This strikes the present reviewer as a model of what such a book should be. It is designed to enable the ordinary reader to grasp the essential facts about one of the greatest of historical figures, and to free him from the necessity of delving in volumes "in most cases expensive, and often technical and difficult." The book opens with a short account of the Maurya Empire, of whose kings Asoka was the third, and describes, in brief and readable form, the life and teachings of the Buddha: to whom, as the author says, Asoka stands only second in the history of the Buddhist religion. "Buddhism, as Asoka found it, was an Indian sect. He made it a world religion, not by adding to it, modifying it or improving on it, but by emphasising the elements of universality that it had always contained." Its disappearance from India is explained by the fact that it borrowed so much from Hinduism that, in the end, it became almost indistinguishable from it—"the original survived, the parody died." Burma, it is true, is still almost entirely Buddhist; but even there, we are told, the real faith of the Burmese is Animism; and, in many cases, Buddhism (like Confucianism in China) "has been adopted not so much as a religion in itself as a system of morals which may be superimposed upon any creed."

To one who, though long resident in India, has seen none of the monuments left by Asoka except the pillars at Delhi and the beautiful group of buildings at Sanchi in Bhopal State, it comes as something of a shock to realise how many are still in existence, that he has not only not seen, but never even heard of: and the vast extent of Asoka's Empire is brought home to one by the fact that his inscriptions have been found dotted over the country, from beyond Peshawar in the North to Mysore in the South, and from Kathiawar in the West to Orissa in the East. The book also brings out the centralisation of his

government; as to which the author remarks that the East has never understood any other form of government: "the weak point in the Government of India has always been, and still is, in the executive—in the lack of a subordinate agency to which the task of carrying into effect the good intentions of the rulers can be entrusted. Legislative measures that have been passed for the protection of the people become, in the hands of unscrupulous underlings, new means of oppression, and every department of State affords opportunities for corruption. Asoka's drastic efforts to impose the law of Dharma ("dutiful piety") upon the entire people must have given his agents a great deal of power: and, if human nature was the same thing in those days as it is now, it is almost certain that this power was sometimes abused." It does seem probable, however, as the author suggests, that education in India was, in the days of Asoka, somewhat more general than it has ever been since, or is now; for it is necessary to suppose that the rock edicts were meant to be read, not by the officials who had their own instructions, but by the common people. Educated Indians often talk vaguely of the golden ages of long ago: and it seems not unlikely that the age of Asoka has better claims to reality, in this respect, than others more frequently quoted. Certainly this little book does much to bring before the reader a real human picture of the great Buddhist Emperor, and to correct the impression of him as—in the words of the author—"a figure not unlike one of his own pillars, severely upright but somewhat impassive."

INDIA'S PAST.

"INDIA'S PAST." By A. A. Macdonnell (Oxford University Press. 10s.)

To summarize in fewer than two hundred pages the intellectual and spiritual history of India from the far-off days when the Aryan immigration reached its lands till its inhabitants came into contact with the Aryans of the Western branch over four centuries ago sounds an impossible task. But, in the very able hands of Professor Macdonnell, the story seems to unroll itself without effort. He grudges the reader nothing from his vast store of learning and yet manages to impart it without confusing the picture. It is most unusual to find so large a subject, which is at the same time so full of difficult technicalities, handled so easily and ably as to provide a narrative which is throughout eminently readable. This is not achieved by simplification by way of omission. Of this there is no trace and the amount of information imparted in this short space is remarkable. Professor Macdonnell's success is due primarily to his entire mastery of his subject, which has indeed been his life's work, and to his literary skill.

The last two chapters of the book are really appendices to the main essay. They treat of the vernacular languages of India and of their literatures, of the awakening to the importance of the early religion, language and literature of ancient India among the scholars of Europe and of the men to whom this was due.

A large number of excellent photographs add to the value of this most interesting book, which ought to be carefully studied by all to whom our connexion with India means something. The author deserves the thanks of all such for presenting the fruits of his long and loving study in so assimilable a form.

Refinery at ABADAN, PERSIA

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes :—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

The ANGLO-PERSIAN OIL COMPANY controls by itself and through its associated Companies Bunkering Stations at the following Ports:—

LONDON	ABADAN	FREMANTLE
Royal Albert Docks	ADEN	HAMBURG
and Purfleet	ALGIERS	HAVRE
AVONMOUTH	ANTWERP	KARACHI
GRANGEMOUTH	BOMBAY	MADRAS
HULL	BORDEAUX	MARSEILLES
JARROW (Tyne)	CALCUTTA	MELBOURNE
LEITH	CAPE TOWN	MOMBASA
LIVERPOOL	COLOMBO	ORAN
MANCHESTER	COPENHAGEN	OSLO
SOUTHAMPTON	DONGES(Loire)	PORT SAID
SUNDERLAND	DUNKIRK	RANGOON
SWANSEA	DURBAN	SYDNEY

Other Stations are in course of erection.

THE COMMISSION'S TASK.

The British Parliament, speaking for the British people, has given a pledge that India should advance by suitable stages towards the ultimate goal of self-government. The Montagu-Chelmsford Reforms represented an honest attempt to translate that undertaking into action on democratic lines. No one who reads the passages from the report, reproduced in another part of this issue, can fail to be impressed by the difference in that respect from the underlying idea of the Morley-Minto scheme, that Parliamentary Government in its Western sense was inapplicable to India and uncongenial to the sentiments and traditions of the peoples. Whether the authors of the Montagu-Chelmsford report displayed a truer perception of the problem is beside our immediate purpose. "But inasmuch as complete responsible government essentially depends upon the existence of an electorate sufficiently active and cognisant of affairs to hold their representatives effectively to account," they wrote, "we think that one of the most important duties of the (Statutory) Commission will be to examine the growth of capacity and responsibility in the electorates." Neither Mr. Montagu nor Lord Chelmsford made any secret of their desire to see the early realization of their ambition. "We intend," they further emphasised, "that its attainment should depend upon the efforts of the Indian people themselves. It would not be fair to give it to them until they fulfil the necessary conditions." Mention has already been made in these columns of some of the problems that beset the path of democracy in India. Their solution demands the united endeavours of men who are really thinking of their country, who really have the interests of the masses at heart—men of courage and fixity of purpose, who do not fear responsibility, and are capable of leadership. Here and there we find thoughtful, patriotic men working soberly and constructively for the public weal. But they are in the minority—and a small minority. It is "the man who is playing a part," as an Indian contemporary aptly puts it, who has been most prominent in public life in India during the past eight years. And yet if the Commission is to carry out faithfully and justly its responsible task it is essential that the point on which the authors of the Montagu-Chelmsford report rightly laid such stress must be its first and not least important concern.

To suggest that the efforts made by the educated classes to improve the material and moral condition of the masses, and make them more independent and self-reliant, to break down the barriers between communities and help men to regard each other as neighbours and not as the wearers of some caste or creed insignia, should be regarded as no less a test of India's fitness for self-government than the progress made in the working, or obstruction, of the Parliamentary machine, is surely not an unreasonable demand. If, however, it is to be effectually applied it is essential that truth should not be sacrificed to "tact," or anything else, in the evidence to be given before the Commission. Indian conditions, hopes, fears, and aims should be set forth as they are, and not as a

section of political thought says they are. The unchronicled and hitherto largely unrevealed history of the last eight years must be studied with even greater care than the record that is there for all to see. It will need courage on the part of Indians to tell the Commission openly that which they know in their hearts to be the truth. There is an urgent need for a resolute determination on the part of the men engaged not only in politics, but in each and every field of activity, to overcome a not unnatural reticence regarding the vital issues and, when the time comes, to say what they really think and not what may appear to them to be "tactful" or "expedient." Equally, is it the duty of the non-political Europeans to be prepared to play their proper part in the deliberations on which the peace, prosperity and progress of our Indian Empire for many years to come will depend. It is not merely a question of safeguarding the legitimate interests of the community. There are other and very real responsibilities to be taken into account. Non-officials are in a position to put before the Commission views which officials might find it difficult to express openly, whatever they may think or feel. And those opinions must be ventilated if a fair picture of conditions in India is to be presented for consideration.

The formulation of such views will not be an easy task. The general attitude of Europeans in India, and especially of those engaged in commercial and industrial pursuits, towards political and general questions is far too apathetic. Hitherto they have been too content to leave the task of safeguarding their interests to the officials. A relatively small section—most of them men of position and experience—have put in years of hard, self-sacrificing work on behalf of their fellow-countrymen. Their reward has been small, and the support they have received usually quite inadequate. If the Commission is to devote proper attention to the economic, equally with the political, aspects of its inquiry, the evidence of the commercial community—European and Indian—will be of major importance. But criticism and comment, if they are to carry weight, must be sound, constructive, and what is even more essential, representative, and its preparation will call for the united efforts and generous support of all who desire to conserve intact the great interests committed to their charge. But the need for frankness and a resolute facing of facts will nowhere be more necessary than in regard to what is certainly one of the most difficult problems which await the Commission's attention—the status of the depressed classes. That it will receive the earnest attention of that body Lord Winterton made clear in the course of the recent House of Commons debate, but in so far as it is bound up with the structure of Hindu society, a body so constitutional will be clearly unable to do more than recommend certain measures designed to improve their political position. The removal of the main disabilities under which upwards of two-fifths of the total population of the country labour can only be accompanied by Indian administrators themselves. No amount of argument can minimise the gravity of the problem. At the present moment it is over-

shadowed by the more visible rift between Hindu and Muslim, but the view is freely expressed in responsible circles that in time it may lead to trouble at least comparable with that caused by the communal dissension. Obviously the question of untouchability is of more than merely social importance. The Government, so long as it pursues its present policy, can, of course, do little beyond guaranteeing to members of the depressed class the legal rights to which every one of its subjects is entitled. The situation is deplored by Indians of all shades of political opinion, but the author of "India in 1925-26" reported that "there are no very convincing reasons for believing that the caste system is breaking down, despite the great changes in Indian material and moral conditions during the past two or three generations." So long as it retains its strength, the ideal of representative government must remain unattained. The remedy lies largely, if not entirely, in the hands of Indians themselves. It will be for the Commission to determine, in the light of actual achievements, what value is to be attached to such protestations.

CURRENT TOPICS.

Lord Irwin's Appeal.

At once an appeal and a warning, it is impossible to remain unmoved by the sincerity and depth of feeling which are everywhere evident in the Viceroy's address to the joint sitting of both Houses of the Indian Legislature on Monday. Lord Irwin's profound gravity and obvious emotion made the speech the most impressive heard in either Chamber since H.R.H. the Duke of Connaught, at the inauguration of the Constitution, delivered his simple and direct exhortation for political peace. Once again, as on the occasion of his memorable speech at the Chelmsford Club just a year ago, Lord Irwin went, as is his way, direct to the heart of the communal problem—the paramount need for unity and, above all, for the will to peace on the part of all who are endeavouring to rescue India "from her present unhappy state." *The Times'* Simla correspondent says that the warning of the ill-effects upon every branch of Indian progress, including constitutional advancement, of the failure to control the spirit of evil which is abroad under the cloak of religion, was accepted with evident assent. We can only hope that Lord Irwin's offer to throw his whole energies into an honourable quest for peace through a conference with the leaders of the communities will be received in the same spirit. If, as Lord Irwin believes, the present situation demands from the Government a more constructive effort than the mere suppression of disorder, no Viceroy has been better qualified to undertake this onerous and responsible task of mediation than Lord Irwin himself.

The Floods in India.

The prosperity of India largely depends upon the monsoon and the failure of the rains connotes misery, want and even starvation upon an extended scale. But an excessive rainfall, especially at the present stage, gives rise to almost as much distress and privation, and the well-nigh unprecedented rains last month in Gujarat and Kathiawar, and upon a smaller scale in Bengal and Bihar and Orissa, have caused serious loss of life and incalculable damage to property and crops. Fortunately the death roll is not as large as earlier and largely conflicting reports suggested, but the material loss is certainly heavy. There can be no doubt that the floods in Western India, at any rate, have been among the worst experienced for very many years past and the task of those engaged in relief work is likely to be a heavy one. Happily, under the personal direction of Sir Leslie Wilson, it has been taken in hand with vigour and thoroughness and the support of all classes and communities in Bombay and other parts of the Presidency is assured. Huge areas, hundreds of square miles in extent, have been flooded, in some cases to a depth of ten or more feet; the streets of towns and villages became rushing torrents of water and thousands

of houses collapsed when their foundations were undermined; many thousands of cattle have been drowned; bridges and railway lines have been washed away and dams breached; and in many districts the crops, particularly the early cotton sowings, have been hopelessly ruined.

Dyarchy in Bengal.

Bengal obviously intends to live up to its reputation of being the stormy petrel of Indian politics. It is certainly not the fault of the Governors. The latest outbreak of political intransigence is a poor reply to Sir Stanley Jackson's eloquent appeal for wise and statesmanlike co-operation at the recent European Association meeting. "There has never been a time, in my judgment," he said "when greater opportunity offered itself to Indians to produce statesmen, who, rising above the paltry desire of personal aggrandisement, the temporary ascendancy of a party, can by wisdom and foresight show their countrymen the way which leads to the fulfilment of their reasonable aspirations and the establishment of a Government based upon sound and secure foundations, through which alone the continuous and lasting improvement of the people of India can be assured." Foiled in their efforts last March, the Swarajists and their new Muslim allies have at last succeeded in securing the resignation of the Chakravarty-Ghuznavi Ministry, regardless of the admittedly good work done by the Muslim Minister in precisely those fields where the need is greatest. That the Swarajists should oppose the Ministry was only in accordance with their declared principles, but the attitude of Sir Abdur Rahim suggests that personal recrimination is the real motive in his case. If that is so, it is only another instance of the well-known fact that personalities count for infinitely more than principles in Bengal politics. Although the Governor is likely to have difficulty in finding Ministers who can command a majority, dyarchy will still continue, as the Ministerial salaries have been voted for the year.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 11.

The Governor of Bengal's Tour.

His Excellency has had a busy week. Leaving Dacca on the 2nd instant and paying a flying visit to Calcutta, on account of several functions, Sir Stanley left for Pabna, arriving there on the 4th. The usual presentations took place and addresses of welcome were presented. Many grievances were exposed, especially about sanitation, water-supply and education. The District Board and the Municipality thanked His Excellency for releasing Mr. Subhas Chandra Bose and prayed for the release of other *détenus*. The utterances already recorded in other places visited by the Governor were repeated, Sir Stanley asking permission to repeat them, namely, "that the Government sympathise with the claims of both Hindus and Muhammadan Communities to enjoy the due observance of their religious rites and ceremonies according to age-long custom, but that they expect that this observance be carried out with mutual regard for the feelings of others," the very thing that cannot be done, as the Government know perfectly well. His Excellency has referred the people of Pabna to the Agricultural Farm of Dacca for useful information regarding the improvement of the soil and of its cultivation. Appreciating the reference made to his personal association with, and interest in, sport, Sir Stanley said that he "firmly believed that the proper development and encouragement of games led to good-fellowship and mutual good-will, as well as to the development of those characteristics of discipline and self-control which should help towards understanding and mutual respect." He added that if he had his way, every town would have a recreation ground, but that the calls upon Government for land and money, for other purposes con-

sidered more urgent, cannot now be fully met. That may be the case in some places in England or in France, but in India, it is hardly credible, especially in a district in which 90 per cent. of the population are agriculturists. Water supply will get one-third of the necessary expenditure, from Government, provided the Municipality finds the other two-thirds. The Pabna Municipality being unable to fulfil the conditions which are beyond the scope of its possibilities, the Government share is stopped and His Excellency had the disagreeable duty to inform the municipal authorities of Pabna that the above conditions could not be relaxed. *Pas d'argent, pas d'eau*. No money, no water. No matter if double the amount has to be spent on stopping the ravages of epidemics. It might prove a wrong calculation in the end. At Sarda Their Excellencies were received the next day by the Divisional Commissioner and Sanads were presented to certain personalities by the Governor, who left in the evening for Rajshahi. The next morning, Sir Stanley and Lady Jackson were received in Rampur Boalia where the grievances are of a different nature: the repairs to roads will be met, said the Governor, by a motor-car tax that might take the shape of an additional tax on petrol, as it appears that the more petrol people consume, the more damage they are likely to cause to the roads. That a fund will be devoted to the repairs of the highways and main roads, is what the Governor has promised to the Rajshahi Municipality, but it is not yet being "contemplated." His Excellency visited the Jail and the Hospital, and made handsome donations to local charities. Spurred by such a generous example, Mr. Narain Chandra Roy Chowdhury, of Mahadevpur, paid Rs. 12,000 to the P. N. Roy's Hospital, in honour of His Excellency's visit to the district. The general impression is that the Governor is doing his best, and would do better still if things rested entirely with him.

The Floods.

To balance the scarcity of water in some places, we have now the floods, in the East, West, and South of India. Beyond Cuttack the railway traffic is blocked, and passengers who left Madras for Calcutta had to return to Madras on account of the breach on the line. In Jaipur, many people had to seek shelter in the trees. Trains are running from Madras no further than Waltair. The Puri Express is cancelled. The Viceroy's tour will be altered and the Commander-in-Chief's special has been cancelled. The damaged bridges, about twelve in number, are being speedily repaired. The Bombay mail will run via Adra. Gujarat and Baroda are in the same plight. The relief of the flood-stricken in Baroda has been mostly obtained from the benevolent Maharanee Saheba, and there have been so many thieves about, stealing what the poor people had contrived to save from the flood, that the Prince himself, in order to assist the local police, has decided to patrol the city at night, with a few of his armed volunteers. Mr. Andrews cabled from Pretoria that the South African Indians may come forward with funds to assist the Gujaratis in distress. Mr. Gandhi has made a public appeal for funds; he says that he has been struck dumb by the reports of the floods; he thinks with horror of the beautiful crops washed away, and of the stench of the carcasses of the drowned cattle. The Viceroy's telegram has been replied to by the Governor of Bombay, who said that funds were forthcoming. Twenty-seven villages are still under water. Few deaths have occurred, but all houses have been washed away in the flooded area. In Orissa, famine is staring people in the face. "The Government have issued a *communiqué* contradicting the alleged exaggerated reports of the floods, leaving the afflicted people without relief," says *Forward*, praising the Baroda Princes' generosity and comparing it with the apathy of the Orissa Government.

The Statutory Commission.

The *Leader* is strongly opposed to the idea of boycotting the coming Commission. It says: "We cannot subscribe to the general and sweeping assertion that no number of

commissions will advance India towards its goal (Swaraj)." The urging of boycott by a section of Indian politicians is regarded by many as impractical, and as a step back towards the non-violent non-co-operation which has been found to be suicidal to the interests of the country. As Mr. Patel said on his return to India, "the pressure of public opinion is not sufficiently strong to-day to compel the British Government to recognise the claim of India to have her own Constitution." The question is whether Indians are capable of judging what sort of Constitution India should have. The gods often punish us by giving us what we most desire to have, and we see our folly too late. The Reforms Commission is not expected before next year, in November, and it will continue its work till March, 1929, and will sail in April to put its report before Parliament in May or June. There will be plenty of time to adjust matters in the best possible way.

The Political Prisoners.

The Bengal Government have been pleased to release, unconditionally, another prisoner who, for three years, was the companion of several other extremists in the Mandalay Jail. Mr. Satyendra Chandra Mittra has no complaints against the jail management. This sudden and unexpected release came as a pleasant surprise to him and to his friends. Mr. Subhas Bose's telegram of welcome to him is significant. It reads: "Shillong, August 3. Heartiest welcome home for active service at opportune moment." The Mayor arranged an "At Home" for the Aldermen and Councillors of the Calcutta Corporation and admirers of the "patriot" to meet Mr. Satyendra Chandra Mittra, who said he would "take up with a renewed vigour and will the work left unfinished by his revered leader, Deshabandhu Das." Other prisoners are being transferred from Burma to India, it is hoped by their friends in view of their release in the near future.

The Consumption of Opium.

A Committee of Inquiry have been specially appointed to find out the cause or causes of excessive opium consumption. As it has been explained in a previous letter, the industrial districts around Calcutta purchase a great deal of what is sold, most mill workers being addicted to the drug, which they believe to be a panacea for all their troubles, physical and moral. It is reported that the production of the United Provinces has been considerably reduced, but that the cultivation of the plant goes on in certain Indian States from which large quantities are regularly smuggled into British India. The States having accepted the idea of the Committee of Inquiry, might further be induced to buy opium from the Government's factory at Ghazipore, prohibiting the cultivation in their own areas; but that would hardly remove the evil. The great question is to find out why people take opium, and whether it is, or is not, bad for them. When one looks at figures, one must admit that the total consumption of opium is on the decrease, and in some parts of India it hardly reaches the minimum fixed by the League of Nations, whilst in others it is appallingly excessive and apparently unjustified. It does not solve the problem to say that if the people were not allowed opium they would fall back on other stimulants. The excess reported in Calcutta is explained by the fact that more people can afford to indulge in the drug there than in rural Bengal, for example. There must be another reason and that is what the Committee of Inquiry ought to find out.

Here and There.

The *Straits Times* of Singapore gives a detailed account of the reception of the poet Rabindranath Tagore. It describes him as the advocate of internationalism and of better understanding between the races. The reception committee met the poet on board the Amboise, and all presentations were made by Mr. Ariam Williams, Dr. Tagore's secretary in Singapore during his visit there. The first view caught by the anxious people who had gathered on the wharf, was that of "a face in which

simplicity and humility were the outstanding characteristics." The poet wore a long robe of blue material and a high peak cap. He was garlanded by Dr. K. K. Pathy, on behalf of the Hindu Association, and songs of welcome were sung by Hindu ladies. After replying briefly to the address, Dr. Tagore and his party proceeded to Government House, where he was to be the guest of Sir Hugh and Lady Clifford until July 22, after which he was invited to the house of Mr. Hamazie, whom the poet met a few years ago, on a short visit to Singapore, when en route to China.

The water hyacinth pest has caused a number of telegraph poles to be thrown down through accumulation of the plant in an important jute centre of the Mymensingh District. Communications were stopped for seven days. The Minister of Agriculture will never kill water hyacinth by discussion, or by repeating that resolutions must be passed. Only those who have never seen water hyacinth can speak of the pest lightly and as a sort of legendary evil.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 12.

Government and the Floods.

There has been no lack of criticism of the apparent tardiness of the Bombay Government in doing something for the relief of the sufferers in the flood-stricken areas in Gujarat, and the official press note issued this week, intimating the programme that Government intends to follow, came none too soon. Sir Chunilal V. Mehta, at the same time, announced that all the money necessary to finance the proposed programme would be forthcoming—even though it is not likely that this will be too easy to find. One feature of the work, which is to be split up between the various departments, is that it gives remarkable scope for instituting newer and better ideas in village life for the future. Town planning, better sanitation, and a variety of other amenities might well be now inaugurated, and, it is to be hoped, some precautionary measures designed to minimise the danger from similar catastrophes in the future.

Crop Outlook.

The gloom the floods have cast over the whole Presidency, and not least because of the loss of the Gujarat cotton crop—which, incidentally there appears no hope of even partially saving—is somewhat relieved, so far as the latter contingent is concerned, by the news that the Deccan is likely to produce a bumper cotton crop, and this should tend to settle the prices on the cotton market, which as a result from alarmist reports from America have been rushing up and down with bewildering rapidity. The only redeeming factor for this state of affairs has been the arrest of a large number of cotton gamblers, which might perhaps lessen the almost general prevalence of this form of gambling in the city.

Prohibition.

Talking of gambling immediately brings to mind the report of the committee appointed by the Government of Bombay to inquire into the financial measures necessary to give full effect to the policy of prohibition in this Presidency. For this committee, four of whose members sign the report subject to minutes of dissent, have been hard put to it to find means of raising additional revenue to replace that which is likely to be lost by the adoption of such a policy. Indeed, they can find only about four and a half crores of the six crores required, and that by imposing additional taxes on tobacco and medicines, a succession duty, an irrigation cess, and shares in several other impositions now in force. The sum total of the whole report is that the majority do not feel justified in

recommending prohibition for Bombay until the local Government can persuade the Government of India to come to its assistance in the matter of funds. And knowing the Government of India, we can be certain of remaining "wet" for a long while yet!

The Football Field.

The football league season came to a close, or practically so, with a really thrilling match—the contest between the Cheshire Regiment from Poona and the South Staffordshire Regiment from Bombay—and the championship depended upon the result. The Cheshires won by a narrow margin after a fine game that was an almost even break from start to finish. Having laid the Harwood League, football enthusiasts are now looking forward to the Rovers Cup Tournament, which commences to-morrow and for which several of the leading regimental teams in India are entered. A further attraction is to be a match between Mohun Bagan, the crack Bengali team, and probably the Cheshires, in aid of the Flood Relief Fund. In addition to this, the races at Poona are attracting larger and larger attendances.

THE STATUTORY COMMISSION AND THE MONTAGU-CHELMSFORD REPORT.

Whatever may be one's general attitude towards the scheme of reforms propounded in the Montagu-Chelmsford report—the genesis of the present system of government in India—the meticulous care and outstanding ability with which its authors surveyed the ground of their joint inquiry must command unqualified admiration.

Inevitably, the decade which has elapsed since the momentous announcement of 20th August 1917 has produced many new problems and difficulties that could not at the earlier date have been foreseen. The fundamental issues with which the forthcoming Statutory Commission will be called upon to deal, nevertheless, remain substantially the same, and in view of the widespread confusion of thought which characterises so many public references to the Commission's task it is not inopportune to recall the view of its duties and responsibilities taken by the progenitors of the scheme.

The relevant passages are contained in paragraphs 261-264 of the report and are reproduced in *extenso* below:—

"261. The arrangements sketched in the last paragraph, however, are intended to provide merely for *ad interim* changes; and we regard it as essential, if the terms of the announcement of August 20 are to be made good, that there should from time to time come into being some outside authority charged with the duty of re-surveying the political situation in India and of readjusting the machinery to the new requirements. We would provide, therefore, that ten years after the first meeting of the new councils established under the Statute a Commission should be appointed to review the position. Criticism has been expressed in the past of the composition of Royal Commissions, and it is our intention that the Commission which we suggest should be regarded as authoritative and should derive its authority from Parliament itself. The names of the commissioners, therefore, should be submitted by the Secretary of State to both Houses of Parliament for approved by resolution."

"The commissioners' mandate should be to consider whether, by the end of the term of the legislature then in existence, it would be possible to establish complete responsible government in any provinces, or how far it would be possible to approximate to it in others; to advise on the continued reservation of any departments for the transfer of which to popular control it has been proved to their satisfaction that the time had not yet come; to recommend the retransfer of other matters to the control of the Governor in Council if serious mal-administration were established; and to make any recommendations for the working of responsible government or the improvement

of the constitutional machinery which experience of the systems in operation may show to be desirable. We intend these propositions to be read rather as an indication of our general intentions than as an attempt to draft the actual terms of the reference to the commission.

"262. There are several other important matters, germane in greater or lesser degree to our main purpose, which the commission should review. They should investigate the progress made in admitting Indians into the higher ranks of the public service. They should examine the apportionment of the financial burden of India with a view of adjusting it more fairly between the provinces. The commission should also examine the development of education among the people and the progress and working of local self-governing bodies. Lastly the commission should consider the working of the franchise and the constitution of the electorates, including the important matter of the retention of communal representation. Indeed, we regard the development of a broad franchise as the arch on which the edifice of self-government must be raised; for we have no intention that our reforms should result merely in the transfer of powers from the bureaucracy to an oligarchy.

"We shall be told that we are laying a heavy charge upon the commission. We agree that this is so, and it will probably be necessary to appoint more than one commission; but we think it important that the review of all these questions should be undertaken at one and the same time. It is our desire to revive the process by which the affairs of India were periodically subjected to searching review by investigating bodies appointed with the approval of Parliament itself; and we propose, therefore, that the further course of constitutional development in the country, together with the other matters just enumerated, shall from time to time be similarly investigated at intervals of twelve years, a period which represents the life of four councils under the existing regulations.

"263. In proposing the appointment of a commission ten years after the new Act takes effect we wish to guard against possible misunderstanding. We would not be taken as implying that there can be established by that time complete responsible government in the provinces. In many of the provinces no such consummation can follow in the time named. The pace will be everywhere unequal, though progress in one province will always stimulate progress elsewhere; but undue expectations might be aroused, if we indicated any opinion as to the degree of approximation to complete self-government that might be reached even in one or two of the most advanced provinces. The reasons that make complete responsibility at present impossible are likely to continue operative in some degree even after a decade. Within that time many persons will have been brought in touch with problems of administration and a considerable number will have some experience of the actual exercise of responsibility; but we recognise that time is necessary for the development of responsibility in the electorates and the growth of proper relations between representatives and constituencies. At present electorates of a general character hardly exist. Almost all are designed to represent special classes or interests and consist of very few persons. Those which represent Muhammadans were intended to be fairly inclusive but even those are limited to a few hundred electors.

"The much larger electorates that will now be set up, though still a mere fraction of the population, will be devoid of political experience. The habit of considering political issues as issues to be decided by a man's own judgment, of realising the value of the proper use of a vote and of judging candidates with regard to their fitness to represent the elector's views have all to be acquired. The physical circumstances of electorates thinly scattered over wide areas with indifferent communications will render the task of educating them particularly difficult, especially for men who have to undertake a work for which they themselves have so little experience. These difficulties will be increased by the general lack of

education. Where the great mass of the population is illiterate, as is unfortunately the case all over India, political ideas may be expected only to spread slowly and the progress of political education to be impeded. But we have already recognised the rapid rate of progress which has taken place in India during recent years in the development of political opinion; and we cannot foresee how much the pace will be accelerated under the new conditions. It is, therefore, clearly desirable that periodic inquiries should take place at intervals that may prove too short rather than that encouragement should be given to agitation by undue delay.

"264. But inasmuch as complete responsible government essentially depends upon the existence of an electorate sufficiently active and cognisant of affairs to hold their representatives effectively to account we think that one of the most important duties of the commission will be to examine the growth of capacity and responsibility in the electorates. The approximation to complete responsibility must depend, among other things, on the growth of the electorate and on the measure in which they give evidence of an active and intelligent use of the franchise. We wish to attain complete responsibility where we can, and as early as we can, and we intend that its attainment should depend upon the efforts of the Indian people themselves. It would not be fair to give it to them till they fulfil the necessary conditions."

No apology is needed for the length of the foregoing extract. It is at once the only authoritative commentary on, as it remains the most comprehensive explanation of, the provisions of section 84a of the Government of India Act, with the text of which, for purposes of record, this timely reminder of the real nature of the Commission's onerous and responsible task may fittingly be concluded:—

"84a (1) At the expiration of ten years after the passing of the Government of India Act, 1919, the Secretary of State with the concurrence of both Houses of Parliament shall submit for the approval of His Majesty the names of persons to act as a commission for the purposes of this section.

"(2) The persons whose names are to be submitted, if approved by His Majesty, shall be a commission for the purpose of inquiring into the working of the system of government, the growth of education, and the development of representative institutions, in British India, and matters connected therewith, and the commission shall report as to whether and to what extent it is desirable to establish the principle of responsible government, or to extend, modify, or restrict the degree of responsible government then existing therein, including the question whether the establishment of second chambers of the local legislatures is or is not desirable.

"(3) The commission shall also inquire into and report on any other matter affecting British India and the provinces, which may be referred to the commission by His Majesty."

INDIAN MAIL.

An All-Parties Commission.

The engrossing task of forecasting the probable composition of the impending Statutory Commission still occupies the attention of the politically minded among all the different communities in India, to the exclusion, unfortunately, in many circles, of the far more vital question of the country's preparedness for its advent. Clearly on such a matter opinions differ widely; one of the latest and, at the same time, most original contributions to its study comes from the pen of "Ditcher Secundus," who, acting *pro tem.* for its talented author, fully maintains the high standard of that entertaining column in *Capital*. India is not, and, except in a very superficial sense, has never been a counter in British party politics. On vital issues affecting Indian policy, Britain, finally, has always spoken with one voice. Not only is it manifestly advisable, he contends, to adhere closely to that tradition of unity, but

effective statesmanship equally demands that Parliamentary action on this occasion shall be not only joint but direct. "That means a Parliamentary Commission, of which Lord Birkenhead, who did more than any other statesman to effect the Irish settlement, would be the natural leader. The reform of the House of Lords can wait; but the reform of the Indian Constitution cannot wait." Arguing on the same lines, Mr. Ramsay MacDonald is proposed as the ideal exponent of Labour views on the Commission; and "as no man dare predict the outcome of the next General Election, it would seem expedient that these two should be reinforced by a nominee of Mr. Lloyd-George, who it is possible—nay, probable—will hold the balance of power in the next Parliament (a Commission which failed to take all such political possibilities into consideration might, of course, easily prove infructuous). Then, again, when Mr. Montagu framed the present Constitution they devoted insufficient attention to finance. Lord Inchcape, whose retrenchment inquiry provided the foundation upon which Sir Basil Blackett has built, could double the parts of financial adviser and representative of British commercial interests in India, though it is not certain whether his health would stand the strain."

Whether the foregoing selection conforms to the main desideratum, as stated by the writer himself, namely, that the Commission, in its own personnel, should represent the maximum effort to attain agreement on the points at issue, is at least arguable. In support of the claim that the British representatives should include Labour and Liberal spokesmen, it is enough to say, according to the same authority, "that, even to-day, the Conservative Government, owing to the peculiarities of the British electoral system, represents only a minority of the electorate. It is also necessary to take into account the possibility that, when the Commission presents its report, the Baldwin Government may not be in office." The Indian section, he agrees, presents greater difficulties and he admits that, however carefully selected, it is idle to hope that it will command individual approval. At the same time it is maintained with some force that "a constitutional Commission which excluded the best available representatives of Indian interests and opinions would be as futile and mischievous as a body composed on the supposition that the fashioning of the future Constitution of India is the exclusive prerogative of (and will, in any event, be entrusted solely to) the Conservative party."

The Mysore Jubilee.

The celebration of a jubilee has seldom been made the occasion of the presentation of so valuable a gift as that which the Viceroy was able to offer to the Maharaja of Mysore at the State banquet held in honour of Lord Irwin's visit to the State last month and of the completion by His Highness of twenty-five years of successful and enlightened rule. "To explain the gift," the *Pioneer* reminds its readers, "it is necessary to go far back into the history of the British connexion with India. After the fall of Seringapatam and the overthrow and death of Tipu Sultan in 1799, the British Administration restored Mysore to the grandfather of the present Maharaja, as the representative of the old Hindu family which had formerly ruled the State. It was then stipulated that the State should pay an annual subsidy of Rs.24½ lakhs as the price of protection. In 1881 certain treaty relations of the State were commuted on terms favourable to the Durbar for a further payment of Rs.10½ lakhs. Frequent representations have been made to the British Government for a reduction of the subsidy. On Friday Lord Irwin announced that the Government of India had decided to remit in perpetuity Rs.10½ lakhs of the annual subsidy, thus reducing it to the sum originally fixed nearly 130 years ago." The concession is a well-deserved and practical recognition of the regard the Government of India have for the spirit in which the Maharaja has maintained the traditions of Mysore, where Lord Irwin said he found a contented people and a State wisely governed.

NEWS IN BRIEF.

The King has approved the appointment of Mr. Alexander Marr to be a member of the Executive Council of Bengal in succession to Sir James Donald, whose term of office will expire on November 7.

The King has appointed Mr. John Thomas Marten, Indian Civil Service, to execute the office of Governor of the Central Provinces during the absence on leave of Sir Montagu Butler.

Reuter's Agency learns that the Eastern Telegraph Company, Limited, announce the reduction of their rate for ordinary telegrams between Great Britain and India, Burma, and Ceylon to 1s. 5d. per word from September 1 next, with proportionate reductions for the cheaper classes of traffic. They will also introduce on the same date week-end telegrams between the same countries at a rate of 3½d. per word, subject to the minimum charge of 5s. 5d. for 20 words. A similar announcement has also been made by the Indo-European Telegraph Company.

In reply to questions at the recent Poona Session of the Bombay Legislative Council the Hon. Sir Cowasjee Jehangir stated that the project provision for the Lloyd Barrage and Canals Construction Scheme, according to the estimate sanctioned by the Secretary of State and approved by the Council in 1923, was Rs.18,35 lakhs. No later estimate had been made, but an excess of Rs.60 lakhs was now anticipated on the whole scheme, due to the inclusion of such items as Customs duty and tariff, rectangulation, irrigation of Tando Bago taluka, etc., which could not be foreseen when the original estimate was framed in 1919-20. The total amount spent up to December 31, 1926, was Rs.4,61 lakhs, of which Rs.3,81 was on construction work only.

Lord Cornwallis, Deputy Grand Master, will leave England shortly as the head of a Masonic deputation to visit all the Masonic sub-jurisdictions in India, including Burma and Ceylon. He will be accompanied by Lieutenant-Colonel G. V. A. Monckton-Arundell, Past Grand Warden; Sir John Ferguson, Past Grand Treasurer; Sir Kynaston Studd, Past Grand Deacon; and Lieutenant-Colonel S. Pleydell-Bouverie, Past Deputy Grand Director of Ceremonies. The visit marks the bicentenary of the foundation, in 1728, of the Provincial Grand Lodge of the East Indies, the forerunner of the present District Grand Lodge of Bengal, which has some 85 lodges. The occasion will be celebrated by a special festival to be held under the presidency of the newly-appointed District Grand Master, Mr. Henry R. Nevill. The deputation expects to return to this country early in April.

OBITUARY.

Captain Harold Wilberforce-Bell, a Military Knight of Windsor, whose death, at the age of 78, is reported, was the father of Major H. Wilberforce-Bell, of the Foreign and Political Department of the Government of India. He enlisted in the 15th Hussars in 1869, and served in the Second Afghan War, being present at the entry into Kandahar.

The death of Major-General Leonard Christopher, at Canterbury, in his 80th year, is announced. Appointed a Captain in the Bengal Staff Corps, on transfer from the 75th Regiment (now Gordon Highlanders) in 1879, he served in the Afghan War 1878-80 and Tirah Expedition of 1897-98, and in 1900 became Director-General of Transport in India. He retired in 1908.

ARMY APPOINTMENTS.

The following appointments, to take effect on November 14 next, are announced by the War Office:—

Major-General A. Solly-Flood, C.B., C.M.G., D.S.O. to be Commandant of the School of Equitation and Inspector of Cavalry in India.

Major-General G. H. Freeth, C.B., C.M.G., D.S.O. to be Deputy Adjutant-General in India in succession to Major-General A. Solly-Flood, C.B., C.M.G., D.S.O.

Colonel J. Vander Byl, D.S.O., Senior Officers' School, Sheerness, has been selected to command the 1st (Risalpur) Cavalry Brigade, and will take over command at the end of September.

Colonel E. B. Mathew-Lannowe, C.M.G., D.S.O., from Army Headquarters, will take up the command of the 2nd (Rawalpindi) Infantry Brigade on October 1.

Colonel E. C. Gepp, D.S.O., 2nd Division, Aldershot, will succeed to the command of the Ambala Brigade Area at the end of the year.

The officiating appointments in India consequent on the home leave of General Sir Alexander Cobbe place Colonel Commandant C. F. Watson in charge of the Peshawar District, Major-General Sir Robert Cassels in charge of the Northern Command, and Lieutenant-Colonel R. D. Beadle with the 3rd Indian Infantry Brigade, and Lieutenant-Colonel H. Mallinson with the Peshawar Brigade.

The War Office announces that Major-General G. A. Weir, C.B., C.M.G., D.S.O., has been appointed General Officer Commanding, Bombay District, to date from October, 1927.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Roumania's Railway Problem.

The fact that the serious situation of the Roumanian railways should be the object of increasing attention and criticism (as will be seen from our Bucharest Correspondent's letter) is all to the good, for it is patently obvious that the work of organisation so far carried out since the War has failed to produce the desired effects. So much so is this the case that, as was shown by statistics in these columns recently, the position in certain respects has tended to get worse. Of course as is well known the problem with which the Roumanian authorities were confronted with regard to the railways when the War ended was one which can only rightly be described as prodigious. It was not merely a matter of restoration and the replacement of material but also of the adaption of the system to meet the needs of Greater Rumania. It is, however, nearly nine years since the Armistice, and it will be apparent that the gravity of the initial problem cannot be regarded seriously as an excuse for the present inadequacy of the transport position. One cause which has no doubt tended to hamper initiative has been the fact that the railways have not been run by private enterprise and have suffered in the conflict between the contending political parties. This, it is satisfactory to know, has now been ended by the establishment of an independent Railway Administration, which will, it may be trusted find the way vitally to alter the existing situation. It must be pointed out, however, that one great stumbling block in the reorganisation of the railways is the lack of capital. Roumania no doubt could have raised loans in previous years, but there has been an unwillingness on the part of the Roumanian authorities to invite foreign assistance, an attitude which may or may not be due to some extent to the knowledge that other countries in a less unfavourable situation at the time have been able to obtain loans only on somewhat onerous terms. In the last few years Roumania's economic situation has undergone a pronounced improvement. The Budget has been balanced, and there have been favourable trade balances, so that the negotiations for a loan (primarily, of course, for the railways) which are shortly to be initiated will be entered upon under much more promising auspices than would have been the case in recent years.

Railways v. Motors in Roumania.

It is not surprising that, as our Correspondent points out, the railways in Roumania are now experiencing severe competition by motor transport. It would, as a matter of fact, have been extremely remarkable if that had not been the case. In Great Britain motor competition is thriving because the railway tariffs are such that motor companies are able to quote attractive rates and yet make a satisfactory profit. In Roumania, however, it is not merely that the rates are high, but in addition the service is totally inadequate for the requirements. Thus a rich field is presented for motor competition, and if only the roads were equal to it the traffic would no doubt develop enormously. The serious aspect of the competition, of course, is that its effects may be expected to endure when Roumania's railways have been adequately reorganised, and presumably the outcome will be (as it apparently will be in Great Britain) that the railways will have to meet the competition by running motor services themselves. It will be noted in this connexion that the whole question

of this competition is now under consideration. I refer to this matter not only because of its special interest on account of the similarity to the situation in Great Britain, but also because it affords such an obvious example of the truth that uneconomic prices have a way of curing themselves. It is well for the general public that they have.

Forthcoming Greek Loan.

Of the various Near Eastern loans that are on the tapis it seems probable that the loan—or to be quite precise loans—which Greece is seeking will be the first to be issued. The loan has to be approved by the League of Nations, before which it will come at the pending session, and approval is dependent on certain banking changes. Recently the National Bank of Greece transferred its long term mortgage business to the National Mortgage Bank of Greece, and now steps are being taken to create a Bank of Issue which will deal with the issue of notes. With the establishment of the new institution the reorganisation of Greek banking on the lines desired by the League of Nations will have been carried into effect and the way will be cleared for the loan which is required partly to complete the work of refugee settlement and partly for the stabilisation of the currency. The settlement of the refugees has been an expensive operation, as was inevitably the case, but the money expended in this direction is likely in the end to prove one of the most remunerative investments which Greece has ever made, for by the exchange of populations with Turkey she has added to the inhabitants of Greece a body of capable, hard-working people whose work is already producing results and who promise ultimately to make a very great difference to the economic development of the country.

The Cotton Position.

There is rarely a cotton season without some surprising development, and the present one promises to be no exception. As a result of the Mississippi floods it was inevitable that the American crop in the best circumstances should show a considerable falling off on the previous year's figures, but the weather has so far been unfavourable and it looks as if the crop is going to be far below anticipations. If this is borne out the effects from our point of view will be two, and they will be diametrically opposite. There will inevitably be rising prices, of which already we have had a foretaste, and the result of this will be to give a further and most decided fillip to cotton cultivation in

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

THE BRITISH INDUSTRIES FAIR

will again be held at the
**WHITE CITY, LONDON &
CASTLE BROMWICH, BIRMINGHAM**

FEBRUARY 20th to MARCH 2nd

1928

MANUFACTURERS

Empire produce and manufactured goods may be shown at the Fair, either in any section organised by your own Government, or in the appropriate section of the Fair.

BUYERS

Make a point of visiting the Fair next year. It will be larger than ever—the finest display of British Empire goods the world has ever seen.

Full particulars and Invitation Tickets may be obtained from
**THE NEAREST BRITISH LEGATION,
CONSULATE or TRADE COMMISSIONER,**

or from the

**DEPARTMENT OF OVERSEAS TRADE,
35, OLD QUEEN ST., LONDON, ENGLAND,**

or

THE SECRETARY, CHAMBER OF COMMERCE, BIRMINGHAM.

the Empire—particularly, be it added, of the American type. This development, it may also be pointed out, will solve the cotton problem of the Egyptian Government for the time being at any rate. The other effect will be to retard the reviving trade in cotton goods which, if it happens, will be a most unfortunate occurrence. Lancashire needs an abundance of cotton, but the cotton must be moderately priced, otherwise the demand for piece-goods has a habit of shrinking. This process in its turn, it is true, must bring about lower cotton prices, but it emphatically does not tend to help on that widespread revival of trade for which we are all hoping. The present situation only goes to emphasise once more the weakness of our position from the Lancashire point of view, so long as we are dependent to any great extent upon America for supplies of cotton.

Greece's Mercantile Marine.

I remarked recently upon the increased attention now being paid by Greece to her mercantile marine. The figures for the additions to Greek shipping for the first five months of this year make interesting reading, showing plainly as they do that the Greeks are now making a determined effort to obtain a position in the Mediterranean trade more in consonance with their geographical situation and their traditions. For the period in question 37 vessels of a gross tonnage of 146,677 were added to the Greek mercantile marine, bringing it up to 1,261 vessels of 1,151,745 tons. The importance of the statistics for the five months may be gathered from the fact that for the four years 1923-26 the greatest additions in a year were 69 ships of 159,940 tons in 1924. Now that the Greek authorities have definitely abandoned the attitude of *laissez-faire* with regard to shipping, and have introduced a large number of regulations for the encouragement and improvement of the mercantile marine, a new chapter in the history of Greece's maritime activities may be said to be opening.

Bulgaria's Industrial Expansion.

Some interesting particulars are given in the current monthly report of the National Bank of Bulgaria of the industrial expansion that has gone on in Bulgaria despite the economic crisis. In the ten principal branches of industry the capital of 77.2 million gold leva for 324 enterprises in 1924 had been increased in 1925 to 89.3 million gold leva for 349 enterprises. It is pointed out that the progress of industries generally is due first to the protection afforded by the Law of 1894, and secondly to the fact that the chief industries obtain their raw material from the agricultural production of the country. This is the case with the flour trade, the cigarette industry, and other trades. A feature of Bulgaria's industry is that much of its production is for the home markets, the exports being confined to such commodities as flour, attar of roses, cigarettes (to a small extent), and vegetable oils. It is, in short, because of the home market that Bulgaria's industrial figures have continued in a number of directions, but the exporting trades have been affected by the general situation

Detailed statistics of the imports and exports of Cyprus for the first quarter of the current year show an excess in the value of the latter over the former, the respective values being imports £319,070, and exports £337,425. Compared with the figures for the corresponding period of 1926, imports decreased by £64,952, while exports increased by £124,164. Declines in imports occurred in edible oils, timber, cotton manufactures, machinery and motor cars, while as regards exports, increases were recorded in carobs, raisins, potatoes, wines, raw cotton, hides and skins, pyrites and raw silk. It is considered that if the ensuing months bear out the promise of the early part of the year, 1927 should be a year of prosperity.

CHESS.

By "CARO-KANN."

White to play. What result?

The solution to last week's end-game is as follows:—
1, R—R8 (ch), R—Kt; 2, R—R4, R—Kt6; 3, R—QR4, K—Kt; 4, R—R8 (ch), K—R2; 5, R—R8 (ch), and wins. As I have pointed out, this is one of the very few ways in which a win can be obtained with a Rook and Bishop against a Rook.

I give this week a pawn ending of special interest. At a casual glance at the position it looks as if White, moving first, will be able to win with some ease. Having worked it out, my readers may like to examine what happens if Black has the first move.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Massilia for Bombay (Birkenhead, September 8). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mathura for Calcutta (Birkenhead, August 30); s.s. Matra for Calcutta (Birkenhead, September 15).

Bibby Line.—S.s. Leicestershire for Port Said, Colombo, and Rangoon (Birkenhead, September 7).

British India Line.—S.s. Hatimura for Colombo, Madras, and Calcutta (London, September 3); s.s. Warfield for Bombay and Karachi (London, September 7); s.s. Mashobra for Colombo, Madras, and Calcutta (London, September 10).

Cunard Line.—S.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool September 17, and Swansea September 20); s.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, October 1).

Johnston Line.—S.s. Jessmore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, September 3); s.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 1).

P. and O. Line.—S.s. Ranpura for Bombay (London, September 9); s.s. Nankin for Colombo, Madras, and Calcutta (London, September 17).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 10); s.s. Portuguese Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, Tripoli, Alexandretta, Mersina, and Cyprus (London, September 17).

Ellerman and Papayanni Lines.—S.s. Polo for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona, Venice, Trieste, and Fiume (Liverpool September 3, Swansea September 8); s.s. City of Milan for Malta, Alexandria, Jaffa, and Haifa (Liverpool, September 8); s.s. Algerian for Gibraltar, Malta, Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 8); s.s. Guido for Gibraltar, Alexandria, Jaffa, and Haifa (Glasgow September 10, Liverpool September 15); s.s. Mardinian for Oran, Algiers, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 24). Cargo taken on through Bill of Lading for:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek Outports via Piræus or other convenient port; Fiume, via Trieste.

H.M. Commercial Secretary, Rome, reports that arrivals from Mytilini (Greece) are subject to precautionary measures against bubonic plague.

A world conference of women Zionists opened at Basel on August 29 under the presidency of Lady Samuel. The object of the conference is to secure the collaboration of Jewish women in the development of Palestine.

The Egyptian Government have announced their intention to erect statues of the late Zaghoul Pasha in the principal squares of Cairo and Alexandria, to purchase his Cairo residence, known as Beit el Omma, for the nation, while leaving it in Mme. Zaghoul's possession during her lifetime; to establish a new hospital or asylum to be named after Zaghoul Pasha; and to purchase for the nation the house in which Zaghoul was born at Ebyana village.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Diesel Engines.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Abul Menaga Pumping and Power Station of four internal combustion Diesel groups with flywheel alternators, three pumps and accessories, required for the Public Works Ministry. September 3.

Machinery.—The Controller of Technical Education, Ministry of Education, Sharia, Qasr el Aini, Cairo, invites tenders for the supply of machinery and machine tools for the Model Workshops and Trade Schools, Bulaq Technical School and the Intermediate School of Agriculture at Moushtuhur. October 17.

Bolts, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of bolts spring, espagnolettes, locks, hinges, screws and rivets, pipes metal, cocks bib, wire metal copper, washers I. G. for water bottle corks, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. September 19.

Turbo Alternator Groups, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Belqas Power Station of three Turbo alternator groups, and accessories required for the Public Works Ministry (October 26); and for the supply and erection at site of Esna Barrage grounds of two Turbo alternator groups, and accessories, required for the Public Works Ministry. November 2.

Meters.—The Director-General, Tanzim Department, Cairo, invites tenders for the supply of two verturi meters required for Giza and Gezira Water Works for the year 1927-1928. September 15.

Paper for Targets, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of paper for targets, bathbricks, chalk powder, blanko khaki, and soap palm oil to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. September 12.

Cables.—The General Management, Egyptian State Railways, Telegraphs, and Telephones, Cairo Station, invites tenders for the supply of underground cables. Approximate cost: £E6,000—£E6,300. October 1.

Diesel Alternator Groups.—The Egyptian Ministry of Public Works invites tenders for the supply at site of the Aft Power Station, of four diesel alternator, groups and accessories, including alternators, switchboard, transformers, power station auxiliaries, hand-operated travelling crane, workshop equipment (including machine tools, lathes, drills, etc.) mechanical and electrical testing instruments, station electric lighting. October 12 (D.O.T.).

Switchboard and Switch Gear.—The Director-General, State Domains Administration (Commercial Service), Savoy House, Sharia Qasr el Nil, Cairo, invites tenders for the supply and erection of a switchboard and switch gear. September 10.

INDIA.

Steam Driven, Steel Sea Going Tug.—The Bombay Port Trust invites tenders for the supply and delivery of one single screw steel hulled steam driven sea-going tug completely equipped, afloat in Bombay Harbour. The dimensions to be as follows:—Length B.P., 90 ft.; breadth moulded, 20 ft.; depth, 10 ft.; maximum draft, 8 ft. October 10. (D.O.T.)

TURKEY.

Coupling Hooks, Carriage Springs, Etc.—The Anatolian Railway Administration invites tenders for the supply of coupling hooks, carriage springs, etc. September 27. (D.O.T.)

Postal Wagons.—The Direction of Posts and Telegraphs invites tenders for the supply of two postal wagons. October 1. (D.O.T.)

Drop Hammers.—Tenders are invited by the Chemin de Fer d'Anatolie-Baghdad for the supply and delivery of 2 drop hammers (Lufthammer). September 20. (D.O.T.)

Galvanised Iron Wire.—The Direction Générale des Postes and Telegraphs, Constantinople, invites tenders for the supply of 250 metric tons of galvanised iron wire. September 19. (D.O.T.)

Telephone Sets and Bells. The Post and Telegraphs Department at Constantinople are calling for tenders for the supply of telephone sets and bells. September 15 (D.O.T.).

The death has occurred at his residence in Bromley, Kent, of Mr. Arthur Eccles Wall, assistant manager of the London and Lancashire Insurance Company, Limited. Mr. Wall who served the whole of his business career with this company which he joined in 1884, had only recently returned from a 12 months business visit to Australia.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, August 24.

The Plight of the Railways.

A considerable public sensation was caused recently by the statements made by M. Perietzeanu on the occasion of his resignation of the office of Under Secretary of State for the Railways. It was to be expected that one of the first steps of the Liberal Government would be to abolish this office, and this has now been done by a law published a few days ago, which re-introduces the former semi-independent organisation with permanent and non-political tenure of posts. Since M. Perietzeanu's resignation the *Argus* has published almost daily articles on the utter inadequacy of the railways to cope with the growing requirements of the country. That this is a fact no one with any knowledge of the situation can contest, but the *Argus* brings much heavier indictments against the Governors of Roumania and shows that far from advancing in their capacity the railways are on a downward path. Mechanics employed both in the workshops and on the lines are insufficiently skilled, and to judge from the number of breakdowns, the greatest negligence appears to reign in regard to the supervision of the rolling stock in use. Moreover there is an admitted shortage of engines and of carriages. So far as may be judged from the statistics occasionally published by the railway administration a certain amount of this shortage could be avoided if the system of repairing could be improved. There are always large numbers of engines awaiting repair. But apparently the workshops are inadequately appointed, or have not the funds to provide sufficient materials. Moreover, the quality of the repair work no doubt leaves much to be desired on account of the inadequacy of the working mechanics or of the supervision above referred to. It is amazing that so important a factor in the economic development of the new and greatly increased Kingdom of Roumania as the railway system should have remained thus neglected for a period of nine years after the close of the War, and considering the patching-up methods which have been employed up till now it is equally surprising that no more serious accidents have occurred.

No doubt the constant change of Government policy in regard to the railways and tariffs, etc., has been a considerable drag on their development as an efficient organ of transport, and their constitution as a non-political body would appear to be a step in the right direction in this regard. It may now be hoped that the present Government which introduced the above beneficial change, will waive some of its former prejudices and take immediate steps to procure the means of placing Roumania's transport system on a sound basis. For years there have been constant rumours of loans for the Roumanian railways, but no arrangements have ever matured, owing on the one hand to the unstable economic condition of Roumania and on the other to what was considered over-confidence of her rulers. Now, however, that her budgets have been balanced for a number of years and have showed an important surplus for two years; now that her trade balance continues to be favourable, it should surely be possible for her to obtain a foreign loan.

Development of Motor Transport.

One immediate result of the inadequacy of the railways has been an enormous increase in motor transport during the last few years. Motor transport services both for goods and passengers have been started all over the country between towns and villages (in spite of the really deplorable condition of most of the high roads), and the number of private motor-cars is increasing by leaps and bounds. To such an extent is this the case that it is being held partly accountable for the deficit in railway receipts for 1927 recorded up to the present date, and a competent committee has been charged by the railway authorities to study the question. Since the railway tariffs were raised last year, motor transport rates are stated to be lower in many cases than those of the railways, and frequently also there is gain in time. According to the *Argus* goods transport in Roumania is the slowest in Europe (It is little wonder when one considers that most of the railway system consists of single lines). But where there is a will there is a way, and it is the general belief that the present Government is determined to make every effort to place the railways on a sound footing.

Harvest Prospects.

According to the latest reports it would appear that the harvest figures will be rather lower than had been expected, though it is reported that the wheat tonnage available for export will probably be greater than that of last year. The forecasts of the maize crop are disappointing, as in many districts the young cobs have dried up for want of rain, but it is too early to make any definite statement on this subject.

The report that the Turkish Finance Minister has concluded an agreement for a loan of £15,000,000 with a Swedish financial group is officially denied (says a Reuter message from Constantinople).

The value of Yugoslavia's exports in May was 519,308,158 dinars, while that of the imports was 577,589,100 dinars, the adverse balance thus amounting to 58,280,942 dinars. For the first five months of this year Yugoslavia had an unfavourable balance of 305 million dinars.

An agreement has been concluded under which Mm. Cory and Sons, Ltd., will become the sole selling agents for home and foreign markets of the group of collieries recently united under the title of the Welsh Anthracite Collieries, Ltd., which own and operate a considerable number of collieries in the Welsh Anthracite area. The need for amalgamation of collieries operating close to one another in the same geological area and producing the same class of coal, was emphasised by the last Coal Commission, and would seem to be generally accepted as one of the readiest forms of self-help available to the industry from the point of view of economy in production costs.

Near East Markets

THE SMYRNA DRIED FRUIT TRADE.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended August 20 :—

The estimated arrivals of sultanias on the Smyrna market since the opening of the season are 1,440 tons, and the estimated sales to date amount to 1,170 tons. Closing price Smyrna, per cwt. c.i.f. : Type 12, 40s.; type 13, 43s.; type 14, 47s.; type 15, 50s. Types 16 and 17 are unobtainable as yet.

Sultanias : The yield is fully a fortnight late this season, and supplies reaching market are from the immediate neighbourhood and show poor development. Fine grades are not as yet available. Arrivals from the main centres of production will commence coming forward over the next ten days. The weather remains favourable for the cutting and drying of the grapes. Estimates of the yield are unchanged at 47/50,000 tons. The market has a weakening tendency.

Figs : The first arrivals have just reached the market totalling about 900 tons. Negotiations are proceeding between dealers and packers for fixing opening prices. Values will undoubtedly be established at a level which, owing to the higher exchange rates prevailing as compared with 1926, will, in foreign equivalents, be lower than last season. Information from the Meander valley points to the yield as likely to prove 15 to 20 per cent. short of last year.

FRUIT CROP PROSPECTS IN THE BALKANS.

The current weekly report of the Empire Marketing Board gives the following particulars :—

The uninterrupted period of drought experienced in Yugoslavia is reported to be causing much concern in that country. The hot winds prevalent in July did much damage to plums and a great deal of the unripe fruit has fallen from the trees. The crop is estimated to yield no more than 30,000 tons, as compared with 48,000 tons produced last year, and if the present drought continues this estimate may have to be considerably reduced. Relatively few fresh plums are exported from Yugoslavia, the bulk of the crop being used either for drying or for the manufacture of brandy.

An official report on fruit crop prospects in Roumania states that much damage was done to fruit trees and vineyards by cold weather in May, and by subsequent hail storms. The grape crop is expected to be medium, but better than usual as regards quality, and the fruit will be exported, probably to Poland and Germany. Apples and pears are expected to yield a satisfactory crop and the quantities available for export are estimated to be 7,000

tons in the case of apples, and 500 tons in the case of pears. The plum crop is stated to be somewhat below average, and an excess of 4,000 tons over home requirements is expected.

Roumania produces fair quantities of fruit; the official figures for 1925 and 1926 being as follows :—

	1925. Tons.	1926. Tons.
Plums	486,000	295,00
Apples, pears and other fruit	408,000	252,000

Exports, however, are comparatively small and consist principally of apples, pears, and prunes, which are consigned chiefly to Germany.

TRADE AND THE B.I.F.

Outlook for 1928.

It seems somewhat early to write about the 1928 British Industries Fair, and indeed in these days of a newly-found summer the very mention of an event that is to be held in far-off February is enough to send a chill down the back as it calls up visions of climatic conditions and their results which we would rather not think about until they are upon us. In actual fact, however, it is none too early, for the organisation of the Fair commences almost as soon as its predecessor is over, and by this time the details available of the demand for space readily enable an estimate of the prospects of the coming event to be made both as regards the number of exhibitors and the business done. This may seem rather in the nature of a paradox, but it has to be remembered that the firms exhibiting are doing so not merely because of the results achieved at the last Fair, but also on account of their view of the outlook for trade expansion generally. If, therefore, we find a notable increase in the demand for space we are entitled to take a moderately optimistic view of the possibilities for the next Fair.

So far the progress made in letting space has been remarkable, for space has already been applied for equal to the largest Fair that has yet been held. A few figures of the space allotted to some of the sections in London up to the present may be of interest. In the Stationery Section the space allotted is about 11,000 sq. ft., which is larger than this section was at the last Fair. In the Leather Goods Section 22,000 sq. ft. of space has been taken, and here again it is an advance on the previous figures. Then the Toys and Games Section has reached the total of almost 27,000 sq. ft., while other sections for which there has been a specially good demand for space are those devoted to Pottery, Textile and Clothing (12,000 sq. ft. this time against 10,000 sq. ft.), Wireless, Chemicals, and Sports Goods. It is evident that as far as size is concerned it is going to be a record Fair, and it is very satisfactory to know that reports from abroad are very promising with regard to the number of buyers that may be expected. The setting is in fact prepared for a very successful undertaking, and all that is required for the fulfilment of the hopes based upon it is that there should be a material improvement in the trade situation in the intervening months.

It may be hoped that one result of the Fair will be increased commercial relations with the Near Eastern markets as a whole. The Fairs in the past have always attracted a sprinkling of buyers from the Balkans and other Near Eastern centres, and the fact that there have not been more is no doubt to be attributed, among other causes, to the general economic conditions and to the failure of our traders as a whole to bring the merits of British goods sufficiently before the notice of potential customers in these regions. It would be well worth while making a special effort on this occasion to ensure the attendance of representative buyers from all the centres concerned.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, August, 30.

Though most sections of the Stock markets are experiencing the usual August quietude and dullness, quite a feature of the past week has been the activity of certain departments in the miscellaneous and industrial markets. The maintenance of the $7\frac{1}{2}$ per cent. dividend by the Calico Printers' Association and the preliminary report of the directors created a good impression, and prices of other textiles shares moved up in sympathy with those of the company concerned. The outlook for textile shares, particularly for those of undertakings concerned with the finishing trades, is considered good. Artificial silk shares are also maintaining their recent popularity. The Electrical group has also been displaying activity, following the lead set by the debentures of the English Electric Co., and newspaper shares have been prominent. Insurance shares, too, have been enjoying a steady business, buyers being in evidence in spite of the relatively low yields offered at present prices. The policy of buying and putting away insurance shares as a long term investment for capital appreciation has in the past paid well, and there are investors who are content to adopt it at the present time.

The Supply of Rubber Shares.

While the rubber share market continues more or less to mark time it is significant that most of the upward movement of a fortnight ago has been held. One of the reasons is that the supply of shares is comparatively small, a fact which, of course, tends frequently to cause considerable fluctuations and is unsatisfactory both to the public and to the Stock Exchange. It has been suggested that this difficulty might be overcome if the amalgamation process were developed. By linking up, say, half a dozen adjacent estates into one company a sufficiently large combined capital would be obtained to give the share market that flexibility and ease of dealing which can only be found when the supply of shares available in the market is sufficient to meet the demand. Apart from this direct advantage to the investor which would accrue from the amalgamation of many of the small companies which now preserve a separate entity, there has to be considered the saving in agency and other expenses, which could be heavily reduced were estates contiguous to one another to be operated by one agency. But there are vested interests in the form of agents who have, after long lean years, brought the estates into a prosperous condition and these seriously complicate the problem.

Argentine Rails.

The traditional dullness of the Stock Exchange during the holiday season is this year being partly relieved by the activity in Argentine railway securities. It is true that some attention is generally paid to Argentine rails during August, since this month represents the eve of the dividend declaration season; but this year the volume of business passing is much above normal, owing to the great prosperity of the companies during the past year. There is considerable speculation regarding the dividends to be declared shortly. The buoyancy of prices indicate that, in some cases at least, there are expectations of higher dividends. The gross traffic receipts certainly suggest that larger distributions are possible. The Central Argentine shows the largest increase in gross receipts, the figure being no less than $\pounds 1\frac{1}{2}$ millions. The market is confidently looking for an increase in the dividend from 6 per cent. to 7 per cent. Two one-half per cent. increases are expected. It is regarded as probable that the Buenos Aires and Pacific railway will raise its distribution from 7 per cent. to $7\frac{1}{2}$ per cent. and that the Buenos Aires Western will do likewise. The market view is that the Buenos Aires Great Southern dividend of 8 per cent. will be repeated. Assuming that these dividends are paid, the yields at current prices range from approximately

$\pounds 7\frac{1}{2}$ per cent. to approximately $\pounds 8$ per cent. These returns are not unattractive, but it should be remembered that the companies' earnings are liable to considerable fluctuations. It is noteworthy, however, that traffics have been fairly well maintained since July—the beginning of the current financial year.

Canadian Investments.

The visit of the Prime Minister to Canada, and especially his statement upon his return to England, have focussed attention upon the potentialities of Canada. "It's possibilities," he said, "agricultural and mineral, are, humanly speaking, unlimited." But the investor, and particularly the investor of modest resources, should consider Canada as a field for investment with due caution. Being a "new" country, there are many risks and only those with the necessary financial backing and first-hand knowledge should assume them. There are, of course, a number of Canadian securities quoted on the London Stock Exchange which are quite well known in this country. Canadian Government securities, however, offer no very special attractions to the British investor. In the main, they are either short-dated or give moderate yields. This also applies to the securities of the majority of the Provinces, while in addition these frequently have a narrow market.

Turning elsewhere, Canadian bank shares likewise give modest yields, but in this case, owing to the promising future of Canada, shareholders will almost certainly receive a windfall sooner or later. The 100 dollar shares of the Royal Bank of Canada return $\pounds 5$ 2s. per cent. and those of the Canadian Bank of Commerce $\pounds 5$ 6s. per cent. The yield given by the 100 dollar shares of the Bank of Montreal is somewhat lower, being $\pounds 4$ 16s. per cent. One of the most prosperous industrial concerns with Canadian interests is the Mond Nickel Company. Though the shares have recently appreciated—the return being $\pounds 4$ 10s. per cent.—they still appear a promising purchase.

Bulgaria is among the countries which are taking part officially in the Salonika International Fair. It is estimated that about 300 foreign firms will have stands at the Fair, the majority of them being English, French, German and Belgian.

THE YUGOSLAV WAR DEBT SETTLEMENT.

The monthly review of the Anglo-International Bank Ltd. has an interesting article on the settlement of the Yugoslav War Debt to Great Britain, from which we quote the following:—

Although the amount involved is relatively small, the settlement of a problem, which for several years has retarded the development of economic and financial co-operation between the two countries, is a result on which both the contracting parties are to be congratulated. British people will feel a quiet satisfaction that the last of the War Debts with the exception, of course, of the Russian, has now been settled, while the Yugoslavs should rejoice not only because they have obtained a settlement which is far more favourable to them than at one time seemed possible, but still more because an obstacle has been removed which constituted a potential cause of ill-will between London and Belgrade. It is no secret that the delay which has elapsed in the settlement of this vexatious problem has adversely affected Yugoslav credit in this country and hitherto has kept the London market closed to Yugoslav loans.

For obvious reasons the British Press has only a limited amount of space to devote to Yugoslavia. Such references to the new Kingdom as appear from time to time are usually devoted to the dissensions between the Serbs and the Croats and to the all-too-frequent party squabbles which form a somewhat disquieting feature of the political life of Yugoslavia. As a consequence, the very solid progress which the country has achieved during the last eight years has not received the notice which it deserves. It must be admitted that the administrative machinery of the new State has revealed obvious weaknesses, and that to the foreigner the constant changes of government are as bewildering as they are disturbing to his confidence in the stability of the country. It is easy, too, to point out the difference of religion and outlook between Serb and Croat and Slovene, the lack of expert economists, the absence of the spirit of compromise, and the long road which has still to be travelled before the internal consolidation of the country can be achieved. These weaknesses are patent to all and cannot be denied. We believe, however, that in the mind of the average Englishman they have been greatly exaggerated. . . . When one looks back on the economic difficulties with which the new State was confronted after the war, it must be admitted that in the work of reconstruction the Yugoslavs have achieved a success which far outweighs the mistakes both of omission and of commission. With smaller financial resources than countries like Czechoslovakia and Roumania, Yugoslavia has succeeded in establishing budgetary equilibrium. Her financial policy, too, in spite of certain mistakes, has been marked by a moderation and a sense of responsibility which augur well for the future. For the last three years there has been a favourable trade balance, and, in spite of a general economic crisis due, partly, to the too drastic deflation of the dinar and, partly, to the system of high tariffs and the desire for economic self-sufficiency which are the bane of the Central European economic system, exports are

increasing and, in view of the undeveloped state of the country's resources, are likely to increase steadily for many years. The country, indeed, has great and varied agricultural resources, many of which are only in a primitive state of development. Its peoples, too, are vigorous and frugal and possess in a large measure the will to succeed and to make good which is half the battle of success. Provided that she can overcome those particularist tendencies which have hitherto made a dividing line between Serb and Croat and Slovene there is no reason why a consolidated Yugoslavia should not prosper exceedingly and become one of the chief factors of peace and stability in Central Europe.

With the settlement of the War debt a new era opens in Anglo-Yugoslav relations. For her economic development Yugoslavia requires foreign capital, and it is a natural consequence of the debt agreement that she should now begin to look to London for these credits. Quite recently, the Administration of the Tobacco Monopoly received the necessary authorization for the placing of a foreign loan, and it is known, too, that several Yugoslav municipalities, including Zagreb and Belgrade, are also anxious to raise funds abroad. There is no reason why these needs, under certain conditions, should not be satisfied in London. Indeed, it is to be hoped that one result of the debt settlement will be to attract more attention in England to the possibilities of Yugoslavia. It is a country which merits far more study than it has ever received in this country, both on account of the commercial advantages which it offers and on account of its position in what is perhaps the zone most dangerous to the peace of Europe.

On the other hand, as sincere well-wishers for the future prosperity of Yugoslavia, we hope that the Yugoslav Government will not now be tempted to embark on an ill-considered policy of borrowing. Indeed, before any further borrowing is contemplated, it is essential that the Yugoslav Government should, first of all, lay down the lines on which it proposes to achieve that financial and economic stabilisation which is essential to the economic recovery of any country.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at June 30, 1927, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share Capital (300,000 fully paid shares of £10 each), £2,925,000. British Consular Reports

III. ROUMANIA.

(Continued from page 253.)

The following are further extracts from the report of Mr. R. J. E. Humphreys, Commercial Secretary to H.M. Legation, Bucharest, on the economic and industrial conditions of Roumania in 1926:—

Transport.

The need for adequate transport facilities in Roumania still remains an acute problem, and little has been done to solve it or to improve the conditions described in last year's report. A certain degree of independence was granted to the Railway Administration by the late Government towards the end of 1925 by their constitution as a commercial enterprise with State participation (under the Law for the Commercialisation of State Enterprises), with the aim of detaching the railways from any political influence and of giving them a continuity of aim by making their officials permanent. In the beginning of 1927 the Government decided to bring the railways again more closely under direct State control, and in February of this year a law was passed entitled "Law for the Modification of the Law Governing the Organisation and Exploitation of the Railways." By this law an Under-Secretaryship of State for Railways was created, and to the Under-Secretary were transferred the powers formerly vested in the Director General of Railways. Another innovation was introduced by this law, namely, that two foreign persons might become members of the board of administration of the railways, should the necessity arise in case of foreign financial assistance being obtained. That such foreign help is required is admitted both officially and privately. During the past year the existing lines and rolling stock have been maintained without any actual retrograde movement, though insufficient for the needs of import, export and internal trade requirements. The passenger traffic showed some improvement, both as to punctuality and comfort.

Shipping.

Last year the tonnage in the Danube ports, according to the statement of H.M. Consul General at Galatz, was the largest since the war, and would have been larger still if it had not been for the high freights brought about by the coal stoppage. When the railway system is developed to feed the ports, experts are inclined to believe that Galatz and Braila will again assume the position they held prior to the war.

The creation of free zones referred to in last year's report, which has again been postponed, will be a contributory factor, when they are finally instituted.

The tonnage clearing from the Danube ports in 1926, compared with previous years, was:—

Tons.	Tons.	Tons.	Tons.
1923.	1924.	1925.	1926.
1,512,791	1,382,498	1,403,317	1,662,932

As regards the nationality of ships entered and cleared from the Danube, it is noticeable that Greece has trebled its tonnage since 1923, and for 1926 was over double that of Great Britain and more than Great Britain and Italy combined. H.M. Consul General remarks that the principal causes of the increase of Greek shipping are the lower wages paid to Greek crews and the fact that a number of Greek ships are old ones acquired at low prices. An endeavour is being made by Greek owners to make the Piræus a chartering centre to avoid the extra commission which must be paid if the ship is fixed in London. The slight decrease in British shipping may be attributed to the fact that British vessels were more profitably occupied elsewhere rather than to a lack of demand.

Shipping from the sea-port of Constantza for the year 1926 constituted a record, and shows a large increase of both coastal and foreign trade in comparison with previous years.

Aviation.

No further aerial navigation lines were opened for either passenger or goods traffic during the last 12 months. At present the only company in existence dealing with such traffic is the Compagnie Internationale de Navigation Aérienne, which runs a daily regular service from April to October between Bucharest and Paris and Constantinople, connecting Belgrade, Budapest, Vienna and Prague with other international services.

A TURCO-BULGARIAN COMMERCIAL TREATY.

(From Our Sofia Correspondent.)

The Turco-Bulgarian negotiations for the conclusion of a commercial treaty are progressing satisfactorily in spite of some unavoidable difficulties. On both sides concessions inspired by a real spirit of conciliation have been mutually accorded in regard to Turkish imports into Bulgaria and Bulgarian imports into Turkey. It is expected that the commercial treaty will shortly be signed.

Johnson and Phillips, London, have received an order for over 10,000 metres of telephone cable for extensions at Medina Exchange, from the Egyptian Government.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson, in their report dated August 24, state :—

Egyptian Futures.—Sakel Contract.—The tendency in this market remains unaltered from last week; values have again appreciated, but in our opinion the movement has been entirely due to further appreciation in the American markets. Operations have been almost exclusively confined to the speculative element, thus it is not surprising that the undertone remains heavy, and should anything crop up to undermine confidence, prevailing "bullish" sentiment both here and in Alexandria would receive a sharp check. In some quarters it is believed that the trade are fighting the advance, but we can hardly subscribe to this view, inasmuch as it was quite apparent that spinners did a large business during June and part of July which was duly covered in actual at that time. Owing to this, they are now in a position to watch the course of the market for some little time, and quite wisely are not entering into commitments until they have further yarn orders in hand. Recent crop reports from Egypt report normal progress, and increasing emphasis on the other side is beginning to be laid on the fact that consumers, in both this country and abroad, have placed so few new crop orders; one explanation of this is probably the fact that fine spinning mills have now two distinct crops to operate in, Egyptian Sakels, which are marketed from September onwards, and Sudan Sakels which begin to be offered during the early spring and throughout the summer months. Large quantities of the latter are now going forward to the mills and the stock on offer here is still ample for requirements for some little way ahead. "Bullish" sentiments in Alexandria appear to be more prevalent than at this side, and, as mentioned previously, whenever the November position advances within measurable distance of 40 dollars, either hedge selling or long liquidation effectively bars further appreciation and causes prices to react. Latterly there has been some disposition for our market to lose some of its premium over the American contract, and should trade support from the Egyptian section be withheld much longer a further narrowing would appear extremely probable. To conclude, we still consider that extreme caution is called for at the present juncture. On the one hand, the market is vulnerable to speculative manipulation owing to fears of further adverse American crop news and also to possibilities of detrimental reports from Egypt at this very critical period of the season; against this there is not sufficient evidence of legitimate trade support in the way of general mill buying to encourage views of any permanent further appreciation in values.

Upper Contract.—This market continues to attract a certain amount of speculative activity, and with further encouragement from the recent appreciation in American values prices have advanced 57 to 60 points on the week. Trade support continues to be moderate and crop reports have again been uniformly of a favourable character. With further poor reports from America regarding the staple position and the continued appreciation of the basis of outside growths, the present level of our contract appears to be justified. We remain of the opinion that the outlook continues to favour those operating on the long side, and on this account advise purchases whenever the market shows an easing tendency.

Egyptian Spot.—The market this week has displayed a more decided tendency, and more business has been done. The strength of the American markets has entirely dominated the situation and the general inquiry for spot cotton has broadened slightly as confidence has shown signs of returning. Opinions are by no means one-sided, however, and a big percentage of spinners are still very much against the market and have adopted the attitude

that present prices are unwarranted, and that the "bullish" crop reports emanating from America are largely without foundation. The inquiry for low and inferior cotton, from 4d. to 12d., has once again been a very noticeable feature, and a fair business has resulted. Until the last few days Sakel had been neglected, and it must be confessed that the prices asked by shippers are not such as are likely to attract spinners at the present juncture. Latterly, however, some improvement in the inquiry has been noticeable, chiefly for cotton F.G.F. to Good in class, but we doubt if much business has resulted as yet.

Uppers at round about "pass" price contracts have been in moderate request, and much searching of stocks has been in evidence for cotton at from 12d. to 13d., a quality which has now apparently been exhausted. Pillion at from 15½d. to 17d. has been asked for occasionally, but sales are difficult to trace. Sudan Sakel cotton has been in improved request and rather more business has resulted. Tokar Sakel has met with an occasional inquiry and about 50 bales have changed hands, we understand, at 22d. A large inquiry for American Seed Sudan has been witnessed and has been divided into two definite classes, 125 to 225 on, and 300 to 400 on.

C.i.f. business has been stagnant. Forwardings to spinners for the week ending the 19th were returned at 5,209 bales Egyptians and 3,594 bales Sudan. Estimated sales for the week, 1,400 bales Egyptians and 3,800 bales Sudan. Quotations of Sakel have been advanced 35 points and those of Upper 40 points. F.G.F. Sakel to-day, 20.10d. F.G.F. Upper to-day, 15.65d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended August 18 state :—

Since our last report the futures market has been quieter but the tendency has kept very firm. The week's summary of price movement is as follows :—Sakellaridis : November, 38.68 dollars, 0.53 dollars up; January, 38.25 dollars, 0.37 dollars up. Ashmouni : August, 27.02 dollars, 0.41 dollars down; October, 27.82 dollars, 0.36 dollars down; December, 28.00 dollars, 0.33 dollars down; February, 28.15 dollars, 0.33 dollars down.

Sakel.—We have had a series of firm markets but much less active than those of last week. A large proportion of the transactions have been of professional character. There has been some profit taking liquidation, but on the other hand, on any reaction some new small speculative buying took place. The trade has not taken much interest in the market, principally because the demand from abroad continues to be rather poor. We might add, however, that the demand might have been better if the export houses were more liberal in their offers.

The selection of Sakel on the Minet el Bassal market may be termed deplorable. We do not think that many export houses at present are offering Sakel for near shipments.

The widening of the difference between Sakel and Ashmouni is due to straddling on a fairly large scale between these two varieties. The favourite operation of the local operators, especially those of limited means, has been of late the purchase of Novembers against sales of October and there must be thousands of kantars straddles open of this nature.

Uppers.—The market for this variety has been quiet and slightly weaker than the Sakel market, due to the straddles operations alluded to above. The demand from abroad has been moderate.

The season will close with the statistical position better than what was generally anticipated. We attribute this to the fact that when prices touched rather low levels

early in the season spinners' purchases were heavier than generally believed; these purchases were for shipment spread over the whole season. We shall probably finish the season with a carryover in Alexandria of about 2,000,000 kantars, and very little up country.

The week's receipts amount to 13,792 Kantars against exports 61,934 Kantars; the stock in Alexandria stands at 2,164,655 Kantars.

Spot: Minet el Bassal have been very quiet this week and we have had dull markets. Sales amount to about 5,000 bales, of which we estimate 2,600 bales Sakellaridis, 2,300 bales Ashmouni and Zagora, 100 bales Pilion and a few bales of White. The spot situation is as last week, the Sakel selection being extremely poor. This restricts exporters' offers to spinners to the absolute minimum, as it is extremely difficult to fill engagements entered into, even if the price be a very full one.

Sakellaridis: A very moderate business has transpired, though all styles have been inquired for, and low grades have been in very fair request. With the exception of Good Fair, which is noticeably dearer, spot differences show very little difference.

Ashmouni and Zagora: Have been in fair demand and all styles have changed hands. Spot differences are firm and inclined to harden. The first lots of new crop cotton were sold at about 3.- dollars on October contracts,

the cotton being of fairly good staple and nice grade.

Pilion: A small business has been done. Spot differences are steady without much change.

Other Varieties: Are neglected and no business is reported except a few bales of White.

Up-country: In Upper Egypt, work has commenced and the arrivals at the factories, although small, are regular. Some fifty bales of new crop cotton have already arrived in Alexandria. In Lower Egypt, work has not yet commenced, but it will not be long before it does because the crop in Lower Egypt this year is slightly in advance of that of last year. In spite of the high levels of price as compared to last year, the grower both in Lower and Upper Egypt does not seem very anxious to sell and fix his cotton; last week, some of the large growers of Upper Egypt fixed some thousands of kantars—this week, fixations, we think, have been negligible.

Crop, 1927: The weather has continued to be very warm and this is not altogether to the benefit of the plant. A slightly cooler temperature would permit of a better development of the bolls. Apart from this, the crop progress is satisfactory. Pink boll worm attack has increased in some districts but, in general, the percentage of attack bolls is only equal to, or even less, than last year at the same time. Latest news from Upper Egypt on the state of the crop are slightly less satisfactory.

Notes of the Week.

The Cyprus Tribute.

A curiously unedifying chapter in British colonial policy has been closed with the decision of the British Government to cancel the payment of the share of the Turkish tribute which has hitherto been borne by Cyprus. For forty-nine years the Island has been under British administration, and for forty-seven of those years from the date when a formal plea for the removal or at least lightening of the burden was first made by the High Commissioner of the day, Sir Robert Biddulph, in June 1880, it can be said that the tribute has found no apologists outside the British Cabinet and no convincing attempt from within that body to justify it. Twenty years ago, when Mr. Winston Churchill as Under-Secretary of State for the Colonies visited Cyprus, he pointed out in reply to a Memorial on the subject that the tribute had a political as well as a financial aspect, and that from a political point of view payment could cease only with the abrogation of the Treaty by which the occupation of the Island is secured, and at that time His Majesty's Government did not contemplate any abrogation of the Treaty. This latter step was taken in 1914, but still thirteen years had to elapse before the wholly unjustifiable burden imposed upon the Island for nearly half a century was removed. With the formal constitution of Cyprus as a Crown Colony in 1925 the anomaly of the tribute became still more pronounced. It must have been, therefore, with a peculiar satisfaction that the present Governor, Sir Ronald Storrs, who since his appointment has earnestly pressed for the removal of the handicap to the development of Cyprus, was able on August 31 to announce to the Legislative Council in special session that the payment of the tribute, which has amounted to £42,000 annually, was to be remitted, on condition that Cyprus contributed £10,000 a year towards Imperial defence. The latter payment, it goes without saying, can be justified, and Cyprus may, as a point of honour, be anxious to make it; but we could have wished that in all the circumstances the tribute had been remitted unconditionally, and that the modest payment towards Imperial defence had been made a matter of subsequent settlement.

The History of the Tribute.

When in 1878 the Sultan of Turkey assigned the Island of Cyprus to be occupied and administered by Great

Britain the latter agreed to "pay to the Porte whatever is the present excess of revenue over expenditure in the island; this excess to be calculated upon and determined by the average of the last five years." The amount finally agreed upon under this clause was a few shillings and pence short of £92,800, and the first anomaly in connexion with the so-called tribute is that the British Government of the day should have decided that this sum was to be a permanent charge on the revenues of the Island. It is true that the first estimate of revenue and expenditure made after the Occupation showed a surplus adequate for the payment of the sum due to the Porte; but the budget took into account merely the bare cost of administration and made no allowance for more efficient government and the development of the Island. Before long it was found that the comfortable surplus of the first estimate was not forthcoming, and the British Parliament had to vote each year as grants-in-aid varying sums to meet the deficit when the tribute had been paid. For thirty years these sums averaged approximately £30,000 annually. The tribute, however, instead of being paid to the Porte, was utilised to pay the shareholders of the Ottoman Loan of 1855, guaranteed by Great Britain and France, and the balance was accumulated in a separate fund, used, among other purposes to which it was put, at times to pay the ransom of British subjects captured by brigands in Turkish territory. Against the contention of the British Government that it was bound by the Cyprus Convention to pay the tribute from Cyprus revenues, it has been very shrewdly urged that the payment of the surplus fixed at £92,000 was an obligation placed on Great Britain and not on Cyprus towards the Porte; but perhaps the gravest indictment against the burden was that it produced the anomalous state of affairs by which an excess of expenditure over revenue in Cyprus laid a burden on the British taxpayer, and not on Cyprus, so that "it was the manifold interest of the Cypriot population to resist any increase of taxation and to put forward demands for expenditure on every conceivable object." In 1907 the fluctuating grants-in-aid from the British Treasury were fixed at £50,000, and the tribute was thus reduced to the fixed sum of £42,000. Cyprus has benefited largely by British administration, and the annual payment has not entailed on budgets balancing at over half a million pounds sterling the same burden as it did when the total

revenue was little more than double the amount of the tribute. The fact remains, however, that since 1878 Cyprus has paid out over four million pounds, receiving as grants-in-aid less than two million, and that the Island has suffered from lack of funds to defray the cost of many enterprises that should have been carried out under enlightened government and that could have been undertaken, if the two million pounds had been available. A no less important consideration that ought to have led to an earlier cancellation of the tribute is the fact that the payment has constituted a more or less legitimate grievance to those Islanders who affect to believe that they would be better off under Greek rule.

The League of Nations.

Although the present session of the Council of the League of Nations does not include on its agenda paper any subject of major European importance, questions will come up before it which are exercising the minds of several Near Eastern States. The most important of these is, undoubtedly, the dispute between Roumania and Hungary regarding the rights of Magyar "optants" from Transylvania whose property has been dealt with under the Roumanian Agrarian Law. The dispute is too complicated to allow any rough-and-ready judgment to be passed upon it. The Magyar landowners contend that as they opted for Hungarian nationality, their property in Transylvania should be treated as the property of foreigners and, therefore, that they should receive compensation in full. Roumania, however, is not willing to differentiate between the property of her own subjects, who are receiving very little compensation for their expropriated lands, and the estates of those who have chosen to avail themselves of their Treaty rights to remain Hungarians. A weakness in Roumania's argument is that elsewhere she has given full compensation to Allied subjects. Under the terms of the Treaty of Trianon disputes of this nature were to be referred to a Mixed Arbitral Tribunal; but the Roumanian Government, being dissatisfied with the proceedings of the body, withdrew its representative, and the Tribunal ceased to perform its functions. How difficult the application of Agrarian reform was in Transylvania may be gauged from the fact that the Roumanian element was held to constitute 63 per cent. of the total rural population, but held only 24 per cent. of the land. Large estates on the other hand, which were naturally in Magyar hands, accounted for 37 per cent. of the agricultural property. Of those who were found to be entitled to share in the distribution of land 396,000 were Roumanians and 134,000 Magyars, Germans or of other nationalities. In these circumstances it was almost inevitable that, unless the Roumanian authorities charged with the distribution, associated with themselves representatives of the Magyar population and could count upon their acquiescence in the equity of the distribution, a fruitful source of subsequent grievances should be created. Unfortunately at that period no Succession State appreciated the value of securing the good will and co-operation of the minorities in its midst. The problem is, therefore, complicated by its bearing on the Magyars who remain on Roumanian soil.

The National Press Conference.

One of the first matters submitted to the Council of the League of Nations last week was the report of the World Conference of Press Experts which had met in Geneva shortly before, at the instance of the League itself. Notable among the resolutions of the Conference was one on the subject of "moral disarmament" in which an appeal was made to the Press of the world to contribute by every means in its power to the consolidation of peace by combating all hatred between nationalities and classes. The same idea appeared in the preamble of the report which referred to the great and responsible mission of the Press "of accurately and conscientiously informing world public opinion and hence of contributing directly

to the preservation of peace and the advancement of civilisation." As representatives of the Near Eastern Press were present at the Conference—an "incident" between a Hungarian and a Roumanian Editor was reported—it is to be hoped that the resolutions were not only cordially endorsed by all of them, but will also be printed daily in a prominent position in each newspaper. In countries where politics loom large in the daily life of the people, it is inevitable that the Press should concern itself largely with political and international affairs. It will hardly be denied by the Press of the Balkan States itself that with some few exceptions their newspapers contain more inflammable material than can be found in the same number of square centimetres of paper in any part of the world. It is only necessary to recall the recriminations between the different countries that form the staple provision for the majority of newspapers, and the unfailing regularity with which neighbouring countries are credited with outbreaks and revolutions that have not taken place, to understand how valuable would be the carrying out into practice of the eminently praiseworthy resolutions of the World Press Conference. In fairness, however, to the Balkan Press it must be admitted that signs of steady improvement are noticeable; but much headway has still to be made in this direction before a Balkan federation can hope to be established broad-based upon the peoples' will.

Turkey's General Election.

That a general election should partake of the nature of a private selection is Turkey's own affair, and abroad it will be noted only as an interesting feature in the process of "westernization" to which the Republic stands committed. Ghazi Mustapha Kemal Pasha may, indeed, be formulating a better system of statecraft than he is aware. No one can dispute that the work of a Parliament is, or ought to be, the most important business of any that can be devised; and for this reason it might be hard to justify the entrusting of the appointment of those who are to carry out the work to miscellaneous collections of people who have little appreciation of the duties and responsibilities entailed. Here let it be said in passing that Turkey is still very young in democratic aptitude. The Ghazi, accordingly, as the head of that great enterprise known as the Turkish Republic, has taken upon himself to select his co-adjutors of the Grand National Assembly. There are 315 seats. No less than 1,100 people were eager to help him; and from these he selected exactly 315, who have been allowed to submit themselves to the secondary electorate for election as deputies. Although there has been some talk of a Greek inhabitant of Constantinople standing as an independent candidate, the suggestion does not seem to have been taken seriously in official circles, and it is not clear that any machinery will be found to exist at this election for the candidature of unofficial candidates. In these circumstances the President's 315 stand a good chance of becoming deputies and the new Grand National Assembly will comprise only members of the Popular Party. Liberal opinion in the West may be shocked at the Ghazi's adaptation of the electoral principle, but the experiment will be watched with interest. If such a thing as resentment is known in Turkey to-day, it might be looked for in the *Union des Femmes Turques*, which has added to its many slogans that of "Votes for Women." The precise value of the political vote under existing conditions in Turkey must be rather difficult to explain; but if the women's wish cannot be immediately granted, it would be a chivalrous act on the part of their menfolk to allow them to act as their proxies when the President's next selection has to be elected.

New Persia.

The appearance in Persia of a new political party is an event the importance of which it is easy either to exaggerate or to minimise. Observers would do well, however, not to suppose that the originators of the *Irani Noh* have been inspired by the example of Signor Mussolini and his

followers, although they are comprehensively said to be maintaining "Fascist" principles. As in some other countries, "Fascist" principles are held in Persia to be simply and solely patriotic principles, principles, that is, which shall conserve that in the country which ought to be conserved and strenuously oppose any subversive movement or foreign design upon the integrity of Persia. In all probability such a party as the *Irani Noh* could obtain very considerable support from sections of the existing parties; and no doubt it would claim the support of the best sections therein. The quite credible report that the Shah is aware of the existence of this new formation is almost certainly an Oriental mode of expressing his approval of it, and it will be instructive to see to how great a force in the internal politics of Persia this new organisation attains. One has heard the wish expressed by Iraqis that a somewhat similar organisation might be formed in Iraq, but that desire possibly springs from the fact that the Majlis in Baghdad is in a more elementary state than that in Teheran. So far as can be gathered, the *Irani Noh* is not, as might perhaps be presumed from its "Fascist" claims, an anti-Parliamentary organisation, whereas in Iraq there is on the part of some educated Arabs distinct impatience with the slow-moving Parliament. In Turkey, of course, these desires are given the freest rein by the simple process of abolishing the Opposition. They order things better, in fact, at Angora, where there already exists all the machinery by which the Fascisti of Italy and the *Irani Noh* of Persia hope to achieve their ends. The Turkish elections debase the very name of Parliament, but they ensure the continuity of the Turkish Revolution, and of what argument is theory against practice?

Persian Problems.

The state of affairs in Persia is, of course, in no way comparable with that in Turkey, and the apparent similarity in the approach to complete independence of the two countries respectively is largely superficial. Persia still relies considerably upon foreign advice, and in this connexion it may be stated that there are those who are anxious not to see too long a hiatus between the departure of Dr. Millspaugh and the appointment of another Western financial adviser. In Persia itself it is believed that high authority favours the appointment of a Persian to succeed the American Administrator General; but uncertainty prevails over how such an appointment would be received by other Americans now serving in Persia. Another matter which still is in the problematical stage relates to the abrogation of Capitulations, notice of which the Persian Government has already given. If the moment be adjudged ripe, the occasion obviously lies at hand for a gesture on the part of Great Britain, for if she were to consent to forgo capitulatory privileges, other nations would surely follow her example. Turning to the aspect of internal affairs in Persia, we are pleased to note that the Shah has recently been to Tabriz, where no doubt he has thoroughly examined the troubles—and the cause of them—recently reported along the Turco-Persian frontier.

Shakespeare and Persia.

It was a happy thought to appoint to London, as representative of the Shah of Persia, a man who has been responsible for the making known of Shakespeare to the Persian people. Something would be lacking in their sense of the fitness of things if the British people did not congratulate at once Hovhannes Khan Mossaed and themselves upon His Excellency's appointment as Persian Minister in London. Admiration on the part of Hovhannes Khan for British thought and character is of long standing—he was, for example, present at the Jubilee of Queen Victoria in 1887—and a sensible *rapprochement* between the Persian and British peoples is one of the things which may justifiably be expected from his representation of Persia in Great Britain. It

would, indeed, be a fitting augury if during his tenure of office the British Government could see its way to agree to the abolition of Capitulations in Persia, as, for instance, it has agreed to their abolition in Turkey, and so make it possible for the people who produced Hafiz and Sa'di and Jalal ud-Din Rumi to speak on equal terms with the people who produced Shakespeare.

The Soviets and Arabia.

It is sometimes possible to take the Soviets too seriously, but we do not imagine that any feeling of profound despondency will invade the breasts of our Eastern merchants when they read that the authorities at Moscow have decided "to establish a regular steamer service between Odessa and the coast of Arabia." The history of Russia's recent connexion with Arabia is, however, worth recording. A Soviet Consulate-General was established in Jidda in 1923, Russia being represented in the country of ex-King Husain by Tatar Communists, under the leadership of Bakin-Hakimoff, a locksmith who assumed the title of "Hakim-Khan"—in order, presumably, to impress a people attached to patriarchal institutions. The real work of the Consulate appears, however, to have been done by one Naoum Belkine, who was then Secretary. For a year or two this Mission made strenuous endeavours to undertake the enormously heavy work of protecting Russian interests in the Hijaz. Upon the arrival of Sultan Ibn Saoud, the Bolshevik Mission betook itself to Eritrea; but later it was recognised by the leader of the Wahhabis, and has now the rank of a Legation. It would seem that the excellent relations subsisting between King Ibn Saoud and the British ("Imperialist") Government have been a weight upon the minds of such Tatars as Naoum Belkine and Moise Askerold, and Moscow has been consulted to see what may be done to undermine such a sorry state of affairs. Belkine is reported to have delivered in Moscow a speech to the Chamber of Commerce on commercial prospects with the Hijaz, the Yaman, Asir, Najd and Eritrea, emphasising the ease with which Soviet exports, such as sugar, flour, matches, soap, petroleum, potatoes, barley, crockery and so on, might find markets in these countries. To this commercial campaign there would be a political side, comprising a check to "British Imperialist plans" in Arabia, to a Pan-Arabian Federation, and to an Hijazi-Egyptian *rapprochement*. Thus there can be no attempt to realise "world-interests," especially if those interests be promoted by Mussalmans themselves, if Bolshevik Russia is not to be the gainer thereby.

TRIANON AND TRY ANON.

As there are more ways of killing a cat than by choking it with cream, so there may be more, and possibly better, ways of securing the revision of a treaty than by decrying those whose consent is required for its revision. This method, however, has been selected in a notable instance for the laudable purpose of righting what are held to be the wrongs done by the Treaty of Trianon. By this Treaty the Allied Powers carried so far their resolve to break up the former rule of the Magyars over alien people that they allowed the very evils which they desired to eliminate by the disintegration of the Austro-Hungarian Empire to be reproduced in the new map of Europe. In Central and South-Eastern Europe nationalities so overlap in many parts that no frontiers can be drawn which would prevent the incorporation of alien populations in the different States. The Post-War settlement imposed too great a strain on the tired men who were responsible for it. By common consent at the time the principle of self-determination had become severely strained when the frontiers of the Succession States were fixed. Whether the round figures given to-day—of "compact masses" of Magyars just across the frontier of Hungary, one million in Czechoslovakia, six hundred thousand in Roumania, four hundred thousand in Yugoslavia—would bear investigation is, perhaps, immaterial. What cannot be gainsaid is that in this part of Europe there is at present a considerable amount of unrest; the underlying reasons are varied, political, racial, and, above all, economic. In a more perfect world the first concern of the new States, profiting by the grim experience of Austria-Hungary, would have been to lay on a sure foundation the peace and contentment of their minority populations. In actual practice they adopted the opposite course. Minorities were regarded as actual or potential enemies, and the mistaken attempt was made to drag them into due submissiveness. If Hungary's neighbours have no reason to be pleased with the attitude of their subjects of Magyar origin, they themselves cannot be held altogether free from blame, although the fault is not entirely theirs. Hungary, it has to be acknowledged, did not prove an easy or comfortable neighbour after the War. Possibly she was given credit for a greater capacity for mischief than she actually possessed. The three Powers of the Little Entente paid her the compliment of combining for their mutual protection against a State much smaller than any one of them, and in this way the Magyars may have been encouraged to think that the time had not passed when they could regard themselves as the superiors of the races around them.

To-day the practical consideration, if the existence of the unrest be granted, is to devise means which will have some chance of bringing about a happier state of affairs in Central Europe. The mere denunciation of Czechoslovakia will do little good, and few people will be found to entertain much hope of securing the consent of the signatories to the Treaty of Trianon for its revision against the determined opposition of Czechoslovakia, Roumania and Yugoslavia. Failing that consent, war would seem to be the only means of tearing up the Treaty. According to Lord Rothermere's diagnosis in the *Daily Mail* the disappearance of Czechoslovakia by sudden disintegration from within is always a possibility, so antagonistic to each other are the mixed elements of which it is compounded. Now this may be a misfortune for Czechoslovakia; but it does not necessarily follow that the country is "the powder-magazine of Europe," if by that is meant that a violent solution of her troubles must necessarily involve the break-up of the peace of Europe. The latter, we prefer to think, has too many faithful watch-dogs not to be able to localise any domestic upheaval; and if things are as bad in Czechoslovakia as they are represented, a local explosion might clear the air for Hungary and for various minority groups. In these circumstances the denunciation of the Treaty of Trianon is likely to miss its mark. The problem of minorities in the States of Central Europe is admittedly a difficult one; but any improvement in their lot will come more effectually from a changed outlook on the part of those in whose power they are than as a result of fierce denunciation by foreigners. To those who worked for the dismemberment of the Austro-Hungarian Empire it must be a keen disappointment to find that the last state of that part of Europe is no better than the first. At least they should try to profit by their experience and refrain from rushing to yet another extreme, which may only shift these so-called "Alsace-Lorraines" to other parts of the map.

Czechoslovakia, it will be noted, is the main villain of the piece in the campaign against the Treaty of Trianon. If there is any truth in the indictment, it becomes the more unfortunate that Roumania and Yugoslavia, whose real interests lie in South-Eastern rather than in Central Europe, should, as a result of the Little Entente, be identified with a State on which any unrest there may be in that part of the world is likely to settle. Roumania has her own problems in Transylvania; but there has been ground for supposing that with the passage of time these would find their own solution. Both in Roumania and in Yugoslavia the mistakes that were made in the earlier days after the War have gained recognition, and there has been a sensible improvement in administrative efficiency and fair play. In this direction, it would seem, lies the best hope for the future. To impose treaty revision at this stage, when racial bitternesses have not had time to subside, would only inflame national passions afresh and lead to further injustices, even though their incidence might be changed. A long time must elapse before the impartial and dispassionate administration of the West can become acclimatised in the Eastern half of Europe. Shortcomings may justifiably be pointed out; but the remedies must be left to the nations themselves to apply. Self-respect and self-interest will prove strong incentives to efficient and impartial administration; the more so as the different States find that their economic development will depend in increasing measure on the degree of confidence that their unity and stability inspire abroad.

The Near and Middle East

From Our Own Correspondents.

Cairo, August 28.

Zaghloul Pasha's Death.

The death of Zaghloul Pasha this week has overshadowed every local happening. For years politicians and others have speculated on what would happen when the Wafd leader did die, without allowing that form of conjecture ever to create an impression that the old veteran's disappearance was imminent, or even inevitable. For a decade Zaghloul Pasha's health has been decidedly unsatisfactory. Diabetes and chest troubles, resulting almost every winter in severe attacks of bronchitis have, however, proved powerless to do more than restrict his activities for comparatively short periods and after every attack he has emerged seeming as strong and as mentally alert as ever. When I last saw him a few weeks ago I could not observe that in any other respect than looking more aged generally he appeared to be any nearer the grave than he had done five or six years earlier. His astonishing powers of resistance to disease had, indeed, become proverbial, and there had unconsciously grown up amongst us a feeling that Zaghloul would never die; when his time came he would, like the legendary old soldier, simply fade away.

In the end death made no exception in his favour. His final illness was mercifully short, and one of the remarkable features of his passing was that, outside his doctors, practically nobody knew that the old man's life was in danger until it was practically done. On Wednesday (August 17) whilst at his estate at Mesguid Wassef Zaghloul Pasha complained of pain in his ear and a swelling appeared, accompanied by a temperature which reached 102.8 degrees F. Treatment was given and both symptoms disappeared, to give place to what was at first thought to be eczema, but was later found to be erysipelas. The doctors considered that treatment could best be continued in Cairo, and thither Zaghloul Pasha was brought on Friday, by steamer, standing the journey very well. He complained somewhat about this transfer, saying that the air was much better at Mesguid Wassef, and he would have preferred to stay there. But on Saturday and Sunday he was much better, on the latter day being almost normal. But during the night he suffered from colic and on Monday morning was clearly seriously ill, his temperature having risen again to 104 degrees F. During Monday he continued in the same state, but the doctors did not regard his condition as by any means hopeless and the public was not allowed to know that he was even dangerously ill. Just before 8 a.m. on Tuesday Madame Zaghloul entered his room and asked how he was, to which he replied, "I'm finished." She answered, "No, no, you're getting on well," to which he replied again, "No, I can feel that I'm finished." These were the last words he spoke, for he fell into a coma from which he did not revive, his temperature steadily rising, although his pulse and heart remained strong and normal to the end, which came

at 9.55 p.m. on Tuesday.

By midday on Tuesday rumours of his condition began to spread and from that time anxious crowds gathered in the neighbourhood of his house, waiting for news. When his death was announced there was an outburst of weeping among the waiting crowds, which included many women, and the visits of sympathy which, in the East, begin immediately on such occasions, continued all through the night. It must have been a terrible ordeal for Madame Zaghloul to receive visitors immediately after the passing of her husband, but it was agreed by all who saw her that she played her hard rôle with the same conspicuous courage as has always characterised her actions.

The Funeral.

The funeral on the following day was, of course, a gigantic affair, which entirely paralysed the normal life of the city. The procession was estimated to number twenty-five thousand persons, while another two hundred thousand odd lined the streets. Control of such vast crowds proved almost beyond the powers of the police. Many of the spectators wished to have the honour of carrying their beloved Saad to his last resting place and with this object a rush was made whilst the procession was forming up near the "House of the Nation," in an attempt to wrest the coffin from the gun carriage bearing it and hoist it instead on willing shoulders. The police cordon was broken and some two thousand persons poured through before the movement could be checked. The military escort prevented the crowd from getting back through the cordon to the footpaths whence they had come and they had perforce to be allowed to form up in a rather disorderly howling and shrieking mob immediately behind the gun carriage, from which the representatives of King Fuad and the other principal mourners were separated by something like a quarter of a mile. Apart from this rather disorderly incident everything passed off satisfactorily, in spite of the great heat, which caused many minor casualties and kept the first-aid men busy all the afternoon attending to persons who had fainted.

The Political Situation.

Politicians, public and Press have as yet hardly sufficiently recovered from the shock of Zaghloul Pasha's death to speculate regarding its probable effect on the local political situation. That the consequences will be great is obvious, since the name and prestige of Zaghloul have for years been almost the sole influences keeping together in a single body an assemblage of individuals and interests by no means always animated by identical aims and ambitions. The problems immediately presenting themselves are, first, will the Wafd in its present form survive, and, secondly, will an attempt be made to find a successor to Zaghloul Pasha as a national leader and figurehead? The latter will certainly not be easy of accomplishment, for there is no other politician who seems likely to be able to step into the vacant place with any hope of retaining anything like the general support which Saad Pasha could command. A meeting was held yesterday of Zaghloulist senators and deputies to consider the situation, but so many of their number are away in Europe that it was decided not to attempt to reach any decision.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

*Under this heading appear weekly or at regular intervals, communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

Cables were dispatched to all absent Zaghloulist legislators, requesting that they should return at once so that a full conference may be held to discuss the position created by the leader's death.

Cutting the Khalig.

The national mourning has resulted in the postponement of most public fixtures, amongst them the ceremony of Cutting the Khalig, which should have been held on Friday. This event is now purely symbolical, there being now no cutting and no khalig to cut, while neither does the Government await the drawing up of the official declaration that the Nile has reached its highest point before proceeding with the collection of taxes. The Cutting of the Khalig is now simply a popular holiday, with the evening's display of fireworks as its most conspicuous feature. It was thought that in the circumstances popular-rejoicing would be out of place, and the revels have been postponed for ten days.

Sofia, August 31.

A Macedonian Protest.

Quite apart from the visit of King Boris to Paris and from his tour in general, in which a lively interest is shown, there have been during the last fortnight three important events. First, there has been the fourth Congress, held at Sofia, of the Associations of Macedonian Youth. This Congress, at which a large number of delegates were assembled, provided a striking demonstration of Macedonian irredentism and of the fanatical attachment of the young Macedonians to the homes of their country, even though they are actually under the domination of Greeks or Yugoslavs. Once more it has been proved that the Macedonian spirit, far from falling into decadence, as the Yugoslavs hoped, is higher than ever and more

than ever confident in its future. Now the Yugoslavs recently arrested, in Macedonia itself (at Skoplye, Veles, and Bitolye) forty young Macedonians, who, having studied in Yugoslav schools, continued their studies in the Universities of Belgrade, Zagreb, and Liubliana. But they resisted being "Serbized." The Congress energetically protested against these arrests, and the protest has been taken up by the Revolutionary Organisation itself. In a public declaration addressed to the newspapers of Sofia, the Organisation proclaims the absolute impossibility of carrying on the struggle by legal means in Macedonia, and emphasises the necessity, imposed by the Yugoslavs, of recourse to arms and assassination. This is a grave event, and is accentuated by the national manifestations organised in the memory of Todor Alexandroff, on the occasion of the anniversary of his tragic death, which was brought about by Federalist Macedonians in the pay of the Communist Internationale of Moscow with or without the connivance of certain quarters in Yugoslavia.

Yugoslav-Bulgarian Union.

In the midst of these protestations there appeared in the *Mir* an article which, in view of the relations which are known to exist between this journal and M. Bourroff, Minister for Foreign Affairs, can justly be called sensational. The thesis of the article was nothing less than a definitive settlement of the relations between Yugoslavia and Bulgaria by means of the formation of a great Yugoslav Empire constituted on a federalist basis, in which each federated country would have its local Government and its chief of State (on the model of the old German Empire) and in which Macedonia would exist as an integral part with an autonomous administration which would suppress, for good and all, the deep roots of the existing Yugoslav-Bulgarian antagonism and would thus permit the entry of Bulgaria into a vast confederation. This proposal, humiliating enough for the *amour propre* of the Bulgarians, whom it makes in some way subordinate to the Yugoslavs, proved itself very disagreeable to the Yugoslavs on account of the autonomy of Macedonia, which constituted its base, and to which the Government of Belgrade would never consent. Finally, it pleased only the Macedonians, who took care, however, to declare that they accepted it without overmuch belief in the practicability of its realisation. The idea was, nevertheless, keenly discussed, first because it emanated from one of the most serious official sources, although the other Governmental organs felt themselves bound to gainsay the proposal of the *Mir*, and secondly because it postulated a combination capable of establishing a stable state of affairs in this troubled part of Europe, although it was of such a character as to encourage decentralising tendencies of the Kingdom of the Serbs, Croats, and Slovenes. Discussion would certainly have been prolonged, if the unfortunate incidents at Tsaribrod, where a delegation of Bulgarian students assembled for the International Congress of Students at Rome and a delegation of deputies assembled for the conference of the Inter-Parliamentary Union at Paris, were stupidly insulted by the Yugoslav authorities, had not come to cut short and to overshadow Yugoslav-Bulgarian relations.

However, the very fact that such an idea has been "launched" proves to what point the situation has evolved towards accord in the Balkans, an accord which all the world desires and which the conversations that will shortly take place at Geneva between the Balkan delegations will certainly further—still more so after the regrets and excuses proffered by the Yugoslav Government for the incidents at Tsaribrod. These conversations this time will have a special importance, for, in the opinion of M. Bourroff, they will succeed in regulating the questions outstanding between Bulgaria and her neighbours. This year at Geneva Bulgaria is making a *démarche* of the highest importance, for the success of which the consolidation of peace in the Balkans is an absolute necessity. Following the example of Greece, she is addressing the League of Nations—and this is the third of the events to which I referred—to ask for its moral assistance in concluding a

loan of fifteen millions sterling which would aid in the economic rehabilitation of the country by the execution of a series of public works, the rationalisation of the national finances and the definitive stabilisation of the Bulgarian currency. To obtain the help for this financial operation is the mission of the delegation which left to-day, and at the head of which are two competent Ministers, M. Molloff, and the Foreign Minister.

NOTES OF THE WEEK

(Continued from page 291.)

Italy and the Yaman.

Al Ahram, of Cairo, has published what purports to be the main clauses of a supplement to the commercial treaty between Italy and the Yaman. The date which this document is said to bear is June 1, 1927, two or three weeks, that is, before the arrival in Italy of the Arab Mission under the leadership of the Imam Yahia's son. On the face of it there appears to be nothing very sensational about this secret pact; by which it is pretended that, among other things, Italy recognises the complete independence of the Imam and of the Yaman "as delimited by the boundaries now accepted" (what are they?), undertakes to assist the Imam in every way possible, "including the supply of arms and ammunition," and promises to assist the Imam by the employment of technical experts in his Administration. In return for this, the Imam ("the King of the Yaman") agrees to favour Italian subjects in commercial enterprises in the Yaman, though such persons must pay local rates, promises to co-operate with Italy in suppressing the slave trade, and agrees to the searching by Italian warships of suspected slave trading vessels in "Yaman waters." If this summary is a correct version, the Imam Yahia appears to have driven what is a theoretically perfect bargain from his own point of view. He stands to lose absolutely nothing, and it is an indication of the energy with which the Fascisti are endeavouring to develop oversea opportunities that they should so have interested themselves in Arabia. It should be noted, however, that the Stefani Agency of Rome has denied the existence of such a supplementary agreement.

Zionists in Council.

In his opening address at the Fifteenth Zionist Congress at Basle on August 30 Dr. Weizmann declared that the Jewish people could look back, after three decades—the first Zionist Congress having been held at Basle in 1897—upon two fundamental achievements: the creation of the elements of a Jewish Commonwealth, and the putting upon a normal basis of the attitude of the world towards the Jewish question. It is, of course, with the first of these claims that *THE NEAR EAST AND INDIA* is primarily concerned. Dr. Weizmann, who spoke with enthusiastic moderation, explained that the Mandate had not yet given the Jewish people in the political sphere "all they could desire, nor all they hoped for, nor all that was implied in it." But it had, according to him, made Jews in the fullest sense masters of their own fate, politically not less

than social. It is instructive to see, incidentally, that this Zionist leader referred to the conviction of the Zionists that what they were doing for the Jewish people they were also doing for all the inhabitants of Palestine. If the Congress, which ends to-morrow (Friday) has been conducted throughout on the wide and generous attitude set by Dr. Weizmann, much good will have come through it. As yet we are not aware of its decisions, but quite certainly the unemployment which is at the moment one of the most notable features of Zionist life in Palestine will have been fully investigated. The immediate future of the depressed Zionists in the Holy Land was perhaps the most vital topic of discussion before the Congress. How to put an end to the "dole," and to the stream of Zionist emigrants, and how to take permanent advantage of the Rutenberg schemes and of the construction of the harbour at Haifa—to and on such problems as these, it is to be hoped, the Zionist Congress will have addressed itself and decided.

GREEK COMMEMORATIVE STAMPS.

Through the courtesy of Messrs. Bradbury Wilkinson and Co., Ltd., we are able to reproduce here the special three drachmæ stamp which the Greek Government issued in commemoration of the centenary of the raising of the siege of Athens in the War of Liberation. Three postage stamps have been issued for the occasion—one drachma, printed in carmine, three drachmæ, printed in blue, and six drachmæ, printed in green, the design being common to all values. The stamps were engraved and printed at the works of Messrs. Bradbury Wilkinson at New Malden.

THE DEATH OF FAHAD BEG.

We regret to record the death of Fahad Ibn Hadhal, the paramount Shaikh of the powerful Anaizah tribe, who was over 80 years of age, and had a great reputation in the desert in which he lived. Recently he sent a message to Baghdad stating that he was unwell, and asking for an examination by a British doctor. An aeroplane was sent to his assistance, and when it alighted in the tribal encampment the aged shaikh examined it dubiously, remarking that it was a wonderful ship, but he had never flown before. He declared, however, that he was prepared to risk the flight in order to secure the benefits of British medical attention. He flew to Baghdad on August 27, and an operation for a grave internal trouble was performed at the hospital the same afternoon. Unfortunately, the old man died the following day.

Fahad Beg was the chief of the Amarat, a sub-section of the Anaizah, who came originally from Najd. The Amarat are on the Iraq border west of Baghdad and Karbala. The Government of India used to pay a subsidy of 240,000 rupees per annum to Fahad Beg, who was very loyal to Great Britain.

During June 311 Jews, 61 Christians, and 4 Muslims entered Palestine. This number includes 73 persons (27 Jews, 44 Christians, and 2 Muslims) who entered the country as travellers and were given permission to remain permanently. During the same time 749 persons left the Holy Land. Of these 56 Jews, 37 Christians, and 127 Muslims were residents prior to July, 1920; and 509 Jews, 10 Christians, and 10 Muslims were residents after that date.

Elections in Turkey.

Telegrams have announced that the official list of candidates for the Turkish general election has been published. All the candidates belong to the People's Party. Notices in the Turkish Press have referred to the "keen interest" taken in the forthcoming elections, but, in view of the fact that the candidates were not known at the time, the interest must have been of a general kind. The following statement appeared in a Constantinople newspaper of August 23 :—

The expected order to proceed with the election of deputies has not yet arrived. As soon as it is received the Electoral Control Commission will hold an extraordinary session to fix the date of the elections.

As always, the elections will begin first in the outlying districts. Only when the results of these are known will election in the city itself (*au chef-lieu*) take place. The members of the control Commission will proceed there on inspection. It is possible that the secondary electors of the nearer suburbs will come to Stamboul to register their votes.

For the rest, the Control Commission will prepare the programme of the cortège which is to be formed on the day of the elections. This cortège will be very brilliant.

The same day there will be a grand dinner.

The Republican People's Party has not yet made known the names of its candidates. The official list is expected to be published after Saturday (August 28).

As the elections begin on September 1 this list will thus have been published at least three days ahead.

The Secretariat General of the People's Party is hard at work on drawing up the list of candidates. The number of those who so far have submitted their candidature is 1,100.

The Secretary General, after having completed the necessary inquiry into each particular case, will submit the list to the President of the Party, His Excellency the Ghazi, who will designate the persons whose candidature will be proclaimed.

This proclamation will take place on September 2 or 3, and the election of deputies will begin immediately afterwards.

It is supposed that they will be completed by September 15.

As Others See Us.

Under the heading "English Policy on the Continent," *L'Indépendance Roumaine*, one of the organs of the Liberal Party in power, analyses from the Roumanian point of view British policy towards various Continental countries, the occasion for the article being the eighth session of the League of Nations and the question of the differences between Roumania and Hungary, in connexion with which "the Magyar thesis finds most of its supporters in Great Britain."

At the time of the occupation of the Ruhr, England supported Germany against France, and as a result the Ruhr was evacuated. When the London Government officially recognised the Soviets, it exercised on the French Government such pressure to do the same that the latter ultimately yielded. A few months ago British policy showed itself very alarmed over German armaments; the big London newspapers declared that France was right in having drawn attention to the danger. To-day the British Cabinet wishes to force France's hand to reduce her effectives of the Rhine army of occupation to a figure that the French military experts state to be inadequate for the security of these troops. We have reason to know that, after prolonged but friendly relations on this point between London and Paris, the French Government, in view of the British Government's persistence in supporting the German claims, has just addressed to London a firm and emphatic note of refusal. The true partisans of the maintenance of alliances will not regret that things have come to this point; it does not aggravate the situation, on the contrary it clarifies it and thus it will improve it. . . . The generous and obstinate desire of M. Briand for peace had reached the extreme limits of concessions and sacrifices, and had given rise to a belief in France's weakness. . . . France has recognised that the time has come to react against the reputation of increasing weakness in her policy, when her safety becomes involved. She is not an island, defended by the largest fleet in the world, that no one, not even the United States, can injure. France will not reduce the strength of her Rhine army of occupation beyond the point necessary for its safety. No insistence and no pressure will influence her on this question.

In Roumania this policy will be highly appreciated, as it is the policy adopted by our own country at the Peace Conference and since. Whether it is a question of the Treaty of Trianon or of the Hungarian "optants" of Transylvania, Roumania must take her stand on her duties and her rights. In fulfilling the former, she will allow no one to touch the latter.

. . . Of all our Allies Great Britain alone could appear as less directly interested in the maintenance of peace, on account of her geographical position. If such is the case, if the possibility of British neutrality in an eventual conflict on the Continent were admissible, the peace of Europe would not rest on a very solid basis, with a Russia the enemy of civilisation, and with eighty millions in Central Europe, hostile to the actual *status quo*, convinced of British and Italian neutrality and persuaded that they would have to fight only France, the Little Entente and Poland. But British neutrality in such a conflict is an impossibility.

The Liberal organ proves to its own satisfaction that Great Britain for reasons that brought her into the War of 1914 will never be able to remain neutral in the event of a European conflict, and that, therefore, any encouragement that German or Hungarian policy affects to find in the British attitude will never have "really dangerous consequences" for the peace of Europe.

At the least serious sign all the Allies, Great Britain included, will instantly form a *blocc* to defend the peace of Europe. For this reason Roumanians, gratefully, will always remain profoundly and affectionately attached both to Great Britain and to France.

Minorities.

An understanding between Roumania and Yugoslavia on the subject of Minorities is a welcome sign of progress in the eventual settlement of the Balkans. If, however, it has been possible to arrange this matter between Allies only to-day—seven years after boundaries were fixed—it is hardly a matter for surprise that the minorities of ex-enemy States are still dissatisfied. Under the heading "The Roumano-Yugoslav Agreement" the *Viitorul*, of Roumania, writes :—

The conditions under which the Roumanian minority in Yugoslavia, whether in the Banat or in the valley of the Timok, has lived have been ever since the conclusion of peace provisional. The Roumanians in Yugoslavia had no schools in which they could learn their mother tongue, and, if this situation had lasted a few years longer, these Roumanians would have lost their national individuality. Negotiations on the subject have taken place, and it was resolved so to arrange the matter that both countries should have their interests met satisfactorily. Thanks to this arrangement the Yugoslav Roumanians will possess their own schools, where they can receive instruction in Roumanian, except in the case of history, geography and civics, which will be taught in Serbian. The administration of these schools will be on extremely liberal lines, and this is the important result of the negotiations. A new school can be founded, as soon as the attendance of twenty children of school age is guaranteed. Moreover, these schools, which will be under the control of a committee consisting of priests and Roumanian professors, will give certificates, which will rank with those of State schools.

Turkish in Latin Characters.

La République, the French edition of the *Jumhuriyet*, of Constantinople, returns to the subject of the adoption of Latin characters for the writing of Turkish. Its first article was essentially a *ballon d'essai*. On the second occasion the Editor, who is also a member of the Grand National Assembly, is surer of himself. He has received from the head of the Political Bureau in the Commissariat of Foreign Affairs a pamphlet giving the results of the author's studies on the subject of the Turkish language. The writer establishes that the Arabic characters and the Latin alphabet are both derived from the same Egyptian source. Consequently "in adopting Latin characters we should be writing our language with letters derived from one and the same source, with the sole difference that instead of going from right to left we should be going from left to right."

There follows an indictment against conservatives, who allow sentiment to play a preponderating rôle. The fez was adopted only in imitation of Sultan Mahmoud II. The conservatives of the day protested against it, but, as it would hardly do to say that they protested equally against its abolition, the point is neatly turned: "Everybody has seen that at the moment when this felt headgear, this devil's red hat imported from Greece had long acquired the character of a covering so to speak indispensable to the exercise of divine worship, the whole nation quickly lent itself to reason when it realised the truth and had the matter explained." Thus are bowlers and straw-hats justified at the price of a *non-sequitur*.

The earnestness of the writer admits of no doubt. Three times the reader is reminded of the common origin of the Arabic characters and the Latin alphabet.

This ought to make us occupy ourselves with this question with all the greater curiosity and naturally with a greater interest. This should be the case, because it is extremely difficult to write Turkish by means of Arabic characters, and it is almost impossible to create the wherewithal of instruction in Turkish while we continue to use Arabic characters. We have only to reflect that before the Great War the best book in Turkey hardly exceeded an edition of two thousand copies—a state of affairs that various circumstances since then have rendered still more precarious. But, even if we could extend our editions to ten or twelve thousand—the maximum with our usual alphabet—we should still cut a sorry figure with this miserable total before the civilised world in whose steps we are treading.

In this particular argument it is to be hoped that the writer will not be taking his readers out of their depth. It is not at first apparent why the number of copies of a book to be printed should be restricted by the type used—be it Arabic, Latin or Chinese. From what follows, however, it has to be inferred that what the writer has in his mind is that no Turkish book in Arabic characters—whether it be a child's primer or a collection of the Ghazi's speeches—has any chance of finding a reading public of more than two thousand. He continues :

We hold then this Arabic script solely responsible for the distressing situation of public instruction in our Turkey, and we accuse this ugly and incoherent alphabet of having caused us to lose all hope of ever being able to develop among us the advantages of the arts and sciences.

All this leads up to the demand that the Commissariat of Public Instruction should without delay appoint a Linguistic Commission to study the question of Latin characters.

ZIONISTS AND PALESTINE.

Too late for notice in our last issue we received from the Central office of the Zionist Organisation (77, Great Russell Street, W.C.) a copy of the Report of the Executive of the Zionist Organisation submitted to the XVth Zionist Congress at Basle, August 30—September 9, 1927. The price of this interesting compilation is 2s.

In the Political section of the Report it is claimed that during the last two years the relations between the Zionist Organisation and the British Government were throughout satisfactory; "indeed, it is not too much to say that they have never been more cordial." Direct affirmation is made that the Jewish National Home in Palestine has now "passed out of the sphere of political controversy, the actual progress of the Jewish work of reconstruction having led in all quarters to a recognition of the fact that the establishment of the Jewish National Home must now definitely be accepted as a settled British policy." Reference is made to the plan of extending the Jewish Agency, and of securing for Palestine the support of American non-Zionists.

Of Palestine itself, important legislation is recorded during the last two years. The figures given for immigration and emigration respectively, from 1922 up to and including the first four months of 1927 are 75,823 as against 18,069. The Report remarks on this:—"It will be seen that since the beginning of the post-War era Jewish development in Palestine emigration amounts to 24 per cent. of the immigration, a figure which compares favourably with the corresponding statistical records of the Argentine and other countries which have been built up by immigration." The details of the immigration statistics are interesting. During 1925 and 1926 51.2 per cent. of the Jewish immigrants into Palestine were drawn from Poland, 17.4 per cent. from Russia, 5.4 per cent. from Roumania, 3.7 per cent. from United States. The British Empire is included among "other countries" which were responsible altogether for 6.2 of the immigrants. Of the immigrants during 1925 and 1926, 67.2 per cent. had a knowledge of Hebrew.

In the section devoted to Labour, it is estimated that

there are 34,000 Jewish workers in Palestine at the present moment, as compared with 25,000 in 1925. A year ago, there were 23,462 in the towns and 8,374 in the colonies and agricultural settlements. Dealing with the problem of unemployment, the Report states that the present situation is not so much an economic crisis as an incomplete settlement of the immigrants of the last few years. In May, 1927, the total weekly unemployed payments were:—Tel-Aviv, £E1,250; Haifa, £E425; Jerusalem, £E350; and Afuleh, £E40. Mention is made of the illuminating fact that in 1924 there were 46 strikes among the workers, with 24,000 strike days; in 1925 there were 61 strikes with 33,300 strike days, and in 1926, 21 strikes and 18,860 strike days. During the first half of 1927 there was the strike in the Haifa Matzoth factory, and the one at the Nur match factory at Acre, which lasted for five months.

Eleven new settlements were founded during the last two years by the Department for Agricultural Colonisation. The total area cultivated by settlers now amounts to 130,000 dunams (as compared with 17,000 six years ago). It is pointed out that the urban colonists suffered much more than the agricultural. Of the Jewish *Iishub* (138,000 souls in 1925) 114,000, or 80 per cent., lived in cities. But many industrial concerns have been started in the towns since the "crisis."

Other interesting matter is to be found in the sections on Education and Health. The Report contains over 500 pages.

NEWS IN BRIEF.

The Zionist Congress was opened at Basle on August 30 by Dr. Weizmann, President of the Zionist world-organisation. In his inaugural address he outlined the present difficult situation in Palestine, and declared that the development of the country was solely dependent upon Zionist effort. Greetings were conveyed to the Congress by Dr. Wenck, President of the Basle Cantonal Government, and by a representative of the British Minister at Berne.

It is stated from Athens that the Navarino centenary celebrations, which had been fixed for October 20, have been postponed until April, owing to the insufficiency of time for preparation.

M. Theunis, a former Prime Minister of Belgium, who is making an inquiry into economic conditions in the Balkans, arrived at Sofia on September 3 from Belgrade. He is leaving shortly for Athens.

According to a message from Rhodes, the Orthodox Archbishop, while on his return from a visit to the interior of the island, was attacked by an unfrocked Orthodox priest and badly wounded in the lung.

The Yugoslav Cabinet on August 31 approved the agreement concluded for the settlement of the War Debt to Great Britain, including the money spent in relief for Serbia. The first instalment, £170,000, will be paid at once.

In accordance with a Government decision, the Persian Foreign Office has notified all the Legations that henceforth no Persian subject may act as an honorary agent to any foreign Government. Persons who have hitherto acted in such a capacity will not in future be officially recognised.

According to the *Politika* nine classes of Albanian reservists have been called out in order to suppress the movement in Northern Albania. The *Politika* declares that the movement is a purely internal affair, but that rumours were being spread that it had been fomented by Yugoslavs.

Conversation between the Royal Dutch and the Standard Oil Company over Soviet oil concessions is reflecting itself in Syria in a price-cutting war. The Asiatic Petroleum Company is reported by the Beyrout Correspondent of *The Times* to have reduced the prices of benzine and kerosene. That of benzine has fallen within a week by 5d. a gallon. Other companies are doing likewise.

THE PERSIA SOCIETY.

President : Lord Lamington, G.C.M.G., G.C.I.E.
Founded in 1911 to study all questions of common interest to Great Britain and Persia.
Subscription £1 per annum.
 Further particulars may be obtained of

Book Reviews

TURQUOISES OF PERSIA.

"*SUHAIL*." By Coleridge Kennard. (London: The Richards Press. 10s. 6d.)

There are in this book beauty and wonder and incandescence. Sir Coleridge Kennard, during his official stay in Persia, fell in love with the country, in love, moreover, not merely with what he saw but with what he heard. He attuned his mind to the songs, the music, the poetry, and the thought of the simple or mystic Persian. And in penetrating their loveliness he discovers to us, in his pages of recollected experiences, some of the gems of Persia. Turquoises, he calls his finds; it is a modest claim, however, for that of which we get glimpses, by the light of his eastward journeying caravan, is nothing less than the perennial soul of Persia.

Sir Coleridge sets out from Teheran; and ends at Nushki. We go with him, through Qum, the Kashan desert, Malik Siah, until he arrives at Nushki. And how enriched by the unusual journey! Observation, reflection, recollection—of all the accomplished traveller's qualities Sir Coleridge is possessed abundantly. He is impregnated with the beauties of Persia. Those beauties which are explicable to the West are explained; and those which, equally real, are incommunicable, are abandoned to our imagination. . . . It is, indeed, the reader's fault if he be not enchanted with the Persia of this book.

Sir Coleridge talks of the silently flowing waters in palaces by Teheran; and writes thus of them:—

. . . Elaboration of some dumb impulse that stirs in the soul of the East; symbol, perhaps, of its formula of happiness that what each moment brings the same moment should efface. The nightingale sings and leaves the shadow of the tree, the peasant, who has had no other teacher, plays to himself for a while, then puts his flute in his pocket and walks off.

At Isfahan he dreams of the vanished art of Persia, of the phantasmagorias of the Sufic faith, of Jallaludin Rumi, of the students in by-gone ages to whom Love was defined so:—

"I am the sparkling of the stars; I am also a buyer of dustbins."

By the ruins of Kuhpaye he hears an old man say: "It belongs to olden times, to olden times." And he himself on this says:—"The phrase would serve as a motto for Persia."

And between Isfahan and Yezd, by Ardekan, he hears a "grief dimmed voice" chanting Sa'di's famous lines:—

Ay karavan ahesteh ran karami janam miravad
V'on del keh bar khud dashtam bar detsetanam miravad
Man mandeam majur az u bi chareh o ranjur az u
Gui ker nishi, dur, az u, der usteqanam miravad.

Beside such cullings as these, from Persian tales and poems and sayings, mere physical incident on the caravan's journey to Nushki seems barren. There was much of it, nevertheless; inevitably, seeing that the Lut desert had in part to be crossed. By Gurg, for instance, Sir Coleridge noted down:—

The heat affects everyone, and two men crawl under the shelter made by two loads uptilted and sleep, goodness knows how. The reverberation of the ground is worse almost than the direct rays of the sun, and the air is full of monster mosquitoes . . . mosquitoes humming over the poisonous swamps. They are so ferocious, I am told, that they drive even the wild asses in springtime northwards into the heart of the Lut.

With the approach to Baluchistan, the author feels, as if confining his being, the officialdom—precedence, efficiency, and the rest of it—of British influence. There we may leave him, but not before having quoted the last impression before entering Baluchistan. It was by Hurmek, where Afghan caravans rested:—

Yet a party of Afghans still linger, occupying a narrow space of shadows at the bottom of a lawn ablaze with sun. Are they held by some tale of love or adventure, too spell-bound to stretch out a hand towards turbans or slippers discarded amid the grass? The drums sound. What matter! The story will go on, eternal too, starting and restarting during the long leisures of the night. Does not the poet know a thousand *beyts* of Mir Chakar's fierce battles? Cannot he set Ani whispering to her lover and scatter on the night the sweetness of Shirin's breast?

A crash of bells breaks upon the evening. Up and down the trains pass figures burning rue. A hundred and fifty camels move slowly from the shadow of the rocks like an immense caterpillar unwinding; two hundred and eighty cross them like a kaleidoscope. For a while they seem all one, till gradually the movement passes down the lines and reaches the *pas-ahang*. The gap between them opens, slowly grows; the sounds of singing rise. So they wander out, to stray like gossamer thread upon the waste; so ever have they wandered out, in search of pleasure or of gain. And time has changed nothing. Where at Pasargadae they bargained for melons and saw Cyrus lay claim to the world, they bargain still at Murgab and see on a crumbling stone—as a picture, a target for their rifles—his same proud words; where at Persepolis they loitered among the willows of the Pulwar and heard the soldiers of Alexander boasting of their empire, they loiter to-day at Takhti Rustem and hear Indian officers boast of ours; where on the banks of Ruknabad they halted for water and listened to the poems of Hafiz they halt for water still and chant his songs.

Unchanging in the midst of change, with the same slow step, the same homes abandoned, the same sound of singing—for men have ever had their dreams. And no one can know where the end of the road lies, for a hundred thousand stages open ahead, and the dust on the road of eternal searching is the veil of truth.

Has the thought ever been expressed with more picturesque justice?

This book is indeed a rare one, to be treasured and remembered.

LIFE IN CHARLES II's NAVY.

"*THE DIARY OF HENRY TEONGE*." (London: Routledge and Sons. 12s. 6d.)

Sir E. Denison Ross and Miss Eileen Power are doing much to add to our enjoyment by the issue of their carefully selected and well edited volumes of "The Broadway Travellers," which Messrs. George Routledge are publishing in a style worthy of their contents. The variety of fare which the Editors of this series place before us is illustrated by this delightful diary of an English country parson taking spells of Navy Chaplaincies in the beginning of the last quarter of the 17th century.

We may take it that he applied for these appointments as much for the purpose of seeing foreign lands as for the benefit of his purse. But the needs of the latter were evidently pressing. He seems to have taken up his first commission with neither money nor equipment, and had quite literally to beg, borrow or steal his bare necessities for life on board. Not that this seems to have troubled him much. His cheery temper and keen power of enjoyment, his good fellowship and eager curiosity made little of all discomforts and much of the sunny side of his life. There is no grumbling, though we do get glimpses of the fact that there was a seamy side too, specially in the case of the crew. To us of the present day, accustomed to the modern comforts of ocean travel, the necessary discomforts of life on board one of these little vessels of war, always at the mercy of wind and weather, seem very great, but they appear to have had little effect, on the officers at least. As for the crews, they were at all events treated with far more wisdom and human kindness than their successors who were driven to mutiny at the Nore. The diaries provide an extraordinarily vivid picture of life in Charles' Navy in the Mediterranean and deserve to rank with the novels of Smollett and Maryatt in this respect.

Parson Teonge had a sharp eye for what he saw and a pen that could record what he saw in a pleasantly racy manner. In chronicling his personal experiences he makes us feel that we are actually seeing things with our own eyes, his curious summaries of what he has not seen, as,

for example, his account of Africa with its legendary details, acting as a brilliant contrast.

Our readers will find much to interest them, but specially in his account of a call at Scanderoon and a journey thence overland to Aleppo with his experiences there. Although by doing so we are trenching too much on the space at our disposal, we cannot resist the temptation of setting out the arrangement of the table at a feast provided for him and his friends by our Consul at Aleppo. The menu is unfortunately mutilated at the foot, so that it does not do full justice to the entertainment. We are glad that the guests "had breakfast but no set dinner" before they set to work on the following:—

A Dish of Turkeys	A Dish of Tarts
A Plate of Sausages	
A Dish of Jellies	A Dish of Gammons
A Bisque of Eggs and Tongues	
A Dish of Geese	A Dish of Biscuits
A Plate of Anchovies	
A Dish of Hens	A Venison Pasty
A Plate of Anchovies	
A Dish of Biscuits	A Dish of Green Geese
A Great Dish with a Pyramid of Marchpane	
A Dish of Tarts	A Dish of Hens
A Dish of Artichokes	
A Pasty	A Dish of Marchpane in Cakes
A Dish of Sausages	
A Dish of Gammons	A Dish of Biscuits
A Plate of Herrings	
A Dish of Geese	A Dish of Turkeys
A Plate of Anchovies	
A Dish of Marchpane	A Pasty
Artichokes	
A Dish of Hens	A Dish of Jellies
A Pyramid of Marchpane	
A Dish of Biscuits	A Dish of Gammons
Anchovies	

and yet, next day, "I dined at Mr. Ivatt's house with six more, where we had excellent provision; plenty of wine, but especially good canary."

Charles Knight printed these diaries in 1825. It may be remembered that, some time ago THE NEAR EAST AND INDIA reprinted extracts from this publication. Since Knight's book appeared, the manuscript was lost sight of and doubts began to be expressed of its genuineness. Its recent re-discovery has triumphantly vindicated Teonge and has enabled the present Editor, Mr. G. E. Mainwaring, to prepare a correct text which he has enriched with excellent notes and several interesting plates.

C. S-W.

INDIAN NATIVE STATES.

"AN INTRODUCTION TO THE STUDY OF THE RELATIONS OF INDIAN STATES WITH THE GOVERNMENT OF INDIA." By W. M. Pannikar. (London: Martin Hopkinson, 10s. 6d.)

The Indian Princes are waking up to a consciousness that alterations in the form of the Government of India may be momentous to them. Many of them have felt impatience from time to time with the Resident who represents the Supreme Government at their Courts. Ordinarily, however, his presence has been welcome and, on the whole, relations between Simla and the States have been friendly and harmonious. If some would contradict this, it is for the simple reason that incidents showing a contrary state of affairs are so rare that they get much talked of. But things have altered much since the introduction of the reforms, and the first taste of an India governed by Indians largely of the clerkly and lawyer classes has not been to the taste of the Princes. They look forward with considerable apprehensiveness to further "reforms" and wonder whither they will lead and where they themselves will stand when these changes come into action. One of the signs of how the wind is blowing was seen in the recent visit of Professor Rushbrook-Williams and Colonel Haskar to Whitehall. We shall not have to wait long before we hear more. And there is likely to be much to hear. The Princes have every right to make their views plain and to insist on their being very carefully considered. Many of these views are likely to be such as cannot be brushed aside, no matter how their

acceptance may affect the symmetry of any theoretical scheme.

This being so, it is most desirable that every one interested in India should try to get a picture of the Native States in relation to India as a whole into his head. Lee-Warner's and Tupper's books have their own value, but something more up-to-date and less partial was wanted. This has now been supplied by Mr. Pannikar in the book under review. The author tries to be entirely impartial, and it is high praise to say that he almost succeeds. He takes a broader view of the situation than writers on the subject usually take. He sees the difficulties in the way on both sides and, on the whole, states them fairly. As an historical introduction to the study of the relations between the Supreme Government of India and Indian Princes we have nothing but praise to offer to the book, which is essential for every student of India of the present day.

Mr. Pannikar's English is, if we may say so without offence, almost uniformly impeccable. It is only now and then that it is a little difficult to follow his meaning. The danger of using foreign colloquialisms is amusingly illustrated by our author's statement that not all the King's horses nor all the King's men could put Humpty-Dumpty on the wall again.

Lord Olivier contributes a thoughtful and useful Foreword.

C. S-W.

"MOTHER INDIA."

A review of Miss Katherine Mayo's book, "Mother India," appears on page 307.

"ANTIQUITY."

Antiquity, a quarterly review of archaeology, edited by Mr. O. G. S. Crawford, won instant praise from connoisseurs with its first number. Nor is there any falling off in the standard of the second (June) number. This issue contains, among many informative things, particularly interesting articles on "Where did Man Originate?" "The Etruscans," "The Aryan Problem" (by Dr. A. H. Sayce), and "The 'Works of the Old Men' in Arabia," by Flight-Lieutenant Maitland. This last article deals with the walls and hut circles about 120 miles to the east of the Dead Sea. These are encountered after leaving Ziza, Qasr Azraq, and Qasr Kharana. The Editor usefully compares them with the hill-fort of Tre'r Ceiri in Carnarvonshire. We cordially recommend this quarterly, which examines archaeology with a vital, not a dry-as-dust, mind.

BOOK RECEIVED.

"An Eastern Palimpsest." World Dominion Society Series. By O. Wyon. (London: World Dominion Press. 2s. 6d.).

It is announced in the newly published Transjordan Customs Ordinance that there will be no Customs barrier between Palestine, Transjordan, Syria, Najd, and the Hijaz, except in regard to tobacco, alcohol, and spirits.

The explosion near the Wailing Wall in Jerusalem, which occurred on August 30, has been traced to an inter-Arab family feud. The loser in a law suit blew up the house of his neighbour, the successful litigant, with dynamite.

A Roumanian military aeroplane with an officer and N.C.O. on board, which had presumably lost its way in the thick fog, crashed on Bulgarian territory on August 30, near the village of Adjemler, in the Varna region. The machine and its occupants were detained by the Bulgarian authorities.

The Governor of Cyprus (Sir Ronald Storrs) summoned a special Session of the Legislative Council on August 31 and announced that the British Cabinet intended to cancel the payment of the share of the Ottoman tribute which had hitherto been borne by Cyprus, on condition that an annual payment of £10,000 were made towards Imperial defence.

King Ibn Saud of the Hijaz has sent 5,000 rupees (£375) to the Bombay Central Relief Fund, which, according to *The Times*, now totals nearly nine lakhs.

Recently at Port Sudan the sloop *Clematis*, Commander C. H. Godwin, D.S.O., senior naval officer, Red Sea Division, was due at Malta on September 7 for refit. The *Dahlia*, Commander H. P. Cotton, remains on her station, and recently left Kamaran for Hudaida.

THE CASPIAN FISHERIES.

(From a Correspondent.)

[In view of the present negotiations between the Persian Foreign Minister and the Soviet Government upon various questions which require settlement between Russia and Persia, this article on the Caspian Fisheries, which forms one of the keenest "bones of contention" between the two countries, will be found of interest.—ED.]

The fishing rights in the Persian waters of the Caspian Sea were first conceded by the Persian Government to Stepan Lionosov, a Russian subject, in 1876. In 1906, this concession was extended to 1925. After the death of the concessionaire, his heirs, Leon, Martin and Veronica Lionosov, reorganised the fisheries which, in 1916, were incorporated as the K.Y. Lionosov Company with a capital of nine million gold roubles. In 1918, despite the energetic protests of the Russian Legation at Teheran, the Persian Government cancelled the concession, seven years before it was due to expire. On July 19, 1919, the fishing rights and the fishing stations were leased to another Russian subject, named Vanitzov, who in the terms of his contract agreed to pay to the Persian Government half the profits of the undertaking, but this arrangement failed of accomplishment as M. Vanitzov was unable to carry out his obligations. On May 18, 1920, Kazian was seized by Bolshevik troops, whose commander stated, incorrectly, that he was acting under the orders of the Government of the Independent Soviet Socialist Republic of Azerbaijan; and shortly afterwards the remaining fishing stations fell, by similar means, into the hands of the Moscow Soviet.

In the terms of the Soviet-Persian Treaty, signed at Moscow in March, 1921, the Persian Government recognised that arrangements should be made for the export of fish to Russia and undertook to enter into an agreement which would make this possible on a legal basis. In 1922, in pursuance of this undertaking, the Moscow Soviet was granted a monopoly for the purchase of fish caught off the coast of Gilan in return for a payment of Ts.50,000, but the Soviet failed to hand over that sum. During this period, however, the Persian Government had decided to inquire into the legality of the abrogation of the Lionosov concession in 1918 and had appointed a judicial commission to investigate and make recommendations. For this reason, the Soviet and Persian Governments agreed on October 28, 1922, that their negotiations on the fisheries should be suspended pending a settlement with the representatives of the K.Y. Lionosov Company. On November 8 of the same year the commission submitted its report, in which it expressed the opinion that the cancellation of the Lionosov concession had been illegal and recommended that, in compensation for the loss incurred, the fishing rights should be renewed for a further period of fifteen years, the Persian Government receiving half the profits.

The Moscow Soviet, however, did not relinquish its demands, and, in October, 1924, after protracted negotiations, the Persian Foreign Office agreed that, subject to the consent of the Persian Parliament, the fisheries should be reorganised as a Soviet State trading concern with an equal number of Russian and Persian directors and with both Governments sharing equally in the profits. The clause, implementing this agreement, in the Soviet-Persian treaty, duly placed before the Majlis at Teheran, was strongly opposed by the deputies on the grounds that the proposed nature of the organization would place an unfair advantage in the hands of the Russian directors; and its rejection, on the grounds of its illegality, was recommended by the American Financial Adviser who, on account of his opinions in this connexion, had already become the subject of a campaign of virulent abuse directed by M. Shumiatsky, the Soviet Minister at Teheran. On February 1, 1926, when it had become evident that the Majlis would not sanction the agreement, Moscow closed the frontiers of the Soviet Union to all exports from Persia with the exception of raw cotton. This situation still obtains.

The fishing stations are well constructed on modern

lines and including drying sheds, wharves, lines for the personnel, and hospitals. They are well sited for defensive purposes and, during the War, were frequently employed for the accommodation of Russian troops. The most important are at Astara, Kazian, Safid Rud, Siah Kalah Rud, Meshed i Sar, and Kara Su.

The town of Astara is partly in the Talish district of the Persian province of Gilan and partly in the territory of the Independent Soviet Socialist Republic of Azerbaijan, the fishing station being immediately to the south of the frontier. From this point a road was constructed before the War to Ardebil, in Persian Azerbaijan, which is the chief market town of the Shabsavan tribe. It is not suitable for wheeled traffic, but it enables pack animals to negotiate the Elburz range without difficulty. In the event of aggression against Tabriz by the Moscow, Tiflis or Baku Soviets, the ability of the Persian authorities to mobilize the Shabsavan for defensive purposes would be nullified should Ardebil be threatened by a force based on Astara.

Kazian, the Russian suburb and the port of Pahlavi (formerly called Enzeli) is on the eastern side of the channel which unites the Murdab lagoon and the Caspian Sea. The largest steamers on the Caspian are able to berth at the wharves here, which are the starting point of the metalled road, to Rasht, Kasvin, Hamadan, and the Iraq frontier at Qasr i Shirin, that gives easy access to the positions commanding the lateral lines of communication between central and western Persia.

Safid Rud, at the mouth of the river of that name, and Siah Kalah Rud, in Tunekabun and thirty miles to the south east, are in the country of the turbulent Jangalis, who have often succeeded in closing the road between Rasht and Kasvin to all traffic except considerable bodies of troops.

Meshed i Sar is the port of Barfarush, seven miles distant, which is the chief commercial centre of Mazandaran. The two towns are connected by a road suitable for all types of vehicles, and from Barfarush there are roads of a secondary nature, eastward to Sari, the capital of the province, and westward to Amul, from which point the Persian Government has recently constructed a road to Teheran.

The fishing station at Kara Su, in the extreme south east of the bay of Astarabad, is on the north-eastern bank of the river of the same name which marks the southern limit of the steppe inhabited by the Yomut Turkomans of the Attabai and Jafarbai tribes. It has good landing facilities in what is the best natural harbour on the coast and is under the protection of the Soviet's naval base at Ashuradah, an island at the entrance to the bay. The Russians have constructed a first-class road from Kara Su to Astarabad, the provincial capital, and it would be the sea port of that city, were it not that, on account of Turkoman depredations, the Persian merchants prefer the longer and difficult track to Bandar i Gaz. Both the Attabai and the Jafarbai are entirely out of sympathy with their Persian fellow-subjects, but at one with the Yomut Turkomans in the "Independent" Soviet Socialist Republic of Turkmenistan which was formed in 1924 under a government seated at Polterask, formerly known as Askhabad. From Astarabad there is an easy route through the Elburz range to Shahrud, which is to north eastern Persia what the Kazian-Hamadan chaussée is to the north west, in that it commands the only possible road between Teheran and Khorassan to the north of the great Salt Desert.

It is generally assumed that the Soviets have no intention of violating the sovereign rights of Persia unless they can do so under the pretext of supporting a people "exploited by western capitalism." It would be wise, however, to remember that the legal recognition of the fisheries as a Soviet State trading organisation, and the presence of many thousands of the Soviet's employees at the fishing stations, would so far increase Moscow's prestige and political influence in Northern Persia as to enable her to create, almost at will, a situation which would call for her direct intervention.

PERSONAL AND GENERAL

TO-DAY

September 8, 1927 (New Style).

August 26, 1927 (Old Style).

Rabia I, 11, 1346 A.H., of the Muslim Calendar.

Ellul 11,5687, of the Jewish Calendar.

Lady Tegart left London on September 2 in the Ranpura for Bombay.

King Faisal of Iraq, who is staying at Aix-les-Bains, visited Geneva on August 29 for the purpose of consulting a specialist.

Mahmoud Pasha, Egyptian Minister of Finance, who has been on a short visit to England, leaves London this week to return to Cairo.

H.E. Muzahim Beg Amin Pachachi, Iraq Diplomatic Agent in London, left on September 2 for Aix-les-Bains, where King Faisal of Iraq is staying.

The name of the new Persian Ambassador to Turkey was incorrectly given in THE NEAR EAST AND INDIA of August 25. It should have been Mirza Said Abol-Ghassem Khan Amid (Entezamol-Molk).

His Excellency Mirza Eissa Khan, the Imperial Persian Commissioner, gave a reception at the Carlton Hotel on September 1 for His Excellency Hovhannes Khan Mossaed, the newly appointed Persian Minister, to meet members of the Staff of the Anglo-Persian Oil Company.

On the initiative of Lord Beauchamp, Chairman of the Anglo-Hellenic League, a Committee has been formed to celebrate the centenary of the Battle of Navarino. The Chairman of the Committee is H. E. the Greek Minister, and the Honorary Secretary is Monsieur J. Romanos, 51, Upper Brook Street, W.1. The celebration will take the form of a Dinner to be held at the Savoy Hotel on Thursday, October 20. The Chair will be taken by Lord Beauchamp.

Aziz Izzet Pasha, Egyptian Minister to the Court of St. James's, accompanied by Fikry Bey, First Secretary of the Royal Egyptian Legation, is paying a visit to The Hague. Since the abolition of a number of Egyptian Legations in Europe, the Egyptian Minister in London has been accredited to Holland also. Aziz Izzet Pasha expects to present his credentials to Queen Wilhelmina on her Majesty's return to the capital during the current week.

Rear-Admiral H. E. Grace, C.B., assumed on September 1 the duties of Rear-Admiral in charge of the Submarine Service, in succession to Rear-Admiral Vernon H. S. Haggard, C.B., C.M.G. Rear-Admiral Grace, who attained flag rank in May, 1925, is the second son of the late Dr. W. G. Grace, the famous cricketer. He was commended for services in action in the Gallipoli operations.

THE NEW PERSIAN MINISTER.

The newly appointed Persian Minister, His Excellency Hovhannes Khan Mossaed, is no stranger to London where, indeed, he is known both in diplomatic and literary circles, particularly on account of his translations of Shakespeare.

He was attached as interpreter to the late Shah, Nasr-ed-Din, in 1883, and later a member of the Persian Foreign Office. In 1887 he was a member of the Extraordinary Embassy to London at Queen Victoria's Jubilee. At the accession of the Tsar Nicholas he was a member of the Extraordinary Embassy at St. Petersburg. In London, again, in 1897, he was a member of the Extraordinary Embassy at Queen Victoria's Diamond Jubilee.

His Excellency was "Chef de Cabinet" of the Foreign Minister, Teheran, until 1901; Counsellor of the Persian Legation in Berlin until 1905, and Chargé d'Affaires in Berlin until 1910. From 1910-1912 he was "Chef de Cabinet" of the Regent, Nasr-ul-Molk. For the next four years he was Persian Minister in Berlin. From 1916 to 1925 he lived in London in a private capacity. In 1927 he was, until appointed Persian Minister to London, a member of the Persian Majliss.

Hovhannes Khan Mossaed is an exceptionally accomplished linguist.

SARWAT PASHA.

The above illustration is a reproduction of a marble bust of the Egyptian Prime Minister by Mahmoud Mukhtar Effendi, the Egyptian sculptor. Sarwat Pasha, who recently accompanied King Fuad on his Majesty's visit to England, is now on his way to Egypt in consequence of the death of Zaghloul Pasha. A large monument by Mahmoud Mukhtar Effendi, representing New Egypt, is to be placed in the Square before the Railway Station in Cairo.

The 17th annual summer school of the London Society for Promoting Christianity Amongst the Jews is now being held at Swanwick, Derbyshire. It was stated on September 2 that during the past ten years 175,000 Jews had joined the Christian Church. Since the Balfour Declaration the Jews had flocked into Palestine and had bought 50,000 acres of land. The population had increased by 150,000. The Jews were realising the prophecy that they should again return to Palestine as their national home.

BUSINESS AND POLITICS.

Commenting in these columns five weeks ago upon the reported proceedings of the Joint Select Committee on the Gold Standard and Reserve Bank of India Bill, we observed that the finality of the majority decision in favour of a State bank without share capital clearly turned upon the ability of the authors of the new scheme to devise a form of management acceptable equally to the executive and to the legislature. Although, we pointed out, the idea of a State bank finds no place in the Currency Commission's report, the arguments which the majority of that body adduced for entrusting the management of the currency, and the consequent control of credit, to a central bank of the recognised type, rather than to a Government authority, are equally cogent against the new proposal. In particular we stressed the difficulty of constituting a sufficiently independent board of management without shareholders, and the improbability of any agreement being reached as to the proper electorate for the selection of its personnel. The creation of share capital may not be without disadvantages, but it is a convenient device for securing a directorate in close touch with commercial and financial interests, while still preserving intact that freedom from political pressure and undue official interference which is so essential to the proper discharge of such an institution's responsibilities. We did not have to wait long to see our fears abundantly justified, and, if, as appears not improbable at the time of writing—though the situation changes with bewildering rapidity—the measure is withdrawn and the matter referred for consideration *de novo* to the proposed Banking Commission, the main, if not the only, reason, will be the failure to reach agreement upon the particular point we have cited. Meanwhile the adjournment of the debate on the third reading of the Bill—which had continued uninterruptedly for five days—provides a convenient opportunity in which briefly to review the course of events since the conclusion of the Calcutta Session of the Joint Committee early last month. When the Joint Commission met in Bombay, as we have previously stated, the Finance Member urged the adoption of the Currency Commission's scheme, embodied in the Bill, under which the shareholders of the proposed Reserve Bank were required to elect their own directors. The advantages of such a course were clearly and concisely stated by the Commission in the majority report. After quoting with approval the resolutions passed both by the International Financial Conference of Brussels (1920) and that of Genoa (1922), in identical terms, "that banks, and especially banks of issue, should be free from political pressure, and should be conducted solely on lines of prudent finance," the Commission expressly recommended that "a predominant majority of the Local as well as of the Central Boards of the Bank should derive their mandate from the shareholders of the Bank by election, and that only a small minority of the Board should be nominated by Government," in order to secure close co-ordination

between the currency and credit policy and the financial policy of the country.

There is, moreover, another objection to the majority's proposal, in the particular circumstances of India to-day, which for obvious reasons is not mentioned by the Commission, but cannot on that account be ignored. In the Central Legislature, and until India attains Dominion status, Indian legislators are in permanent opposition, and it is idle to pretend that they would shed that rôle in an institution covering so wide a range of State functions as a Central Bank. "Thus, a State Bank in India," as the correspondent of a Calcutta contemporary pertinently observes, "would not only be handicapped as fully as in Western countries by the intrusion of political influences of the type from which every central bank in Europe is now striving to escape. It would, regrettably but inevitably, create a new theatre of conflict between an irremovable executive *vis-à-vis* an 'irresponsible' Legislature." The majority of the Joint Committee, however, took from the outset an entirely different view of the Reserve Bank's constitution. In their opinion a private shareholders' bank would in practice be controlled by vested interests of largely foreign origin, and they regarded it as essential, if the confidence of the Indian public were to be secured, that the proposed institution should not only be a purely State Bank but that the legislatures should have direct representation on the Board, thereby ensuring that the latter's composition should be pre-dominantly Indian in character. A deadlock inevitably ensued, but at the Calcutta meeting Sir Basil Blackett declared his willingness to accept the principle of a State Bank without share capital, and was prepared even to concede the claim for an Indian majority, on condition that the idea of the representation of the legislatures was abandoned. The offer was rejected, and the scheme embodied in the revised Bill, whereby three directors shall be elected by the elected members of the Central and Provincial legislatures, respectively, was adopted by the narrow margin of one vote. Thereupon the Finance Member intimated that rather than agree to a proposal so fundamentally unsound he would revert to the original project and that, failing its acceptance by an adequate majority, he was prepared to sacrifice his laudable ambition to endow India with a strong central bank, and withdraw the measure. The difference of opinion, not only on this point but also in respect to the proposed minting of a gold coinage and the restoration of the sovereign and half-sovereign as legal tender, was strikingly manifest in the Joint Committee's report, to which Sir Basil Blackett and his supporters appended a minute of dissent on the lines above indicated.

If we appear to have stressed somewhat unduly the political aspect assumed by negotiations which ought primarily to have been concerned with recognised banking practice and the canons of sound finance, it is because politics have obtruded at every turn. Until the major question of whether business or politics is to be the paramount consideration in the constitution of the institution

which is to assume the future control of Indian currency and monetary policy is determined, no useful purpose is served by detailed examination of the less controversial issues raised by the projected legislation, though we are far from implying thereby that the report is not open to criticism in other respects, especially as regards the subordinate position accorded to the Indian joint stock banks and the exchange banks. The history of subsequent developments, though hard to follow through the maze of conferences and compromises, is in the main only a repetition of the same struggle. At the informal conference between the Finance Member and the party leaders convened by the Viceroy a few days before the Session opened, Lord Irwin made it clear that the Government could not accept the revised Bill so long as it provided for the representation of the legislatures on the Board of the Reserve Bank. At the same time he is understood to have added that if the offending provision were deleted, and also that relating to the coinage of gold mohurs, there was every possibility of the Government modifying their objection to the idea of a bank without share capital. The practical problem, however, has been to secure popular representation on the Board—namely, apart from sectional interests, without the direct intervention of the Legislature, and when, on the third day of the debate, Sir Basil Blackett announced that he had agreed, in principle, to the election of six directors by six electoral colleges, instead of by the elected members of the Central and Provincial Legislatures, it seemed as if at last agreement on that vital issue was in sight. Although, upon that understanding, the Finance Member again withdrew his opposition to a State Bank, the terms of the pact have proved unacceptable alike to the non-official European members, who rightly maintain that the State Bank question admits of no compromise, and of the Muslims who apparently fear that if they endorse the new arrangement they will be committing themselves to the principle of joint electorates, and thereby weakening their case before the Statutory Commission for the perpetuation of communal representation. Even as we write comes news of yet another development, in the shape of an even more complicated scheme for popular representation by a system of trustee electorates. Unless, however, there is a greater possibility of a substantial measure of agreement being forthcoming than at present seems likely, we feel that the Finance Member would be well advised to revert to the original scheme sponsored by the Currency Commission and afford the Legislature a final choice between legislation on that basis, or maintenance, until 1931, of the *status quo* pending the examination of the question *de novo* by the projected Banking Commission.

CURRENT TOPICS.

A Great Engineer.

The story told by Sir Michael O'Dwyer at a recent gathering of merchants and others interested in the future of Indo-European trade illustrates only one of the many ways in which the life work of the late Sir John Benton, whose death is reported on another page, contributed to the prosperity and progress of the country of his adoption. One of the wealthiest men in northern India, Sir Michael said, had told him a few years ago that he was investing his money in the land irrigated by the canals which had been opened up in the Punjab. On being questioned regarding the price he had paid the zemindar replied that he had bought two thousand acres at £50 an acre. "That land for which he paid £50 an acre," the ex-Lieutenant-Governor of the Punjab reminded his audience, "I bought myself for a railway forty years before at less than half a crown an acre!" If the pioneers like Mr. Sidney Preston, the last of the Stanley engineers as Sir John Benton was the first of the Coopers Hill men, laid the foundations of irrigation work in India on sound and farseeing lines their successors have fully maintained the same high

standard of progress and efficiency. Those who affect to believe that nothing has been done for agriculture in India conveniently forget that the total area under irrigation is nearly one-eighth of the entire cropped area of the country. But if that figure is astonishing the record of the last quarter of a century is still more remarkable. Between 1903, when Benton returned from Burma to the Punjab, and 1922 the number of irrigation works of importance in India has exactly doubled, and when the projects at present under construction, constituting the largest under operation in any country, have been finished the area under irrigation by important works will be nearly three times what it was in the year 1902-3.

Lord Irwin's Appeal—and After.

While there are many who feel that the Viceroy's courageous offer to throw his whole energies into the "honourable quest" for a fair and equitable solution of the communal differences marks a new and not unencouraging development, the effect of which time alone will reveal, the fact cannot be ignored that the first fruits of Lord Irwin's appeal to "the multitudes of India" have been only a recrudescence of the disorders. Reports from all the affected areas indicate that the hostilities between the contending factions have been marked by the same, or even greater, ferocity and attended with the inevitable crop of serious casualties. "In less than 18 months, so far as numbers are available, the toll taken by this bloody strife" the Viceroy reminded his hearers last month "has been between 250 and 300 killed and over 2,500 injured." Only a week has passed and already those appalling figures have been largely exceeded. Is Lord Irwin, in again proposing the conference method which has hitherto repeatedly proved vain, letting desire outrun a true estimate of the possibilities? The question, as *The Times'* Simla correspondent rightly adjudges, does not admit of a direct reply. In part the answer is that the Viceroy is approaching the problem by a path which is not available to the political leaders, whose actions, to say the least, would in many cases appear to belie their professed desires. There is also the undoubted fact that the increasing gravity of the situation has enhanced the need for the boldest possible measures and has, as an aftermath of the profound commotion caused by the disclosures arising out of the Lahore High Court judgment, left in the minds of both communities a desperate, though as yet despairing, anxiety for the discovery of some road to peace. While we cannot but admire the Viceroy's constructive and courageous lead there is considerable force in the comment of *Forward*, the Swarajist organ in Bengal—"Our salvation lies in freeing the country from the influence of bigoted fanatics and political self-seekers, and it is doubtful whether in this task foreigners with the best intentions can be of any help."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 18.

Sir Stanley Jackson.

Last week the Governor of Bengal's activities were so numerous and so varied that comment on his remarkable speech on the occasion of the Saraswat Samaj Convocation at Dacca had to be left out for the next letter. After the usual thanks for the address of welcome, His Excellency remarked that it had been the custom for some years past for the Governor of Bengal to attend the Convocation at Dacca, and that he was pleased to continue that custom. Sir Stanley also said that he had always been interested in the learning and teaching of Sanskrit, and that, when he was at school in England, a special prize was given for efficiency in that subject. He did not enter for the prize, but believed that his friend and school-fellow, Sir Harcourt Butler, won it. His Excellency admitted that for many years he wondered what Sanskrit could be, and that he appreciated the interesting experience

of finding himself in the presence of the most learned exponents of Sanskrit lore. He told the Pundits that their knowledge was held everywhere in high esteem, and that the Pundits' method of teaching and learning, namely, of having teacher and student living together, both intent on the pursuit of learning, appeals to those who wish to aspire to exceptional knowledge of Hindu religion and philosophy. But the most significant part of the speech is that which the Governor addressed to the Pundits, saying: "By your system of living and your learning, you have acquired the confidence of the public, which gives you authority, and this you can be depended upon to use wisely by guiding the people along the paths of simplicity, truth and loyalty. Your creed, as enjoined by the holy Shastras, which lays down loyalty to the Throne and respect for law and order, has never been forgotten, and Government feel that they can depend upon the Pundits to assist them with their influence, whenever the law is broken or peace is threatened. I am glad that Government, recognising your influence throughout Hindu Society, have felt justified in giving you some assistance." But it is doubtful whether, in spite of His Excellency's appeal and unmeasured praise, the new generation of Bengalis will allow themselves to be led by the Pundits. Surely His Excellency must know that the scholars of the West who take a real interest in the "vast erudition of the traditional Sanskrit commentaries," can be counted in each country on one's fingers, and that, generally, they do not make use of such knowledge for political ends. It is His Excellency's view that "there is at present no common path of study for the Western and Eastern systems of Sanskrit learning." One is doubtful what that means, and still more doubtful if what His Excellency means is the truth.

The Floods.

Floods have broken out in many places, and a correct estimate of the damage caused to life, crops and houses cannot be given as yet. Baroda has suffered most, but the rulers there are described as enlightened people, who do everything in their power to mitigate the sufferings of the people. Gujarat is appealing to all India for help. When the South of India suffered through the Cauvery flood, Bombay was the first province to send her contribution, a substantial one too (Rs.40,000). Gujarat, on behalf of which Mr. Gandhi has made a stirring appeal, hopes to get relief from all parts of the country. But few people realise the seriousness of the situation. In Orissa more than 100,000 people have become homeless and have lost whatever belongings they possessed: clothes, provisions, crops, utensils, cattle. Volunteers are going there with food and clothing. The fact that 34,100 dwellings have been entirely destroyed or carried away will give an idea of the appalling condition of the sufferers. In Lower Sind the floods have destroyed large areas under cotton. The Hon. Mr. V. J. Patel, President of the Legislative Assembly, on landing in Bombay on August 5, was appalled to hear the heart-rending accounts of the agony of the people. He immediately made an appeal for funds, starting the list with Rs.10,000. They are, he said, all his savings.

Broadcasting in Calcutta.

The Calcutta station of the Indian Broadcasting Co., Ltd., will be officially opened on August 25 by the Governor of Bengal. In the meantime rehearsals are taking place and the last touches to the building and to the wonderfully equipped studios are being put by enthusiastic workers. Mr. C. C. N. Wallich, the Director of the Calcutta station, has adopted the wise course suggested in one of my letters: he has collected local talent, and with Miss Crowe as accompanist and Miss Violet Waring as leader of the orchestra, the performances will certainly be as good as can be desired. Miss Violet Waring is an English lady. She is thoroughly accomplished and plays the violin in a most classical manner. She speaks French like a native of Paris. The other English lady who will assist Mr. Wallich in the selection of the programmes is

Miss Wavenay Gorton. There will be a separate studio for Indian programmes. From this broadcasting Europeans may learn to respect, if not to love, Indian music, for good performances, either vocal or instrumental, show beyond doubt that the system, though rather less than more pleasant to the European ear, is at least far from barbaric or monotonous.

Anglo-Indian Problems.

The Anglo-Indian Association commemorated last week the anniversary of the Deputation to England. Lieut.-Col. Gidney, responding to the toast of the Anglo-Indian Association, asked the guests present at the dinner, about 120, to procure and read the Memorandum to the Secretary of State for India, in order to realise and appreciate the magnitude of the work done by the Deputation. He also repeated the well-known complaint that the Anglo-Indians are "European British subjects for Empire defence purposes; Statutory Natives for economic purposes; Anglo-Indians as a social designation." In last year's Railway Budget, Anglo-Indians were styled as "other classes." Col. Gidney preached unity, for, "unless we can present a united front, with a defined communal policy, to the Royal Commission," he said, "we shall not be considered, respected nor understood." The leader added that "the only policy to adopt is to adhere rigidly to that which will be best for India, for in the solution of India's economic problems lies the settlement of every communal difficulty." But the solution does not seem to be forthcoming from the brain-waves of the Anglo-Indian community. And the great pity is that their disagreements are frequently not on matters of policy or organisation. There are rivalries too personal to be interesting to the outsider, who may feel sympathy, at other times, for that not "quite hopeless" community.

Here and There.

The account of Dr. Tagore's splendid reception in Singapore was given last week from reports of the *Straits Times* and *Malaya Tribune*. The poet delivered an address to the Chinese community at the Palace Theatre. The hall was crowded. The Acting Chinese Consul presided and delivered an address of welcome. Then Dr. Tagore stood and addressed the teachers, greeting them, he said, as brothers, since he himself had a claim to that honoured name. He spoke of Asia as a "continent which once was the cradle of great civilisation, and the source of the streams of spiritual truth, which still feeds the life of the greater part of the world." He asked, in the name of Mother Asia, that the Chinese should awake into a full consciousness of their race, and rescue Asia from its age-long humiliation and obscurity. Incredible as it may sound, a Chinese translator immediately conveyed the message in Chinese. Dr. Tagore alluded to the fact that he had spent his 54th birthday in China. He was then given a Chinese name and was given garments of blue and imperial yellow which are used for new-born babes. It made him feel, as it were, "like one of the great makers of history in Asia."

It is reported that to enforce prohibition in Bombay an extra revenue of 4½ crores is required. If prohibition is the goal, they say, revenue should not be considered. It would not be safe to enforce prohibition gradually, keeping in view the gradual increase of revenue from another source. The best would be, of course, to get the co-operation of the Government of India. Detection of "excise crimes" would no more require such an elaborate establishment as when the revenue was threatened. The preventive staff would, in any case, cost much less than the *personnel* engaged now in the service of the Excise Department.

The Museum authorities have submitted to Government a scheme involving the demolition of the building known as Museum House, and the erection, in its place, of a five-storied fireproof building to house the reserve collection, the Library, and the offices. The cost is calculated at

Rs. 7½ lakhs. The Museum House has been used since 1875 as residential quarters for Museum officers. Dr. Annandale, who lived there until he died, loved the house, but thought it most insanitary.

The late Lord Cable, who was educated at St. Paul's School, Darjeeling, left in his will a legacy of Rs. 3,00,000 to that institution, to enable the Rector of the School to proceed with the building of the Chapel, and to provide additional comforts for the boys.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 19.

The Textile War.

Hope, we are told, springs eternal in the human breast, and expectations certainly ran very high indeed when the deputation from the millowners visited Simla recently and put their case before the Viceroy and Commerce Department. An even higher notch was reached when the news came through that the Government of India was reconsidering the Tariff Board's report, and that, in the reply to the millowners' protest, would put fresh proposals of a more satisfying nature. It was thus all the greater a fall when those proposals were rather hurriedly made public a couple of days ago—and it was found that they made not the slightest difference to the main problem to be solved,—protection against Japanese dumping. The millowners asked for bread, and they have been given a very hard stone. A specific duty on all imported yarn is the pacifier offered to the textile industry, and it cannot but be agreed that the latter's representatives have very rightly refused to take the offer as the last word on the subject.

An Offensive.

Behind closed doors the latest suggestion has been discussed threadbare, and to-day a telegram has been despatched to Simla pointing out the fact that once again the real issue has been side-stepped, and expressing in very plain words the keen disappointment felt at the matter. That protest having been lodged, the millowners will now launch their offensive through the Legislative Assembly, and their spokesman, Sir Victor Sassoon, having arrived only this morning from a visit to England, is leaving post-haste for Simla and the battlefield. That Government will suffer in the Legislature is more or less a foregone conclusion, for not only does their attitude not even remotely coincide with that of the industry, but it does not even resemble that of the Board which it appointed to inquire into and report on the question. An unenviable solitude, indeed, which will, one feels sure, be brought home very forcibly within the next week or two.

The Principal Need.

The Government has been at great pains to point out a self-evident fact, that their suggested 5 per cent. duty on important yarn will not lead to any hardship either to the consumer or to the hand loom industry. No one denies that, but its protective value to the Indian textile industry is practically nil. What the industry needs is effective protection against the dumping of cheap foreign cloth, and until it is forthcoming the fight will, and must, continue. The country cannot allow such its premier industry to go to the wall merely because the Government refuses to face economic facts.

Gujarat and Kathiawar.

With the restoration of more or less normal communication with the flood stricken areas in Gujarat and Kathiawar, there comes news which goes to show that things are not quite as bad as was at first anticipated. Thus, though the general damage has been very great indeed, measures have been immediately taken to set things straight once more, and are proving remarkably effective. Relief is pouring in from every quarter, and already crops are being re-sown, houses re-built and the sufferers re-

established. In view of this fact, Sir Leslie Wilson's plan to visit the scene of the floods and to examine the situation has very rightly been fixed to be carried out at a later date. A visit would now lead to the holding up of the work of the various officials—for one cannot travel *incognito* in this country with much success—and prove of little value.

Universities and Research.

Professor Jadunath Sarkar delivered an inspiring convocation address to the Bombay University this week, and in it he confined himself to appealing for the organisation and endowment of research at the University. No one could have been better qualified than he to outline as rosy a picture of the future as Professor Sarkar did, for as Vice-Chancellor of the Calcutta University and an ardent research worker in history, he has done more for the Calcutta University than anyone else and has created a great impression on educational circles all over India. Our main difficulty in even making an effort to follow his valuable advice, however, rests in the fact that the Bombay University lacks leadership. The Governor, who is Chancellor, is far too busy to be able to devote the time that such leadership would entail, while the Vice-Chancellor, being only an honorary incumbent, is obliged to carry out a variety of other functions at the same time. It is hoped that the new University Bill before the Legislative Council will do away with this handicap, and when it does we hope to see some of Professor Sarkar's ideas put into execution.

A Doctor's Retirement.

In Colonel L. T. Rose Hutchinson, I.M.S., who has just retired and gone home after devoting thirty years of his life to this country, we in Bombay have lost a very good friend indeed. Although Colonel Hutchinson saw service at a number of places in India, he spent most of his time in Bombay and has left here many a memorial by which he will be remembered. Coming to Bombay during the plague epidemic, he did notable work with the aid of a band of voluntary nurses from England, and from then onwards India claimed him. He is best known here for his services at the Grant Medical College, where he was a lecturer for many years, and at the Goculdas Tejpal Hospital, which improved out of all recognition during his ten or so years in charge of it. Apart from his professional activities, however, Colonel Hutchinson was a well-known figure in social circles, and many are the friends who regret his going.

Theatrical Enterprise.

Bombay is experiencing a real theatrical revival thanks to the enterprise of Mr. "Wally" Banvard and the technical ability and judgment of Mr. Lew Marks, for many years the late Mr. M. E. Bandman's general manager. Between them, these bold gentlemen have brought out a real class entertainment and a really good company of artists, and the result has been that Bombay has literally been swept right off her feet. Instead of the usual lethargic half a dozen in the stalls, the theatre has been packed night after night, and the enthusiasm of the audiences has been unprecedented. If success such as this continues, and there is no reason to doubt that it will, the Eastern theatrical market will again prove worth while tapping, and perhaps we will then succeed in securing a continuity of real theatrical-fare instead of occasional visits from touring companies.

Commercial Markets.

Money market steadiness, offerings of Treasury Bills and the approach of settlement have led to a regular slump in gilt-edged securities, which are a weak market. Exchange is steady to dull, but speculative activity in gold has resulted in that market assuming a much steadier tone. Silver, due to London and American sales and the far from reassuring advices from China, is unhealthy with prices inclined to sag. Interest has been diverted from industrial shares which have been dull. Cotton is very steady, while piecegoods are naturally dull in view of the Government's attitude towards the mill industry.

"MOTHER INDIA."

The author of this book, whose previous work on the Philippine Islands is well known to students, tells us that she went to India to see what she could observe of common things in daily human life, with particular interest in all questions affecting public health. The record of her observations leaves no room for doubt that she possesses the first qualification for her task, in that she is able to observe, but it shows also that she has read largely and wisely, and further that she has the gift of getting below the surface. In writing of politics, for instance, she goes straight to the main weakness, the want of an efficient electorate; in regard to primary education, she realises, what the experts have long known, that it is the quality of the available teaching that is at fault; and she brushes away the figments of commercial or industrial "drains" with the sure touch of an economist. The book must, therefore, be taken seriously, and not as the impressions of an ordinary globe-trotter. Its most novel, and most painful, chapters throw back to the great truth, which was so familiar in ancient Greece, and is still so often overlooked in Western practice, that it is Men who make the City; the author's thesis is that Indian life cannot escape the influences operating at its inception; and her studies have led her to the conclusion that in modern India those influences are exceedingly bad—that the combination of unfit parents, unskilled midwifery, and unsuitable homes, give the new generation no real prospect of a healthy life. As regards the second group of these adverse influences, there is unfortunately no room for controversy, for the survival into modern times of the old taboo of ceremonial impurity attaching to child-birth does, in point of fact, involve untold dangers to the children, as well as suffering to the mothers; and philanthropic efforts, inspired from outside, have not yet succeeded in producing a substantial change. Regarding the presentment of the other influences, we think there is some room for criticism. They are to be found in all countries, and the question is one of their extent. We do not say that the picture shown to us is overdrawn, but we think it is not drawn very skilfully; the necessary qualifications are there, but they are not so stated in such a way as to catch the attention of the inexperienced reader; and this part of the book would have been better if the writer had striven for a more definitely judicial standpoint. The ordinary reader will probably leave the subject with the impression that the evils stated are practically universal in extent, and unvarying in degree; let us insist, therefore, on the qualifications stated in various places by the author, that the north is better than the rest of the country, that in some respects the Moslems are better than the Hindus, that the villages are better than the towns, and that nine-tenths of the people live in the villages. The conclusion we would draw from these statements is that, while unfavourable influences are widespread, or even general, their importance varies greatly, and they are most important among town-dwelling Hindus. That conclusion is supported by a mass of evidence drawn from vital statistics and other sources: it deserves the most careful consideration from the leaders of the community; and the author has done a necessary, and painful, bit of work in bringing the facts so forcibly to their attention, though, in our judgment, its presentation might have been improved.

Apart from this particular point, the only general criticism we have to offer on the book is one that is inevitable in the circumstances of its production. The author has no effective parallax: looking at the present primarily with regard to the goal, she is naturally impressed mainly by the distance still to be traversed, and, while she constantly recognises that things are changing for the better, she scarcely realises the extent of the progress which has been made. Those of us who can look back even

thirty or forty years can agree with her as to the distance of the ultimate goal, but can perceive at the same time that India has not been standing still, or going the wrong way; that she has advanced already some distance on a course where the earliest steps are by far the hardest; and that what is wanted now is not a rush or a bang, but steady acceleration of the pace. It is this standpoint which we would urge in particular on our Indian readers. Some of them, too, have no effective parallax, for they are so impressed by past achievement as to regard the race as practically over, and for them "Mother India" will be painful reading. Let them read it all the same, and, if it pains them, as it has pained the reviewer, let them treat the pain as the prick of the spur, urging them to increased efforts for the realisation of their ideal, the development of an Indian nation worthy of its past—and of its future.

WIRELESS TO INDIA.

The Postmaster-General announces that the Anglo-Indian Beam Wireless Service was opened for public traffic on Tuesday. The new service places London in direct wireless communication with Bombay, and will be available for telegrams to all destinations in India, Burma, Ceylon, Iraq, Persian Gulf, Siam, etc.

The reduced rates per word to India by this route are 1s. 1d. for ordinary telegrams, 6½d. for deferred telegrams, 3½d. (with a minimum of 20 words) for daily letter telegrams, and 3d. (with a minimum of 20 words) for week-end letter telegrams. Messages for transmission by the new beam service may be handed in at any postal telegraph office, and should be marked with the free routing instruction, "via Empiradio." Full particulars of the service can be obtained on application at any postal telegraph office. In addition to the reduction in the rates for public traffic the beam service offers a reduced rate of 2½d. a word for Press messages.

Among those present at the demonstration held at the General Post Office on Monday, prior to the first day of public working, were Mr. R. Chinoy, director of the Indian Radio Telegraph Company; Mr. P. J. Edmunds, Director, Wireless Branch, Posts and Telegraph Department, India; Mr. J. Stuart Jones, Controller of the Central Telegraph Office; Mr. P. M. Mitra, Assistant Director-General, Traffic Branch, Posts and Telegraph Department, India; Mr. E. H. Shaughnessy, Chief Engineer of the Radio Section of the General Post Office; Mr. R. N. Vyvyan, Engineer-in-Chief, Marconi Company; and Mr. A. Ogle, Deputy General Manager, Marconi Company.

INDIAN MAIL.

Rural Medical Relief.

The prejudice with which Western medicine was in the past regarded by the masses of the people of India has very largely been overcome and considerable progress has been made in recent years in extending its benefits to all classes. But that these advantages are not always very fully appreciated is shown, observes the *Pioneer*, in the recently issued triennial report of the working of hospitals and dispensaries in Bihar and Orissa. There has been a multiplication of local fund dispensaries as a result of the increase in the grants which the Legislative Council has never hesitated to vote and also of the larger share of local funds devoted to the same purpose. All local fund institutions; however, depend to a considerable extent on the subscriptions which are collected by their managing committees. It is here that disappointing results are recorded. Public subscriptions provide less than 7 per cent. of the total income of State local fund and private aided dispensaries. Many of these institutions are ill-equipped and are with great difficulty maintained by the committees owing to inadequate public support. "The public avails itself of medical relief so long as it is free," says the Government resolution, "but prefers to suffer rather than pay anything for the benefits conferred upon it." This was illustrated when towards the close of the period the Government of India imposed a small charge on patients attending the Pusa hospital in Darbhanga, with the result that the number attending the institution immediately declined. And it is pertinently added that if the public will neither pay for medical attendance nor subscribe to medical institutions it is difficult to see

"Mother India." By Katherine Mayo. (London: Jonathan Cape. 10s. 6d.)

how medical relief on an adequate scale can be extended to it or how the doctors, whose services rural areas particularly require, are to make a living in them.

There has been a somewhat similar experience in the United Provinces. Here, however, in the same three years, instead of a marked increase in the number of hospitals and in the patients treated, the number of institutions remained stationary and there was a steady decline in the number of patients. For financial reasons there was no possibility of expansion. The local dispensary system in the United Provinces was founded on the basis of local effort expressed partly in endowments and guaranteed subscriptions. The subscriptions now amount to only three and a half per cent. of the total receipts, compared with eight per cent. in 1919, while invested capital which is now Rs. 19.35 lakhs has in 20 years increased only by Rs. 4½ lakhs. The ground which has been lost in private subscriptions has not been recovered through the allotments which District Boards can make from their own funds. "Faced with a largely increased salary bill they can in most cases," says the Government resolution, "make no provision for expansion unless they increase their resources by taxation." But there is little sign that the need of the rural areas for more widely diffused medical relief impresses the boards so strongly as to induce them to take this step. Progress in both provinces has been checkered and some of the experiments which have been tried, such as travelling dispensaries and the subsidising of medical practitioners in remote areas, have in their results fallen short of expectations. But a definite policy is being persevered in with a view to the expansion of the system of medical relief, directed generally towards inspiring local interest and effort and there are various hopeful signs to be noticed. There have been exceptions to the general apathy and the Governments of the two provinces have each to record their appreciation of cases of very generous assistance given to hospitals and dispensaries by philanthropists, whose example, it is hoped, will inspire others.

CORRESPONDENCE

THE COMMISSION'S TASK.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I request the favour of your kindly allowing me heartily to endorse your remark (made in the leading article in your issue of September 1, under the above heading)—"It will need courage on the part of Indians to tell the Commission openly that which they know in their hearts to be the truth." Truth should surely be not sacrificed to tact or anything else. It is really no time for mincing matters.

I may also say that "The talk of a united nationalism" in the words of Dr. Sir Mohammad Iqbal, "is futile; like a hen it has cackled a great deal without laying a single egg." It is idle to think of advancing the purely democratic principle in India under the existing circumstances. The maintenance of the political representation of minorities is essential to Indian order and progress as pointed out by *The Times* of August 9. There is no doubt of the fact that without some special representation the important elements, which have a history of domination behind them, will inevitably attempt to assert their rights by violence. This emphasises the necessity of having in the Commission itself representative persons like Sir Mian Fazli Hussain and Sir Abdur Rahim who, having a long experience of Indian political life, are not apt to be unduly swayed by the vain idealism of some of the anti-British agitators.

As regards the question of untouchability, also, you are right in saying that in time it may lead to trouble. The Adi-Hindus upon whom the Aryan herdsmen imposed their speech and their deities are already awakening, and they demand their legitimate rights. The following was said at the Adi-Hindu conference at Allahabad: "The nigh class Hindus who pose as our sympathisers are afraid lest you who have now been disillusioned with the help of

education, gained under the impartiality of the British rule, should now secure separate representation on political bodies. How can they tolerate such a state of things? In the first place their share of representation dwindles to one-third and in the second place those whom they have managed to keep in slavery for 5,000 years are going to be freed."—I am, etc.,

London, W.2.

MOHAMMAD ISA.

NEWS IN BRIEF.

The first of the three international polo matches between Great Britain (represented by the Army in India team) and the United States for the Westchester Cup has been postponed from Monday, September 5, to Saturday, September 10, owing to the state of the ground. No alteration has been made in the dates of the other two matches.

Mr. Geoffrey Williams, having disposed of his interest in Woellwarth and Co., has resigned from the board. Mr. T. Caldwell Anderson, formerly of the Hongkong and Shanghai Banking Corporation and of the Eastern Bank (Calcutta), having acquired a half interest in the company, has joined the board as a director. The name of the company has been changed to Woellwarth, Anderson, and Co.

Major-General Eric S. Girdwood, C.B., C.M.G., who has just vacated the command of the Bombay District, has succeeded Major-General C. E. Corkran as Commandant of the Royal Military College, Sandhurst. He commanded the 9th Infantry Brigade at Portsmouth, and was for a time in Iraq during the formation of the native levies there. He was formerly adjutant of the 2nd Battalion of the Cameronians (Scottish Rifles), which he joined from the old 2nd Royal Cheshire Militia.

The Secretary of State for India has received the following telegram:—Rainfall for the week ended August 31:—Scanty: Bihar, Sind, Berar, Hyderabad (North), and Mysore. Normal: Lower Burma, Assam, United Provinces (East), Baluchistan, Konkan, and Madras Coast (North). Fair: Bengal, Chota Nagpur, United Provinces (West), Gujarat, Bombay, Deccan, Hyderabad (South), Madras (South-East), and Madras Deccan. Excess elsewhere. Monsoon been weak Deccan and strong North-West and Central parts.

The endorsement for India of the passport held by Mr. Saklatvala, M.P., has been cancelled by the Foreign Office. Intimation of the cancellation was sent to Mr. Saklatvala in the following terms:—"Sir, with reference to the endorsement on your passport granted on December 21, 1926, I am directed by Secretary Sir Austen Chamberlain, to inform you that the validity of your passport for India has been cancelled. The fee for the endorsement can be refunded to you on your returning the passport to this office for cancellation of the endorsement." No *visa* is necessary for journeys to India, and a special endorsement of a passport must be obtained. It is this which has been cancelled at, it is understood, the express desire of the Indian authorities.

OBITUARY.

SIR JOHN BENTON.

THE NEAR EAST AND INDIA regrets to announce the death, which took place on August 29, at the age of 77, of Sir John Benton, the distinguished engineer, and one of the pioneers of irrigation work in the Punjab and in Burma. The first student to enter the Royal Indian Engineering College at Coopers Hill on its inauguration in 1871, of which he was subsequently made a Fellow, he joined the P.W.D. in 1873, and his first service was on the Sirhind and Bari Doab Canals, and later on the Multan and Chenab irrigation works, under Mr. Sidney Preston; and Lyallpur and other stations in that area owed much to his foresight. Transferred to Burma in 1897, he raised the whole standard of irrigation work in that province, and in 1902 was created C.I.E., returning the same year to the Punjab as Chief Engineer and Secretary to Government in succession to Mr. Preston. Retiring under the age limit in 1905, he was recalled by Lord Curzon in 1906 and appointed Inspector-General of Irrigation and finally retired in 1912, having been promoted K.C.I.E. in the previous year.

Lieutenant-Colonel George Charles Lambton, O.B.E., D.S.O., late the Worcestershire Regiment, died suddenly on August 30 at Brownslade, near Pembroke, at the age of 54. He joined the King's Royal Rifle Corps in 1892, and three years later he transferred to the Worcestershire Regiment, and served in the South African War, 1899-1902, with the mounted infantry. From October, 1909, to July, 1912, he was adjutant, Indian Volunteers. In the Great War he commanded successively the 2nd Battalion the Worcestershire Regiment, the 29th Battalion the Royal Fusiliers (T.R.), the 1st Battalion the Norfolk Regiment (temporary), the 52nd Battalion the Nottinghamshire and Derbyshire Regiment, and the 11th Battalion the Leicestershire Regiment.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Syrian Trade.

It is unsatisfactory to find, some four years after the opening up by British enterprise of regular motor-car services across the desert between Syria and Iraq, that the British Consul at Damascus has to complain of the neglect of the Damascus market by British trade. There can be little doubt that Mr. E. C. Hole is right in considering that present tendencies point towards an increase in the general trade between the Mediterranean and the East. Already, he says, many tons of Persian merchandise pass through Damascus every week for shipment to the West. With the development of motor facilities—they are improving every month, almost every week—and with the inevitable effect of the spread of settled conditions throughout the Middle East on the productivity of these countries, there must needs be a marked improvement in trade. At present the aim is to accomplish the journey between Damascus and Baghdad as quickly as possible. Before long some people will begin to use the motor car to cover the route more slowly, and then they will discover potentialities in some of the districts traversed, with further impetus to trade.

Some Needed Tonics.

As the British Chancellor of the Exchequer has seen fit to paint the economic situation in Great Britain in confident and optimistic colours, it may not be out of place to try to discover encouraging prospects in the Near East, which pessimism has for so long claimed for its own in respect of a trade revival. Our authorities will also be official, but will, perhaps, be less suspect than Mr. Churchill of viewing their subject through rose-coloured spectacles. From the Report on Economic and Commercial Conditions in Turkey for 1926, extracts from which are reproduced on another page, it will be seen that the British Commercial Secretary at Constantinople regards the economic outlook for the Turkish Republic far more favourably than he could a year previously. He sees indications of a gradual economic revival and development; there has been an intensification of agriculture; the trade balance registers a marked improvement; there is every reason to believe that this balance will go on improving; the Government has made some attempt to establish more precise budgets and to reduce, by the exercise of a stricter economy, the deficits carried forward from preceding years. This picture, no doubt, is not so brightly painted as Mr. Churchill's picture; but no one with a sense of proportion would expect it to be. The change to better conditions will be the more lasting, if it comes about slowly. There has been a steady flow of foreign capital into the country for industrial and other purposes, although the much needed loan has not yet been arranged. A beginning has been made with industrial undertakings, and these will be more likely to prosper, if the Turks curb their expectations and realize that it is much better to allow foreign experts to show them how to run their own businesses than, by courting failure from inexperience, to shatter the confidence of their own people. An exclusively Turkish factory—be it for sugar or textiles—financed and managed by Turks makes good patriotic reading in a newspaper, but is unlikely to win the people to supporting industrial enterprises, if it is seen that incompetence dogs the venture from the outset.

Progress in Roumania.

Another country that is showing signs of beginning to turn the corner is Roumania. Here too the British Commercial Secretary is able to report noticeable improvement in economic conditions in 1926, and as an indication that this is being continued during the current year it may be noted that the Customs revenue for the first seven months of 1927 amount to nearly 5,400,000,000 lei as compared with 4,500,000,000 lei for the corresponding period in 1926. There has been a notable increase in the revenue derived from imports, which accounts for 3,615,000,000 lei, as compared with 2,148,000,000 lei in the first seven months of 1926. In quantity and value imports show a falling off, but the enhanced duties have led to this considerable increase in revenue. Taxes on exports, on the other hand, have been reduced, and the revenue from this source has fallen from 1,986,000,000 lei in the first seven months of 1926 to 1,506,000,000 lei in the same period in 1927. As the estimated revenue for the period under review was 4,608,000,000 lei, the actual returns shows an improvement amounting to 800,000,000 lei. Future progress depends in large measure on Roumania's success in raising a foreign loan. To this end the Foreign Minister, M. Titulescu, and the Minister of Finance, M. Vintila Bratianu, will shortly be in touch with business circles in London and Paris, and it is hoped that M. Bratianu will be able to convince those to whom Roumania must look for a loan that many of the features to which foreign interests took exception in the policy of the Bratianu Government when it was last in office have been abandoned in the light of wider experience.

Aide-toi—le Ciel t'aidera.

A Bulgarian newspaper has succeeded so far in shaking off a national weakness as to challenge the wisdom of continual appeals to the Government and to other nations for help or remedial measures in connexion with the difficult time through which Bulgaria is passing. The situation, it points out, imposes on the people themselves the duty of searching out new avenues of progress, by the development of greater activity and a wider initiative on the part not only of the State, but also of private organisations and enterprises. Rather than crying out for the State to come to their aid, the Bulgarian people, it is urged, should come to the aid of the State and show to a greater extent the spirit of initiative. A harassed Govern-

ment, it would be thought, could only welcome this appeal for greater consideration of its own particular difficulties; but so strong is convention that a semi-official organ takes its colleague mildly to task. All these appeals to which reference is made, it points out, are a proof of the great intellectual and moral progress that the different classes in the country have made, based on their experiences and deductions; but they are equally proof of a material economic weakness for which the appellants are in no way responsible. There follows a tabulated list of Bulgaria's oft-quoted grievances—the War catastrophe, surrendered territory, reparations, undeserved distrust, lack of capital and so on.

A Lesson from Greece.

Bulgaria's friends do not dispute the existence of these handicaps; but they will derive far more hope for the future of the country from the unusual appeal for a sturdy self-reliance than from any fresh enumeration of its complaints against the world in general. By a curious coincidence the semi-official organ had two days previously pointed the very moral which, when it is urged by a colleague, it seeks to challenge. Its Athens correspondent, describing conditions in Greece, had drawn attention to the fact that, in spite of a Ministerial crisis and her serious financial difficulties, the economic development of the country was proceeding normally, and he attributed this circumstance "in large measure to Greek merchants and industrialists, who, without waiting for State aid, themselves work at the development of commerce and production." These qualities of initiative and enterprise which one meets with in the Greek commercial man, the correspondent added, are also to be found in the numerous publications which aim at assisting commerce, industry, agriculture and trades in Greece.

Sir V. Caillard's Resignation.

The resignation of Sir Vincent Caillard from the Vickers' Board of Directors marks the severance of a very long association with the company, for Sir Vincent Caillard became a director of Vickers (then Vickers Son and Maxim) as long ago as 1898. He has, therefore, been a director for some twenty-nine years, of which the last fourteen at least have constituted a period of special importance. Among the pre-War developments during his tenure of office that are of particular interest may be mentioned his negotiation on behalf of Vickers and Armstrong early in that fateful year 1914 of the contract for the reconstruction of the Turkish fleet, dockyards, and arsenals. The work on this contract was begun, but the outbreak of the War brought it to an untimely close. As has been the case with all other concerns of a similar character post-War conditions created a difficult situation which has been met by the reconstruction of the Company, and, as this has been practically completed, Sir Vincent Caillard probably felt that he was at last able to relieve himself of the very heavy responsibilities associated with the directorship. Sir Vincent Caillard has been very closely connected with the Near East throughout his career. He was Assistant Commissioner for England on the Montenegrin Frontier Commission in 1879, was attached to the Headquarters Staff for the Egyptian Campaign of 1882, and

was for many years before joining Vickers President of the Ottoman Public Debt Council.

The Problem of the Currencies.

Post-War economic history has been largely a record of fluctuating currencies and their effects on commercial and industrial developments and of the efforts of the various States concerned to solve the problem each in its own way. The general problem of unstable currencies has recently been the subject of a series of interesting lectures before the School of International Studies at Geneva by Professor Irving Fisher, of Yale University. He puts the case very strongly for the standardization of the money unit, illustrating the importance of stable conditions by the consequences which followed deflation in the United States and Great Britain. Apart, however, from what may be termed the social results there are the international results reflected in hampered and reduced commerce, even sometimes in the alteration of the channels of trade. The Near Eastern countries have suffered to the full from the problem of fluctuating currencies, and while most of them have reached the point of stabilisation it has only been at figures which bear small comparison to the pre-War exchanges.

The Ideal of Stabilisation.

If the stabilisation of the currencies is the obvious ideal to be aimed at it is self-evident that in the present complicated system of human society with its increasingly intricate credit structure such an end can only be approximately attained. The money of a country is in a sense a reflex of the internal conditions—I say in a sense; because it is far more than that, and it can be influenced by a variety of factors which have nothing to do with internal conditions. Gradually the countries are getting back on to a gold basis, following the example of Great Britain, who, says Professor Irving Fisher, "accomplished this . . . at terrific cost in trade depression and labour unemployment and unrest," and he holds, it is interesting to note, that by doing so we have set an unfortunate example to other nations. While in my view it was a premature step and one which could well have been postponed, that is not the point to which I wish to refer now, but to the question of the gold standard. Given that the standard is effectively restored universally what will be the situation (1) in the event of the discovery of vast new gold fields (always a distant possibility) and (2) in the event of gold becoming scarce? Clearly stabilisation would be disturbed, and that is just one example of the difficulties with regard to the question of stable currencies. Dealing with this particular point Professor Irving Fisher says that credit control is not enough and that gold control will ultimately be needed to supplement it.

Astra Romana.

It is announced that a convention has been signed at Bucharest between the Roumanian State and the Astra Romana Company (the Roumanian subsidiary of the Royal Dutch Shell Group) setting out the terms on which Roumania undertakes to compensate the Astra Romana Company for the losses suffered in the course of the destruction of the Roumanian Oilfields in 1916. The convention follows the same lines as that concluded last November

between the Roumanian Minister in London and the Phoenix Oil Company. The compensation will be paid in forty annuities, two per cent. during the first five years, $3\frac{1}{2}$ per cent. during the next five years and $4\frac{1}{2}$ per cent. during the remaining 30 years. The capital sum of compensation on which the annuities are based is that fixed in 1922 by the Anglo-Franco Roumanian Commission. Only one-half of the compensation will be paid until Roumania has concluded an arrangement with France regarding the latter country's obligation in this matter.

COMMENTATOR.

Near East Markets

THE SMYRNA DRIED FRUIT TRADE.

Messrs. C. J. Giraud and Co., of Smyrna report as follows for the week ended August 27:—

The estimated arrival of Sultanias on the Smyrna market since the opening of the season amount to 3,750 tons, as compared with 3,850 tons for the same period in 1926, the estimated sales to date amount to 3,200 tons, as compared with 3,800 for the corresponding period in 1926. Closing prices, per cwt. c.i.f., were:—Type 12, 40s.; Type 13, 46s.; Type 14, 50s.; Type 15, 54s.

Sultanias: On the subject of market conditions the Report adds:—Market unsettled and undergoing considerable fluctuations dependent on weather conditions. Rain fell last week in some districts causing damage to quality to the estimated extent of about 15 per cent. of the yield. Supplies reaching market show poorly, both in respect of quality and development, and fine fruit is as yet unobtainable. Although rain has passed off, the weather continues uncertain. The bulk of the fruit is now on the drying sheds and a recurrence of wet weather over the next fortnight may have serious consequences, causing further deterioration in qualities and probably loss of fruit as well.

Figs: The estimated arrivals of figs on the Smyrna market since the opening of the season amount to 3,490 tons, and the estimated sales to date to 3,253 tons, as compared with 1,960 tons and 1,540 tons respectively for the corresponding period of 1926.

In regard to market conditions the Report states:—During the week heavy showers in the Upper Meander Valley and moderate showers in the lower districts have caused serious damage to the quality of that part of the crop which was at the time laid on the drying sheds. The damage to the figs on the trees during the past week by rain and dew at night can be assessed at 5 per cent. loss of fruit. The weather continues generally unfavourable. Although market has been little impressed by the unsatisfactory reports received from the growing centres, closing prices are much firmer than opening values notwithstanding the early heavy arrivals as reported above. Unless we have decided change in the weather, prices for all qualities are likely to advance.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows in regard to the gum arabic market in the Sudan for the period from July 21 to August 20:—

Arrivals of Kordofan Hashab from July 21 to July 31 showed a decrease of about 66 per cent. as against the same period last year, whilst from August 1 to August 20 the decrease was more accentuated, viz. 74 per cent. The daily averages of gum coming upon the markets were 14 tons and $7\frac{1}{2}$ tons respectively.

During the above period the percentage of rain-damaged gum was 37 per cent. of the total arrivals, the percentages for El Obeid and Nahud taken alone being 58 per cent. and 17 per cent. respectively.

The shortage from July 21 to August 20 was 745 tons, which brings the total shortage of Kordofan Gum from the beginning of the year up to date to 1,615 tons, as against

last year (besides the shortage on the inferior qualities which is estimated at about 2,000 tons).

Prices.—Taking El Obeid as the standard, the market opened on July 21 at the same price at which it closed on the 20th, remained steady with little fluctuation up to August 4 and closed on the 20th at about 9d. less.

Demand.—During the last ten days of July demand has been generally weak, whilst for the first twenty days of August it has been better than last year, and, though small, might be considered as good for this time of the year.

The total exports of Gum Arabic for the first six months of 1927 amount to 12,945 tons (to Great Britain 3,202 tons, to U.S.A. 2,397 tons) as compared with 13,791 tons (to Great Britain 4,199 tons, to U.S.A. 3,046 tons) in 1926. The exports for July were 1966 tons as compared with 2,492 tons in 1926.

CHESS.

By "CARO-KANN."

White to play. What result?

The solution to last week's end-game is as follows:—1, K—K3, K—K4; 2, K—B3, K—B4; 3, K—Kt3, K—K4; 4, K—Kt4, K—B3 and draws. The curious thing is that the result is the same if Black moves first.

I give this week another pawn problem of a different character.

A SUDAN HANDBOOK.

An admirable little handbook on the Sudan has just been published by the Sudan Government Railways and Steamers. In the compass of a hundred pages, with many excellent illustrations, a complete compendium of knowledge regarding the country is provided for the tourist or the resident-to-be, who is given not only a rapid survey of the history of the country since 1820, but also useful notes on economic conditions, the products, and the activities of the people. For the rest the book is a handy guide, giving information of the things to be seen, where to go and how to get there. There is a chapter on antiquities, and another gives a description of the journeys by car from Rejaf—end of steamer navigation on the White Nile—to Uganda and to the Belgian Congo.

The Indo-European Telegraph Company announce that the following reduced rates between Great Britain and Northern Ireland and India, Burma and Ceylon came into operation via Indo as from September 1:—Ordinary telegrams, 1s. 5d. per word; deferred telegrams, 8½d. per word; daily letter telegrams, minimum charge for 20 words 7s. 1d. and 4½d. per each additional word. From the same date, a week-end telegram service between the same countries has been introduced at the following tariff:—Minimum charge for 20 words, 5s. 5d., and 3½d. per each additional word.

ECONOMIC POSITION IN PERSIA.

The continuation of the Russian embargo on imports from Persia had a depressing effect on business conditions during 1926. Agricultural production showed improvement, but the market for surplus products was restricted (says an article in the United States "Commerce Reports.") Government revenues increased and the financial position of the country continued satisfactory.

Satisfactory crops are indicated for the year 1926, in contrast to the droughts of 1925 when the importation of large quantities of cereals was necessary to avert a famine. Although no returns are available for 1926, there was an abundant water supply throughout the crop season and grains were unusually free from rust and senn. Difficulty however, was encountered in marketing the export surplus of agricultural products because of Russia's existing embargo on imports from Persia, thus cutting off Persia's chief market for such products. Cotton production in 1926 is reported to have been larger than for 1925, and wool production is estimated at 9,810,000 lb. as compared with 6,540,000 lb. in 1925 and 14,887,000 lb. in 1924. The low figure for 1925 wool was the result of inroads made by anthrax during that year. Tobacco production is estimated at 25,500,000 lb., as against 23,000,000 lb. in 1925. The crop of fruits and nuts is reported to be somewhat better than for 1925, in spite of adverse weather in the spring of 1926.

Persia's leading industry, the manufacture of rugs, had a satisfactory year. Exports in 1925-26 exceeded those of 1924-25, and preliminary returns for the first six months of 1926-27 indicate still further expansion. However, the gradual reduction of foreign capital in Persia, normally utilised for advances on contracts for rugs, has revealed certain unsatisfactory conditions within the industry which may ultimately affect exports. This situation is reflected in the tendency of foreign buyers to purchase in the open market rather than on the contract system. The Government has become concerned about this condition and has taken steps to investigate it. Organisation along modern factory lines, with rigid restriction of dyes and other materials entering into the finished product, improved breeds of sheep, as well as better conditions for workers, are among the measures under consideration.

The match factory at Tabriz and the spinning mill at Ispahan are reported to have functioned normally in 1926. These two and a woollen mill in Meshed are the only factories in Persia of any importance.

With a view to stimulating industry, the Persian Government has prepared a bill proposing that all raw materials for Persian-owned factories be exempted from customs duties and road taxes. In the past such exemptions have been limited to specific shipments.

Definite steps were taken in the latter part of 1926 on the railway construction question that has been under discussion in Persia for some time. An American rail-

road engineer was appointed and several routes were surveyed. Recommendations for a construction programme are expected to be presented to the Government before the end of 1927. The fund for railway construction totalled £1,466,000 at the end of 1926 and by the end of 1927 the sum of £2,400,000 is expected to be reached. This will enable work to be started on any programme that may be adopted.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Lamp Chimneys, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of chimneys spare for lamps standing, stands wash head, bells hand office, chairs office bentwood, mats door, stoves oil warming, brushes paste, brooms grass, locks, sacks, choppers vegetable, dominoes, saucepans, shears gardeners, stones razors, lamps dietz, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. September 21.

Brown Leather Sword Knots, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of knots sword brown leather, burnishers steel, rugs horse winter, saddleries, cases tin uniform, badges gilt and buttons officers, ribbon medal silk, twillette and drill khaki officers, slates, rivets iron for hales, etc., to the Department of Ordnance Services, Egyptian Army, Cairo. September 26.

Tenders are invited by the State Domains Administration, Ministry of Finance, Cairo, in respect of the following contracts (local representation essential):—2 semi-Diesel engines; 1 horse-drawn portable steam fire-engine; 1 centrifugal pump, 16 in./16 in.; 1 centrifugal pump, 12 in./12 in.; 1 hand fire pump. October 1. (D.O.T.)

INDIA.

Steam Driven, Steel Sea Going Tug.—The Bombay Port Trust invites tenders for the supply and delivery of one single screw steel hulled steam driven sea-going tug completely equipped, afloat in Bombay Harbour. The dimensions to be as follows:—Length B.P., 90 ft.; breadth moulded, 20 ft.; depth, 10 ft.; maximum draft, 8 ft. October 10. (D.O.T.)

TURKEY.

Postal Wagons.—The Direction of Posts and Telegraphs invites tenders for the supply of two postal wagons. October 1. (D.O.T.)

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, September 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Matra for Calcutta (Birkenhead, September 15); s.s. Magdapur for Calcutta (Birkenhead, September 22).

Bibby Line.—S.s.S. Shropshire for Port Said, Colombo, and Rangoon (Birkenhead, September 21).

British India Line.—S.s. Mashobra for Colombo, Madras, and Calcutta (London, September 10); s.s. Manora for Bombay and Karachi (London, September 17).

Cunard Line.—S.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool September 17, and Swansea September 20); s.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, October 1).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 1).

P. and O. Line.—S.s. Ranpura for Bombay (London, September 9); s.s. Nankin for Colombo, Madras, and Calcutta (London, September 17); s.s. Kaisar-i-Hind for Bombay (London, September 23); s.s. Mirzapore for Colombo, Madras, and Calcutta (London, October 1).

Prince Line.—S.s. Scottish Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 10).

Ellerman and Papayanni Lines.—S.s. Guido for Gibraltar, Alexandria, Jaffa, and Haifa (Glasgow September 10, Liverpool September 15); s.s. Mardinian for Oran, Algiers, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 24). Cargo taken on through Bill of Lading for:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek Outports via Piræus or other convenient port; Fiume, via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates:—

*MASSILIA ...	Sept. 14	*BRITANNIA ...	Oct. 12
*ASSYRIA ...	Sept. 30	CALIFORNIA ...	Oct. 26

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. California, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool Oct. 26; Marseilles Nov. 1.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, in their report dated August 31, state:—

Currants.—The extremely quiet period which was experienced during the latter days of last month was accentuated in the first week of August. The Bank Holiday is always accompanied by slackness of trade, but this influence gradually wore off, and once the holiday feeling was dispelled more interest was shown, resulting in a fair volume of business for this season.

Holders were much alive to the importance of clearing stocks on the eve of new crop shipments, and concessions in price were made to dispose of arrivals per Phrygia and Polo while on quay. Practically all on hand was cleared, and the new season will be inaugurated with brokers' counters bare, awaiting fresh samples. The Greek market keeps firm with advancing quotations for shipments of new crop, ranging from 37s. 9d. c.i.f. Pyrgos, up to 47s. c.i.f. Vostizza; there seems very little likelihood of lower prices before the new season is well advanced. Spot sales comprised Amalias, 42s.; Zante, 42s., 43s.; Bags, 41s. 6d.; Vostizza, 42s., 43s.; fine, 46s. to 48s. Quotations:—Amalias and Patras, 42s. to 43s.; Zante, 42s. to 43s.; Gulf, 42s. 6d. to 43s.; Vostizza, 42s. to 46s.; Vostizza Smalls, 43s. to 45s.

Sultanas.—Reports continue to arrive from Smyrna of crop deterioration owing to excessive heat, and many overland samples that have arrived are very disappointing and inferior to last season's. The market is practically bare, only a few parcels of Cretans remaining unsold. Holders are raising their prices for forward sales, as high as 42s. c.i.f. being asked by some shippers, but very little business is passing. Greeks have met with more inquiry, 50s. to 54s. up to 70s. for fine qualities. Two steamers, s.s. Etrib and s.s. Cypria, have left Smyrna, calling at Greece.

Figs.—The first shipments of skeleton cases are on the way per s.s. Etrib and s.s. Cypria. Bags Genuines are offering afloat at 24s. c.i.f. without finding buyers.

Steaua Romana (British), Ltd., are advised that the production of the Steaua Romana Company, Bucharest, for the month of August was 51,020 tons.

BELGIAN TRADE WITH INDIA.

According to Brussels press reports a co-operative society to be known as "The Belgian Manufacturers' Corporation" has been formed for the creation of offices in British India for the sale in British India, Burma and Ceylon of the goods manufactured by the associates and for all commercial operations intended to develop the export of Belgian products in India. A centralising office is to be opened in Brussels, in order to carry out business, concentrate certain expenses, and permit of the rational solution of grouped shipments; to facilitate exports to India, and to create a service of commercial and industrial information concerning the Indian market. The capital is unlimited, but fixed at a minimum of 675,000 francs, which has been subscribed by the following firms:—

Ateliers de Construction de Charleroi, Ateliers Heuze-Malevez et Simon, Ateliers Van Acker, Anciens Etablissements Lobet, Ateliers Metallurgiques, Société Baume et Marpent, Usines Remy, Visseries et Treffleries, La Turnhoutoise, Société Belge des Couleurs et Vernis, Cartoucherie Belge, Société Armes et Munitions, Banque Belge pour l'Etranger, Fabrique Nationale d'Armes de Guerre.

PALESTINE AND SYRIAN GRAPES.

The current report of the Empire Marketing Board states:—

The Palestine Government recently shipped an experimental consignment of grapes to this country with the object of testing the carrying qualities of the fruit, the methods of packing and the suitability of the varieties for the British market. The botanical officers of the Empire Marketing Board inspected the fruit on arrival and reports have been furnished to the Board by the firms to which the fruit was distributed. A report is being prepared for the Palestine Government.

In a report received by the Board from Damascus dealing with prospects in that district it is stated that the grape crop is expected to yield about 4,200 tons. Owing to exceptionally warm weather, the sugar contents are likely to be less than usual. The report adds that in consequence of a shortage of labour for agricultural needs, it may happen that the whole crop will not be harvested.

NEWS FROM ALL SOURCES.

The Turkish commercial delegation, which has had its seat at Amsterdam, has been transferred to Antwerp.

Metropolitan-Vickers Electrical Co., Manchester, have received orders for turbo-generating sets for Calcutta and the Punjab.

The Yugoslav Cabinet has approved the agreement concluded for the settlement of the War Debt to Great Britain.

The Egyptian Minister of Public Works is appointing a committee of technicians to study improvements in the Assiut Barrage.

An order has been received by the Dominion Steel Corporation, Toronto, from the Indian Government for 8,000 tons of rails.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended August 10 amounted to £E7,269, making the total from April 1 £E95,050.

A party has been formed in Persia under the name of the Irani Noh (New Persians) with a policy modelled upon that of the Fascisti. It is rumoured that the movement has the approval of the Shah.

The British Overseas Bank announces that funds for the payment of the coupon due October 1, 1927, on the bonds of the Roumanian Four per Cent. Consolidation Loan, 1922, have now been received.

The Englishwoman who died at Belgrade while on her way to visit friends in Yugoslavia recently, has been identified as Mrs. Sidney Christian Lloyd, aged 75, of Knighton, Radnorshire, and widow of the late Mr. Edward O. V. Lloyd, Rhagatt Hall, Corwen.

The traffic receipts of the South Indian Railway Company for the week ended August 6 amounted to Rs.10,27,278, making the total from April 1 Rs.2,14,76,389. For the corresponding periods of the previous year the totals were Rs.10,36,362 and Rs.2,10,19,494.

The report of Mr. Justice Pearson, of the Calcutta High Court, and Mr. B. L. Mitter, Advocate-General of Bengal, concerning certain allegations made by the European Association in regard to the political activities of the Young Men's Christian Association has been issued. The findings are understood to be generally favourable to the Y.M.C.A., but it is recommended that a more efficient control

should be exercised over the lectures given in the Association's halls, and particular care taken to exclude anything of an undesirable nature.

An armed band, formed to carry out murders and acts of sabotage, and led by Hajji Sami (one of 150 undesirables who, under the Treaty of Lausanne, are forbidden to enter Turkey), was discovered by the Turkish police at Kush Ada, near Smyrna. In a fight which followed, Hajji Sami and his brother, Ahmed, were killed, and three other members of the band were captured.

Sir Vincent Caillard, who for 27 years has been a director of Vickers Limited, and who was mainly instrumental in arranging for the recent reconstruction of the company (which is now practically completed), has tendered his resignation as from September 1. His colleagues have accepted his resignation with great regret.

With a view to supplement the efforts that are being made in India on a wide scale for the relief of the areas afflicted by the recent floods, an influential movement has been started in London, Manchester and other centres to collect funds and forward the proceeds to the proper quarters in India. Subscriptions in aid should be sent to the treasurers of the Relief Fund, Messrs. Tata, Limited, Capel House, New Broad Street, London, E.C.2, to whom all cheques, etc., should be made payable. Lady Chatterjee, the wife of the High Commissioner for India, is the chairman of the executive committee of the Indian Floods Relief Fund, and the vice-chairmen are Sir M. Bhownaggee and Mr. H. S. L. Polak.

COMPANY NOTES AND REPORTS.

SERVICE PETROLEUM.

Interim dividends of 6 per cent. on the preferred ordinary shares and 15 per cent. on the ordinary shares have been declared for the half-year ending August 30, payable on September 10. This company recently announced that it had successfully concluded the final negotiations with respect to its Roumanian holdings.

COMMERCIAL BANK OF THE NEAR EAST.

An interim dividend at the rate of 5 per cent. per annum, less tax, has been declared in respect of the half-year ended June 30 last. Warrants will be posted on September 9.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 6.

The Stock Exchange has still been presenting an appearance of liveliness, in which, as in past weeks, industrial share sections played the principal part. British Celanese provided a sensation, with wide and bewildering fluctuations. They are being "talked" higher, but the cautious investor would be wise to stand aside from the speculation. Industrial shares generally developed some irregularity, and there is just a possibility that the long period of active conditions in those sections may be nearing an end. The optimistic speech of the Chancellor of the Exchequer may be refreshing, but it is not convincing. It is, indeed, difficult to see in the trade situation of the country any justification for a general uplift of industrial share quotations; although, of course, conditions in certain selected directions are favourable. It is pretty evident that the recent "boomlet" in industrials has been caused less by favourable intrinsic factors than by the eagerness of a large section of the investing public to counteract the effects of high taxation and high living costs by getting a high return on their money and also by snatching a quick profit. Every time a movement begins in the industrial section it is accelerated by the intervention of investors of this mentality, whose operations are always likely to carry the movement too far. A satisfactory feature of the week has been the firming up of Home Rails after their long period of sagging. Prices in this market still look on the low side.

Prosperous Building Companies.

In the past week two company reports have been published which suggest that undertakings directly engaged in the building industry are enjoying a period of prosperity. Thus Eastwoods, the brick manufacturers, return a net trading profit at £95,905, roughly £4,000 higher than a year ago, while an increase in the ordinary dividend from 17½ per cent. to 20 per cent. is recommended. The Crittall Manufacturing Company, which is engaged in the production of metal casements, doors and so forth, returns a profit of £163,285, which is nearly £50,000 higher than last year's figure. Although in the interval the issued capital has been increased, the ordinary dividend is maintained at 15 per cent. It should be remembered that these accounts cover the greater part of the period of the coal strike. In recent months there has been considerable interest on the Stock Exchange and in companies directly interested in house building, and the foregoing figures indicate that this has not been without some justification. In some quarters, however, the belief is held that the companies have satisfied the maximum demand, but it appears that there will be ample scope for some time to come for efficient undertakings. At the present price Eastwoods' ordinary shares yield £8. per cent. and are still a fair investment of their class. It is noteworthy that the 8 per cent. participating preferred ordinary shares (issued at 22s. 6d., 12s. 6d. paid) of Eastwoods' recently formed subsidiary—Eastwoods' Flettons—stand at a discount of 1s. 9d. Crittalls' ordinary shares return £6 per cent. there being not unreasonable expectations of an early increase in the dividend. The ordinary shares of the London Brick Company and Forders, yielding £8 6s. per cent., are another attractive investment in this group.

Multiple Shop Companies.

In recent weeks the price of Lipton's ordinary shares has been advancing, but it is doubtful whether this appreciation is justified by the company's position. The shares have advanced from 9s. earlier in the year to 13s. 9d. at the present time. But a very considerable recovery in trading profits is necessary before dividend payments can be resumed and the price of the shares seems to discount a substantial improvement. Those who are seeking investments in branch shop companies would be well advised

to confine attention to the shares of those companies which have a fair record of prosperity. At best the element of risk in this class of business is rather conspicuous. Last year, for instance, many companies were adversely affected by the strike. Boots is one of the most prosperous branch shop companies, but the ordinary shares, which return £3 17s. per cent., discount the immediate future. Other prosperous undertakings include the Meadow Dairy Company, Plummer Roddis, and the Home and Colonial Stores. The Meadow Dairy Company's ordinary shares yield £9 10s. per cent. and those of Plummer Roddis £8 4s. per cent. The ordinary shares of the Home and Colonial Stores give the more modest return of £6 5s. per cent. The higher yields are a fair measure of the degree of risk involved.

Norway's Improving Finances.

Norway appears to have passed successfully the crisis in her recent financial difficulties. This will doubtless be welcomed by those British investors who hold Norwegian bonds, though there has never been any doubt that Norway would weather the storm. The improvement in Norway's economic position is strikingly reflected by the exchange. During the period when the currency was appreciating foreign balances were transferred to Norway on a large scale, but recently these have been mostly withdrawn. The fact that the exchange has, in spite of this reverse movement, maintained its improvement is gratifying. It indicates that the underlying economic condition is sound and the present difficulties are rather of the book-keeping variety. Progress has also been made in dealing with the banking crisis, and all that remains to be done is to arrange for a financial reconstruction of the banks before releasing them from public administration. In short, Norway seems to be making what must, in the circumstances, be regarded as satisfactory progress. The prices of Norwegian bonds have been fairly steady this year and their yields show that Norway's credit is good in the opinion of the British investor. The 3 per cent. of 1888, finally redeemable 1965, yield £5 3s. A return of £5 5s. per cent. is given by the 4 per cent. bonds of 1911, the final redemption date being 1971.

The following articles have been added to the list of goods which are admitted into Syria and Lebanon duty-free. Rice husking machines, wheat huskers, bran brushes, pumps for raising and distributing water, worked by windmills, anti-plague serum for the immunisation of cattle to be exported, insecticides for the destruction of vegetable parasites and diseases, and date palms. In the case of the last three, duty-free import is made conditional on the production of an attestation from the Agricultural Service.

H.M. Commercial Secretary at Constantinople reports that it is understood that the provisions regarding the time limits for storing goods in Customs sheds and transit stores in Turkey will not be brought into force until October 1 next. Proprietors of goods which have remained in Customs depôts for a period approaching the statutory time limit of one year should transfer their goods to transit stores in which they can remain for three years. Immediately on the expiration of these periods (one or three years respectively) proprietors lose all rights on the goods in question.

British Consular Reports

IV.—TURKEY.

The following extracts are taken from the Report on Economic and Commercial Conditions in Turkey, dated May, 1927, of Colonel H. Woods, O.B.E., Commercial Secretary, H.M. Legation, Constantinople.

In the last Report, which was dated April, 1925, a slight improvement in the general economic conditions of the country was recorded. Although there have been many instances since then where nationalism has overridden moderation and sound judgment, there is no doubt that conditions have been more normal of late, with consequent improvement in administration. In fact, there are indications of a gradual economic revival and development. Advances made to the peasants, the abolition of the tithe and later of the tax on produce which replaced the former tax, and other measures for the agricultural development of the country enforced by the Government, have, no doubt, been important factors in the intensification of agriculture.

Whereas in 1925 Turkey imported 77,000,000 kilos of wheat, imports in 1926 only attained 10,000,000 kilos. Exports for the first six months of 1926 register a surplus of £T7,713,000 over exports for the same period in 1925. Turkey's trade balance registers a marked improvement, her exports representing in value 46.2 per cent. of her total trade for the first six months of 1926, compared with 41.7 per cent. in 1925, 40.1 per cent. in 1924, and 33.4 per cent. in 1923.

Crop forecasts for 1926-27 are reported to be most favourable, and there is, consequently, every reason to believe that Turkey's trade balance will go on improving.

The improvement has not been confined to agriculture alone, for reports from Smyrna and other districts also show industrial progress. With the realisation of the country's programme in respect to railway and road construction a greater agricultural development should follow.

Finance.

Some attempt has also been made by the Government of recent years to establish more precise budgets and to reduce, by the exercise of a stricter economy, the deficits carried forward from preceding years. The estimates of revenue, as finally approved by the National Assembly for the forthcoming year, are reported to attain £T194,580,554 as against £T190,158,864, approved estimates for the current year, whilst estimated expenditure amounts to £T194,454,619, as against £T190,105,544 for 1926-27. Thus, for the coming financial year the budget estimates show a surplus on the credit side of £T125,935.

According to the statements which the Minister of Finance is reported to have made some time ago, the Government's debit balance at the commencement of the year 1926-27 amounted to £T20,000,000. Thus the nominal debit balance of £T72,500,000 for the 1924-25 and 1925-26 budgets was reduced by £T52,000,000 during the course of these two years. Further, by a general cut of 13 per cent. in the approved votes for the financial year 1926-27, the Turkish Government was able to wipe out the debit balance of £T20,000,000 and part of the supplementary credits voted during the interim period from March to May, 1926, an interim budget being necessitated by the change from March to June in the opening of the Turkish financial year.

Expenditure during the interim period exceeded revenue by approximately £T18,000,000, but this deficit was further reduced by £T7,000,000 representing the amount allocated in the budget to the external debt for the preceding two years, as this sum was diverted to meet current expenditure. In these circumstances, there is still a debit balance of approximately £T11,000,000, to which must be added supplementary votes in 1926-27 amounting to over £T3,000,000. Before, therefore, the theoretical credit balance of £T125,935 for the forthcoming financial year can be taken into account, the real

deficit of £T14,000,000, to be carried forward, will have to be met.

Agriculture.

A marked feature is the gradual change in the mentality of the peasant, for there is no doubt that the wealthier cultivator is now adapting himself to more modern methods. Reports from the interior show that the use of modern agricultural implements is appreciated, and were it not for the lack of mechanics, there would be a growing demand for reapers and tractors. Mechanics with even a very rudimentary knowledge of machinery are very scarce, owing to their unwillingness to serve in a temporary capacity.

Although the 1925 and 1926 crops exceeded those for the year 1924, by approximately 40 per cent., the 1926 harvest has, with the exception of the raisins and fig crops, been disappointing. This was mainly due to climatic conditions. The grain crop has fallen considerably below expectations, owing to lack of sufficient rain in the spring, especially in the regions of Konia, Afion Karahissar, Eski Shehir, Kutahia, Cesarea, Erzerum, Smyrna, Sivas and Karassi. The opium crop did not exceed that of 1925, and owing to the dearth of the 1925 stock, prices rose considerably.

Cotton.

Estimates for the Smyrna region were attained, exceeding the 1925 output, but on the other hand, Turkey's principal centre of production, Cilicia, failed to attain the output of the preceding year. This failure, combined with the poor cereal crops, has placed agriculturists in the Cilicia region in a most difficult situation.

Tobacco.

This crop also failed to attain that of the preceding year and the qualities were also inferior. Sowings for the next crop exceed those of the previous year and, according to forecasts, there is every reason to hope for an excellent return.

Industry.

The law for the encouragement of industry, by virtue of which certain Customs and other immunities are granted in respect of the installation of factories, has given a slight impetus to the development of industry and, therefore, some progress has been made in this connection. According to the statement of the Minister of Commerce, Turkey possesses only 1,220 factories, the greater portion of which are of minor importance.

A new development is worthy of particular note. Since the establishment of the New Régime, the authorities have been concentrating on the foundation of a sugar industry. Two factories have now been established—one at Ushak and the other at Alpoulou. Both factories have been inaugurated quite recently.

Progress is particularly marked in Angora, due in a great measure to the late Prefect. The capital has now been provided with the following establishments:—a cloth factory, principally for military requirements, an ice factory, six carpentry and joinery factories, a brick and tile factory, a repair shop, a cement factory, and a power station. There has also been industrial development in other centres.

The match monopoly has erected a large factory at Sinope, the output of which will be sufficient to meet the country's demand. This monopoly is now envisaging the construction of an aerial roadway between the factory and the neighbouring forest land with a view to maintaining an adequate and rapid supply of timber from local resources. This ropeway will be supplemented by a Décauville line.

Railways.

During the greater portion of the year progress in railway construction has been slow on the Angora-Sivas and

Samsoun-Sivas railways, due to a great extent to the lack of funds. Since Behidj Bey has taken over the portfolio for Public Works, the resumption of work in certain sectors of the regions to be traversed by the new line, which was being carried on spasmodically as the contractors obtained cash to pay their workmen, has been renewed with some vigour. Despite the impetus given by the new Minister, the work of construction has always been hampered by lack of money, and reports current during the past two years to the effect that the Government was gradually coming round to the view, so often expressed, that without foreign aid many years would elapse before the railway programme could be carried out, have not been confirmed.

Two most important conventions have now been approved by the Council of Ministers with foreign consortiums for railway construction; but before going into details in this connection a review of the Government's railway programme and of the extent to which it has been carried out may be of interest.

Programme of Construction.

The position to date as regards the undermentioned railways is as follows:—

(a) The Angora-Sivas Line (Angora-Cesarea-Sivas). Length, approximately, 500 kilometres (broad gauge). The section from Angora to Cesarea has now been completed, and the whole length of this section will be open to traffic in June, 1927.

(b) The Samsoun-Sivas Line. Length, approximately, 380 kilometres (broad gauge). The section between Samsoun and Tourhal is rapidly approaching completion.

(c) The Heraclea-Angora Line. Length, 300 kilometres (metre gauge). With the exception of expenditure in connection with the trace of the line, no work has been carried out.

(d) The Oulou Klishla-Cesarea Line (broad gauge). Length, approximately, 250 kilometres. The authorities are now reported to be in negotiation with a German group for the construction of this line, as well as that of the Kutahia-Tavchanli Railway referred to under (g).

(e) The Keller-Malatia-Arghana-Diarbekir Line. Length, approximately, 430 kilometres (metre gauge). With the exception of expenditure in connexion with the trace of the line, no work has been carried out.

(f) The Samsoun-Baffra-Alatcham and Samsoun-Tcharchamba-Terme Lines. Lengths, 70 and 80 kilometres respectively (Decauville.) Work on the Samsoun-Tcharchamba-Terme section has been completed as far as Tcharchamba, and is now exploited (35 kilometres). No work has been undertaken on the Samsoun-Baffra-Alatcham sector.

(g) The Kutahia-Tavchanli-Euksugueul Line. Length, approximately, 220 kilometres (metre gauge). Work completed up to kilometre 12, but further progress will depend on the result of negotiations referred to in (d).

(h) Trebizond-Erzurum. No work of any kind undertaken to date.

(i) The Kotch-Hissar-Serayena Line. Length, 90 kilometres (metre gauge). No work undertaken to date.

(j) The Tcheuhrekli-Hadjibairam Line. No work of any kind undertaken to date.

(k) Konia-Adalia. No work undertaken to date.

It will be observed from the above that of this extensive programme only a small proportion has been carried out, but with the final ratification of the two conventions referred to above, which have recently been approved by the Council of Ministers and signed, Turkey will be endowed within a period of five years with the major portion of the railway systems which form the programme of its Government.

The aforesaid conventions are as follows:—

A Franco-Belgian group, having its headquarters in Paris, 60 per cent. of the capital of which is Belgian and the remainder French, except for a small German interest, obtained the concession for the construction of the following public works:—(1) The Cesarea-Sivas section of the Samsoun-Sivas Railway. (2) The Tourhal-

Sivas section of the same line (Tourhal is situated at 178 kilometres from Samsoun). The total length of the two lines specified above is 400 kilometres. (3) An agreement has been reached, in principle, in regard to the extension of the Samsoun-Tcharchamba-Terme line, of which the construction has already been completed as far as Tcharchamba, as well as the construction of the Samsoun-Baffra-Alatcham section.

A Swedish group has signed a contract for the following constructional work:—(1) The Diarbekir-Arghana-Malatia-Keller Line (500 kilometres). (2) The Heraclea-Zafranboli-Irmak Line, with a branch to Seuyuduzu (formerly designated as the Heraclea-Angora Line, approximately 500 kms.). (3) The construction of the port of Heraclea.

In the case of the Belgian group the work of construction is to be completed within three years (from June 1, 1927, at a total cost of 15 million dollars. As regards the Swedish group the contract has to be completed within five and a half years from June 1, 1927. The total inclusive cost is 55 million dollars.

Guarantee bonds, to a maximum of £T200,000,000 to be devoted to railway, port, irrigation and drainage schemes, have been issued and will cover these contracts.

Trade.

The purchasing power of Turkey depends directly upon the success or failure of its crops. The Turkish Government have under consideration legislation for the encouragement of native industries, but as yet there are few industries of any importance, and practically all manufactured goods must be imported from abroad. During the course of the past few years, there has been a gradual improvement in the volume of Turkey's exports, with no corresponding rise in the volumes of imports, with the result that the adverse trade balance, which has been such a marked feature in the overseas trade returns of the country, has been gradually reduced.

The attainment of an approximate equilibrium between imports and exports was inevitable. Turkey's "invisible" exports are small, and the country could not indefinitely continue to import more than it exports.

Demand for Motor Cars.

There is an increasing demand in Turkey for motor cars. The total number of motor vehicles in Turkey at the commencement of 1926 was estimated to be: motor cars, 3,200 to 3,304; motor lorries, 1,000 to 1,200; motor cycles, 400 approximately. There are no heavy omnibuses, light and medium lorries being adapted as passenger vehicles in certain districts. The number of cars in Turkey has, however, rapidly increased since the commencement of 1926, and it is estimated that there are now 4,800 to 5,000 cars in Turkey, of which about one-third are registered in Constantinople. According to the returns issued by the Constantinople Municipality, the number of cars registered in the city at the end of 1925 was 1,072, of which 544 were of American manufacture.

One of the minor transformations which have taken place in Constantinople of recent years is the opening of numerous show rooms by the agents of foreign motor-car manufacturers. An adequate showroom, a large stock of spare parts and repair facilities are essential if British manufacturers, who have now entered the field, are to compete.

One difficulty experienced by British manufacturers in the Turkish market is that of payment. One of the most successful foreign cars on the market has owed a great deal of its popularity to the fact that the firm have given credits to purchasers up to a period of 18 months, preferring to offset an occasional bad debt against the increase in sales. This method is particularly attractive to taxicab drivers who have not sufficient capital to purchase a car outright.

Manufacturers consigning cars to Turkey are recommended to give them, in all cases, a test run of about 500 miles before export, as owing to the hilly nature of most areas where cars are run they are subjected to a severe strain from the moment they are put into service.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended August 31:—

Egyptian Futures.—Sakel Contract.—For the greater part of the week values in this contract have shown an advancing tendency, the mainspring of the further upward movement again being almost entirely due to the action of the American markets. The features to which we have latterly drawn attention continued in evidence throughout the progress to the high level mark of the season reached yesterday; we refer to what might be termed the neutral attitude of trade interests and the opposition encountered in Alexandria whenever the November position there advances to the region of 40.00 dollars. Apart from this, the open speculative long account appeared recently to have become distinctly congested, and the weakness of the technical position was emphasised during the earlier trading to-day when liquidation and stop-loss orders following an overnight break in New York forced the level back 90 points; since this, some better class buying and a moderate amount of trade support has had a steadying influence and prices have rallied somewhat, closing 1 to 11 points decline for near and unchanged for distant positions since we last wrote. The closing in of the American-Sakel difference has again been in evidence throughout the week, the October-November straddles at the time of writing being just under 800 points; this is getting down to a more reasonable basis, and whilst perhaps the moment is not yet opportune we consider the possibilities of operations between the markets should be closely followed, especially in view of the growing probability of a shortage of stapled cotton during the coming season. Trade reports and activities have both been moderate, although signs of expansion were beginning to come into evidence before prices reacted; current fluctuations, however, have been too rapid for the majority of consumers, and generally speaking spinners show little confidence in present values.

Upper Contract.—This contract continues to attract a fair amount of speculative interests, and as a result of this support and also the recent strong action of the American markets prices have advanced 30 to 34 points on the week. Trade interests have maintained their recent attitude and still abstain from any purchases of note. The crop is now starting to move and advices from the other side are to the effect that growers are abstaining from hedging and will probably continue to do so as long as they have the encouragement of "bullish" American advices.

Egyptian Spot.—Instability of values has once again acted as a deterrent to trade buying in any quantity, although yesterday, following on three consecutive days in which New York had produced strong and active markets, we believe we came within an ace of seeing the commencement of the looked-for buying movement. Last night's serious break in the overseas market, however, has again reduced buyers to a state of doubt and uncertainty, and that section of the trade to which we referred last week, which has been fighting the advance point by point, is now naturally pluming itself on its astuteness. The end is not yet, however, and those spinners who have been quietly covering their requirements for the next few months ahead may yet have cause to be well satisfied that they did so.

The daily inquiry has varied considerably in extent, but one or two days showed a marked improvement on what we have recently become accustomed to, and, on balance, sales, both of Egyptian and Sudan cotton, have shown an increase on last week's figures. The slightly better enquiry for Sakel, to which we have drawn attention once or twice in these reports, has been, on the whole, maintained, the quality in request being chiefly F.G.F. cotton with rather more than "fair" staple. In a less degree "Good" Sakel has been in request. Uppers have been comparatively quiet, though a small demand has persisted

for cotton at from 12d. to 14d., and also from 15½d. to 16d. Pilon has been asked for occasionally at from 15d. to 16½d. A continuous demand for Low cotton on the spot of any description, at from 4½d. upwards, still exists. Sudan growths have been in improved request and a fair business has resulted, Sudan Sakel, Tokar Sakel and American seed cotton, all coming in for a share of attention.

C.i.f. business has been very quiet. Forwardings to spinners for the week ending 26th. instant were returned as 5,050 bales Egyptian and 2,174 Sudan. Estimated sales for the week, 1,900 bales Egyptian and 4,050 Sudan. Quotations of Sakel show a net decline of 40 points. Quotations of Upper remain unchanged on balance. F.G.F. Sakel to-day 19.70d. F.G.F. Upper to-day 15.65d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended August 25 state:—

Since our last report the futures market has been rather quiet and the tendency slightly weaker. The week's summary of price movements is as follows:—Sakellaridis: November, 38.87 dollars, 0.19 dollars up; January, 38.52 dollars, 0.27 dollars up; Ashmouni: 29.00 dollars, 1.18 dollars up; December, 29.20 dollars, 1.20 dollars up; February, 29.37 dollars, 1.22 dollars up.

Sakel.—The market has been somewhat dull, which we attribute to the almost absolute lack of any demand from spinners and the reversal of straddles with Ashmouni. The continued absence of demand is causing some anxiety to the "bulls," and resulted in some small liquidations; if these liquidations have not been larger, it is because of the big rise in New York which encourages holders of

THE LIVERPOOL COTTON EXCHANGE.

Liverpool Cotton Association

LIVERPOOL

The Greatest Spot Cotton Market in the World

MEMBERS OF THIS ASSOCIATION
OFFER FACILITIES FOR THE SALE,
PURCHASE AND FINANCE OF
EVERY GROWTH OF COTTON.

The World follows Liverpool Cotton Quotations daily.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary.

Up-Country: The moving of the crop has increased in Upper Egypt, and arrivals of new crop cotton in Alexandria are of daily occurrence. In Lower Egypt, one or two ginning factories have been working this week, and we shall soon have the first lots sent down. The poorness of business with spinners has its repercussion up-country. Export houses have, up to now, bought very little.

COMMERCIAL BANK OF GREECE

(A Limited Liability Company Registered in Athens.)

Notes of the Week.

A Royal Incognito.

The wish—or at least the decision—of King Boris of Bulgaria that his visit to Great Britain should be undertaken in the strictest incognito has been loyally observed; but it is legitimate to challenge the wisdom of those who were responsible for advising His Majesty on this point. No Bulgarian, least of all Bulgaria's Sovereign, has any need to enter this country surreptitiously, as though he were labelled "ex-enemy." With the very natural desire of crowned heads to divest themselves at times of the trappings and stilted ceremony of monarchy the British public has the fullest sympathy, and knows how to respect the privacy or unconventionality that is essential to any real holiday. When, therefore, as often happens, a foreign monarch comes to England for rest and respite from normal conditions, he has no occasion to fear that, after the welcome that courtesy and the dictates of hospitality call for has been accorded him, his freedom of movement will be in any way impaired by the curiosity of the public during the rest of his visit. In the circumstances, therefore, it seems mistaken policy on the part of those responsible to have required King Boris to dispense with the welcome that would have awaited him, if due notice could have been given of his arrival. Bulgaria has to-day no more valuable asset than her King. Governments succeed one another in Sofia, make mistakes, are denounced by their successors or by their political opponents, and incur the hostility of one or more neighbours: no one, however, has been able to accuse King Boris of a false move in his own country. His splendid record in a difficult position has been of more value to Bulgaria abroad than she is aware, and it would have helped the Bulgarian Government in its foreign relations, if the King had been allowed to make more use, during his first prolonged tour abroad, of the genuine esteem in which he is held everywhere. Qualms regarding international jealousy were altogether misplaced; even if this had been aroused, it would have done Bulgaria no harm. South-Eastern Europe finds in psychology one of its hardest lessons, and the one in which it makes most mistakes.

The League Meeting.

The eighth session of the Assembly of the League of Nations has provided more interesting subjects for discussion than seemed promised by its original agenda. For the smaller States of Europe it will have been a memorable session in more ways than one. They are particularly interested in the Polish proposal for a Pact of non-Aggression, as it is an axiom of faith for the smaller Allied countries that the *status quo* in Europe must not be allowed to be altered, whatever prove to be the injustices and unrest to which it gives rise. They belong, consequently, to the section of the League that is continually arguing for something to be done, and is not content to let the League advance slowly from strength to strength. For these States, therefore, the remarkable speech made last week by the Greek delegate, M. Politis, may have aroused mixed feelings. While admitting the progress already made by the League, M. Politis stressed its limitations. He reminded his audience that the League could not be something above and apart from its members. It is just what its members are, what existing international psychology permits, and no more. In particular he challenged the feeling of antagonism that seems to be growing up on the part of the small States against the big Powers. He urged that, so far from bringing every question to the League, an attempt should be made as far as possible to avoid such reference, and to make the League only the last resort. Better a good settlement than a good case, was his theme, and he based it on the fact that in the international field law in the proper sense hardly exists yet, and the instinct for the violent assertion of right is consequently not yet eliminated. M. Politis would even prefer to see nothing done, when in an extreme case diplomacy has failed and a private settlement has not been reached, rather than that the matter should be submitted prematurely to the League. At least in the event of its being left in suspense there was the chance of the parties being brought to a more conciliatory disposition. M. Politis delivered a very striking and a very wise discourse, which, it is to be hoped, will have made

more than a passing impression on the delegates. Greece, at least, will not be able to protest, when the League, acting up to M. Politis' advice, referred back the dispute between her and Germany, over the battle-cruiser ordered before the War from the latter, to the parties concerned for further consideration.

The Lotus Case.

It is possible to be unreservedly glad that the Permanent Court of International Justice has confirmed Turkey's contention that the Turkish Courts were competent to try the case that arose from the collision between a French and a Turkish steamer in August 1926. In the event of a different verdict much would have been said in Turkey about the impossibility of the Turk's receiving fair play at Western hands, whereas now the International Court of Justice is admitted for the time being to be a really important institution. Conceptions of absolute impartiality have not readily entered so far into the Turkish estimate of judicial procedure. While, however, Turkey is to be congratulated on the issue of the reference to The Hague, it will be as well that she should bear in mind that the main cause of the bad feeling aroused in France at the time was the actual treatment of the French officer rather than the question of jurisdiction. The collision took place on August 2, and the French officer of the watch at the time was at once arrested by the Turkish authorities and was detained in prison until September 15, when the trial was held and the Court found both ships to blame, France, it is true, challenged the jurisdiction of the Turkish Court on the ground that the collision took place in international waters: but the straining of the relations between the two countries could have been avoided, if Turkey had agreed to liberate the French officer on bail, while taking any precautions necessary to secure his attendance at the trial. The International Court was not called upon to pass judgment on this point. A dispassionate consideration of the whole incident would probably find that Turkish judicial procedure had enhanced its reputation, but that Turkish administration still lags behind in its appreciation of the value of a spirit of reciprocity in international dealings.

Turkey and the Jews.

A further instance of the trouble that can be caused by excessive rigidity of outlook in administration is provided by the present attitude of the Turkish authorities towards the Jewish community. Of the three principal minorities, Greek, Armenians and Jews, the Jews were the first to adjust themselves without fuss to the new order in Turkey; and, apart from any friction that there may have been at one time between Constantinople and Angora, it could be said that the relations between the Jewish community and the Turks were satisfactory to both parties. A few weeks ago a young Turk of good family, who had become infatuated with a Jewish girl, deliberately murdered her because his advances received no encouragement. The Jewess had previously sought police protection from his molestations, and the Turk had been subjected to "preventive" imprisonment for a month. There was a great Jewish demonstration at the funeral, and, as far as can be gathered from the reports, the efforts of the police to regulate the funeral procession led to conflict with the crowd. There were Jewish shouts of "Justice," and a number of arrests were made. The incident was at once magnified, seemingly out of all proportion to its merits. The Turkish press waxed eloquent on the enormity of Jews' crying out for justice, when it was so well known that Turkish justice was above reproach; the trial of the Jewish demonstrators is being accorded the importance of a great affair of State, as they are accused of having uttered remarks derogatory to Turkey. In the meantime no steps have been taken to bring on the trial of the murderer, but the Turkish press has produced elaborate accounts of his past history to show that he is merely a degenerate, quite unworthy of notice, and the ground is being prepared for having him treated as insane. Finally, regulations discriminating against the Jews throughout Turkey have been suddenly enforced, and

an anti-Jewish campaign is being let loose over the country, which has already produced excesses in Smyrna. Thus a relatively unimportant incident has been allowed, by an unfortunate absence of elasticity in the Turkish outlook, to give rise to effects which may have a wide reaction on Turkey's economic situation.

The Yugoslav Elections.

To the accompaniment of unmeasured abuse, accusations of corruption, free fights and revolver shots the electoral campaign in Yugoslavia has pursued its hectic course until the polling-day last Sunday. Owing to the serious divisions in the chief parties it is not possible at the moment of writing to gauge the significance of the results so far announced, which give the Radicals 112 seats, the Davidovitch Democrats 61, the Croat Peasant Party under Raftich 60, the Slovene Clericals 21, the Independent Democrats 30 and the Bosnian Moslems 22. Twenty of the Radicals are Pashitchists, but if the party were to hold together, and M. Voukitchevitch can count on the support of the Democrats, Slovenes and Moslems, the Government will have over 200 seats out of 315 in the new Skupshtina. The Radicals, however, went to the poll in three antagonistic groups. On the previous Sunday M. Voukitchevitch, the Radical Prime Minister, had bitterly criticised the programme of the Head Committee of the Radical Party and demanded its reorganisation from top to bottom. It does not necessarily follow, however, that parties and individuals who have been spending weeks in heaping abuse on one another will not be able to co-operate for the purpose of sharing the fruits of office. With from twelve to seventeen groups claiming to be regarded as serious political parties, and members of the Skupshtina far more exercised over personal and party affairs than over the furthering of national interests by legislation, it is hardly to be wondered at that constitutional government as interpreted in Yugoslavia is falling into contempt, and behind the violence of the electoral campaign has lurked the belief in some quarters that constitutionalism may prove to have been the real issue of the elections. According to M. Davidovitch there will be only two real political camps in the country from now on—one for democracy, the other for reaction; but there are probably others who would label the same camps Chaos and Progress. One of the worst indictments that can be brought against constitutionalism is Yugoslavia's own record during the last few years, with its minimum of achievement in legislative effort, and the important programmes of things waiting to be done that all the chief parties can produce without stealing one another's thunder.

Egypt and the Wafd.

With the return of the Prime Minister to Egypt, the stage is now set in that country for the interesting developments that must follow the death of Zaghloul Pasha. It is significant of the peculiar position that he held that the next step to be taken in the settlement of Anglo-Egyptian relations was to have been a consultation between the leader of the Wafd and Sarwat Pasha on the results of the latter's conversations with the British Foreign Secretary. The Prime Minister, however, returns to Egypt to find the Wafd without any recognised head, and consequently not in a position to receive officially his communications. As a party it continues to represent the great bulk of the electorate, but so centred was its control in the hands of Zaghloul Pasha, who alone determined its policy and spoke in its name, that there is no single member of the party nor committee empowered to act provisionally as its head or mouthpiece. In tacit acknowledgement of the cross-currents with which the Wafd is beset, no formal action on its behalf is to be taken until the members, many of whom are now dispersed abroad on holiday, have had time to arrive at a decision regarding the future of the party. It will be strange—and signally unfortunate for Egypt—if the consciousness that only by unity can the Wafd retain its strength does not prevent the party from disintegration for the present. That there will be an attempt to make its policy more aggressive is a fore-

gone conclusion; but the certainty that such a course must sooner or later split the party will probably prevent the extremists from having things all their own way. The existing arrangement which leaves the Wafd the fount of power, but enables it to exercise that power through the statesmanship of Sarwat Pasha, may not be ideal for the Wafd, but has the effect of saving it from possible impotence through the wrecking of the organisation that Zaghloûl Pasha alone was able to build up.

Hijaz, Asir, and the Yaman.

No one could be greatly surprised if the report proved to be accurate that the Wahhabi delegates to the capital of the Yaman, Sanaa, who had gone thither in order to attempt definitively to arrange the boundaries of the States under the sway of the Imam of the Yaman and King Ibn Saoud, have returned to the Hijaz with this problem unsolved. It is stated that no settlement could be reached because of the rival claims of the Imam Yahia and the Idrisi of Asir to Hudaida, Lahiya, and Maidi. These towns, of course, once belonged to the Idrisi, but were in time filched from him by the Yamanis, or, in an alternative and perhaps equally correct version, were successfully reclaimed by the Yamanis. Recently, however, the Idrisi has come under the protection of the Wahhabi leader, and presumably feels strong enough to continue to assert his claim to these three ports. If King Ibn Saoud confirms this claim, quite obviously an amicable settlement of the question is impossible, for the Yamanis are certainly unwilling to yield that which they have recovered. Much had been hoped from this Wahhabi mission to Sanaa; it was confidently asserted, indeed, that the peace of Arabia depended upon its success. Is it to be concluded, then, that war between King Ibn Saoud and the Imam Yahia is inevitable over the insoluble problem of certain sections of Asir, or, as may be, of the Yaman? Things will certainly have to be watched on the eastern coast of the Red Sea, and observers might do well to examine closely the exact nature of Italian imports into the Yaman.

Immigration into Palestine.

It is hardly necessary to point out that the large immigration of Jews into Palestine in 1925, which brought money into the country and had a beneficial effect upon the finances of the State, was also one of the causes of the subsequent and still prevailing "crisis." A natural consequence of this fact, we should have imagined, would be to restrict immigration more severely. But the recently passed regulations regarding Jewish immigration into Palestine, which confine it to wives and infant children of settlers already in the country and to men of really independent means, are being loudly criticised by the Zionists. Both from Palestine itself and from the Congress at Basle protests have been published against these restrictions, which, it is claimed, make it impossible for workmen and artisans to immigrate, and render it more difficult for Jews to enter Palestine than any other country. Now until last month, when the new decree was issued, Jewish immigrants came either into the category of the "labour schedule" or into the "capitalist" category, which was usually understood to include immigrants possessed of at least £500. In 1924 and 1925 too many of this latter class were allowed to enter, and it was found necessary in 1925 to issue an Immigration Ordinance restricting their number. Many of them have since left Palestine, owing very largely to the economic situation of Poland, whence most of them had come, and it has been found wisest to leave to immigration officials the interpretation of "independent means." But the critics of the latest regulations go further than lamenting the granting of such liberty to immigration officials, and complain that *Halutzim* (pioneer) immigration has temporarily ceased. It is difficult indeed to understand the basis of such criticism. One of the plainest duties of the Palestine Government—it is plainer than ever now, after the depression of the last two years—is to restrict im-

migration to the economic capacity of absorption of the country. Such restriction manifestly is very difficult to gauge to a nicety, but most reasonable people and well-wishers of Palestine would be content to see the Government err, if at all, on the side of over-severity. The Jews and Palestine can wait, but it is doubtful how the Zionist cause would entertain the prospect of and survive another crisis consequent upon over-immigration. Non-Zionist American Jewry may make good the ravages of the last two years; but allow unlimited immigration into Palestine, and who would make good the years of suffering it would entail?

The Economic Crisis.

The problem of Palestine, it must once more be affirmed, is, for the Jews, an economic problem; its political aspect has already been solved by the Mandatory Power. If the British Government are to be trusted by Zionists in their pledge to further the establishment of a National Home, it were well to leave questions of prestige and justice to them; even if immigration were temporarily altogether to cease, the Zionists would be right in concentrating on the economic sphere. In this connexion it is interesting to note how, as a result of experiment, or, if you will, of experience, the nature of the Jewish immigrants into Palestine is changing. The "soul" of the Zionist immigration is, of course, the *Halutzim*, who in 1925 constituted 40.5 per cent. and in 1926 58.7 per cent. of the total number of immigrants. Now, however, this class is stated to have ceased to immigrate into Palestine. "Independent" settlers in 1925 constituted 27.8 per cent. and in 1926 7.2 per cent. of the total; and they, again, are likely to have decreased this year. The point of this is: how will the narrow economic capacity of Palestine affect the "freedom" of the poorer Jew, who is at present in Eastern Europe and "oppressed"? Are the majority of future settlers to be Jews who cannot, in the material sense, have been so badly off in their original homes; or will the opportunity once more be freely given to the downcast Jews to find something more than spiritual comfort in the Holy Land? If the former question be answered in the affirmative, one of the objects of Zionism—the relief of the more unfortunate Jew—will have failed of accomplishment; but if the latter, there seems no reason why the movement should not regain momentum. But it is the Government which must always be judge of the country's economic capacity, for they are responsible to world opinion that Palestine, whatever Zionist funds be collected outside it, does not allow more Jews to enter it

ZIONISTS AND PALESTINE.

Many Zionists, we believe, object to the phrase, "the Palestine experiment," as implying doubt upon a certainty. We cannot help thinking, however, after reading the reports that are so far available of the Fifteenth Zionist Congress at Basle, which has just ended, that the order in Palestine is still best described as being in the experimental stage. At the meeting last June of the Permanent Mandates Commission, indeed, Sir John Shuckburgh, the British representative for the Mandatory Power for Palestine, did not hesitate to use the word "experiment." With all Zionists faith is far in advance of fact, as, of course, it must necessarily be with all idealists; but the depression which has hung over Zionist organisations in Palestine for the last two years, and which scarcely yet shows signs of lifting, caused various repercussions at the Basle Conference. Some delegates, such as Mr. Jabotinsky, the Revisionist leader, were fain to emphasise the need of a more militant or aggressive policy on the part of Zionists both in and out of Palestine. According to them, the British Government must be persuaded, in effect, to put Zionist interests before British interests. There should, for instance, be Protection in Palestine, because the remedy for the present unemployment lay in increased industrialisation of the Holy Land; complaint was made that factories had had the satisfaction of their demands delayed until they had threatened to close down; the Arab soldier had replaced the British soldier as the defender of Palestine; the Jewish Agency, the legal means of approach by Zionists to the British Government, was being handed over to non-Zionists; and so on. The Revisionists, indeed, were convinced that the leadership of men like Dr. Weizmann and Mr. Sokolow was wrecking the Zionist movement. Again, and from another angle, the Zionist Executive was attacked by certain American Zionists, the leader of whom, Dr. Stephen Wise, was actually moved to leave the Congress because a proposal of his which implied dissatisfaction with the present work of British Zionists for Palestine was not strongly supported. But rifts within the lute of the American Delegation were but an anticipated indication of the rifts within the whole body of Zionists. In the end, however, the Congress reaffirmed its belief in the wisdom of "gradualisation," and, in general, of the policy of the men who have in recent years brought the Zionist Movement to its present condition.

A word may here be said upon the attitude of Zionists to the Mandatory Power for Palestine. The intensity of the criticism by Zionists of the British Government appears to be in proportion to the distance of their residence from Whitehall; it is perhaps highest in America and Palestine, the country whence most of the money for Zionist funds comes and the country into which that money goes. Now it cannot be denied for a moment that Jews supplying and Jews absorbing this money have a perfect right to criticise the régime under which Zionist colonization is being attempted. It is, however, another matter if such Zionists accuse British Zionists of cowardice or of weak faith when Jews who are in direct and constant contact with the British Government emphasise the difficulties of the speedy establishment of the "Jewish National Home." Dr. Weizmann pleaded, with every justification, that his signature of the White Paper of 1922 was practically a

sine qua non of the continuation of the National Home movement. He further said:—

We are not covering the British political policy, but when the Congress identifies us with it, our defence appears like an identification. I understand that the Jewish National Home policy is not identical with the policy of the Mandatory Power. Our task is to see that the Mandatory Power is placed in as little embarrassment as possible in carrying out this policy, and we must, therefore, avoid acts which will bring into conflict unequal forces. Our delicate task is to bring the Zionist wishes before the Mandatory Power, not to demand, but to interpret.

Those were reasoned words, bitterly disappointing though they must have seemed to many of the non-British Zionists at this Congress. The fact is, however, that many foreign Zionists, remembering in a general and uplifted way the terms of the Balfour Declaration and of the Mandate for Palestine, have forgotten the Churchill Statement of 1922, which contained these words:—

Unauthorised statements have been made to the effect that the purpose in view is to create a wholly Jewish Palestine. Phrases have been used such as that Palestine is to become "as Jewish as England is English." His Majesty's Government regard any such expectation as impracticable, and have no such aim in view. Nor have they at any time contemplated . . . the disappearance or the subordination of the Arabic population, language or culture in Palestine. They would draw attention to the fact that the terms of the Declaration referred to do not contemplate that Palestine as a whole should be converted into a Jewish National Home, but that such a Home should be founded in Palestine.

To the outside observer it would appear a little curious that the patience which has characterised the Jewish race for centuries should have been replaced, by some delegates at the Basle Congress, by impatience. But facts are facts, and it is quite without the realm of possibility that the Jewish National Home should be built in a day, or in a short number of years. Zionists must continue to make sacrifices for the privilege of having a National Home: and this was abundantly and sagely recognised by the moderate and preponderating section of the Congress. It may be that Zionist hopes in many instances will have to be modified; it may be that they will have even to be postponed or abandoned, but obviously it is upon Jews themselves that the future of the Home depends. The tendency, when things go wrong—and for the last two years they have gone wrong from the Zionist point of view in a most thought-provoking manner—to blame the Mandatory Power for what should properly be blamed on to the world conditions or to the Jews themselves—is perhaps natural and pardonable; but there are, as Mr. Philip Guedalla pointed out to the Congress, few advantages in its frequent indulgence. Upon the detailed decisions of the Congress we have as yet no information, and indeed, patience in regard to the real policy of the Zionists in the Holy Land will have to be exercised until the report is published at the beginning of next year of the non-partisan Commission now investigating the possibilities of Palestine. For the immediate future it would seem probable that concentration will be made in the agricultural sphere, the experiences during the last two years of Zionists in industrial centres having been so unfortunate. There would, in fact, be more confidence in the future of the Zionist experiment, if the percentage of agricultural colonists were higher, for, as Sir John Shuckburgh reminded the Permanent Mandates Commission last June, the Jews employed in agriculture had not left the country but had formed its most stable element in times of crisis. Much may come with the establishment of the Rutemberg hydro-electric schemes, the building of a port at Haifa, and so on, but Zionists would do well to remember that Palestine is essentially an agricultural country, and that industrial schemes permanently employing thousands of men could prosper only if subsidies from abroad poured into the Holy Land in much greater quantities than hitherto. Fortunately for the Zionist movement, the Zionist Organisation is now thoroughly awake to and informed of the possibilities of agricultural colonisation in Palestine, and if Jewish ambition does not overleap itself, nor clash too violently with the necessarily slow provisions of the Mandatory Power, considerable transformation of the Holy Land, involving the improvement both of Arab and of Zionist, may be seen, say, in ten or fifteen years' time.

The Near and Middle East*

From Our Own Correspondents.

Cairo, September 4.

Leadership of the Wafd.

The successor to Zaghloul Pasha continues to be the dominating object of discussion in the Press, clubs and cafés. It is interesting to note the changed tone of the vernacular newspapers during the past ten days. Immediately after the death of the late venerable President of the Wafd it was confidently and almost universally asserted that the disappearance of Zaghloul Pasha would make no considerable difference to the political situation. Though lacking his personal leadership, the Wafd would continue to be inspired by his principles and any talk of disintegration was malicious and unfounded, put about by fishers in troubled waters anxious to gain personal profit by helping to confuse the situation. But latterly a less confident note has been in evidence. The political writers begin to agree that the death of Zaghloul Pasha confronts not only the present coalition Ministry, but also, and even more immediately the party of which Zaghloul Pasha was the President, with a very critical situation. The informal discussions which have been proceeding during the past ten days are reported to have revealed nothing like unanimity of opinion amongst leading Wafd members now in Egypt. A preliminary conference was held last Saturday, but as it was immediately evident that any attempt to discuss the present situation would result only in revealing a large number of conflicting opinions, the proceedings were confined to passing a resolution that a plenary meeting of the Wafd was urgently necessary and that, for this purpose, the many Wafdist politicians now on holiday in Europe should be cabled to return at the earliest possible moment. This has been done, and it seems that the conference will be held during the last week of the present month or in the first few days of October.

So far as it is possible to judge, opinion in Wafd circles tends steadily towards agreement that there can be no real successor to the late leader. Zaghloul Pasha combined three principal capacities: President of the Wafd, President of the Zaghloulist Parliamentary Party, and President of the Chamber of Deputies. It is generally conceded that there will not again be a single tenant of this triple Presidency. The vacancy in the Chamber will probably be easiest to fill and already several names are being discussed, including those of Adly Pasha Yeghen and Ahmed Pasha Mazloum. The principal difficulty in the case of Adly Pasha would probably be to induce him to accept nomination as a candidate for the Chamber of Deputies and, eventually, for the Presidential Chair. Mazloum Pasha has had one session as President of the Chamber (in 1924) and it then appeared that the task of controlling the debates was something of a strain for a man of his advanced years—which, of course, are now still more advanced. It seems probable that the President will be neither Adly Pasha nor Mazloum Pasha, but is

more likely to be Mustapha Nahas Pasha or Wissa Wassef Bey, or some other prominent Wafdist who has already had experience of the vice-Presidency, or who, at least, has been a deputy in the successive Parliaments since 1924.

Barakat Pasha.

For the Presidency of the Wafd, which has constituted the "Leadership of the Nation" in the past, but is less likely to do so in the future, the name of Fathallah Barakat Pasha is most mentioned. Barakat Pasha most nearly of all the prominent Zaghloulists inherits the position of his late uncle in the eyes of the fellaheen—a very important consideration. But in other respects he might find the mantle of Zaghloul a very large-sized garment. This circumstance might be met by a readjustment of the relationship between the Presidency of the Wafd and of the Parliamentary Party. The leadership of the latter presents the most difficult problem of all, and it is quite impossible, in the present position of affairs, to speculate usefully on possible occupants of this difficult position.

Hopes of the Opposition.

Quite naturally, other political parties are endeavouring to profit by what they anticipate will be the difficulties of the Zaghloulists. The Nationalists, who have had experience of what may happen to a party when its founder and inspiration die, frankly hope that they may now resume the predominance in Egyptian politics which they lost after the death of Mustapha Pasha Kamel. The Unionists, who have been quite out of the political picture during the past twelve months, are also becoming active, though they have little ground for hoping that, in any conceivable combination of circumstances, the Egyptian electorate is likely to accept them as the saviours of the country in difficult conditions. But they, like the Nationalists, will do all in their power to foster disagreement and schism in the Zaghloulist ranks, in the hope that, amidst the consequent confusion it will be possible to snatch some of the political spoils. It seems probable, therefore, that Egyptian politics will be in the melting pot during the coming winter. Whatever eventually emerges from the boiling-up process the process itself ought to provide abundant interest for onlookers.

The Costi Affair.

The Egyptian Government has asked the German Government to make representations in Moscow regarding the seizure of the Egyptian s.s. Costi in the Black Sea. The Costi was formerly Russian-owned, but was captured by French naval forces in the Black Sea soon after the War and was eventually sold to Egyptian owners. A few weeks ago she was seized in the Black Sea, though whether by pirates, as was at first reported, or by Soviet Government officials, is not clear, and taken to Odessa, where she has apparently been impounded by order of the local Court. It is stated here that the captain of the ship was killed and other officers wounded in the fight which occurred when the Russians boarded the Costi, and that all the crew have been cast into jail at Odessa, but whether these stories have any real foundation of fact is not known. Local newspapers have urged the Egyptian Government to take "strong action" in the matter,

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

For particulars apply to THE SECRETARY.

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

though what action is possible—since Egypt has not recognised the Russian Government—beyond endeavouring, as has been done, to get some third Power to act as intermediary, is not clear. Another suggestion is that Russian ships which enter Egyptian ports, as they often do, although none of the crew is ever allowed to land, should be seized and held until the Costi and her crew are released. Meanwhile, until a settlement of the matter is reached, the owners of the Costi and the relatives of her crew are naturally much concerned for the fate of the vessel and her personnel.

The Post Office.

The business community is loud in its complaints of the methods of the Egyptian Post Office. For years it has been a grievance that there is no reasonably early delivery anywhere excepting in the very heart of the larger towns. In the suburbs of Cairo, for example, the first post may arrive any time between 8. a.m. and 11.30 a.m. Another complaint has concerned the extraordinary time sometimes taken by letters in transit between places no farther distant than Alexandria and its fashionable suburb, Bulkeley, whilst anything up to three or four days may sometimes elapse between the posting of a letter in Port Said and its delivery in Alexandria. Now, attention has been directed to the foreign mail service, which this summer has been very irregular. The latest arrangements provide two regular mails each way, which might be sufficient if they came in and went out at fairly even intervals. But what actually happens is that the incoming mails arrive on Wednesdays and Thursdays, with no mail between Thursday and the following Wednesday, while the outgoing mails are fixed for Saturdays and Sundays. In view of the fact that Egypt is served by a large number of steamship lines and that, either from Alexandria or Port Said, there is a fast liner leaving almost every day, with a similarly frequent service from Europe, it is thought that the Post Office ought to be able to improve on present arrangements.

ALBANIA.

Skutari, September 1.

The President's Visit to Skutari.

The great event of the last few days in Albania has been the visit of President Ahmed Zogu to Skutari. For the two years and eight months during which he has been in power he has never left Tirana except to spend the summer months at Durazzo. Even these small trips were

characterised by the great precautions taken for the President's safety. A dozen cars full of soldiers preceded and followed the car in which he drove, and three hundred additional troops were distributed along the twenty-two miles separating the capital from the sea-port.

On August 17, Ahmed Bey Zogu left Durazzo for Skutari. Three thousand soldiers and two batteries of artillery, as well as the President's whole staff were mobilised for the journey, and he was accompanied by all the Cabinet Ministers and the two Presidents of the Legislative Chambers. The Minister of Public Works, the Municipality of Skutari and the civil authorities were responsible for large demonstrations which took place during the two weeks of the President's stay. To-day Ahmed Bey Zogu left for Tirana.

One result of the visit has been to effect a measure of reconciliation between the inhabitants of Skutari, who had been alienated since the insurrection of last winter, and the Government; and an amnesty has been proclaimed for seventy persons under sentence for participation in that movement. At the same time Ahmed Bey Zogu took possession of a villa on Lake Skutari which had been built by the Municipality of Skutari with funds provided by a surtax on Customs duties.

Public Instruction.

The Government has decided to create two new Ministries—Public Instruction and Agriculture. An appointment to the former only, however, has so far been made, in the person of Xhafer Ypi, formerly Prime Minister and Member of the Council of State. The domain of Public Instruction still calls for great efforts and still greater sacrifices. In the whole of Albania there are only at the present moment 606 schools of all grades, attended by 31,406 pupils. The smallness of the Budget does not allow for any greater development in the way of educational institutions, and for this reason some piquancy attaches to the estimate of a Skutari resident that for the money spent somewhat uselessly and without purpose in connexion with the President's visit, the Ministry of Instruction would have been able to build a hundred village schools, and the children would have had suitable buildings to go to instead of being herded together in mere huts.

Archæological Excavations.

M. Leon Rey, of the French Archæological Mission, is continuing his excavations at Pojani, to the west of Fieri, the Apollonia of the ancients. In addition to the various objects discovered, including statues, he has laid bare a building which he calls the Nymphaeum. His work is described in the second volume of "Albania," which he has published in Paris.

M. Ugolini, the youthful head of the Italian mission, is also continuing his investigations at Feniki, between Delvina and Santa Quaranta, where he is discovering various objects of the Stone Age and others connected with the Roman acropolis.

Colonel Kassim Qafzezi.

Colonel Kassim Qafzezi, who took part in the *coup d'état* of June 1924 and was at the head of the Ministry of War in the Government of Fan Noli, left Albania with his colleagues and some two hundred others of the more prominent supporters of the Fan Noli administration on the arrival of Ahmed Bey Zogu in January 1925. At a later date Colonel Qafzezi was condemned to death in *contumaciam*. Last month, however, having been granted a special pardon, he returned to Albania from Bari, where he had been living in exile. As Colonel Kassim Qafzezi was one of the leaders of the Opposition, it is to be hoped that other prominent Albanians who have been hostile to Ahmed Bey Zogu will also return and be reconciled to the present régime, or at least be content to adopt a passive attitude.

Albanian Moslems in Greece.

Greek Epirus, as is known, is inhabited by Moslem

Albanians called Shami. Greece has taken advantage of her agreement with Turkey to drive out or forcibly deport to Asia Minor 20,000 Albanians from Epirus and 35,000 from Macedonia. The remnant of 30,000 Albanians in Epirus are being subjected to a régime of oppression or petty persecution on the ground that they are to be sent one day to Turkey, and by these means they are being spoiled of their goods. In December 1925 the Albanian Government pleaded the cause of these unfortunate people before the Council of the League of Nations. At the next session of the Council the Greek Government admitted the wrongs done to these Albanians and declared that any harshness or restrictions to which they had been exposed would be terminated. Eighteen months later the lot of these Moslem Albanians shows little, if any, improvement. Their houses, goods, fields and vineyards remain confiscated. The two large villages of Gardik and Dragumi are in particular the objects of extraordinary pressure. The Greek aim, in Albanian eyes, is to deprive these people of all they possess and then to deport them to Asia Minor.

For a month now the Albanian newspapers have been full of alarming news of the situation in Shamouria, that part of Epirus which stretches from the frontier to Preveza.

Newspapers.

The Italians have just established a new propaganda organ in the form of a daily paper published at Bari, as a supplement to the *Gazzetta di Puglia*. It is known as *Gazetta Shqipetare*, it is published in Albania and is the only Albanian daily.

Another paper, *Virog*, has been started at Argyrocastro by the Deputy Javer Hourshid. It is a small sheet. From its very first issue it has directed a lively attack against the so-called National Bank of Albania and the Svea Company (*Societa per lo Sviluppo Economico dell'Albania*), which are accused of being enterprises for sucking Albania's money and life-blood.

CYPRUS.

Nicosia, September 2.

The "Tribute."

Sir Ronald Storrs summoned a special meeting of the Legislative Council on August 31, at 5.30 p.m., at Limassol, at which the Heads of Departments, District Commissioners and many others attended by invitation. It was held in the Law Court. The Governor proceeded to read a despatch from the Secretary of State for the Colonies, informing him that H.M. Government had decided to relieve the Island of the "Tribute of £92,800 a year" (reduced by the annual British grant of £50,000 to £42,800) subject to the condition that Cyprus would contribute annually £10,000 towards the cost of Imperial Defence. At the conclusion of his speech there was loud applause both in and outside the Court. The object of the meeting had not been known to any previously. As is well known, the burden of the Tribute has been for many years the principal grievance in Cyprus.

Immediately after the meeting, the Governor, accompanied by his A.D.C., embarked on board the s.s. Gastein,

of the Lloyd Triestino, for Rhodes, to spend a week as guest of the Italian Governor-General of Rhodes and the Dodecanese. A large crowd followed him to the pier, where loud cheers were again raised. Mr. P. Nicholson, Colonial Secretary, will carry on the administration during his absence.

The Forest Department.

The Principal Forest Officer, Dr. Unwin, has selected two members of his department, a Greek and a Turk, to study forestry at Parkend for two years, and a Turkish Exhibitioner, who will study in Britain for five years—three at Edinburgh, and two at Oxford—with a view to taking up posts in the Cyprus Forest Office. The step is a wise one; for a greater knowledge of forestry amongst the officials is much needed.

Ex-King Husain.

A dastardly crime was committed a few nights ago in the stables of ex-King Husain. His favourite mare, one of great value, was found stabbed to death. Two others had been grievously wounded by stabbing, one of which had to be shot, while the other may possibly recover. The miscreants—for there were probably more than one—had apparently been unable to approach another horse. The animals were all of very great value, and the ex-King was much attached to them. The police have arrested two servants of the ex-King, one of whom had been discharged some days previously. They have also arrested a farrier who is under suspicion. The greatest indignation has been felt and expressed by both the Greek and Turkish communities.

General News.

Definite news has now been received that vessels of the Mediterranean Squadron will visit the ports of Famagusta, Limassol, and Larnaca, in September and October.

Borings for "semi-artesian" water continue to be carried out in the Famagusta district, with favourable results.

The Island population on December 31, 1926 was 335,010, as against 330,601 on December 31, 1925. The immigrants into Cyprus during last year amounted to 7,175, and emigrants from it to 6,558.

ROUMANIA.

Bucharest, September 8.

The Government's Preoccupations.

One of the first cares of the new Government is to be the revision once more of the Import Tariff. The last tariff came into force last April, but the present Government is thoroughly dissatisfied with the method of its compilation, and has already appointed a Committee for revision which begins its duties early this month.

Another of its immediate preoccupations is to be the Minorities Bill—no doubt in fulfilment of a promise which gained for this Government the vote of almost all the minority population. As a matter of fact, the minorities generally vote for the Government, of whatever party it be, as their only chance of receiving any attention from the "powers that be."

The Railways Loan has not yet materialised, though it is more needed than ever, for in the course of the last ten days enormous damage has been done to the permanent way in several districts by the torrential rains which fell, washing away the embankment and small bridges. Several lines have had to be closed to traffic.

Defalcations.

During the past few weeks public interest and indignation have been aroused by the discovery of a series of gigantic frauds and misappropriations of funds, which have been going on for years in some of the Ministries and public offices, and by which the State Treasury has been robbed of millions of lei (that is thousands of pounds). One of the most distressing was that of the Director of the *Official Gazette* ("Monitor Oficial") who appears to have misappropriated funds amounting to over £60,000. At the Ministry of War there was a similar case, and since then a general inspection has brought to light a great many abuses by which the Treasury was being defrauded. The Government is naturally anxious to keep these matters quiet, but it is understood that severe measures are being taken in all Government Departments to prevent their repetition.

Economically speaking such occurrences are usually a sign of bad times, i.e., dear food and clothing and low salaries, and such certainly are the conditions in Roumania to-day, although the Government has recently taken steps to increase the salaries of State functionaries of all classes. In spite of the rise in the value of the leu, however, there is still no sign of the cost of living diminishing, and rents continue to soar. The industries, moreover, have suffered so severely from the prevailing money scarcity and other hindrances such as taxation, high transport charges, and so on, that many of them have been forced to adopt measures of economy. A number of the petroleum companies have reduced all salaries by 20 per cent.

It appears to be the general opinion, however, that the low water mark has been reached and that things are beginning to improve. Bank interests for money lent have gone down from 30 to 16 per cent. and money is not nearly so difficult to obtain. It is stated on good authority that several of the principal Bucharest Banks have obtained important credits from abroad.

Minorities.

The attitude of the British Press generally towards Lord Rothermere's campaign in favour of Hungary has caused great satisfaction in this country. The campaign itself and the continued active propaganda of the Hungarians in their own favour, have served to excite public feeling against them and have led to the reflexion, how necessary was the Little Entente from Roumania's point of view. As a testimony of Roumania's good faith and good will towards her neighbours and towards the minorities generally the agreement is cited which has just been made with Yugoslavia with regard to schools in the Banat, where considerable confusion was created by the new and entirely arbitrary frontiers. The Roumanian minorities in the Yugoslav portion of the Banat have, since the Peace, had no Roumanian schools, and no opportunity of learning or preserving their knowledge of their mother tongue. Now an amicable agreement has been arrived at with Belgrade by which they shall have schools in which the whole curriculum, except History, Geography, and the Constitution, will be taught in Roumanian. However, such a school may be founded as soon as there are 20 pupils who wish to attend it. They will be under the supervision of a committee of priests and Roumanian teachers. Altogether the Yugoslav Government seems to have shown a great deal of liberal sentiment contrasting strongly with that which prevailed just after the War, when the Roumanian mails were dragged out of the trains at the frontier station and kicked aside with an oath by some of the lower railway officials to lie there, probably, to be pilfered at leisure till some one came to look for them. *Über alles wächst Grass* as the Germans say, and what a

blessing is that peaceful covering to so much ugliness. One can only wish that the Roumanians and Hungarians would not keep pulling it up by the roots.

Agriculture.

The harvest this year is inferior in quantity to that of last year but superior in quality. According to the official estimates there will be available for export 38,000 wagons of wheat, 5,900 wagons of rye and 50,766 wagons of barley. The oats harvest has been very poor and amounts to 15,000 wagons less than the quantity required for home consumption.

Congresses.

Two interesting Congresses are about to be held in Bucharest. (1) A congress of Geologists of the Carpathian Association, and (2) a Congress of the Latin Press. At the first, France, England, Germany, Poland, Czechoslovakia, and Yugoslavia will be represented, and at the second France, Italy, Belgium, Spain, Portugal, Switzerland, Argentine, Bolivia, Brazil, Canada, Chili, Columbia, Cuba, Hayti, Mexico, Paraguay, Peru, St. Domingo, Uruguay and Venezuela.

NOTES OF THE WEEK

(Continued from page 323.)

than can be absorbed. This economic crisis has indeed blown away many cobwebs, some of them beautiful spirals of hope, others gloomy hangings of despair: both Jew and Arab now know better the possible significance of a Jewish National Home. And as the Jew shakes down to realities, the Arab dissipates his fears, and slowly, very slowly, resolves to co-operate and to benefit himself.

Persia's Prospects.

Reports still continue of the signing of a Perso-Soviet agreement, but the cup does not actually appear to have touched the lip yet. It is a curious thing, however, that so many people should know beforehand what this new treaty consists of. For instance, M. Davtian, the newly-appointed Russian Ambassador to Persia, has stated that a new Soviet-Persian Trade Agreement, which, it is said, is to be signed shortly, will give permission for the free importation of Persian goods into Soviet Russia within a quota which has been fixed for next year at fifty million roubles. Possibly such an agreement is to be made; on the other hand, it is possible that such previous announcement of the Treaty's provisions is in the nature of a *ballon d'essai* to test Persian opinion. Another important item of news which concerns the future of Persia is the report that Mr. W. B. Poland, American Director-General of Railways in Persia, has consented to succeed Dr. Mills-paugh as Administrator-General of Finances. If this is so—as yet we have no confirmation of it—Persia most decidedly has reason to congratulate herself. Another American who has done good service to Persia, Mr. D. W. McCormack, Director of Internal Revenue, is one of the representatives of Persia at the League of Nations Assembly at Geneva. He is stated to have declared, in France, that during the next twelve years about £20,000,000 will be spent on railway construction in Persia. Not the least of the virtues of the American Advisers to the Persian Government is their optimism, and it is to be hoped, for the sake of Persia, that Mr. McCormack will succeed in inducing some of the capitalists in his own country to share his own optimism.

The *Umm al Qora*, of Mecca, announces that a meeting has been held in the capital of King Ibn Saoud in aid of the sufferers in the Palestine earthquake. The Crown Prince made a speech on this occasion, and contributed £100 himself, while his brother, the Amir Muhammad, contributed £80. Altogether £400 was collected at the gathering.

FROM THE BATINAH TO THE TRUCIAL COAST.

We have received details of an interesting journey recently made by Mr. B. S. Thomas, O.B.E., Wazir to H.H. the Sultan of Muscat, who accompanied a party of three British officers from Sohar, on the Batinah Coast south of the Masandan Peninsula, to Abu Dhabi on the Trucial Coast during May and June last.

The journey in question has been made only twice before by Europeans, on both occasions more than twenty years ago, and the omens were not at the outset propitious; not only were the independent tribes whose territory had to be traversed openly averse from giving facilities to Europeans, but their relations with each other were such as to make it exceedingly difficult to arrange for a succession of escorts, as the territory of one tribe was left and that of another entered.

The route followed was via Wili and Sihlat to Milaiyinah and up the Wadi Jizzi through Ubailah to Najd, the pass on the Hajar divide. Here a letter was received from Biraimi to the effect that the presence of the party was unwelcome, and that the country belonged to God, to themselves, and to King Ibn Saoud, whose agent was in Biraimi.

It was further ascertained that the Bani Qitab, whose territory lies immediately to the North of Biraimi, had this year for the first time sent a present of seven camels to King Ibn Saoud, and that the Ghafriyah Baduins of the Dhahirah had also submitted. This news, though it was afterwards shown to have been exaggerated, indicates that the present King of the Hijaz is no less able to extend his influence by peaceful penetration than by arms; its immediate effect was to increase the disinclination of the Omani tribesmen present with the party to advance further into what appeared to be hostile country.

After some delay the party pushed on to Mahadhah and thence to 'Awainah. It was meanwhile ascertained that King Ibn Saoud's agent had in point of fact left Biraimi *re infecta* and it was found possible to enlist local assistance for an onward move towards Sharjah via Jifr al Halais, which has never before been visited by Europeans, and thus through Qitah to Umm Waila and so to Sharjah on the Trucial Coast.

The journey was not without geographical and archaeological interest.

Emerging from the coastal date belt at Sahar the gravelly Dahna—in Oman termed Sih—stretches westward for some fifteen miles to the steep seaward slopes of the Hajar range. This great backbone of Oman, the Hajar, has in this latitude a cross section of twenty miles and more, attains to a height of more than three thousand feet, then merges into a plateau of Nafudh of 1,500 feet altitude—here called Al Raml—which slopes down imperceptibly westward to the Trucial Coast. The complex folds of the Hajar, arid and inaccessible, are a barrier to trade and communication except where they concede a few of the great cis-montane wadis which thread their steep and tortuous way down to the Gulf of Oman. Not the least of these is Wadi Jizzi. Here, in the upper reaches is perennial running water—usually a shallow crystal stream perhaps twenty feet broad meandering (except when in spate) from side to side over the rough pebbly bed that stretches a hundred yards or so across the wadi. On either side rise considerable hills through which an occasional affluent issues to join the main stream. Here and there massive fallen boulders lie strewn in the wadi bed. In patches of sand or shingle—the detritus brought down by the floods—oleanders of a pale hue bloom in profusion and the inevitable *Ashkar* is found. At intervals where the wadi banks are favourably situated for irrigation and the soil is good, date groves and villages have sprung up to make pleasant halting places. Of such are Milaiyinah, Sahailah, Khan Rabi, Hail, Wasit and Kitnah. Hail marks the head of the Wadi Jizzi, for it is here that Wadi Kitnah from the west and Wadi Ubailah from the north unite and give rise to the main wadi. As one turns north into Wadi Ubailah, scenery and life undergo a sudden transformation. The wadi here is no longer a deep rift

like Wadi Jizzi with perennial water and over-shadowing hills, but a broad rough surfaced depression, wrinkled by numerous parallel shallow dry water courses. These are studded with camel thorn and surrounded by a vast jungle of acacia trees, their scraggy branches stretching outwards fanwise—reminiscent of a conventional Japanese decoration—as if resolved to collect the utmost dew for being cheated by an almost rainless climate.

To the north-west and close at hand is the Divide. Beyond it the secondary ridges have no longer the steep and precipitous face which the Hajar presents to the Batinah. The shelf from which they gently rear themselves is already more than 1,500 feet high. Their ruggedness and dark hue suggest immemorial weathering, and as one rides past them at night they throw up against a moonlit sky the most fantastic outlines. The watershed is now eastward, the ultra-montane wadis—except in the case of Wadi Samaini—which in its early stages at least is a well eroded trough and ultimately reaches the sea at Al Ajman—are merely shallow dry water-courses which finally extinguish themselves in the sandy desert. After rains they become a three days' torrent, but the water soon subsides and they revert to the condition of a dry batha. Beneath them at no great depth water is to be found, and here is the secret of the Murid, i.e., shallow water holes. Except under the mountain sides where their water can be tapped or diverted, they mark the end of date cultivation and the settled Arab. The characteristic vegetation is again the common *Al Ashkar*, whose wood the Badu chars to make a constituent of his native gunpowder. Greens of every hue colour the scrub and herbage—haram, harmel, rumth and similar camel delicacies.

Near Najd at the divide lie some ancient red quarries—presumably iron workings. Westward to the Trucial Coast rolls away a sixty miles sea of sand—a spur of that 800 miles of inhospitable Ruba' al Khali which to our discredit is still marked by geographers "unexplored." Along the route westward from Jabal Faijah to Sharjah, hitherto untravelled by European, this desert is by no means destitute of vegetation and life. Red sandy undulations thirty feet high and more support on their precarious surfaces stunted shrubs of many kinds, and studded thickly in the depressions are the *ghaff* variety of acacia, thickly trunked and twisted with age. The phenomenon of singing sands noticed by Lord Curzon which it seemed reasonable to expect is unknown here. The dunes in this latitude are not sufficiently lofty, the Arabs say, to perform. Small red lizards dart into and out of the light sand, which also bears the soft, elaborate and beautiful patterns impressed by the wanderings of sand insects. The Hadhr was now left behind by the party. Here only the Baduin extracts a poor and precarious existence, and the camels' hair tent and the horse are conspicuous by their absence. The acacia supersedes the tent; the country is essentially camel country.

In the Hajar to the south the wild ass is still found. Shy and untameable, he regards the approach of man with suspicion, and no wonder, for in a lean year the Badu, or in time of war the tribesman, is as likely as not to be stalking him for the pot. Panther are said to roam the Northern Hajar and take off a yearly toll of camels. Nor do they confine their attentions to the young camel—the largest cow is often their victim. Their method is to climb the jungle tree and lie in wait upon its branches. The unsuspecting camel in the half light of dawn comes in quest of food, his long neck upstretched for the youngest and most succulent leaf at the top. Thereupon the panther springs at the camel's head, gets him down and makes short work of him. There are few if any ibex

in the north country, though the short-horned variety is common in Bani Umr country, but descending to the plain, gazelle are numerous. Of oryx there is none so far north as this.

Oman—archæologically speaking—is a virgin field. The country passed through from Sahâr to Burj ash Shukhairi was, there can be little doubt, the ancient Mazun of the Pre-Islam days of Persian occupation. Its capital Jamsetjerd, has already been identified by Miles. These ruins, though the most considerable relic of Persian occupation in Oman, are in reality crude and disappointing. They will not bear the slightest comparison with Persian ruins of perhaps the same period which are to be found in Khadhra in Mesopotamia or Ziza in Transjordan. Except for this fort, ascribed traditionally to Zargar bin Ali Jalund, there is no neighbouring mound or even the trace of a potsherd to indicate an ancient city. At Falaj as Saq the foothills are studded with innumerable *Bait al jahal*, i.e., "Houses of the Days of Ignorance." The local tradition that these were dwelling places cannot be regarded as satisfactory. They consist of circular mounds of black lava pebbles built up without cement of any kind four feet high and six or eight feet in diameter and are half roofed over. The thickness of the walls varies between one and two feet, leaving an interior narrow cell which could scarcely accommodate one man. Nor could their use have been of a military nature, for they are clustered close together and often screen one another. Mr. Thomas formed the view that they have some religious after-death significance—and may have been ancient prototypes of Towers of Silence. This, however, is admittedly difficult to reconcile with their vast numbers, and they have no common orientation. For fifty miles the Hajar foothills are a mass of them. At Sihlat a few miles further on are extensive remains of a village on a slight eminence with a mud fort and a ruined gun. On this gravel mound—it was not an artificial tell—he collected many glazed turquoise coloured potsherds clearly not of Arab origin. Dhahiyah and Jalbah, neighbouring villages to the south, but which he did not see, have also an ancient tradition. Some few miles further on, near Milaiyinah in the small wadi of Shahabat al Hizm, he discovered a most interesting and ancient water system embodying the syphon. The water conduit drops through a solidly built masonry pillar some twenty-five feet high, passes under the wadi, which here measures twenty-five paces, and runs up again through another pillar on the far side. As the Persians were expelled from Oman by the 8th century A.D., this syphon is perhaps one of the most ancient in the world.

THE CYPRUS TRIBUTE.

The following address was delivered by Sir Ronald Storrs, Governor of Cyprus, to the Legislative Council at the meeting of August 31.

"In the first pronouncement which I had the honour of making to you last December I alluded to the undoubted hardship sustained by the Colony in the incubus of the Debt Charge and to the sympathy therein cherished not only by the Cyprus but also by the Imperial Government. Nor was the matter allowed to rest there. After careful study and re-examination of all relative documents and of the circumstances of the Island, I addressed earnest representations to the Secretary of State for the Colonies pressing for a reconsideration and revision of the existing state of affairs. These representations embodied no suggestions for mitigations or palliatives but an urgent appeal for nothing less than a final, permanent and definitive solution and settlement of an anomaly which has been the discouragement and indeed the despair of the Budget of half a century. At the same time I cannot but confess that, aware of the grinding stringency of the financial situation in England and the increasingly drastic economies imposed thereby upon the Imperial Exchequer, I hardly dared imagine for my hopes anything beyond a partial or a gradual realisation.

"It is, therefore, with feelings of profound thankfulness and extreme gratification that I find myself privileged to announce to you the following communication addressed to me by the Secretary of State:—

"Your despatch of March 23. I am glad to be able to inform you that His Majesty's Government has decided to relieve Cyprus of the payment of £92,800 per annum applied to the service of the Turkish Guaranteed Loan of 1885, so long as that service continues, by means of a Grant in aid of equivalent amount, on condition that Cyprus contributes £10,000 per annum towards the cost of Imperial Defence. The net additional relief to the Island Exchequer over and above the present Grant in aid of £50,000 will thus be £32,800 per annum."

"This settlement, with your concurrence, will date from January 1, 1928, on the understanding that provision for the Grant-in-aid at its increased figure of £92,800 will be inserted in the Imperial Estimates for that year.

"I think Honourable Gentlemen will be disposed to agree with me that it is not merely the fact that our country becomes, by a stroke of the pen, the richer annually by near £33,000—though what that means in increased possibilities of development and productivity will doubtless be realised and appreciated by all. The material relief is great; the moral relief will be still greater. A heavy cloud of depression has been lifted from our atmosphere, and the Spring restored to the year. "With regard to the condition attached to the decision of His Majesty's Government, namely Cyprus shall contribute £10,000 yearly towards the cost of Imperial Defence, I should explain that it is the established practice for Dependencies of the Crown to contribute in one form or another to the defence of the Empire against foreign aggression. Cyprus has hitherto not so contributed, but, now that His Majesty's Government have assumed the entire burden of the Turkish Debt Charge, she will be in a position to respond with a recognition of reciprocal obligation; and I feel well assured that they may count upon your willing co-operation to the limited extent indicated.

"I have convened you somewhat out of the usual season because I was anxious to impart the good news to you upon the earliest possible occasion, and I shall be pleased on my return from a few days' change, to convey to His Majesty's Government and to the Secretary of State any acknowledgement you may desire to render of their solicitude for the welfare of the Colony; proceeding in due course to the early enactment of the legislation necessary for the ratification of this momentous and memorable decision.

"You will meanwhile permit me to congratulate you with all my heart."

PERSONAL AND GENERAL

TO-DAY

September 15, 1927 (New Style)
September 2, 1927 (Old Style).
Rabia 1, 18, 1346 A.H., of the Muslim Calendar.
Ellul 18, 5687, of the Jewish Calendar.

Sir Arthur Churchman, M.P., and Miss Churchman left England last week on a cruise to the Eastern Mediterranean, and expect to return early in October.

We understand that Colonel C. H. Cox, British Representative in Transjordan, is on his way to England, where he may undergo an operation.

The Maharaja of Nawanagar, after a visit of six weeks to this country, embarked in the Ranpura at Marseilles on September 9 to return to his State, where he will be visited by the Viceroy in November.

Captain Robert Neville, Royal Marines, upon relinquishing his appointment as private secretary to the Officer Administering the Government of Ceylon, joined the staff of the Governor of Bombay, as aide-de-camp, on September 2.

Sir Ronald Storrs, Governor of Cyprus, left the Colony on August 31 to spend a week's holiday in Rhodes and the Dodecanese. He returned to Limassol from Rhodes in a destroyer, on September 9. To this port sections of the British Fleet are paying a visit during the month.

Sir Edward and Lady Davson left on September 9 in the Armadale Castle for Cape Town, where Sir Edward will attend the forthcoming Congress of Chambers of Commerce of the British Empire. They will return via East Africa, the Sudan, and Egypt and may also visit Palestine and Cyprus. Sir Edward will inquire into possibilities of Empire development. He and Lady Davson expect to arrive home at the end of January.

THE VISIT OF KING BORIS.

King Boris of Bulgaria, travelling incognito with two A.D.C.'s arrived in London from Paris on August 30, leaving that same night for Blair Drummond, Perthshire, on a visit to Sir Kay and Lady Muir.

This visit has retained a strictly private character. During this stay at Blair Drummond, King Boris has had plenty of shooting and, as a keen botanist, has used the opportunity to study the flora of Scotland. He has had conversation with Lord Esher, the Earl of Mar and Kellie, Lord Younger, and Lord Haldane, who all live in the neighbourhood of Blair Drummond. King Boris has also had the opportunity of meeting, at Blair Drummond the Duke of Atholl, Lord Douro, the Hon. Henry Fitzalan Howard and Mrs. Howard, Lord and Lady Manton, Madame Guépin, Lady Boyle, Major Villiers-Stuart, General Sir Ian and Lady Hamilton, Colonel Langdale, and other friends.

Among the places of note visited by King Boris during this stay at Blair Drummond was Stirling Castle, where, accompanied by Sir Kay Muir, he was received by the Castle officials and met by the Earl of Mar and Kellie, hereditary Keeper of the Castle, whose brother, Sir William Erskine, is at present British Minister in Bulgaria. On September 11, the King visited the Earl of Mar and Kellie at Alloa House, to meet Princess Victoria, who has been staying there.

King Boris left Blair Drummond for Balmoral on the morning of September 13, accompanied by Sir Kay and Lady Muir as far as Dunkeld House, where lunch was taken with the Duke of Atholl. King Boris, accompanied by the Duke of Atholl, then left Dunkeld House for Balmoral Castle, on a private visit to their Majesties the King and Queen.

DOMESTIC ANNOUNCEMENTS.

BIRTH.

WILLIAMS.—On September 7, at 4, Cedar Lawn Avenue, Barnet, Herts, to Phyllis (*née* Dickins), wife of A. Kenneth Williams—a son.

DEATH.

RAMSAY.—On September 6, at "The Corner," 16, Prentis Road, Streatham, S.W.16, Christian Ramsay, widow of the late Alexander Ramsay of Constantinople, Turkey.

THE MEDITERRANEAN FLEET.

During this autumn certain ships of the Mediterranean Fleet, under Admiral Sir Roger Keyes, will be seen in Greek, Turkish, and Egyptian waters. The vessels which are to visit Venice and Brioni Island in connexion with the race for the Schneider Cup are the Eagle, Captain B. M. Money, D.S.O., and the Eighth Destroyer Division, consisting of the Witch, Whitehall, Worcester, and Wren, under Commander A. S. Agar, V.C., D.S.O. These five vessels are due to leave Venice on September 27 for Split, Candia, Suda Bay, and Malta.

The five battleships of the First Battle Squadron will cruise independently, and included in the itinerary for the flagship Warspite (accompanied by the destroyer Venomous) are Genoa, Imbros, Cyprus (Famagusta), and Haifa. The Royal Oak, flagship of Rear-Admiral D. T. Norris, Athens, Alexandretta, Cyprus (Larnaka), and Port Said. The Valiant is to go to Rhodes, Salonika, and Alexandria.

Of the Third Cruiser Squadron, the cruiser Coventry, flagship of Rear-Admiral Herbert Meade, will go first to Cyprus (Limassol and Kyrenia), and later to Alexandria, Taormina, and Bizerta.

The Second Destroyer Flotilla will cruise in company to Leros (P. Laki), Haifa, Tripoli (Syria), and Marmarice. The vessels include the flotilla leader Stuart and the destroyers Vanessa, Winchester, Venturous, Vanquisher, Viscount, and Vega.

The First Submarine Flotilla, with its parent cruiser Conquest and depot-ship Cyclops, will be short of its principal underwater craft, X 1, during the cruise. The programme includes visits to Athens, Beyrout, Cyprus (Famagusta), and Alexandria. While the fleet repair ship Assistance will accompany the larger vessels, the destroyer depot-ship Sandhurst will proceed eastward, visiting Sfax, Alexandria, Tripoli (Syria), and Marmarice.

The squadrons and flotillas are due back at Malta on Tuesday, October 25.

Book Review

CHRISTIAN MISSIONARIES IN THE EAST.

"AN EASTERN PALIMPSEST." By O. Wyon. (London: World Dominion Press, 2s. 6d.)

This book belongs to a series known as the "World Dominion Survey," which, in the words of its Editor, "attempts to describe briefly and clearly the situation in various countries as viewed from the standpoint of the Kingdom of God." That, perhaps, is an unfortunate way of putting it: what the Editor really means is that the series is to attempt to describe the nature of the Christian missions in various countries and the prospects of proselytising the native inhabitants.

In this "Survey" Miss O. Wyon thus describes Turkey, Syria, Palestine, Transjordan, and Egypt. On the whole it is a sober and interesting record, although the pessimism that might be thought occasionally to invade the breast of the impartial Christian observer is generally relegated to the background in favour of a queer sort of tentative dogmatism. For instance, Miss Wyon draws a strange conclusion from two things which she saw in Turkey:—

Workmen were busy, very busy, turning an Armenian Gregorian Church into a Picture Palace. We looked inside the building, and there, facing us, was the altar, only half hidden by a mass of scaffolding.

At a remote spot on the route of the Baghdad Railway, among wild hills and marshy valleys, we came across a poignant reminder of the War: a German Red Cross coach, standing by the railway track. The Crescent had been painted over the Cross, but the Cross still gleamed through, red and insistent.

Most people, perhaps, if they had been tempted so to philosophise upon the last fact, would have been set wondering whether Germany or Turkey were the greater menace to Christendom. But Miss Wyon says:—

Surely these pictures are a symbol of something firm and unchanging, and a prophecy of what is yet to come. The countries of the Near East, in spite of all their confusion, are strangely one in this at least; underneath the present-day signs of a dominant Islam, is another script, written in red, the story of the Love of Christ, and of the suffering of His Church in these lands.

In Turkey, again, she derives hope from the changes towards Western civilisation:—

This Infant Welfare Centre is a new thing in the life of Turkish women, and it is surely the sign of a new day.

The "freedom" with which the largely atheistic Kemalists are endowing Turkey gives rise, according to Miss Wyon, to the opportunity for Christian missionaries:—

This way of personal intercourse with individuals is being followed; here and there Turks are coming to the missionaries and asking questions about religion, and now and then they are studying the Bible with them. In a quiet hidden way there is much going on that is encouraging and sure.

Of the figure of Christ in Saint Sophia she writes:—

For a thousand years that Figure has been there, a fitting symbol surely of spiritual reality. . . .

"Surely," in fact, is an unusually attractive word. In between her comments in a similar strain to that of which we have given examples, Miss Wyon contrives to pack quite useful information. She fully realises the difficulties which Syria presents as a "mission-field," but pins her faith to the Syrian Evangelical Church and to the "accessibility" of the Muslim population. And on Palestine and

Transjordan and Egypt she has much to say that will be welcome to the non-specialised reader. He, however, should beware of accepting all her statements, such as, "Tel Aviv, near Jaffa, is wealthy and prosperous"; or "The boundary question between Transjordan and Arabia has been settled by the recent treaty between Ibn Saud and the British Government"; and the number of Jews in Palestine is alternatively given as 160,000 and 83,794. The facts are, of course, that Tel Aviv is in a bad way, so bad that Government supervision has had to be exercised over its municipal finances; that only the boundary as between Transjordan and Najd has been settled (Miss Wyon can hardly be aware of the contents of the most recent Anglo-Wahhabi Treaty and of how the Transjordan-Hijaz frontier is effected thereby), and that the first number of Jews makes much greater approach to accuracy than does the obsolete old number. Also, 1915 is a misprint for 1925 as the date since which Cyprus has been a colony under British control.

For all such details, however, there is much to be commended in this little work. The studious reader will find the statistical tables at the end, showing the distribution of various religions in the five countries concerned and the number of Christian missionaries in each, of particular use. Possibly some of those readers who know the Near East will be found to dissent from Miss Wyon's main conclusions, which are that "between Christianity and Islam lies a spiritual barrier created by centuries of hostility," and that "the future of these lands, in a very real sense, lies not with the foreign missions but with the indigenous Churches." But it is a thought-provoking little work.

BOOKS RECEIVED.

"Money and Monetary Policy in Early Times." By A. R. Burns. (London: Messrs. Kegan Paul, Trench, Trubner and Co., 25s. net.)
 "The Letters of Gertrude Bell." Vols. I. and II. Selected and Edited by Lady Bell, D.B.E. (London: Messrs. Ernest Benn, Ltd., 42s. net.)

THE "LOTUS CASE."

The Permanent Court of International Justice pronounced judgment on September 7 in the "Lotus" case between France and Turkey. The judges were unable to reach an agreed decision, being equally divided, but by the casting vote of the president the Court decided that Turkey's action in the matter did not constitute a violation of the principle of international law. The six members of the Court, Judges Loder, Weiss, Lord Finlay, Nyholm Moore, and Altamira, who dissented from the judgment, appended to it an explanation of their view. The "Lotus" dispute arose out of the detention by the Turkish authorities, and subsequent sentence to eighty days' imprisonment, of an officer of the French steamship Lotus on a charge of manslaughter after his ship had come into collision with a Turkish vessel. Following strong protests by the French Government, the officer was eventually released, and it was agreed that the dispute should be referred to the Permanent Court of International Justice for adjudication.

SALONIKA REUNION.

The War Office announces that the third annual Salonika Reunion will be held on Sunday, October 2. Members will assemble on the Horse Guards' Parade at 10.30 a.m. Application forms for dinner, tea, and concert tickets may be obtained from the various district honorary secretaries. Residents outside the London postal district should apply to the General Secretary, Mr. C. J. Kettle, 30, Courtland Avenue, Norbury, S.W.16.

London: E. MARLBOROUGH & CO., LTD., 51, OLD BAILEY, E.C.4.

The death is announced from Hove of Sir John Harrington, aged 62. Sir John, who played a most important part in Anglo-Abyssinian relations, was appointed H.M. Vice-Consul at Zaila in 1895. The arrangements for the Rennell Rodd Mission to Addis Ababa in 1897 were in his keeping, and three years later he was appointed Agent and Consul-General at the Abyssinian capital. In 1903 he became the first British Minister at the Court of Menelik. During his ten years' tenure of this post he signed, on behalf of the British Government, the Treaty of 1902, regulating the Sudan-Abyssinian frontier; accompanied Ras Makonen to England in 1902; and in 1906 an agreement was negotiated between Britain, France, and Italy, to respect the status quo in Abyssinia. Sir John received, among other distinctions, the First Class of the Order of the Star of Ethiopia.

IMMIGRANTS IN ALBANIA.

Miss Ruth Pennington, who has recently returned from Albania after ten months' work with the immigrants there, writes:—

The immigration question in Albania has now reached a stage that might be called "chronic." In Turkey there are 300,000 Albanian-speaking immigrants. Of these at least ten per cent. would willingly shift their quarters and move again, seeking for better land, to rejoin cousins and friends who have already moved. Turkey does not wish for any further depopulation, but in spite of official prohibition, for the next ten to twenty years there will be a constant leakage of from 200 to 300 emigrants yearly. The same applies to Serbia. Consequently the Albanian Government will be in a chronic state of irritation and torment, to find first the land and then the money to instal these families.

The present Government has the laudable intention of amending the existing law, which defies definite interpretation. To take one instance. A youth of 19 years in June, 1926, applied for land, saying that he had a mother and sister dependent on him. He was given a smaller portion than he asked for, on account of his wish to be installed in a particular spot. He drew £12 to build and plough, and he worked well. His mother and sister were possibly in existence, but he had not seen them for years. In mid-June, of 1927, when his harvest was coming along well, he killed his neighbour and fled. There is no chance of his return, as the neighbouring forty-two immigrant families would bring him to justice. The Government, however, says that this land must remain free until two more years have elapsed, as, until then, either the man or his heirs might claim it; on the other hand, they contend that, as an immigrant he has no hereditary rights, and cannot sell his land. The Government's difficulties at the moment are mostly from the land point of view; all the available good sites have been given out. There is plenty of land still to be had, but its distribution leads to endless litigation among the peasants who have annexed the land quietly. The Government has no real power of decision, as there is no law clearly defined, and it is quite possible for the local authorities to give a decision which is annulled by the Minister at Tirana. After this, there ensues much correspondence, and the matter is finally left in a half-and-half, please-all-parties, condition.

The money question, in regard to the settling of the immigrants, has been a great difficulty, and each year becomes more acute. Happily there is no haphazard immigration now, and no families arrive, as they did in 1924, devoid of money, broken in health, and wasted from a three months' trek under bad conditions. Those who arrive do so for definite reasons; they come to a country where 3,300 of their fellow-members are already established, who, in spite of their poverty, are always willing to lend a helping hand.

The British Red Crescent has sent £300 in the last ten months to help in extra food supplies and medicines, and to provide agricultural needs for the poorest groups. Other private donors have also given their support generously, and this subsidiary work of aid has been carried on for three years. The Albanian Government has welcomed this help and shown by its courteous attention its desire for its continuance. Of course, there are people who resent the foreigner and foreign assistance, but these are rare and are generally what is known in Albania as persons of the old Turkish régime.

This question of immigration may possibly become more acute when the harvest prospects are definitely known, the drought this year having been extremely severe; and the time may come when it is necessary to appeal for a special loan or further British assistance to help the immigrants over their first bad harvest.

The Budget of the Lebanese Republic for 1928 provides for the establishment of a Consulate in Paris to protect the interests of Lebanese emigrants and to foster Lebanese trade in French markets.

NEWS IN BRIEF.

M. Davtian, the newly-appointed Soviet Ambassador to Persia, left recently for Teheran.

The Egyptian Government have presented to the Science Museum, South Kensington, models of the Delta barrage and of a Norfolk wherry.

During the recent floods in Eastern Galicia a Polish-Roumanian Delimitation Commission, composed of three Roumanian staff officers and two high Polish Civil Servants, perished.

The town of Namangan, in Armenia, which recently suffered from a violent earthquake, is still feeling occasional shocks at intervals, and quite recently several more houses were destroyed.

Scarcity of rain lately has been reported from Aden in the Tihama district, and the population is suffering from want of food. Large quantities of grain have been shipped from Aden to Jizan.

The whole of Stamboul was threatened by a disastrous fire which broke out in the business quarter of Constantinople on September 9. As a result 400 houses and shops were burned down—principally houses built of wood.

The agent of King Ibn Saoud to the Imam Yahia at Sanaa is reported to have returned to the Hijaz, no settlement having been reached with regard to the frontier, which the Idrisi claims should include Hudaïda, Lahiya, and Maidi.

Waters from a mountain spring at Smei, Roumania, which are reported to have cured a number of cases of paralysis, proved on analysis to contain no salts of any kind and to possess no radioactive qualities. The cures, it is suggested, were due merely to auto-suggestion.

Mgr. Meletios II. Metaxakis, Patriarch of Alexandria, who was for two years Œcumenical Patriarch of Constantinople, proposes to call a Congress of the Orthodox Bishops of the Patriarchates of Alexandria and Jerusalem to meet in October or November, in order to discuss the reform of the calendar and the advisability of adopting the Gregorian reckoning.

A medal is being struck by the Order of St. John of Jerusalem to commemorate the granting of the new Royal Charter extending the Order to the whole of the British Realm, and the sending of a delegation of the Chapter General, headed by the Sub-Prior (the Earl of Scarborough), on a pilgrimage to the Holy Land and the sites of historic interest to the Order. The medal, which is in silver and bronze, is obtainable at St. John's Gate, Clerkenwell.

The Greek Cabinet on September 7 revoked the organising committee's decision to postpone the celebration of the centenary of the Battle of Navarino on October 20. Owing to the shortness of the time before the ceremony the proposed monument, with the busts of the three Christian commanders who defeated the Turks and Egyptians under Ibrahim Pasha—Vice-Admiral Sir Edward Codrington, Rear-Admiral de Rigny (France), and Rear-Admiral Heiden (Russia)—will not be ready, but its foundation-stone will be laid.

Mr. Howard Carter left London on September 8 on his way to Luxor, where he will continue his work in the Valley of the Kings. Two years at least, in Mr. Howard Carter's opinion, will be necessary before the work is completed and before final arrangements have been made with the Egyptian Government for the disposal of the finds. Mr. Carter, before leaving, said that he was anxious to finish as much work as possible before the next tourist season in Egypt. He expects to write another book on the treasures of Tutankhamen's Tomb.

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

TARIFFS AND TEXTILES.

The Textile Tariff Board, it will be recalled, assessed the benefit enjoyed by Japanese spinning mills, in which no restrictions upon the employment of women on night shifts were imposed, at 10 per cent. of the selling price at the date of their report, or double the rate of the existing revenue duty on yarn imported into India. The Board found also that Japanese competition was most intense in respect of the counts of yarn from 31 to 40, and that the unfair advantage in the case of a mill spinning 32's was 16.55 pies per pound. On the other hand, under the Japanese Factory Law, night work by women will be prohibited from July 1, 1929, and it is expected that all yarn produced by mills employing women and girls on night work will be off the market, at the present rate of absorption, before the beginning of the ensuing fiscal year, namely, April 1, 1930. It is clear from these figures that the imposition of a specific duty of one and a half annas per pound, over the period in question, will tend to neutralise the unfair competition of the Japanese mills at the point where its incidence is most severely felt by the Indian cotton spinning industry. For protective purposes, a specific duty, moreover, is always preferable to an *ad valorem* duty, which varies with the price, and is consequently open to the objection that when the latter is low the protection is often inadequate, and correspondingly excessive when the price is high. These, in the main, are the considerations which have led the Government of India, following the representations made by the Bombay Millowners' Association and reviewed recently in these columns, to introduce the Bill providing that up to March 31, 1930, the duty on cotton yarn shall be one and a half annas a pound, or 5 per cent. *ad valorem*, whichever is the higher, passed by the Legislative Assembly last week. The effect, as we have previously explained, will be that the duty, assuming the Council of State concurs in the Assembly's decision, in future will be leviable on all imported yarn, irrespective of the country of origin, at the rate of one and a half annas per pound (1 11-16d.), unless its value exceeds Rs. 1.14.0 (or roughly 2s. 10d.) per lb., in which case the duty will still be calculated on the *ad valorem* basis.

The same remedy naturally occurred to the Tariff Board, but the majority rejected it in view of its possible effect upon the handloom industry, which supplies more than a quarter of the total consumption in India. The Government of India, however, are satisfied, in re-examination of the question, that in this respect the consequences of the duty are not likely to be very serious, especially as at the same time they propose to minimise the burden by halving the duty on artificial silk yarn, which is being used in increasing quantities both by handloom weavers and by the cotton mills. Referred in the first instance to a Select Committee, which apparently endorsed the Government's proposal by a bare majority, the measure met with considerable opposition in the Report stage. At the same time the arguments of those who supported the Amend-

ment that the Bill be circulated for opinions were not impressive, and, in not a few instances, mutually destructive. Before the indefatigable Mr. Neogy rose to move his Amendment the Commerce Member made the real issue quite clear. The object of the measure, he said, was to concede a measure of protection to the Indian cotton textile industry against unfair Japanese competition in the home market resulting from the exceptional advantages enjoyed by the industry in Japan in the matter of night work, double shifts and the employment of female labour. Although Sir George Rainy confined his remarks largely to the position disclosed in the Textile Tariff Board's report in that connexion, he did not ignore the fact that the situation had since been aggravated by two important developments. The first is the marked increase in the rate at which Japanese piece-goods are being imported into India. In the first five months of 1925 the imports of piece-goods from Japan aggregated 76 million yards, rising in the corresponding period of 1926 to 95 million yards. From January to May of the current year they totalled 131 million yards, an expansion in the two years of 72 per cent.

The second factor, to which the Commerce Member rightly attached much greater significance, is that so far from regaining her lost position in the China yarn trade, the Indian mill industry is now actually faced with increasingly severe competition in its home markets from that source. The Japanese mills in Shanghai, it is contended, are now sending large quantities of grey yarn of medium counts into the Indian market for sale at prices considerably below the cost of production of similar goods in the most efficient Bombay mill. Whatever may be the strength, or weakness, of the millowners' claim for a more effective measure of protection against Japanese piece-goods competition, there seems little doubt that there is considerable force in their contention that a *prima facie* case for anti-dumping legislation can be established in respect of this new and unexpected development. The yarn imports from China in the first five months of 1927 reached a total of 2.1 million pounds, whereas in the corresponding period of 1926 the negligible quantity of 8,000 pounds only was recorded. In addition, since the beginning of the current year, China has also largely increased her shipments to India of piece-goods, importations from that country up to the end of May already largely exceeding those for the whole of 1926.

These facts were, no doubt, uppermost in Sir George Rainy's mind when he said that after fullest and most careful consideration of the effect of its proposals upon the mills and the handloom industry, respectively, the Government, while leaving the ultimate decision to the Assembly, felt that in the circumstances he had recited the interests of the cotton mill industry ought to prevail. That, in the event, they did, for the dilatory amendment was lost by a substantial majority, appears to have been due largely to the impressive tone of the Commerce Member's reply on the debate, when he laid stress upon the grave responsibility which the House would incur

if it rejected the Bill. The attitude of the Congress Party, whose members apparently constituted the bulk of the Opposition, showed every evidence of divided allegiance. The position of several of the leaders of the party, indeed, was a difficult one and that of many others on the non-official benches, who apparently refrained in the end from voting, no less so. Meanwhile, although the millowners have accepted the small measure of relief afforded by the Bill and the other concessions, embodied in a separate measure to which legislative sanction has also been accorded, they are renewing their efforts to obtain an enhancement of the duty on imported piece-goods as well. Unless, however, they can secure a more substantial measure of public support than was apparent in last week's debate, or are willing to adopt the course suggested in an earlier issue, their chances of success are remote.

CURRENT TOPICS.

The Reserve Bank Bill.

Sir Basil Blackett has informed the Legislative Assembly that the Government does not intend "at present" to proceed with the Reserve Bank Bill. The announcement has occasioned little surprise in trade and financial circles in this country, which have viewed with some disquietude the way in which the fundamental principles underlying the Currency Commission's scheme have been whittled down by the Finance Member in an attempt to conciliate the fractious and short-sighted opposition. As was pointed out in the leading article in last week's issue, the aim of the latter was to have nominally a "State" bank which would, in reality, be controlled by the politicians. Apparently Sir Basil Blackett has found compromise unavailing, and deemed it better to withdraw the Bill altogether rather than to attempt to carry by a bare majority a measure which has been reduced to a mere travesty of its original form. The decision is a wise one, and whether the initiative in this instance came from the India Office, as now appears probable, or not, the Finance Member is to be congratulated upon his refusal to allow a legitimate personal ambition to endow India with a strong central bank, and so secure the permanent transfer of the control of currency and monetary policy for the Secretary of State to an independent non-official institution, to outrun his discretion. Various explanations of the Government's action are hazarded and the hope is expressed in some quarters that the use of the words "for the present" indicates the possibility of further negotiations and the presentation of a revised measure before the Assembly reassembles for the Delhi session. Meanwhile, fortunately, the monetary system remains on a basis which, if not perfect, is at least workable and businesslike. The improved gold exchange standard, introduced by the Currency Act of last year, will presumably remain in operation until agreement is reached, and the opposition in the Assembly will thus be a party to the perpetuation of the very feature of the existing system against which they have so repeatedly inveighed.

Sir Norcot Warren.

Sir Norcot Warren leaves India this week on leave preparatory to retirement after an exceptionally distinguished record of service, extending over 42 years, first with the old Bank of Bengal and since 1921, with the exception of an interval of three years, during which he was in charge of the London office, as Managing Governor of the Imperial Bank of India. The announcement of his impending retirement has been received with very genuine regret by the business community—both Indian and European—in that country, and the City of London, where he was almost as well-known, cordially endorses the fitting tribute paid by the Chairman of the Calcutta Board at the annual general meeting of the shareholders of the Imperial Bank last month. "Pat" Warren, as he is familiarly known to a wide circle of friends in the two hemispheres, has had a more extended

experience of Indian banking than any other man, and it is difficult to exaggerate the value of the services he has rendered to the Government, no less than to the commercial community in general, and the bank's constituents in particular, during his notable career. Mr. Eddis paid Sir Norcot no more than his due when he referred to the skill, courage, and resource which marked his handling of the financial crisis of 1913, and those who are acquainted with the inner history of the amalgamation of the three Presidency banks into the present institution will be the first to admit that its success was largely due to the tact and personality of one man. At the London office, perhaps his most important achievement was the transfer of the control of the rupee debt from the Bank of England, preparatory to a similar transfer of the sterling debt facilities at a later date, and his work on the Royal Commission on Indian Finance and Currency is too recent to require reiteration.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, August 25.

Sir Stanley Jackson.

From his recent tour in Eastern Bengal, His Excellency has gathered useful knowledge. He has found that the greatest needs of the people are "education, good communications, and pure water supply." It is to be hoped that some improvement will come in these lines, but in the reverse order: pure water supply should come first, then good communications and better education; for, what is the use of education to people who have no clean drinking water? From His Excellency's speech at Chittagong, on the occasion of the opening of the Union Board Conference, one gathers that in the matter of water-supply in rural areas the Union Boards have to spend from their own income at least half the amount spent by Government. But Government bear the whole expenditure entailed by Police Stations, Supervision and Control leading to the detection or prevention of crimes against life and property. It is generally admitted that police protection is a primary need of the villages.

On the 19th the Governor of Bengal was present at a Durbar held by H.H. the Maharaja Manikya Bir Bikram Kishore Deb Barman Bhadr, Maharaja of Tripura, at the Ujjanta Palace, Agartala, for the purpose of his investiture with the full powers of a Ruling Chief. After the robing ceremony the Governor of Bengal took His Highness by the hand, and led him to the "gadi." Then he read the Viceroy's "kharita," whilst a salute of 31 guns were fired. After an exchange of amenities, there was a magnificent banquet. The Governor's tour has been an expensive one. Sir Stanley and the Hon. Lady Jackson have responded to all appeals, and distributed thousands of rupees to libraries, orphanages and hospitals.

Howrah Bridge Again.

The Commissioners for the Port of Calcutta, realising the seriousness of the situation, had decided to start the repairs of the Howrah Bridge on October 15. The repairs include the replacement of the shore spans on both ends of the bridge. But then both footpaths would be simultaneously closed for a considerable period, and only 20 feet of roadway would be free for traffic. Considering that a lakh of pedestrians cross the bridge daily either way, it would be a most unsatisfactory arrangement. Free communication over the bridge cannot be expected to be resumed before next July. The provision for the new bridge has been sanctioned last year; but the plans and estimates are not yet ready. In the meantime the old bridge is in such a precarious condition that urgent repairs have become imperative, pending the advent of the new structure. And then it may go on for some years yet; for, as the French say: "*Rien ne dure comme le provisoire.*"

Aviation In India.

One would have expected the Director of Civil Aviation in India, Colonel F. C. Shelmerdine, O.B.E., to arrive at Karachi in style, i.e., in the latest aeroplane. But he came over as you or I might, by the mail steamer. The Air League of India gave an "At Home" in his honour, and the Colonel read a most interesting paper on Civil Aviation in India. He thinks that a weekly air-service could be provided from Europe to Karachi, with extensions to Delhi and Bombay. As soon as night flying can be organised, there will be a further saving of time between Delhi and Calcutta. The journey by air can be done in one day: passengers and mails for Calcutta would proceed as far as Delhi by air and complete the journey by train, arriving in Calcutta, say, on Tuesday morning instead of the following Sunday morning, as at present. I take it that these passengers and mails would be coming from Europe, though Colonel Shelmerdine has not made it quite clear. What is clearer is that in future Allahabad will be the main air junction of India. Alluding to the ridiculous Dum Dum Aerodrome, Colonel Shelmerdine remarked that considerable expenditure would be needed to convert it into an all-weather aerodrome. That was mildly put.

The Floods.

The calamity which Gujarat had to face recently staggered the imagination. The state of affairs is beyond description. Asked to give his views on the immediate measures that might ease the situation, Mr. Patel said that, without Government help on a large scale, the agriculturists cannot be set up on foot again. The greatest sufferers are the ruined middle-classes who cannot, and will not, beg. Mr. Patel understands that there is a Government of India Famine Fund: the necessary assistance should be given from that fund. The wholesale remission of land revenue would put heart into the people. Foodstuffs and clothing are regularly distributed. Many volunteers are on the spot.

The Model Village.

About two miles from Asansol there is a large property belonging to the American Methodist Mission. They have lately converted it into a model village. They call it "Ushagram," which means the village of the New Day. An American gentleman, who is a University graduate in agriculture, conducts the experiment. Each cottage has its own vegetable and flower garden, also a poultry yard. There is a Co-operative Store, a Savings Bank, a Hospital, a School, a Workshop, and vocational training in different trades is given to the villagers. There is a miniature Municipality, looking after the cleaning of streets and drains, and the lighting of streets on dark nights. (Does this mean that no lights are lighted up on moonlit nights?) The American-gentleman-in-charge is willing to help with advice any person wishing to reorganise villages, to suit the needs of the present day.

C. P. Governor on Leave.

His Excellency Sir Montagu Butler left Nagpur for Bombay on the 19th inst. He is proceeding home on four months' leave. The office of the Acting Governorship of the Central Provinces and Berar during the absence of Sir Montagu Butler is assumed by the Hon. Mr. J. T. Marten. The departure was private, yet there was the usual salute of guns from the Sitabaldi fort.

Retiring Bank Officials.

At the annual general meeting of the Imperial Bank shareholders, well-deserved tributes were paid to the ability and affability of Sir Norcot Warren, senior Managing Governor, and to Mr. D. S. McClure, Secretary and Treasurer of the Bank. They are both due to retire in September. Sir Norcot Warren has been described as the "Grand Old Man of Indian Banking." Mr. D. S. McClure joined the Old Bank of Bengal on August 4, 1896, thus completing now thirty-one years' service. He has held

the important office of Secretary and Treasurer since November, 1923. In 1926 he officiated for six months as Managing Governor.

Siva Re-installed.

Some time ago the Public Works Department had thought fit to remove from its pedestal a Siva-Lingam erected at the crossing of Lower Circular Road and Chowringhee, on the grounds that it obstructed the traffic. A general protest from the Hindus, headed by prominent men of Bengal, led to the re-installation of the symbolical statue on a newly constructed pedestal built at municipal cost. The solemn atmosphere that pervaded the place at the time appointed for the public re-installation ceremony is sufficient proof of the hold of such religious ideals on the otherwise advancing Bengalee community. Crowds came from all places around Calcutta, and the Brahmins performed the "puja" as they would have done one thousand years ago. The deity was sprinkled with milk, flower petals and Ganges water. Songs were sung and alms distributed. The ceremony lasted till dark. Mr. Bannerjee, Deputy Commissioner, and Mr. Mallick, Assistant Commissioner of the South District, attended the function. Hinduism is by no means dying.

Mr. Bernard Shaw's Visit to India.

Certain newspapers had thought amusing to broadcast a "canard" regarding the proposed visit of the great playwright to Santiniketan. Dr. Tagore himself was mystified. At the same time, being assailed by doubts, he wrote to Mr. Bernard Shaw asking whether there was any truth in the report. But Mr. Shaw recently sent Dr. Tagore the following cable: "Alas! a poetic fiction invented by someone who knew our regard for you." A most courteous reply, anyway.

Miss Mayo's Book.

Miss Mayo's book, "Mother India," has been condemned wholesale by the Indian people. Indignation is so great that a resolution will probably be moved at the next session of the Legislative Assembly to urge the Government of India to take necessary action against the book. It sounds very much like closing the stable door after the horses have been stolen. There was a rush on the book, and what is described as Miss Mayo's myths and half-truths about India has been read, and, if there is damage, it is already done. At best the Government of India can stop the entry of further copies; but will not this give value to the copies already distributed? The Indians are very touchy on the subject of their womenfolk, and though they are often prepared to admit that things are not satisfactory from many points of view, especially child-marriages and neglected maternity, they cannot endure the criticisms of a foreigner. In fact, the book has been written for Americans by an American lady, who tells the English-speaking world what she has seen in India. If all were written that could be, it would make an appalling book.

The Release of the Bengal Detenus.

His Excellency the Governor of Bengal, who has won the gratitude of the Bengalis by contriving to release several of the leaders of the Swarajist Party, has disappointed them by saying at the opening of the Legislative Council that: "Provided no untoward event occurs, and the conditions at present prevailing in Bengal continue, and the conduct of those released justifies the action taken in their cases, I hope that a large number of those now detained will have been transferred or released before the end of the year." There had been rumours that all prisoners would be liberated on the 23rd inst. The Swarajist Party had decided to make the unveiling of Lord Lytton's portrait the occasion for a "walk-out" demonstration. But the young Raja of Santosh with much tact handled the difficult situation, thus robbing them of the opportunity: the portrait remained unveiled.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, August 26.

A Line on the Floods.

With a return to something approaching normal conditions in the flooded areas of Gujarat and Kathiawar it is possible to appreciate the position with more accuracy than has been the case during the continuous influx of conflicting reports from every small village in this large tract of country. Of one thing there is absolutely no doubt, and that is that the damage to house property amounts to an enormous figure, as may be judged by the fact that the P.W.D. estimate the damage to their works as being in the neighbourhood of four lakhs of rupees, roughly. That is really the main problem; every estimate at present is rough, and until something is available in the nature of definite figures, the work of reconstruction must necessarily be delayed. The Ministers have all visited Gujarat and returned to Poona, have discussed the whole affair with the Governor, and have drawn up a notification intimating what Government intends doing in the way of relief. There is nothing new in these proposals, which follow the general lines provided for by the Famine Relief Fund, from which the money to finance is to be derived.

Governor's Tour.

I mentioned last week the possibility of Sir Leslie Wilson's undertaking a tour of the devastated areas, and pointed out that it was not to be immediately as that might hamper the Government officials in their work. It has since been announced that the visit is to be made from the 8th to the 16th of September, and so as to avoid the danger of the officials being taken away from their work, His Excellency is to spend the whole week in his own train instead of staying with the various officials, as would be the case in the ordinary course of events. In other words, it is to be only a semi-official visit. One advantage that the visit will have, is that the people of Gujarat will be considerably heartened in their labours of rebuilding their homes and resuming a normal life if they know that they have the sympathetic understanding and assistance of the leader of the Presidency.

Tata Steel Company.

The shareholders of the Tata Iron and Steel Company attended in force at the annual meeting of the Company during the week, and finally succeeded—principally owing to the activity of Mr. P. D. Shamsadani—in nullifying the effect of a lengthy speech by the Chairman. In it he painted a much brighter outlook for the future than was outlined in the recent communiqué issued by the Directors, but this did not prevent some strong criticism being offered in the course of the shareholders' speeches. Finally it was suggested that instead of adopting the report it be only received, and a poll on this is to be taken next week. Apropos the meeting, a local newspaper came in for some hard words from Mr. J. C. K. Peterson for an apparent misstatement of facts in an editorial note. But the statement happened to be a quotation from the communiqué, which Mr. Peterson has had to admit was inaccurate in this respect. Which does not improve the position of the directors!

Fight for Protection.

The millowners, contrary to anticipations, came in for criticism instead of sympathy at the hands of the members of the Legislative Assembly when the Government's Bill for the imposition of a duty on yarn imports was brought up. Sir Victor Sassoon put forward the case for the industry—but his appeal fell on deaf ears. There is every reason to expect that the situation will not be left at that, for the campaign is to be carried on to the bitter end—and if the millowners' representatives in Simla only prepare the ground a bit more thoroughly before their next attempt, it is almost certain that it will prove more successful. It will be a national disaster if the question fails to be debated in the Legislature now, when it is ripe for discussion.

Insolvency.

A very creditable move has been initiated in the Insolvency Court of being harsh instead of lenient towards insolvent debtors. The Court appears to be regarded in the light of a refuge, and has consequently been abused most terribly. The new policy of calling bankrupts to give a stricter account of themselves and their dealings before they are free to repeat their adventures, should be welcome to the public. For it is only too patent a fact that the inviting portals of the Insolvency Court have led people into gambling for large stakes, knowing well that they can easily dodge the ultimate effects of failure by this simple expedient. There is reason to believe that similar action is to be instituted on all the Insolvency Courts in India, and behind the whole movement is the Chief Justice of Bombay, Sir Amberson Marten.

Commercial Markets.

Well informed observers of trade conditions see a brighter period in prospect as a result of the success attending the major crops of the country and the approaching settlement, one way or the other, of the Reserve Bank and textile protection questions. Meantime there is little to report and a general steadiness in the markets is the only feature. Call money remains unchanged and securities appear to have reached a stage where little fluctuation is likely for some time to come. Gold has declined on the cessation of speculative activity, while steady London and China advices have helped to bolster up silver to a certain extent. Cotton prices have soared in sympathy with America, being thirty rupees higher than last week. Industrial shares remain very dull with little inquiry.

INDIA AND THE REFORMS.

(From a Correspondent.)

[While THE NEAR EAST AND INDIA in no way associates itself with many of the views expressed in the following article, which is published in pursuance of its declared policy of opening its columns for the discussion of the constitutional changes in India, from every standpoint, the signal services rendered by the writer to Indian trade, industry and finance in the course of a long residence in the country, invests his opinion with more than ordinary interest.]

The Montagu-Chelmsford scheme of reforms has been examined from almost every angle of vision, and special attention has been paid to that very curious feature of it, the principle known as "dyarchy." But throughout the whole of the discussion the main issue, as one who has spent the greater part of a lifetime in India understands it, seems to have escaped recognition. For nobody explains why it is that instead of satisfying, or at any rate tending to satisfy, Indian aspirations, Mr. Montagu's scheme, together with every other move that the British Government has made in the same direction, has merely exasperated the Indians. But such is indeed the case: every advance towards democracy which we have made in India has been received with bitterness and antagonism.

Why is this? Surely here we have the one question to which our statesmen in England and our administrators in India ought to address themselves. For what is the use of continuing the progress towards self-government if every step that we take increases the existing exacerbation, and enhances still further that racial antagonism which, though of recent growth, is now so deeply rooted among the educated classes? Moreover, if our efforts to introduce democratic principles tend—as they surely have tended—to promote and to intensify communal and religious antagonisms between the people themselves, how can it be either wise or logical to persist in these efforts? The existing situation indeed merely emphasises the melancholy fact that the nearer we get to India in a material and geographical sense—for modern means of

transport and travel annihilate distance—the farther she recedes from us in methods and habits of thought.

The pre-Reform system of administration was not, and perhaps could not have been, continued without certain modifications. But these modifications need not of necessity have been based upon European methods of government. It has always been a great fault in our administration of eastern countries that we assume that there is only one path along which self-development can proceed, namely, the democratic parliamentary system modelled on British lines—a system which is entirely unsuitable for eastern peoples.

Is there no lesson to be learnt by the British public from this strange phenomenon? The result was inevitable, for the people of India have never had any real attachment to our western civilisation. It is true that with the extension of European education, the literate classes have become acquainted with western culture and western political thought and methods; but they would wrathfully and rightly deny that they have been Anglicised thereby. And as for the masses of people, they have always believed in a strong and direct personal system of administration tempered and controlled by British justice. They are nowadays unwilling to respond to our efforts, for we are, in point of fact, trying to govern the country by eliminating all the personal touch which they so greatly value in a government, and on principles altogether alien to their ideas and sympathies. They resent this, and as they cannot, and never will, understand any voluntary abandonment of power, they have become not only fractious but positively alarmed at what is in effect an entirely new and untried régime. And as regards the Hindus, the educated classes—even those among them who are prominent in politics—are tending to return to their ancient ways which, far from being of a democratic or parliamentary character, were marked by all the characteristics of a fanatical and despotic caste system. But notwithstanding these manifest facts, which really govern the situation, we are still blindly trying to force our British institutions on the country. Our remedies have proved to be merely irritants; and, instead of friendly fusion, there is a growing and bitter breach. I have, however, said enough of the disease, and of our futile, ignorant, and ill-advised treatment of it. The point that we have now to consider is whether there is any real remedy, and, if there is, whether it can, at this late stage, be applied.

In the first place, what is the prospect for the future if we continue our present democratising policy? Self-government on the colonial model will, it may be assumed, be granted; and to that there would be no objection if there were even a remote prospect of the Indians being able to administer the country as broadly and efficiently as the other self-governing dominions are administered. But no man who is at all well-acquainted with India imagines for a single instant that there is any such prospect. The difficulties which would confront a democratic government in India would be many times more serious than are those that our other dominions have to face. Not only is the population enormously greater, but it is so heterogeneous as to make common action on democratic principles positively farcical to contemplate. No country can be self-governed unless the people are homogeneous, and are physically able to enforce, by military measures if necessary, the two primary essentials of all government, namely, the maintenance of internal order, and the power to repel invasion.

How could any purely Indian administration be expected to fulfill these requirements, seeing that the antagonisms between the various races are vital, and that they are becoming more and more acute—even to the point of bloodshed—as British rule tends to fade away? It follows that, if we are to save India, we must check the downward course of our present policy. This does not mean that we must establish an iron despotism; but we should ask ourselves if there is no plateau upon which we can halt for the time being, so as to give ourselves at least a breathing space. I believe that there is, and, although I am painfully conscious of the difficulties of constitution-making

which an amateur like myself must experience, I venture to offer a few suggestions, the adoption of which might possibly afford all parties time to consider the future.

Let us then by all means give the people of India freedom in the management of their local and provincial affairs; but let us try to make the administration of these affairs more akin than is the Montagu system to that personal form of government which our administrators formerly worked so successfully, but which we have so foolishly tampered with. The really urgent need is that it should be made unmistakably clear to the people of India—alas! that such teaching should have become necessary!—that the British Raj is still in existence and is in full command. For, unless this is done without delay, it will be impossible to stem the ever rising tide of discontent, or to check religious and communal animosities. The Supreme Government should be vested—as of course it is now—in the Viceroy and his Executive Council; but the Council should consist only of the Viceroy, the Commander-in-Chief and a number of European civil servants representing the several provinces. It would not be necessary for this Council to have powers in all respects co-extensive with those exercised by the Government of India as at present constituted. As I have already indicated a large measure of freedom might be given to the provincial Governments where the services of Indians might be utilised to the utmost possible limit. But the British Government ought to say boldly to the people of India that, while on the one hand more freedom to manage their local and provincial affairs is conceded to them, there must be on the other hand in supreme command a small but exclusively European Executive.

Difficulties would no doubt be attendant upon this course of action. But they would be nothing in comparison with the difficulties which must attend upon persistence in our present course. And the proposal is much more in accordance with Indian ideas and traditions, and with the facts of the existing situation, while it is at the same time a much more logical attempt to solve the problem than what we are now doing. Indeed it is difficult to see how without some such measure India can be rescued from the chaos which is threatening her.

We shall also have to proceed cautiously in the Indianisation of the Civil Service. By all means admit Indians, and if possible in increasing numbers; but there must still remain sufficient high posts in the provinces to attract the necessary leaven of well-qualified Englishmen. Not only will these men be required to stiffen the Provincial Governments, but it will be to them that we shall have to look for the recruitment of the members of any such Supreme Council as I have indicated above.

It may be a subject of comment that I am proposing a scheme which merely carries one step further the trend towards democracy which I have myself condemned. But it will be noticed that, while my scheme would give to the educated Indians what they profess to want, it would very materially strengthen the Central Government in the eyes of the country at large, with the result—as I believe—that the millions of India would be tranquillised and reassured.

The Hon. Sir Abdul Qadir has been appointed a temporary member of the Punjab Executive Council, in the place of the Hon. Sir Fazl-i-Husain on deputation to Geneva.

St. Paul's School, Darjeeling, has received a windfall in the shape of a bequest of Rs. 3,00,000, left by the late Lord Cable, head of Messrs. Bird and Co., who received his early education at St. Paul's. It will be remembered that La Martinière, Calcutta, was recently the recipient of large bequests from two Old Boys—Sir Percy Newson and the late Sir Paul Chater.

The Secretary of State for India has approved the grant of a vacant Good Service Pension to Major-General Sir H. Mullaly, K.C.M.G., C.B., C.S.I., R.E. (retired).

The last returns of the strength of the new Army in India Reserve of Officers show a great improvement in strength, with an even flow of men from civil life taking up commissions. From a poor response the applications have quickened, and now yield about 60 officers each month. The strength of the Reserve is about 800, including nearly 100 Indians. The best returns are from Calcutta and the Punjab.

INDIAN MAIL.

India's Sugar Needs.

India occupies second place in the world's table of sugar growing countries, her aggregate production being only exceeded by the outturn of the Cuban crop, and yet she imports about seven times the quantity of refined sugar that she manufactures. Nor does the anomaly end there, for of her total imports as much as ninety per cent. comes from a country with only one-sixth of the acreage under cane—to wit, Java. The proximity of Java to India is, of course, a point in its favour and another is the undoubted preference shown by the Indian consumer for Java's white plantation sugar. So long as the latter country maintains its superiority in scientific sugar cultivation it has little to fear from outside competitors and its costs of production, on that account, can compare favourably with any other country likely to enter the Indian market against it. According to the review of the trade just issued by the Sugar Bureau at Pusa, India's imports of foreign sugar during the official year 1925-26 were, in fact, the largest recorded since 1921-22, totalling 732,600 tons against 671,000 in 1924-25 and 717,600 in the earlier year, the record figure being 803,000 tons in 1913-14. Ninety per cent. of last year's total, namely, 659,160 tons, was drawn from Java as compared with 72 per cent. in the previous year. Mr. Wynne Sayer, the Secretary of the Bureau, in his evidence before the Royal Commission on Agriculture in India was, however, confident that with adequate provision for research, experimental work and propaganda the country itself can meet its own requirements and thus put an end to the drain of 15 crores of rupees a year now spent on foreign sugar.

Speaking from first-hand knowledge of the actual working of the admirable Java organisation and the measures recently taken in this country to promote the development of the beet sugar industry Mr. Wynne Sayer told the Commission that he was convinced that, if Java could manufacture 2 million tons of sugar off an area of 425,000 acres, it would not be impossible to raise 800,000 tons of sugar from an equal area devoted to cane in the eastern portion of the United Provinces and Bihar alone, leaving the remaining 2 million and odd acres annually for gur making. As the Government of India have unfortunately been unable to carry out the major recommendations of the Indian Sugar Committee, owing to the heavy cost involved, Mr. Wynne Sayer, under whose direction the Sugar Bureau at Pusa, working in close association with the Cane Breeding Station at Coimbatore, in the charge of Rao Sahib T. S. Venkatramen, has already done so much for the Indian sugar industry, confined his specific recommendations to the minimum requirements of the situation, as he envisaged it, necessitating a capital cost of less than Rs. 6 lakhs, and recurring expenditure of under Rs. 3 lakhs, against which a net revenue of at least Rs. 50,000 might be anticipated. His proposals, which are deserving of the Commission's most serious attention, were designed to ensure that, first, the interests of the small cane cultivators as regards improved varieties, proper measures, machinery, etc., may be met; secondly, that the needs of the white sugar manufacturers may receive adequate recognition; and, thirdly, that the requisite provision is made for a high grade technical education in sugar manufacture.

Anglo-Indian Unity.

At the beginning of the year Colonel Gidney asserted in his opening address to the Anglo-Indian Association that "none but a poor blind fool would say that unity exists in the community." More recently the same authority has made it clear that neither the latest developments nor the passage of time have brought the object for which he is so laboriously and whole-heartedly striving any nearer of attainment. It is not surprising, therefore, that the most sympathetic observer begins to wonder whether there is any hope for a community whose members are so ready to allow personal differences to interfere with

general welfare. The mutual jealousies and resentments of their chosen or self-elected leaders are matters that Anglo-Indians alone can settle but the situation of the community is at best a difficult one, and its members are making a very great error, the *Englishman* pertinently observes, in allowing personal bickerings to hinder constructive effort. If the existing differences had their roots in differences over matters of policy, it would be easier for the outsider to sympathise. The dispute, however, appears to be almost entirely personal in its origin, the *Calcutta* journal points out, and adds, with commendable candour, "it must be obvious to every thinking man that a section of the population which complains unceasingly that it is being ground remorselessly between the millstones of circumstances cannot expect the sympathy it may deserve if it will make no real effort to help itself. However ready others may be to assist Anglo-Indians towards the realisation of their efforts, they can do no more than assist. Anglo-Indians must be able to stand on their own feet before anyone else can help them forward; and stand on their feet they never will until they develop *esprit de corps* and learn the essential lesson of placing the good of the community before the benefit of the individual."

The matter brooks no delay, for to no section of India's heterogeneous population will the findings of the Statutory Commission be of greater importance than to the members of the Anglo-Indian community. It is urgently necessary, therefore, that Anglo-Indians as a body shall take stock of their position with a view to representing the community's case before the Commission as forcibly as may be possible. "If Anglo-Indians have lost confidence in Colonel Gidney," the article concludes, "and believe their interests would be better served by the appointment of another leader, their line of action is an obvious one. On the other hand, so long as Colonel Gidney remains their accredited leader, he has a right to demand full support and the cessation of fractious opposition; and it is for the rank and file of his community to see that their interests do not suffer, as they most assuredly will if that right is ignored."

OBITUARY.

SIR T. MACKENZIE ROSS.

The death is announced from Ootacamund of Sir Thomas Mackenzie Ross, who was created a knight in the last Birthday Honours List. A partner in the firm of Best and Co., he took a prominent part in the Madras Chamber of Commerce, and was recently its president and representative in the Madras Legislature. He was also a director of the Imperial Bank of India, a member of the Port Trust, and a steward of the Race Club.

R. W. BIGG-WITHER.

The death is reported from Naini Tal of Mr. R. W. Bigg-Wither, Deputy Secretary, General Branch, United Provinces Secretariat. Educated at Eton and King's College, Cambridge, and appointed to the Indian Civil Service after the examination of 1912, he was posted to the United Provinces as Assistant Magistrate and Collector in November, 1913. He was appointed to officiate as District Magistrate in 1923 and as officiating Deputy Commissioner in 1925.

SIR E. THACKERAY.

Colonel Sir Edward Talbot Thackeray, the sole surviving first cousin of W. M. Thackeray, and since the death, in 1924, of Sir Dighton Probyn, the senior V.C. among Army officers, died at Garessio, Italy, on September 3 at the age of 90. Educated at Marlborough and the Honourable East India Company's Military College, Addiscombe, he joined the Royal Engineers in 1854. As a second lieutenant he served throughout the Indian Mutiny campaign, was mentioned in Sir Archdale Wilson's dispatch, and gained the V.C. "for cool intrepidity and characteristic daring in extinguishing a fire in the Delhi magazine enclosure on September 16, 1857, under a close and heavy musketry fire from the enemy, at the imminent risk of his life from the explosion of combustible stores in the shed in which the fire occurred." Later he was engaged in many actions, including the siege and capture of Lucknow, and the attack on Fort Rooyah, where he had his horse shot under him. He also served in the Afghan War, 1879-1880, in command of the Bengal Sappers and Miners, and was severely wounded at Jugdulluk Kotal. He retired with the rank of Colonel in 1888, and in 1897 was created K.C.B. He had already been appointed C.B. in 1886. The author of several works on sport and on Indian campaigning, Sir Edward, with Lady Thackeray, had lived for nearly 30 years at Bordighera. He was mentioned in dispatches and received two Indian medals during the late War and was a Knight of Grace of the Order of St. John of Jerusalem, of which Order Lady Thackeray is a Lady of Grace.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

An Important Railway Link.

It is satisfactory to be able to record that the Greek and Bulgarian Governments have agreed to join up the Greek and Bulgarian railway systems between Demirhissar and Petritch, thus providing direct communication between Sofia and Salonika. At present in order to go from the Bulgarian capital to Athens, it is necessary to travel *via* Nish, Uskub and Salonika, or *via* Adrianople, Dedeagatch and Salonika, or by train to Constantinople and thence by steamer. Thus the rail journey between Sofia and Salonika will be shortened by two hundred miles or about half the present distance *via* Nish. Bulgaria stands to gain by direct access to the port of Salonika, and Greece will be able to make use of coal from the Pernik mines near Sofia. At present the railway from Radomir, a station on the Sofia-Kustendil standard-gauge line, to Petritch is narrow gauge, but the work of converting it to standard gauge as far as Dupnitza is in hand, and it will now be necessary to extend this to Petritch. Demirhissar, of course, is on the standard-gauge line connecting Salonika with Adrianople and Constantinople.

America and Europe.

It looks now as if we must be prepared for a relatively small American cotton crop and consequently for a considerably higher range of prices than last year. For some time the tendency of cotton prices has been to rise, and while there have been the usual fluctuations it is scarcely open to doubt that still higher prices will rule in the course of the next few months. One inevitable result will be higher prices for cotton goods, with the result that Lancashire's trade will be hampered. Another and not less important consequence will be that it will entail increased payments to America in the autumn, a consideration which is very material in view of our annual debt payments to that country. The United States has been placed in an enviable position through the War, and in addition to being the only creditor country she has endeavoured by high tariffs to safeguard her home market in every way, the result of which is to make more difficult the payments to her either in respect of debts or for goods. She had an unrivalled opportunity after the War to give a real impetus to reorganisation and the development of commerce by abandoning her debt claims, but she ignored it, and up to the present has shown an absolutely uncompromising front to any question of a reconsideration of the position. We give extracts this week from an article in the monthly review of the Guaranty Trust Company, which suggests that it is beginning to be realised across the water that the situation of a creditor nation like America is not going to be without its drawbacks. "Ultimately," it is stated, "the position of the United States as a creditor nation must be reflected in a surplus of receipts over deliveries of goods and services. Like every economic readjustment, these changes in the movement of trade will undoubtedly occasion some degree of hardship in certain branches of commerce and industry here and abroad." It is not impossible that a fuller realisation of all the effects of the position which will come in the course of a few years will bring about a modification of America's present intransigent attitude. The very thought of such a possibility is enough to give a tonic to members of the European nations weary of taxes and the conditions of the post-War period.

Dacia Romano.

The shareholders of Dacia Romano Petroleum Syndicate have still to be content with the future potentialities of their property. Last year's working showed an increased deficit of £65,000, bringing the adverse total to £158,000. The output of oil, however, continues to improve, and for the first eight months of the present year amounted to over 20,000 tons, as compared with a total output of 18,000 tons last year. Even at the rate of the August output, which was over 4,000 tons, the probable production in the near future leaves the Dacia Romano a long way behind the big Roumanian companies, whose output runs into six figures, gradually working up, in some cases, to the half million mark. The reduction in the export taxes has given a fresh impetus to Roumanian oil, but the price of crude oil for export is still low.

Suez Canal Traffic.

A further marked improvement in the traffic of the Suez Canal was recorded in July, the shipping transiting the Canal representing a total of 2,342,000 tons, which compares with 1,993,000 tons a month ago and 2,056,000 tons for July, 1924, which was the best total for the month yet recorded. The tonnage of merchandise transported through the Canal amounted to 2,548,000, as against 2,033,000 tons for the same month last year. Of this total 981,000 tons represented the outward traffic and 1,567,000 tons the homeward traffic. The principal increases in the outward movement were in railway material and petroleum. The railway material totalled 96,000 tons, the highest ever recorded for one month, India being the principal destination with 55,000 tons, East Africa coming next with 11,000 tons. The increase in the homeward traffic was due principally to cereals, and it may be pointed out that the shipments from India were approximately equal to those from Australia, a thing that has not happened for a long time.

The Importance of the Tourist.

In the last few years the tourist traffic has come to assume an importance quite out of proportion to what it did before the War. Up to 1914 a few regions like Egypt, Italy and Switzerland enjoyed practically a monopoly of the traffic and of the profits appertaining thereto, but the changed conditions of to-day, such as the reduced markets and altered trade channels, have led many countries to

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

endeavour to attract some part of the traffic. Hence the "come to Britain" movement to give but one instance, while regions unaffected by all of the causes cited, such as Yugoslavia and Palestine, are also holding out inducements to the tourist, and further afield India too has now entered the lists. Obviously there is only one country that is in a position to supply wealthy tourists in adequate numbers, and it is interesting to note that, according to statistics just issued, American citizens spent in Europe last year £91,200,000 and in the whole of the world £129,200,000. These figures are most illuminating as illustrating the enormous importance of the tourist traffic, and they explain fully the eagerness shown by the various countries to share in it.

Steaua Romana's Capital Increased.

An increase in capital was decided upon at the recent extraordinary general meeting of the Steaua Romana Société Anonyme pour l'Industrie du Pétrole of Bucharest. The existing capital is 866,625,000 lei, and this is to be increased to 1,000,000,000 lei by the issue of 266,750 new shares of the nominal value of 500 lei each, which will rank for dividend as from January 1, 1927. The shares are to be issued at 560 lei to be fully paid up at the time of subscription, and holders of shares existing at December 31, 1926, will be entitled to subscribe for two shares for every 13 held, fractions not being considered. It is announced by Messrs. Stern Brothers that shareholders wishing to exercise their right to subscribe may deposit before October 31, 1927, coupon No. 29 at 6, Angel Court, E.C.

COMMENTATOR.

Striking tributes were paid at the recent annual meeting of the shareholders of the Imperial Bank of India to the ability and judgment of Sir Norcot Warren, the retiring Joint Managing Governor, who is returning to England this week. A brief appreciation of Sir Norcot's distinguished services to Indian trade, industry and finance will be found elsewhere in this issue. Mr. B. E. G. Eddis, Chairman of the Calcutta Board, who presided, also made reference to the pending retirement of Mr. D. S. McClure, Secretary and Treasurer of the bank after 31 years' service. Mr. McClure joined the service of the old Bank of Bengal on August 4, 1896. He was confirmed as Secretary and Treasurer in November, 1923, and has held that appointment since then. Mr. Eddis said that Mr. McClure had rendered exceptionally meritorious service to the bank, particularly during the past few years when he played a prominent part in bringing to a successful conclusion the heavy branch development programme, which had been undertaken.

A LOAN FOR BUCHAREST.

The Municipality of Bucharest is inviting tenders for a loan of 10,400,000 dollars, at 7½ per cent. interest, redeemable in 30 years. A prospectus issued in connexion with this application states that the City's Budget for 1927 shows ordinary revenue at 1,104,526,000 lei and 48,232,000 lei extraordinary revenue (in all 6,986,412 dollars), the expenditure of the Municipality being entirely covered by the revenue. In 1926 there was an excess of 20,629,190 lei (125,000 dollars). The assets of the Municipality are shown at 11,128,395,190 lei (67,444,810 dollars), and the liabilities at 559,712,363 lei (3,392,196 dollars). Between 1888 and the present day Bucharest Municipality has contracted nine loans of a total of 262,619,000 lei, of which 58,785,490 lei have been paid off. The new loan is intended for municipal works, e.g., drainage, light and water installations, and other remunerative undertakings. A small part only is to be utilised for Municipal offices.

CHESS.

By "CARO-KANN."

White to play. What result?

The solution to last week's end-game is as follows:—1, P—R4, P—K4; 2, PxP (ch), PxP; 3, P—R5, PxP; 4, PxP, K—Kt4 and draws.

I give this week an ending of a much more complicated order.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Files, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of tools for artisans such as files, hammers, augers, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. October 3.

Steam Salvage Tug.—The Director-General, Ports and Lighthouses Administration, Arsenal, Alexandria, invites tenders for the supply of a steam salvage tug as per conditions of tender and specifications obtainable from Secretariat Department, Arsenal, against payment £E4 per set. October 24.

Bedsteads.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of bedsteads iron, required for the year 1927-1928. October 25.

Machinery.—The Controller of Technical Education, Ministry of Education, Sharia, Qasr el Aini, Cairo, invites tenders for the supply of machinery and machine tools for the Model Workshops and Trade Schools, Bulaq Technical School and the Intermediate School of Agriculture at Moushtuhur. October 17.

YUGOSLAVIA'S MERCHANT MARINE.

In an article in the *New York Journal of Commerce* Captain Gordon Gordon-Smith states that probably no country in Europe has since the War registered such progress in the development of its merchant marine as Yugoslavia. He continues:—After the collapse of Austria and the surrender of her navy and the seizure of her marine the lion's share of the war booty fell to Italy. By the Trumbitch-Betolini agreement Yugoslavia only received such vessels as had been in direct ownership of Yugoslav citizens, while those belonging to companies having their headquarters in Trieste and Fiume, in spite of the fact that many Yugoslavs were shareholders, were handed over to Italy.

The only vessels which obtain Government subsidies are those which carry on a coastal trade and the conveyance of passengers and mails. None of the lines carrying on maritime commerce outside Yugoslav waters or those engaged in international service obtain State help in any shape or form. Nor is State aid given for the construction of new vessels or for the purchase of vessels abroad. Consequently the progress recently made in Yugoslav merchant shipping cannot be ascribed to any aid furnished by the State, but solely to the capacity and enterprise of the shipowners themselves. The great progress achieved is therefore the more valuable, as it gives hope for its continuation in the future, as it is not due to artificial State aid but to the impulse of economic conditions.

Composition of Fleet.

The majority of the vessels are small and come under the category of 500 tons. This, however, is only natural along a coast so indented and full of bays and gulfs as that of Dalmatia. The fact that there is no coastal railway necessitates a large traffic by sea, as this is very often the only means of transport both for passengers and goods.

The small vessels which carry on this local traffic and ply up and down the coast of the Adriatic are sufficient to provide for the transport of goods and passengers. It is certain, however, that the marvellous beauty of the Dalmatian Riviera will year by year attract an ever-increasing number of foreign tourists. It will then be necessary to replace the older and slower vessels by new ones of a more modern and faster type.

There were at the end of 1925 only ten large steamers of over 4,000 tons, with a total of 47,000 tons. This was due to the fact that Yugoslavia has no passenger lines to foreign ports, and it is such lines which require the larger type of ship. The vessels of 500 to 2,000 tons carry on the more extended coastal trade. These include passenger vessels running between the Dalmatian ports and Sushak and Trieste and the regular goods service to Salonika, Egypt, Smyrna, and the Western Mediterranean ports.

Type and Age of Vessels.

It is of interest in estimating the capacity of a Merchant Marine to establish the ratio between passengers and goods steamers. The official figures furnished up to the end of 1925 give the following data:—Passenger vessels 82, gross tonnage 26,999, 17 per cent. of the total tonnage. Cargo vessels 56, gross tonnage 132,063, 83 per cent. of the total tonnage.

Passenger vessels, therefore, represent over half of the total number of ships, whereas the cargo vessels are 83 per cent. of the total tonnage. That is to say, the smaller boats carry both passengers and cargo, whereas the larger vessels are exclusively cargo boats. This is because the passenger service of the country is along the littoral working on short lines and does not visit foreign ports. The larger vessels are employed on cargo service to foreign ports.

The age of the vessels of any Merchant Marine is also an important factor, as boats lose their value as they grow older, not only because they wear out, but because they are inferior to other vessels which are technically more perfect, and can be run more cheaply. The 1925 figures gave the age of the various vessels as follows:

Under 10 years	...	8	19,828	11.9
From 11 to 20 years	...	43	59,155	36.5
From 21 to 30 years	...	49	67,366	42.4
From 31 to 40 years	...	28	12,757	8.8
Over 40 years	...	10	1,955	1.2

Thus new vessels form a very small percentage of the total. On the other hand, those over thirty years old are less than 10 per cent. of the total. The greater part of the vessels, both in number and tonnage, are between twenty and thirty years old. This is not satisfactory in view of the fact that of the world's shipping, only 14 per cent. is over twenty-five years old. The reason for the age of so many Yugoslav vessels is that the country does not possess sufficient capital to build new ships, and has, therefore, to buy older vessels which are comparatively cheap. But as the cost of running ships is less than in other richer nations, very good results have been attained even with these older ships.

Yugoslavia's Ports.

The following was the classification of the vessels according to their port of register:

Ports.	No. of ships.	Tonnage.	P.C.
Sushak	44	40,054	25.2
Split (Spalato)	25	27,650	17.3
Dubrovnik (Ragusa)	34	85,946	54.0
Other ports	35	5,412	3.5

Most of the coasting vessels are registered at Sushak, which accounts for its large number, but as these boats are, for the most part, small, the total tonnage for the port is also small. The Dubrovnik companies have only large steam cargo vessels. It is only fitting, however, that the largest shipping should be concentrated in the Yugoslav city with the greatest naval traditions. Split, which is gradually becoming the economic centre of the coast, has rapidly assumed an important place in the shipping world. When the projected double track railway from Belgrade will be built and the extension of the

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41 Lothbury, London, E.C.2

port carried out, Split will be one of the most important ports on the Adriatic.

Recent Development.

Such was the situation at the end of 1925. Since then there has been a tremendous development of shipping business in Yugoslavia. The exact figures are not yet available, but it may safely be said that during 1926 and the first months of the present year, the Yugoslav Merchant Marine has increased by 50 per cent., and now exceeds 250,000 gross tonnage. This was created in a great measure by the British coal strike, which led to the transport of large quantities of coal to Great Britain, and also by the large consignment of grain from Argentina and Australia. Yugoslav shipowners made full use of this situation to increase the number of their vessels. Practically the whole of the first profits which they were able to make on account of their lower running costs were utilised for the purchase of new ships, while the later profits were employed to increase their capital.

The Rachitch Co., for instance, which formerly had 10 ships, has bought four new ones with a tonnage of over 20,000, while the Yugoslav-American Shipping Co., of which the capital was chiefly subscribed by Yugoslav immigrants in South America, has increased the number of its vessels from three to six, and its tonnage from 16,000 to 33,000. The Progress Co., which in 1925 owned only one vessel, now had three, while the newly-founded Topitch Co. has already two. The Overseas Co. has built a large new cargo boat, and another is being built for the Dubrovnik Shipping Co. Other smaller companies also purchased a number of boats. All of these new vessels are being employed in international cargo trade.

Passenger traffic with other countries has not hitherto been carried on by Yugoslav vessels. After the War a plan was drawn up for the organisation of a steamship company to handle emigration from Yugoslavia, but when the United States established the quota the scheme came to nothing. A few months ago a British and Dutch company submitted a plan for the organisation of a steamship line to carry goods and passengers to South America. Shortly after the Rachitch and Yugoslav-American companies made an offer on similar lines, but entirely with Yugoslav capital.

While these two offers were awaiting the decision of the Ministries concerned, the Vesna Co., of Sushak, which had been in existence for some time, but had given no sign of life, recently purchased a steamer of 14,000 tons from the Hamburg-Amerika Line, as well as some other boats, with which it intends to open up a line to Buenos Ayres. Behind this company is the Hamburg-Amerika Line, which hopes through it to obtain a share of the emigrant trade.

Shipping Returns for 1926.

Vessels entering Yugoslav ports during 1926, as stated by the ports administration of Split (Spalato), numbered 69,810, with a total tonnage of 10,220,821. Of these, 6,207 were sailing ships and 63,603 steamships. During the same period there left the ports of the kingdom 6,183 sailing ships and 63,589 steamships—altogether 69,772, with a total tonnage of 10,219,727. These figures represent a steady increase in port traffic since 1923, both in number of vessels and in their aggregate tonnage.

Of the vessels registered in the ports of the kingdom, 63,259 were Yugoslav, with a total tonnage of 7,823,027. Second place was occupied by Italy (6,144 vessels, 1,988,715 tons), followed by Great Britain (103 vessels, 236,634 tons), Germany (24 vessels, 34,533 tons), Netherlands (34 vessels, 55,713 tons), Greece (45 vessels, 40,668 tons), and Albania (137 vessels, 4,343 tons).

The most active ports were, in the order named, Split, Sibenik (Sebenico), and Susak.

Cargo passing through the ports of Yugoslavia during 1926 covered 10,000 metric tons of imports and 1,300,000 metric tons of exports, as compared with 1925 imports of 329,000 metric tons and exports of 1,100,000 metric tons. Of the cargo exported through Yugoslav ports,

664,000 metric tons went to Italy, 84,600 to Argentina, 77,000 to Egypt, 74,000 to Greece, 69,300 to the United States, 33,000 to the Netherlands, and 32,000 to Algiers. The other ports are of minor importance in their cargo records.

The principal commodities represented in these exports were timber (470,000 metric tons), cement (292,000), clay (256,000), bauxite (91,000), and coal (64,000).

Passengers registered for travel by sea and on Lake Scutari numbered 972,572 on local lines (97 per cent.) and 30,886 on foreign lines (3 per cent.).

THE SMYRNA DRIED FRUIT TRADE.

Messrs. C. J. Giraud and Co., of Smyrna report as follows for the week ended September 3:—

The arrivals of sultanias on the Smyrna market since the opening of the season are estimated at 7,100 tons, and the sales to date are put at 5,700 tons. Closing prices Smyrna, per cwt. c.i.f.: Type 12, 42s.; type 13, 48s.; type 14, 52s.; type 15, 56s.; types 16 and 17 are practically unobtainable.

The market continued unsettled throughout the week, but with the general tendency firmer. The weather is uncertain, and at the moment of writing rain is again threatening. Supplies coming forward show no improvement on last week's assortments, and it is becoming increasingly evident that the available quantity of good qualities this season will be short of requirements. The yield is maturing 10 to 15 days late, thus considerably extending the danger period of damage during drying operations.

The arrivals of figs since the opening of the season are estimated at 5,915 tons, and the sales to date are put at 5,209 tons.

A proportion of arrivals this week has consisted of rain-damaged fruit caused by the wet weather reported in our last report. Prices over the week have advanced about 10 to 15 per cent. for good, sound fruit, but, on the other hand, have weakened for all inferior goods, supplies of which are accumulating on the market. Rain-damaged fruit is selling at a substantial discount owing to its liability to ferment.

NEAR EAST MARKET REPORTS.

The current issue of the monthly review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

Alexandria.—The maintenance of the comparatively high price of cotton is fostering optimism and crop reports are good. The marketing of the new crop has begun in Upper Egypt, prices for cotton in seed ranging from £E6 to £E6½, which is very remunerative to the grower. The average price of the cotton crop for the 1926-27 season was 21½ dollars per kantar, representing a total value of £37 millions, compared with an average price of 30½ dollars and a value of £48,670,000 in 1925-26 and 39½ dollars and £56,100,000 in 1924-25. The stock market has been well sustained, while trade in Colonial produce and Manchester goods, although still below normal, has shown more activity. On the whole, the general outlook is brighter, but business, as is usual at this time of the year in Egypt, is dull.

The Sudan.

Satisfactory rains are reported from all districts, and if they continue to the end of August, good crops of rain-grown cotton and of durra may be expected. The general outlook is much brighter, and the coming winter is anticipated with optimism.

Palestine.

There has been greater activity in the building trade, consequent on the rebuilding necessitated by the recent earthquake. Crops are being released and coming on the market—a fact which should tend to a larger circulation of money.

British Consular Reports

IV.—TURKEY (Continued).

The following additional information regarding Turkey is taken from the Report on Economic and Commercial Conditions in Turkey by Colonel H. Woods, Commercial Secretary, His Majesty's Embassy, Constantinople, from which extracts appeared in our last issue:—

Agricultural Machinery.

There are evident signs that the Anatolian peasant is becoming more and more alive to the value of modern machinery, but the increase in its use is retarded by (a) lack of initial capital to purchase; (b) difficulty of obtaining skilled mechanics. Farmers are prepared to pay an adequate wage to a mechanic during the harvest season, but they cannot do so during the rest of the year, with the result that skilled workers, who can obtain regular employment elsewhere, cannot be found for purely temporary work of this nature.

Both the above difficulties are being overcome to some extent by the Agricultural Bank, which hires out harvest machinery and mechanics to the farmers, but the practice is by no means general.

There are at present about 2,500 tractors in the whole of Turkey, of which about 2,000 are of American manufacture. As regards ploughs, a well-known foreign type is used to the exclusion of practically all other makes.

Credits.

The question of credit is becoming increasingly important on the Turkish market. It is, of course, impossible to lay down any hard-and-fast rule in regard to this question, as the extent to which it is advisable to grant credit depends upon the nature of foreign competition, the discrepancy in competitive prices and the status of the firm to which credit is granted. Generally speaking, Italy and Germany, and latterly Czechoslovakia, have been disposed to grant the most extensive facilities, but there has been a marked indication recently on the part of France, Belgium and the United Kingdom to follow a similar method in Turkey. America and Japan, on the other hand, have refused to adopt this policy.

As regards foodstuffs, the United Kingdom and Czechoslovakia generally accept payment on the terms of cash against order, whilst the United States and Japan usually require payment with order, before goods are shipped.

The question of credit is of great importance in connection with the market for cotton goods, of which Turkey imports to the value of £T6 to 7 millions annually. Italian manufacturers have taken undue risks in this connexion, and in order to ward off competition have granted credit up to ten months, or a year. The danger of this policy has recently been demonstrated as the sudden appreciation in lira has led to great difficulty in securing payment for cotton goods delivered or under order to the value

of 200,000,000 lire. British manufacturers of cotton goods have in general declined to do business except on the basis of cash against documents, but there has been a marked tendency recently to extend credit for from 30 to 60 days and in certain cases to 90 days. France and Belgium are also adopting a policy similar to that of the United Kingdom, and German manufacturers of cotton goods grant credit up to three months. This should be regarded as a maximum, as there is extremely severe competition in this line and some agents are prone to accept unsound business in their anxiety to secure orders.

In the case of hardware, principally imported from Germany, a credit of 3 to 4 months is generally accorded.

Up to the past two or three years the United Kingdom had secured the greater part of the trade in woollens and worsted and business was almost invariably conducted on the basis of cash against documents, but severe competition from France, and to a lesser extent from Italy, Belgium and Czechoslovakia, has obliged British manufacturers to revise their policy and to grant credits up to a maximum of three months. Italy and Czechoslovakia grant credits up to six months on this article.

As regards iron and steel manufacturers, German exporters give credit up to 60 days; in the case of leather, credit is generally restricted to one month. French manufacturers of silk goods and wollen yarns grant credits of two to four months and their competitors have been obliged to follow a similar policy.

It will, of course, be realised that the above observations on the question of credit, whilst obtained from very reliable sources, represent a kind of general average and are not intended to provide an immutable line of policy. It is not recommended that British manufacturers should take undue financial risks, but, with the severe competition to be met on all sides in Turkey, some modification of the policy of uncompromising refusal to grant credit on any terms to this market must be considered.

The question of credit gives rise to the co-related question of the despatch of goods on consignment. Goods take an average of 5 to 6 weeks to reach Constantinople from the United Kingdom, and with the addition of another week to cover the time taken in discharge and clearance through the Customs, it will be realised that in many instances any agent possessing stocks ready for immediate delivery is in a strong position, particularly in the case of the Anatolian buyer who generally comes to Constantinople for the purpose of making an immediate purchase. It is realised that the policy of despatching goods on consignment is not without its dangers, but with a reliable and well-established agent the system has many advantages.

Any consideration of credit in the Turkish market must depend to a large extent upon the local agent, and provided manufacturers are satisfied that their agent is sound and is not given to accepting orders from, and recommend-

Constantinople Port Congestion.

On many occasions merchants have found great difficulty in obtaining prompt delivery of their goods owing to congestion in the port of Constantinople, due to several factors, of which the following were the main:—

(a) Congestion caused in Customs sheds owing to delay in the clearance of goods from the Customs. Certain consignees delayed clearance as the result of exchange fluctuations and other causes, and lack of organisation in respect to stevedoring was another contributory factor.

(b) Lack of organisation in connection with the delivery of goods to the Customs by the new port monopoly.

(c) Lack of storage accommodation. Conditions have now improved, owing to the efforts of the Quay Company and Customs, which have acquired and continue to acquire more storage room. In fact, when all arrangements have been completed, the port of Constantinople should be in a position to provide sufficient accommodation for the requirements of trade.

Shipping agents and merchants continue to be faced with difficulties in respect to Customs legislation, particularly in respect to short-shipped and over-carried goods. Endeavours are being made, however, to obtain some modifications in the exactions of the Customs authorities, and should the Special Commission decide in favour of the project, a simplification of the present legislation is bound to follow.

Towards the close of 1925 it was announced that the monopoly for the handling of goods in the port of Constantinople would become operative, and shipping agents especially looked upon this new formation with some apprehension. It was feared that this monopoly, the organisation of which lacked experience, would, instead of being beneficial to trade, which was the purpose of its creation, be extremely prejudicial, especially at a time when considerable congestion in the port existed. Hitherto shipping agents were themselves responsible for the delivery of cargoes to the Customs, these operations being carried out by competent tally clerks and labour.

Happily the port monopoly were persuaded to make an arrangement whereby shipping agents would sort out cargoes and supervise their discharge into lighters on behalf of the port monopoly. This was satisfactory, seeing that shipping agents with their past experience were enabled effectively to separate parcels in ships' holds, and to see that lighters were loaded in such a manner as to enable consignees to trace their goods when delivered to the Customs by the port monopoly.

A difficulty arose with the Customs, however, which, had it not been finally settled, would have been particularly damaging to shipping interests. Agents required the Customs administration to absolve them of all responsibility in respect to cargoes handed over from the ship's

side to the port monopoly against the presentation of the Customs of a receipt emanating from the former, acknowledging the delivery to them of the cargoes. This the Customs refused to recognise as a document freeing shipping lines of all responsibility. The question has been satisfactorily settled in principle, but a modus vivendi acceptable by all parties has not yet been reached. Later reports state that a form of receipt has been agreed upon by the shipping agents and the port monopoly, and brought into use.

There have been several complaints in respect of leakage and theft in the port of Constantinople, in consequence of which insurance premiums on freights have been raised of late. More than one demarche has been made to the competent authorities, but conditions do not appear to have improved to date.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, September 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Magdapur for Calcutta (Birkenhead, September 22); s.s. Maihar for Calcutta (Birkenhead, September 29).

Bibby Line.—S.s. Shropshire for Port Said, Colombo, and Rangoon (Birkenhead, September 21).

British India Line.—S.s. Manora for Bombay and Karachi (London, September 17); s.s. Mandala for Colombo, Madras, and Calcutta (London, September 24).

Cunard Line.—S.s. Sea Glory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool September 17, and Swansea September 20); s.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, October 1).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 1).

P. and O. Line.—S.s. Nankin for Colombo, Madras, and Calcutta (London, September 17); s.s. Kaisar-i-Hind for Bombay (London, September 23); s.s. Mirzapore for Colombo, Madras, and Calcutta (London, October 1).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 24); s.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 4).

Ellerman and Papayanni Lines.—S.s. Mardinian for Oran, Algiers, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, September 24). Cargo taken on through Bill of Lading for:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek Outports via Piræus or other convenient port; Fiume, via Trieste.

According to official returns the Greek merchant marine on June 30, 1927, comprised 472 steamers with a total tonnage of 942,885 tons and 731 sailing vessels of 59,417 tons in all. The figures for December 31, 1926, were 472 steamers of 929,619 tons and 736 sailing vessels of 59,656 tons. Of the steamers 339 of 864,396 tons, or 91.6 per cent., were cargo boats, 119 (70,584 tons) passenger boats; 95 were of between 3,000 and 4,000 tons, 43 of 4,001-5,000 tons, and 22 of 5,001-6,000 tons. Only 24 per cent. of the total number of steamers were less than 20 years old; 43 per cent. were over 30 years old.

Provisional estimates for this year's crops in Roumania point to a harvest inferior in quantity but superior in quality to that of last year's. The estimated returns in metric tons are:—Wheat, 2,678,725; barley, 1,231,050; oats, 842,645; rye, 247,730. After allowing for domestic requirements these figures should leave available for export:—Wheat, 380,000 tons; barley, 507,600 tons; rye, 59,000 tons. In oats there will be a shortage for home consumption of 150,000 tons.

The foreign trade of Roumania for the first seven months of the current year (January-July) showed imports amounting to 19,477,467,879 lei, and exports valued at 21,617,433,284 lei, as compared with 20,756,003,600 lei and 20,941,249,655 lei for the corresponding figures for 1926. As reported in these pages last week the Customs revenue for the first seven months of the year amounted to 5,397,331,151 lei, as compared with 4,505,936,000 lei in 1926, and an estimated revenue of 4,608,326,000 lei.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 13.

From a variety of causes, the week has been one of more than usual interest in the City and especially the Stock Exchange. Recently, at a meeting in Scotland, the Chancellor of the Exchequer made a strikingly optimistic speech about the state of the country's industry and finance. The foundation for his words is not too apparent, and they must be taken with the proverbial pinch of salt. But optimism in high quarters helps markets, and this week has proved it once more. Even more effective as a favourable influence was the course of the proceedings at the Trade Union Congress at Edinburgh. The emphatic repudiation of communism, the break with the Russian Unions, and Mr. Hick's appeal for industrial co-operation, all surprised the City in a favourable sense, and improved the tone in the investment world. In addition the Stock Exchange settlement passed off with unexpected ease, and, all fears in this respect being out of the way, the speculative activity in industrials broadened and gathered force.

The past week has also seen the announcement of a two fold debt conversion scheme by the Government. The first part of which the terms have already been broadcast, deals with bonds now mainly in money market hands, and maturing very shortly. The second, of which the terms will not be issued till next Friday, concerns the conversion into 3½ per cent. Conversion Loan of a series of securities maturing in 1928. Of the latter little can be said until the prospectus is available, but the City liked the first fairly well; and confidence is expressed in responsible quarters that the Treasury is in a business-like way setting about the huge problem of debt conversion, which will persistently face it for many years to come.

The Rise in Shipping Shares.

During recent months the view has obtained that the outlook for shipping is brightening and consequently the prices of many shipping shares have been gradually advancing; a contributory factor, however, has been at work in the rumours of impending amalgamations. This favourable view is supported by the decision of the P. and O. Company to increase its deferred stock by £1,000,000. The new capital is needed to provide for tonnage now being built and about to be built, and for the general

purposes of the company. The P. and O. Company is one of the largest and most prosperous of the British shipping companies. In the last balance sheet steamers, tugs and payments on account of new ships stood at over £18 millions and for the past two years the dividend on the deferred stock has been 10 per cent., free of income-tax. At present the deferred stock (which declined strongly on the new issue announcement) gives a return of £3 12s. per cent., free of income-tax. The prices of the deferred and ordinary stock of many of the most prosperous companies, indeed, considerably discount the immediate future. Thus the ordinary shares of Furness, Withy yield only £3 18s. per cent. free of income-tax, while those of the Cunard Company return £4 11s. per cent. But it is considered that the outlook for shipping is appreciably brighter than it has been for some time past. In the past month cargo freights moved upwards and chartering operations were on a fairly generous scale. In particular, the favourable harvests in South America are resulting in a good demand for tonnage.

The Nitrate Outlook.

For many months past the shares of the Chilean nitrate companies have been extremely depressed. But at the moment there are signs of a slightly more hopeful feeling regarding the future of the industry. Private advices indicate that the Chilean Government is seriously considering a reduction in the duty on nitrate after July, 1928. The overwhelming majority of the producers hold that a considerable reduction in the duty is absolutely necessary before a reasonable measure of prosperity can be regained. The course of the Chilean Government's policy in the matter will, therefore, be followed with the greatest interest by shareholders in Chilean nitrate companies. Meanwhile, it is satisfactory to note that three more oficinas have notified their intention to re-open in the near future, though one oficina has closed down. The total number of oficinas likely to be working at the end of the year is put at 51. Moreover, the nitrate market is displaying a better tone, owing to a very active demand from American buyers. But pronounced optimism is decidedly unjustified. The position of the industry is indeed serious. Thus taking eight representative companies only one was able to pay a dividend last year. Again, it is unlikely that the synthetic product—the Chilean industry's great competitor—will readily concede any of its hard-won ground.

The Artificial Silk Industry's Prospect.

A notable feature of the Stock Exchange in the past week has been the activity in the shares of artificial silk companies. The ordinary shares of the British Celanese Company remain fairly firm at the high level recently established, while other speculative favourites have been in demand. But a more trustworthy index of the tone of the market is provided by price movements of Courtaulds' shares. Opening the week at 136s., dealings were recorded up to 145s. At the beginning of the year the shares were quoted no better than 100s. At the current price the shares return only £3 3s. per cent., free from income-tax, and those of other companies similarly discount the future. It is clear, therefore, that many investors and speculators believe that the British artificial silk industry is passing through a period of marked prosperity. It is true that the consumption of artificial silk in this country is now approximately 30 per cent. greater than the average during 1926. The demand for particular classes of yarn is greater than the supply and the evidence points to the probability of this demand being maintained throughout the winter. One result of the present phase of prosperity is that the newer companies have been able to overcome their initial difficulties in regard to working capital. It should be remembered, however, that much of the industry's prosperity is due to the favour of so fickle a mistress as fashion. In these circumstances, care should be taken that the shares do not discount the future too far ahead, while the investor would be well advised not to take part in such speculation as that which centres around the British Celanese Company.

COMPANY NOTES AND REPORTS.

CHARTERED BANK OF INDIA.

At a meeting of the court of Directors of the Chartered Bank of India, Australia and China, held on September 7, it was decided to declare an interim dividend for the half-year ended June 3 last, at the rate of 14 per cent. per annum, free of income tax, payable on and after September 14. This is the same rate as last year.

EASTERN BANK.

The Eastern Bank announces an interim dividend of 4s. a share, less tax at 3s. 8.657d. in the £, after allowing for relief in respect of Indian taxation, payable October 1. This is the same rate as last year.

P. AND O. COMPANY.

An extraordinary general meeting of the stockholders of the Peninsular and Oriental Steam Navigation Company was to be held at 122, Leadenhall Street, on September 14, for the purpose of considering and, if thought fit, passing the following resolution:—"That the capital of the Peninsular and Oriental Steam Navigation Company be increased from £3,592,518 Deferred Stock to £4,592,518 Deferred Stock by the creation of £1,000,000 additional Deferred Stock, thus making with the addition of the existing Preferred Stock of the Company, the total capital of the company £7,632,518." The additional capital is required to pay for new tonnage now being and about to be built and for the general purposes of the company, and will, in accordance with the company's Charter, be offered in the first place to the existing Preferred and Deferred Stockholders who hold not less than £40 of Stock of the company. The Stock will be offered at the price of £2 for £1 of Deferred Stock, or, say, £200 for £100 of Deferred Stock, rateably in proportion to the amount of Stock held by them respectively at the date of issue. The market price of P. and O. Deferred was at the time of the issue of the notice about £290 per £100 Stock and is now £270.

OCEAN SALVAGE AND TOWAGE.

The report of the Ocean Salvage and Towage Company, Ltd., for the eighteen months ended June 30 last states that the company's operations in all areas have been profitable. The accounts show an excess of income over expenditure for the period amounting to £11,680 14s. 10d. This profit includes the dividends declared by the Neptun Company of Stockholm for the two years ended December 31,

1926, amounting to Kr. 114,240, or £6,304 12s. 8d. The legal reserve of the Neptun Company has been increased by Kr. 23,000, or £1,269 sterling, and now stands at a total of Kr. 50,000, or £2,759. A further sum of Kr. 38,767.52, or £2,139, has been carried forward to the current year's revenue account. All ships and plant have been maintained in first-class condition, and all repairs have been charged against revenue. The profit for the eighteen months' period extinguishes the debit of £10,289 10s. 6d. on the profit and loss account, and leaves £1,391 4s. 4d. at the credit of this account to be carried forward to next year's account. The negotiations referred to in the circular letter of June 27 have, as regards Roumania, been successfully conducted. Certain other negotiations are still proceeding, but until they are completed the directors consider it inadvisable to make any further statement.

ORIENTAL CARPET MANUFACTURERS.

The report of the Oriental Carpet Manufacturers for 1926 states that the turnover has been affected by a series of adverse conditions, notably the general strike in England and the abnormal fluctuation in the exchanges of certain European countries. Further, there has been a fall in the market price of Persian carpets, due principally to the depreciation in the value of the kran; so that it has been difficult to maintain the turnover in Persia, and at the same time to deal with stocks of Persian carpets on hand. The directors have considered it necessary, in the company's interests, to acquire a majority shareholding in the Société Anonyme Ottomane des Manufactures de Coton de Smyrne, Smyrna. This transaction has been effected on favourable terms. The shares acquired are to be paid for, at the company's option, over a period of ten years. On account of this an increase of £97,000 in the asset, "Shareholdings in other companies," appears in the balance-sheet. The net trading profits, after deduction of all charges, amount to £47,373, less £2,600 for remuneration of the Board, adding balance brought forward of £39,162, gives £83,935. The directors recommend that the financial resources should not be weakened by the distribution of a dividend this year. They recommend placing £40,000 to extraordinary reserve, carrying forward £43,935.

The Greek and Belgian Governments have entered into an agreement in regard to the joining up of the Bulgarian and Greek railways between Petritch and Demirhissar. The Bulgarian Railways Board are reported to have sent engineers to study conditions on the spot in connexion with the scheme.

AMERICA AND WAR DEBT PAYMENTS.

Economic Effects.

The following extracts on the subject of War Debts and the balance of payments to the United States are taken from the current issue of the *Guaranty Survey*, the monthly publication of the Guaranty Trust Company of New York:—

The alteration that has occurred in the balance of international payments of the United States in the last few years justifies the increasing attention that is being given to the probable effects of the anticipated payment of the inter-Ally War debts upon American trade and finance. Since the beginning of the present decade the lowering of America's surplus of merchandise exports and the distinct increase in foreign services rendered to her have reflected the position of the United States as a creditor nation. Though the direct result of the payments will be to increase further the annual receipts of the United States as a creditor country, the substantial amounts of the payments and the extended period over which they are to be made may in turn produce new relationships between the other items in the country's international balance.

The term "balance of international payments" is defined by the Department of Commerce as "a statement of all the valuable things received from other countries balanced against all the valuable things transferred to other countries during a given period of time." Since every transaction involves a transfer of value in return for an equivalent payment, the difference between the total amount of export or credit items and the total amount of import or debit items in the international balance of each country must be exactly offset by the net amount of funds paid out or received, as reflected in the net change in international bank balances. If the change in bank deposits is incorporated with the other items, obviously the amounts of debits and credits must be exactly equal.

Although the change in bank balances in the course of a single year may be fairly large, the trend will not continue in one direction over a long period, since an unduly large or small total of international deposits will tend to adjust itself through fluctuations in exchange ratios, interest rates and commodity prices acting upon the various constituent items in the balance of international payments. In the case at hand, therefore, the introduction of the annual receipt of debt payments as an added credit item in America's international balance must be offset by an equivalent amount of additional debits, a corresponding reduction in other credits or a combination of the two. Translated into general terms, the receipt of the debt payments in this country will ultimately force America to increase her imports, to accept a greater amount of foreign services, or to reduce the present total of exports.

Debt payments, like all international payments, rest fundamentally upon the ability of the debtor country to create a credit balance from international transactions in merchandise and services, transfers of gold, and loans from one country to another within the borders of the nation in which payment is to be made. Taxation by the debtor governments would be without purpose unless the surplus resulting therefrom could be converted into bank balances arising from sales of merchandise and services abroad.

Because of the necessary balance between international debits and credits, payments of money by one country to another are accompanied by "promotive" and "detractive" influences growing out of the payments themselves. When the debtor nation levies taxes in order to accumulate the treasury surplus necessary for the liquidation of the external debt, it thereby reduces the domestic purchasing power and the ability of its people to purchase goods in foreign markets. At the same time, the demand of the domestic treasury for bills of exchange lessens the available supply and causes the foreign exchange rate to rise, thereby discouraging imports and encouraging exports. The country then, by reason of this exchange situation and

its lower purchasing power, becomes a world "bargain counter" and the exportation of goods is strongly stimulated. Hence, the debt payments exert a "promotive" influence upon exports from the debtor country and at the same time a "detractive" influence upon imports.

In the case of the creditor nation the situation is exactly the opposite. The curtailment of foreign purchasing power lessens its exports to the debtor nation, while the higher domestic purchasing power resulting from distribution of receipts from debt payments or from lower taxes encourages imports from abroad. The payment of the War debts, therefore, contains this "promotive" element which will tend to adjust international levels of purchasing power in such a way as to be most favourable to the transfer of the funds demanded.

The changes that have been developing in the balance of international payments of the United States during the last five years have tended to follow lines usually witnessed in the readjustment of the status of a country from that of debtor to that of creditor.

In an estimate of the ultimate effects of the War debt instalments upon America's balance of international payments the important consideration is that, if the present schedule of payments is carried out, the debt instalments will represent, for the next sixty years, a fixed and unchangeable item on the credit side of her list of international payments, and that this must be offset by equivalent debits, either in the merchandise account or among the invisible items.

Broadly speaking, therefore, one may say that the gradual increase in the amount of the War debt instalments over the next sixty years will be accompanied by one or more of the following changes: (1) a reduction in the visible export balance, or possibly the appearance of a visible import balance; (2) an increase in the invisible import balance; (3) an increase in the volume of American private loans abroad, which would represent merely a refunding of the debts and an indefinite postponement of their repayment. Ultimately the position of the United States as a creditor nation must be reflected in a surplus of receipts over deliveries of goods and services. Like every economic readjustment, these changes in the movement of trade will undoubtedly occasion some degree of hardship in certain branches of commerce and industry both in the United States and abroad.

CONGRESS OF EMPIRE CHAMBERS OF COMMERCE.

A large party of Chambers of Commerce delegates, numbering over 100, will leave Southampton on the Union Castle liner Saxon to-morrow to attend the eleventh Congress of Chambers of Commerce of the British Empire which will be inaugurated by the Governor-General of the Union, the Earl of Athlone, in Cape Town on October 4. Representatives of Chambers throughout the Empire will be in consultation at Cape Town including delegates from all over the Union.

The Congress is held triennially, alternately in London and in one of the Dominions, Crown Colonies or India. This is the first occasion of its meeting in South Africa. The President of the Federation of Chambers of Commerce of the Empire, and therefore of the Congress, is Lord Kysant, who is already on his way to South Africa, as is also Sir Edward Davson, Bt., Chairman of the Council.

The Congress in the four days at its disposal will have a lengthy agenda to debate, containing a large variety of subjects all of which have a direct bearing upon the development of inter-Imperial commerce and industry this being the primary object for which the Federation was formed.

In the first five months of this year the number of motor cars imported into Turkey amounted to 842, as compared with 711 cars during the whole of 1926, and 439 in 1925.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 7 :—

Egyptian Futures.—Sakel Contract.—For the greater part of the period under review this market has shown a firm undertone; minor downward reactions due to profit-taking and evening-up operations owing to the coming Bureau report have occasionally been in evidence; but on the whole values have had a gradually hardening tendency, to-night's close being 56 to 57 points higher for near positions and 58 to 59 points for more distant months. Trading during the week has proceeded on much quieter lines than we have been latterly accustomed to and fluctuations have also been on a more normal scale. The advance registered can hardly be ascribed to any improvement in trade, and support in fact has been almost entirely due to the Alexandria market, which has shown considerable strength, especially during to-day's session, when, despite comparative easiness at this side they maintained an opening advance of over half-a-dollar per kantar. The result of this was that at one time our market stood at a discount of 30 points; however, once the early selling here was absorbed our market quickly hardened again in sympathy. Trade reports in the fine section show an improvement, but in face of this spinners' operations in the raw material have been unimportant. New crop business remains practically at a standstill; in many quarters opinions of doubt as to whether the present level can be maintained are expressed and as this implies a good deal of business withheld, it would appear probable that should Thursday's Bureau report come out slightly more "bullish" than expected, a considerable weight of fresh business will be forced into the market. Tentative estimates of the Sakel crop are now beginning to be circulated. The most optimistic of these give a figure of about 3 million kantars, whilst the less favourable range between 2½ and 2½ million kantars. Even should the former be the more approximately correct it would, in our opinion, be rather a "bullish" factor, as last year the Sakel exports from Alexandria totalled over 3,100,000 kantars. Of course, there is a certain amount of cotton to be carried forward, notably, the Government stock, and there has also to be taken into account the increasing competition of large Sudan Sakel crops. As far as our market is concerned, it would appear probable that most of the more conservative operators have recently taken their profits, probably a wise policy in view of the uncertainty of the course of American markets during the next few days. The Alexandria Produce Association's Crop report for August is fairly favourable. Picking has already commenced and will be general from about the 10th to the 15th of the present month; this is roughly ten days earlier than last season. Early maturity is often detrimental to staple, but we have no authoritative opinion on this point so far. On the whole we still remain moderately "bullish" on the situation and consider that conservative purchases on easy markets are to be recommended.

Upper Contract.—Trading in this option during the past week has been of a rather colourless description, operations being confined to quantities of a few hundred bales. Trade support continues to be lacking in sufficient quantity to maintain or advance prices, but in the meantime speculative interests are holding the market, and as long as they have the encouragement of hardening American values there appears little likelihood of the first-mentioned factor having a direct immediate influence on the position. The Alexandria Chamber of Commerce August report, just published, is not quite as good as the earlier ones.

Egyptian Spot.—The spot demand for both Uppers and Sakel has only been moderate during the past week; at times the inquiry has promised an expansion in the turn-

over, but present confidence and uncertainty regarding the future course of values are in evidence in many quarters and on this account a good deal of business has been withheld; should the Bureau report, due to-morrow, prove even moderately "bullish" we would not be surprised to see the commencement of a good buying movement, as apart from Sudans the majority of mills must have worked their stocks well down. An analysis of the inquiry during the week shows little demand for Sakel cotton grading over F.G.F., the majority of business in this variety taking place in the lower qualities ranging in value from 12d. to 16d., similarly, the top grades of Uppers have only been dealt in very occasionally. Only isolated transactions have taken place in Pilon, a like remark applying to the very low and inferior qualities of all descriptions. There has been a fairly consistent demand for Sudan Sakel and also American Seed Sudan, but only one or two small lots of Tokar Sakel have been sold. C.i.f. business has again been very quiet.

Forwardings to spinners for the week ending 2nd inst. were returned as 5,468 bales Egyptian and 4,580 Sudan. Estimated sales for the week, 1,200 bales Egyptian and 4,500 Sudan.

Quotations for Sakel are advanced 70 points and those of Upper 70 points.

E.G.F. Sakel to-day, 20.40d. F.G.F. Upper to-day, 16.35d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ending September 1 state :—

Since our last report the Futures market has been more active and the tendency has been firm. The week's summary of price movements is as follows :—Sakellaridis : November, 39.73 dollars, 0.86 dollars up; January, 39.47 dollars, 0.95 dollars up. Ashmouni : October, 29.93 dollars, 0.93 dollars up; December, 30.12 dollars, 0.92 dollars up; February, 30.30 dollars, 0.93 dollars up.

Sakel.—The market has advanced chiefly owing to fresh speculative purchases on very unfavourable crop news received from America; this unfavourable news has been reflected in the continuous advance in New York. The operators are awaiting eagerly the Bureau Report which is to be published on September 8; naturally, the report is expected to be very bullish reading. The demand from abroad, although slightly better than last week, is still far from being as large as one would desire it. Business for new crop shipment continues to be negligible. Many rumours have been spread on the market, and have also been published in the Press, regarding the disposition of the Government stock, but all these rumours are without any foundation; we are of opinion that the position has not changed. All the same, it seems strange to us that the Government should abstain from offering its cotton on the market at present levels of price.

Uppers.—This market has followed very closely the fluctuations of Sakel. The demand from abroad for Ashmouni continues to be larger than the demand for Sakel and, taking into consideration this demand and the present levels of New York, prices of Ashmouni would appear to be justified.

Statistical Position.—The Alexandria General Produce Association estimates the stock in Alexandria at the end of August at about 1,940,000 kantars, but apparently they still lack certain figures and they promise an adjusted stock figure later on. A stock of about 1,940,000 kantars was the figure generally expected. We do not think that there is left in the Interior any big quantity of old crop cotton. The Government is drawing up a statement giving the stock in Alexandria at the end of August by varieties, and we hope to be able to reproduce this statement in our next report.

We believe that the hot weather during August has done much to check the development of this pest.

COMMERCIAL BANK OF GREECE

(A Limited Liability Company Registered in Athens.)

CAPITAL PAID UP - Drs. 47,107,000**RESERVE FUNDS - Drs. 57,091,594.50**

The Assets include securities worth £1,000,000, which are valued at Drs. 25,000,000; that is at the rate of Drs. 25 per £1 only.

Notes of the Week.

Turkey and Greece.

Greco-Turkish relations, which have been following a correct course for some time, are now in danger of being disturbed as a result of the activities of brigands, who recently crossed over from Samos to the Turkish mainland. A number of Turks known as "the 150," who have been proscribed in their own country, have taken refuge in Greece. Their presence there constitutes a sore point with Turkey, who affects to believe that they are secretly or openly encouraged to intrigue against the republican régime. When, therefore, a notorious brigand left Samos with his band for a raid near Smyrna, it was argued that such a step could not possibly have been taken without the connivance of the Greek authorities. As if to lend point to the Turkish contention, the designs of Haji Sami and his band were made to include an attempt on the life of Mustapha Kemal Pasha, which it was left to be inferred would be particularly welcome to Greece; but as few weeks are allowed to pass in Turkey without some incident's being construed into an attempt or a design on the President's life, this further allegation can be ignored. It is a sufficiently serious matter, however, that a band of brigands should be able to leave a Greek island and make a descent on Turkish territory. The crossing of land frontiers in mountainous country is comparatively easy, even where frontier guards are employed; but there is little excuse for raids entailing departure by boat. The Greek Government has shown a proper appreciation of the position by recalling the Governor of Samos and by transferring the chief of the local gendarmerie to another post. It exonerates the Governor from the charge of having connived at the escape of Haji Sami's band from the island, but it considers him to have been guilty of negligence. This prompt action will, it may be presumed, satisfy the Turkish Government; but it is certain that the last has not been heard of "the 150."

Prevention Better than Cure.

In one form or another the custom of allowing political refugees from one Balkan country to find asylum in a neighbouring State is continually leading to trouble. It

provides occasion for constant discord between Bulgaria and Yugoslavia, Yugoslavia and Albania, Roumania and Bulgaria, and now between Turkey and Greece. No country likes to sacrifice this right of asylum, but there is no reason why it should tolerate flagrant abuse of the privilege. In the Balkans it would seem to be the exception that a man should accept exile from his own country, however justly it may have been inflicted; he shows little inclination to settle down and start a new life, but, instead, sets to work to intrigue against the land of his birth, regardless of the extent to which he may implicate the country where he has taken refuge. As the evil is too rampant to be disguised, little sympathy is felt for a Government that pretends to shut its eyes to it. If it be the case that the 150 proscribed Turks have settled in Thrace and certain Aegean islands near Turkish territory, then Greece should realise that sooner or later she must have trouble with Turkey. It may be that Haji Sami in Samos was a quiet and inoffensive tiller of the soil or tended flocks on the foothills; if on the other hand he was known to be a professional brigand, Greece's acquiescence in his presence on the island could hardly fail to create suspicion. Brigands, it is true, are not always to be dealt with easily in Balkan countries, as the Greeks have good reason to know; but however leniently they may be treated when of Greek nationality, it would be sound policy not to tolerate them a moment longer than is necessary when they are liable to embroil Greece with her neighbours. Even if there is little chance of any actual conflict between the two States in existing circumstances, there is a danger that the Turkish Government, which is still apt to act first and to reflect subsequently, may proceed to disciplinary action against the Greeks under its jurisdiction, as it has recently done in the case of the Jews of Asia Minor, in retaliation for a Jewish demonstration in Constantinople.

Turkey's Troubles.

In addition to Haji Sami's raid by sea, which ended in the death of the brigand leader and the capture of some of his band, the Turkish authorities have had to cope with a gang of criminals in Constantinople, who had been

responsible for several daring robberies and have since—almost inevitably—been credited with the contemplation of political crimes. In each case the efficiency of the Turkish administrative system was shown, and the Republic has reason to be satisfied with the machinery established for the maintenance of order. It has been less fortunate, however, in the domain of legislation. The history of the last few years has been particularly rich in instances of laws hurriedly passed to remain a dead letter or to be repealed in the light of wider experience. The most recent administrative contradiction has been the sudden closing of the Yildiz Casino, which was opened only last year by the Minister of the Interior. This measure was taken without warning and was effected by the arrival at the Casino of the Public Prosecutor, with a body of policemen, who ordered the building to be closed and seized the money in the bank. As the proprietor, who is understood to be an Italian subject, had been accorded a State or municipal licence, it is probable that more will be heard of the matter. The action of the Turkish authorities is said to have been based on a recent law declaring games of hazard to be illegal. In this case it must be inferred that the law was passed without any attempt to legislate for existing institutions established under State auspices, or that Constantinople is unable to keep *au courant* with the mass of legislation that the Grand National Assembly is responsible for day by day; for it is inconceivable that an enterprise on the scale of the Yildiz Casino would not have taken steps to safeguard its interests, if it had known of the danger threatening it. No one disputes the right of the Turks to be master in their own house; but the risk connected with these impetuous administrative methods is that they frighten foreign capital, which the authorities claim to be anxious to attract to Turkey. Although the Turkish Government has contrived in a wonderful way to carry on for several years without foreign loans, the shortage of capital which is seriously handicapping development in the country is being continually emphasised. Two recent illustrations, which are particularly tragic, have been provided by the disastrous fires which within three weeks have overtaken Skutari and a part of Stamboul by the Golden Horn. By common consent the damage, in spite of the wooden houses, would have been much less, if Constantinople had possessed an adequate water supply. Profiting by the Allied occupation the municipal authorities have acquired an up-to-date fire brigade, equipped with modern appliances, but its efficiency is often counteracted by the city's unsatisfactory water supply.

The Roumano-Hungarian Dispute.

The special committee of the Council of the League of Nations that was appointed to examine the controversy between Hungary and Roumania over the claim of Magyar "optants" to fuller compensation for their expropriated estates in Transylvania than Roumanian landowners are receiving under the Agrarian Reform Law has delivered its report. Its findings appear to have gone against the main Hungarian contention, for it has ruled that the estates of Magyars in Transylvania who opted for Hungarian nationality are subject to the Roumanian scheme of agrarian reform; that there must be no differentiation as between Roumania and Hungary either in the terms of the law or in its application, and that the expression "retention and liquidation" used in the Treaty of Trianon applied solely to measures taken against the property of a Hungarian on the ground of his being a Hungarian national. The controversy has been complicated by the question of the Mixed Arbitral Tribunal appointed under the Treaty of Trianon to deal with cases of all kinds involving the rights or claims of Hungarian minorities. The Tribunal decided that it was competent to deal with the cases of the three hundred Hungarian optants; but the Roumanian Government, whether because it feared that endorsement of the Hungarian claims would undermine the whole scheme of agrarian reform, or because it took its stand on Roumanian sovereign rights and would not allow a Roumanian Law to be overruled by an inter-

national body, brought the activities of the Tribunal to an end by withdrawing its representative. As the Treaty of Trianon made provision to meet an emergency of this nature, the Hungarian Government applied to the Council of the League of Nations to appoint a judge in the place of the Roumanian representative, so that the Tribunal could continue to meet. Roumania, however, has claimed to have the wider question of the rights of Magyar landowners in Transylvania decided by the Council, and has had her point of view upheld, at least by the special Committee.

Rival Interpretations.

Last Saturday the new Council of the League was occupied all day with the Committee's report, but came to no decision before the meeting stood adjourned. The subject can be approached from so many points of view that it was one that naturally made a strong appeal to the dialectical powers of the members. The Treaty of Trianon prohibited the liquidation or confiscation of estates, and the Hungarian case clings resolutely to this point. It is evident, however, that a Peace Treaty was not intended to overrule for all time the domestic legislation of Roumania. Provision was made for the protection of Hungarian landowners from being penalised on account of their nationality; but it was not thought necessary to guard against expropriation under a subsequent measure of agrarian reform. Against the argument that Hungarians should not suffer for what Roumanians like to do in their own country and with their own property it can be urged that agrarian reform deals with land rather than with its owners, and as the land is situated in Roumania the laws of the State cannot be overruled. In the circumstances it is not a matter for surprise that the Roumanian delegates insist strongly on their point of view. The state of the country's finances does not encourage the Government to be generous, in order to buy off the Hungarian agitation. On the other hand, the Council naturally hesitates to endorse Roumania's action in stultifying the work of the Tribunal by withdrawing her representative. The Tribunal decided in favour of its own competence in the matter, and there is a feeling in the Council that its ruling ought to be upheld. It should be possible to do this, and yet at the same time to indicate the lines on which, in the Council's opinion, the Tribunal should approach a question to a considerable extent outside its original terms of reference. Both Tribunal and Council, it would be imagined, would be impressed with the Roumanian contention, if it can be shown that Magyar peasants in Transylvania have benefited from the expropriation of Magyar estates quite as much as Roumanian peasants have.

The Zionist Palestine Executive.

The fifteenth Zionist Congress has come and gone, and of its main decisions perhaps the most interesting to students of the Holy Land is that which it made in respect of the Zionist Executive for Palestine. For the last six years, Palestine has had a coalition Executive in which the non-party members were strengthened, or weakened—it depends on the point of view—by representatives of the Labour and Orthodox wings. In Palestine itself, of course, these wings are of very great prominence. Now, however, the Executive has been limited to three members: Colonel F. H. Kisch, Mr. H. Sacher, and Miss Henrietta Szold. Such a formation is in sufficiently close approximation to the wishes of Dr. Weizmann for it to be acclaimed as a sign of the victory of the "Moderates." Colonel Kisch, is, of course, well known; it may be recalled, however, that he is one of the Zionists who have striven hard, though for the most part unsuccessfully, to persuade fellow-Zionists in Palestine to adopt Palestinian nationality. Miss Szold is one of the admirable disciples of the admirable precepts of a Zionist benefactor to Palestine, Mr. Nathan Straus. As head of the Hadassah Medical Organisation, this gifted American lady has shown what may be done in the sphere of practical service in the welding, if only for health's sake, of Arab and Jew.

If all Zionists were as broad-minded as are Colonel Kisch and Miss Szold, the political problem in Palestine would probably soon lose its acuteness. Nor is this to imply that the new Executive is not whole-hearted in its desire to establish a Jewish National Home; we merely mean that, both in and outside their conception of a National Home is bound up, in the minds of the new Executive, the larger and equally important conception of the Mandatory Power, a Palestinian nationality which shall comprise both Arab and Jew. Quite plainly the Congress has shown, in its choice of the new Executive, that it believes that only through the coalescing and collaboration of Arab and Jew in Palestine can come the consummation of its hopes.

Anti-Wahhabism in the Hijaz ?

It was probably only to be expected that from time to time anti-Wahhabi rumours should be sent through the world of Islam, for both on sentimental grounds and on grounds of self-interest the conquest and management of the Hijaz by King Ibn Saoud have disappointed not a few Mussulmans. But reports of the declining of his authority should be accepted with considerable reserve, even though actual attempts be spasmodically made to bring that about. One rumour, however, which is more original and interesting than the majority of its kind, has just emanated from a Damascus newspaper, which states that two parties in the Hijaz, called the "National" and the "Liberal" party, have combined to struggle against the dominance of the Wahhabis, on the ostensible ground their their leader has not carried out the promises made at the time of his conquest. This report adds further that the object of the movement is the independence of the Hijaz, and that delegates are being sent to Cairo and Bombay, whence it is proposed to spread anti-Wahhabi propaganda. Now we have no means either of denying or of confirming the truth of this particular report, but it may be time enough to treat it seriously when anti-Wahhabi newspapers have actually been founded in Cairo and Bombay. Mecca is, of course, notoriously a difficult city, and it is just feasible that a few Meccans have grown dissatisfied with the efficiency and discipline which the Najdi influence has brought into the Hijaz. Complaints against the Wahhabis in the Holy Cities of Islam are not likely yet to die down, but we should have thought that their utterers would have more chance of mental repose if they were to leave the Hijaz than if, as reported, they were to start therein a campaign against the mighty Wahhabi ruler. Not in a day will the Hijaz become reconciled to the Najdis, and intrigue in Mecca, which has probably existed from before the days of the Prophet Muhammad, may not have yet become a *démodé* indulgence. The observer would, therefore, do well to watch for the recurrence of such complaints, at the same time being very careful to examine their source and motive. He may find, on inquiring into this particular rumour, that it really derives from those Mussulmans outside the Hijaz who warmly espoused the idea, at first entertained by the ruler of the Wahhabis, of putting the Holy Places into commission, so that the Hijaz could become an independent Muslim Republic, or, again, from those Mussulmans outside the Hijaz who are merely jealous of the present eminence and success of the Wahhabi leader. For it is hardly credible that men in Mecca itself would be so stout-hearted as to attempt openly to undermine King Ibn Saoud's influence from within.

Russian Products for Arabia.

In our issue of September 8 we referred to the attempt of the Soviet authorities to open up and develop commercial markets in the Red Sea area, and a few details have now come to hand on the success with which the Russians sold their products to pilgrims in Arabia on the recent *haj*. The realist policy of the Bolsheviks, which is everywhere pursued in the East, from the Mediterranean to Persia, of selling products at absurdly low prices in order to cut out the existing sellers, was once again followed in the Hijaz. Sugar and flour appear to have

been sold to Mussulmans in some quantities; small traders received credit, according to the Riga correspondent of *The Times*, "to induce them to take Moscow sugar and Bolshevik bread." The price of Russian sugar and flour was sufficiently reduced to keep out similar products from India; and it is hoped that Russian oil may later find a market in the Hijaz. It is to be seen, therefore, that the Arabian campaign very closely follows that which the Bolsheviks have successfully indulged in Persia, to which THE NEAR EAST AND INDIA has more than once drawn attention. How sternly it is to be pursued is proved by the fact that, at the moment when Russian sugar was being sold so cheaply to the *hajjis*, in Moscow and Leningrad there was a sugar scarcity, which was remedied only by the arrival of cargoes of foreign sugar! Manifestly this game cannot be indulged in indefinitely, but it provides, while it lasts, a spectacle on no account to be missed.

Perso-Iraqi Relations.

Despite the constant endeavours of the British High Commissioner in Iraq and of the British Minister in Teheran, relations between Iraq and Persia have never attained the normal level. So long as three years ago the Persian Government asserted its willingness to recognise the Kingdom of Iraq, but the preparations then made for such recognition remain unfulfilled. The Persian representative in Baghdad, together with the United States representative, is still not formally recognised by the Kingdom of Iraq, although all their fellows are so recognised. Delay in taking what one would imagine to be a natural step succeeds delay in a perplexing manner. The Teheran Majlis, indeed, on September 11 decided that no passports be issued to Persians travelling to Iraq "until a better understanding has been established between the two countries," and also—what is more difficult to understand—the Majlis passed a bill authorising the expenditure of 100,000 krans "for the relief of the Persians in Iraq, and to enable them to obtain passports to return to Persia." Since nothing has been heard of the sad plight of Persians in Iraq, nor of the strained relations which appear to exist between the two countries, it is to be assumed that one of three reasons has actuated the Teheran Administration in this step. It may have some connexion with the outbreak of cholera in the Middle East, though we were unaware that any serious misunderstanding had arisen between Persia and Iraq over the matter; it may be but another local indication

THE YUGOSLAV ELECTIONS.

The general election which was to put an end to the indeterminate parliamentary situation in Yugoslavia has been held, but it still remains to be seen whether the result aimed at has been fully attained. After a series of short-lived Cabinets under M. Ouzounovitch, who had tried to secure a majority in the Skupshtina with the help in turn of the Croat Peasant Party, the Democrats and the Slovene Clericals, M. Voukitchevitch formed a Government last April which represented a coalition of moderate Radicals and the Democratic Union (Democrats under Dr. Davidovitch, and Bosnian Muslims led by Dr. Spaho). Owing to the attitude of the Pashitchist group of Radicals the Ministry could count on no stable majority in the Skupshtina, and Parliament was at once prorogued. It was subsequently dissolved and fresh elections were fixed for September 11. As the time for the electoral campaign approached it was announced that M. Voukitchevitch had agreed to find room in the new Government, in the event of the Coalition's victory at the polls, for Dr. Koroshetz and other representatives of the Slovene Clerical Party. Out of 315 seats in the new Skupshtina the election results have given 111 to the Radicals, 63 to the Democrats, 16 to the Bosnian Muslims and 21 to the Slovene Clericals. If, therefore, these four parties agree to co-operate, the new Coalition Government is assured of a substantial majority in the Chamber, and there should be a fair prospect of a period of political stability, in which much needed legislation could be carried into effect. What uncertainty there is in the situation arises from the internal differences of the Government majority. The Radical Party is divided against itself and went to the poll in three more or less antagonistic groups. Of the new Radical deputies only seventeen are avowed Pashitchists and as such hostile to the Prime Minister; but they have lost their leader, who failed to secure election, and it is possible that, as a result of their present discomfiture, they will be more ready to compose their differences with M. Voukitchevitch and accept his leadership, which would seem to have been accepted by all other Radicals. Another feature of the electoral campaign was the rancour that was shown by a section of the Democrats led by Dr. Davidovitch, the head of the Party, against the Prime Minister in spite of the official coalition of the two parties. As far as the election has produced any practical change in the constitution of parties, this is confined to the loss of thirty seats by the Radicals and the gain of twenty-six by the Democrats. Compared with these the reduction of seven in the number of M. Raditch's followers is not important.

Until the composition of the new Government is announced it will not be known whether M. Voukitchevitch has succeeded in uniting four parties which have as yet no programme in common. As evidence of the uncer-

tainty of the political situation, it was stated that the Democrats had been approached with a view to joining the Raditchists and the rest of the Opposition, so that they might claim the mandate to form the new Government. The suggestion does not need to be taken seriously at this stage. The instincts of self-preservation would close up the ranks of the Radicals, and no heterogeneous Ministry in which at least half a dozen groups would have to be represented would be likely to hold its own for long against a solid Radical Opposition. There has been a further proposal that M. Voukitchevitch should dispense with the help of the Slovenes in the Government on account of the difficulty of keeping four different parties together. In the interests of the country it is to be hoped that the Democrats and the Radicals, now on a more equal footing than they were before the election, will provide a working Government, or at least its nucleus; to which the better elements in the other parliamentary groups will rally in support. During the current year Yugoslavia has passed through some anxious moments, and until the people surrendered themselves to their customary orgy of electoral passions there was a growing realization of the need for national solidarity in the face of what was regarded as a foreign menace. When the heat of the electoral campaign has had time to subside, it may still be considered in the more responsible circles that the best defence against threatened dangers from without is to consolidate the internal situation by promoting harmonious co-operation and contentment among the various constituent parts of the State.

Although the Yugoslavs show a tendency to cling more tenaciously to their political fervour than other Balkan peoples in the face of the sterner realities of life that post-War conditions have brought in their train, there are signs even in Yugoslavia of a growing weariness of party strife. The polling last Sunday is reported to have been smaller than usual, but, more important still, there is general recognition that the country needs to devote itself more seriously to economic reconstruction. Until this year all schemes to this end were brought sharply up against the fact that the State had no working capital for the purpose. With the conclusion during the spring of three foreign loans which brought some eight million pounds of new capital into the country the situation was materially improved, and, if for no other reason, political rest is required to enable whatever Government is in power to regulate the expenditure of this money in such a way that it will provide the maximum of relief for immediate needs and at the same time pave the way, by promoting confidence abroad, for further loans. The association of the Democrat Foreign Minister, M. Marinkovitch, with the Radical Prime Minister has considerably strengthened the position of M. Voukitchevitch's Government, and probably no party at this particular moment, not even the volatile M. Raditch, is prepared to throw down any serious challenge to the foreign policy with which M. Marinkovitch has identified himself. In the domain of domestic politics M. Voukitchevitch was confronted with the need of such a comprehensive programme that the Decree for the dissolution of the Skupshtina gave as a reason for the step the impossibility of carrying this programme through in the space of the two years still left of the life of the last Parliament. He is pledged to alterations in the Constitution and in the electoral system, and to a number of economic reforms, chief among which is the introduction of a uniform system of taxation in the place of the different systems still prevailing in the various provinces. As a result of the elections M. Voukitchevitch has clearly strengthened his own position in the Radical party and consequently in the State. The elections, however, have proved conclusively that there is less likelihood than before of a single party's being able to dominate the political situation in Yugoslavia, and for this reason the only solution corresponding to the interests of the country is that by means of an equitable distribution of portfolios in the new Government the Radicals and Democrats should weld themselves together for a period of useful co-operation.

The Near and Middle East*

From Our Own Correspondents.

Cairo, September 10.

Sarwat Pasha's Return.

Sarwat Pasha arrived to-day, and was given a warm reception on landing at Alexandria from the Champolion. His return has been anxiously awaited, since it is hoped that his presence will help to clarify the present very obscure atmosphere hanging over the political situation.

His stay in Egypt will necessarily be short, as he must be back in Paris before October 15, the date at present fixed for the official visit of King Fuad to the President of the French Republic. The Prime Minister originally decided to make a flying visit to Egypt during the King's private stay at Vichy in order to confer with Zaghloul Pasha upon the conversations which he had been carrying on with Sir Austen Chamberlain, and to see to what extent he could count on Wafd support in the conduct of negotiations for a settlement based on the result of the recent London conversations. Sarwat Pasha then intended to slip over again to London and fix up with the Foreign Office the preliminaries for negotiations this winter in Cairo. While possibly he may discuss with leading Egyptians the result of the London conversations, his main preoccupation during the three weeks that he will be in Egypt will be to assure himself of a parliamentary majority for which so far he had been dependent on the goodwill of Zaghloul Pasha.

Out of all the confusion of ideas which have been in circulation from the moment Zaghloul Pasha died, one fact clearly emerges. There is a distinct desire for the continuation of the Coalition. To that extent Sarwat Pasha is assured of support. But everything will depend on the manner in which the Wafd arranges its internal affairs.

While Sarwat Pasha may be expected to use all his influence to conciliate the warring elements in the Wafd, nothing definite can be known in this respect until the end of the month, as the leading Zaghloulists, pending whose arrival decisions had been held up, will not all have reached this country until September 20.

Activities of the Ittehad.

Meanwhile the Wafdist and Liberal Press appears to be much exercised over the coincidence between the departure for France of Ali Maher Pasha and Mahmud Abul Nasr Bey, Vice-President and Secretary, respectively, of the

Ittehad Party, and an application for further extension of leave received by the Ministry of Foreign Affairs from Hassan Nashat Pasha. The latter has applied on grounds of ill-health, while the Ittehad Party explains that the departure of its two members is due to medical advice to take an immediate cure. The Wafdist and Liberal Press declines to believe either of these reasons and prefers to attribute to these two actions political significance in the sense that they interpret them as foreshadowing a recrudescence of Palace activity in the political arena. And they are indulging in a campaign the net result of which would appear to be to rekindle in the public mind interest in a body, one can scarcely call it a political party, which for all practical purposes had passed into oblivion. Whether these fears are justified it is not possible at present to say, but this outburst is an instructive commentary on the state of mind which has come over Wafd circles since the death of Zaghloul Pasha and illustrates how uncertain they feel of their own position.

The Muled El Nebi.

On Wednesday last there took place the annual celebration of the *Muled El Nebi* (Birthday of the Prophet). It had at first been intended to abandon the celebration this year in consequence of the death of Zaghloul Pasha, in the same manner as the "Cutting of the Khalig"—due the end of last month and marking the completion of the Nile flood—has been abandoned. But as the *Muled El Nebi* has such a popular character, it was decided not to interfere but to suppress the fireworks, and so Nessim Pasha, representing the King, and the Prime Minister and his colleagues duly attended the reading of the Koran in the official tent at Abbassia.

It is not at all improbable that this may be the last celebration of the Birthday of the Prophet in its present form. Always a festival in which the populace has taken part, the *Muled El Nebi* has tended more and more to lose its religious character, to acquire features of a more or less vulgar nature, and to perpetuate customs which had been recognised as no longer in keeping with the age and had been suppressed in other connexions. It has for some time been felt undignified for the King and the Cabinet to take such a prominent part in a celebration of this description, and as the land on which the *Muled* is held is required for other purposes and another site must be found, it is proposed to take this opportunity drastically to reform the programme.

In place of the popular fair, which hitherto has been held on this occasion and has given rise to the practices of which so much complaint has been made, it is proposed to have a review of the Egyptian Army and an official reception in the Ezbekiah Gardens accompanied by fireworks and distribution of alms to the poor. The question is being energetically dealt with by Aly Pasha Gamal Eddine, the Under-Secretary of State for the Interior, who, if successful in his efforts, will thereby rescue one of the greatest festivals of the Muslim calendar from the contamination to which it had fallen victim and reclothe it with the dignity and respect which the good name of Islam demands.

Ljubljana, September 14.

The Yugoslav Elections.

On Sunday, September 11, general elections for the National Skupshtina took place throughout Yugoslavia.

The result of these elections was awaited with the keenest interest, because upon them depended who was henceforth to set the course of the country's internal policy, and—more especially—what were to be the future relations between the various factions in the Radical Party.

The elections were run by the Coalition Parties, viz., a section of the Radicals, and the Democrats in alliance with the Bosnian Muslims. The Government also favoured the Slovene People's Party under Dr. Anton Koroshetz. The general situation was complicated by the fact that the Government group of the Radical Party under M. Velya Voukitchevitch had to reckon with the keen hostility of another powerful group within the same party, consisting of the more intimate political associates and friends of the late Nikola Pashitch and therefore usually referred to as the *Pashichevchi*. The Pashitchist extremists sharply attacked the Government Radicals and in most cases put forward opposition candidates of their own. Before the elections it was an open question which of these two groups counted the greater number of adherents in the country. The Pashitchists controlled the Central Committee of the Party; but the Government controlled the administrative machine and, moreover, asserted that they had a mandate for eventual fresh elections, if they were to fail to secure a majority in these.

Among the Democrats, too—and, by the way, the present Minister for Foreign Affairs, Dr. Voya Marinkovitch, belongs to that party—there was internal discord, although it did not degenerate into an open quarrel. Dr. Liuba Davidovitch, hitherto leader of the Party, who is

not a member of the Cabinet, however, frequently attacked the Government, especially the Radical factor in it, insisting on repeated occasions that he was in no wise satisfied with the composition of the Government, nor with its methods. The latter he stigmatised as tyrannous and anti-democratic. All the same, the Democrat members of the Government did not feel called upon to resign.

Of the Opposition Parties the most important used to be the Independent Democrats under the leadership of M. Svetozar Pribitchevitch, and the Croatian Peasant Party under M. Stepan Raditch.

There were reasons why the political public should take special interest in the outcome of these elections. Everybody knew that the constitution of the present Government no less than the dissolution of the late Parliament sprang from a desire to relegate the political leaders hitherto in power to the background and to entrust the helm to younger men unhampered by old commitments. This desire rises in the main from the fact that in Yugoslavia as elsewhere, parliamentarism has fallen somewhat into discredit; it is too dilatory, and achieves far too little.

The results of Sunday's election are now known. The Radicals have secured 111 mandates, all told, whereas before they held 140 seats. They have, therefore, lost considerably. Still more important is the detail that the Government group of the Radical Party gained an absolute victory over the Pashitchists. Of course it is impossible at this moment to say in all cases which of the deputies elected will side with the one group and which with the other, because the difference between the two factions was not sufficiently clear in all constituencies, and because we have also a remnant of the so-called Central group, at one time the nucleus of the party, most of whose members have by now joined the Voukitchevitch group. In Government circles we are told that among the Radicals elected there were only 17 Pashitchists. What is more important is that the leaders of the Pashitchists have failed to secure election, among them the late President of the Skupshtina, M. Marko Trifkovitch.

The other Coalition Party, the Democrats, who had 36 deputies in the late Parliament, have scored 63 mandates. This means a considerable gain, and they are now the strongest party but one in Parliament. Besides this, they form a special unit, called the Democratic Alliance, with the Bosnian Muslims, who have increased their number of mandates from 15 to 16.

A third party which has already arrived at an agreement with the present Coalition for entry into the Government is Dr. Koroshetz's Slovene People's Party, which has maintained its strength in Slovenia and returns to Parliament with 20 mandates, the same number as before. With its own members we much include the one representative of the Croatian People's Party elected in Dalmatia, who will most certainly join the Club of the Koroshetz Party.

Of the Opposition Parties, that of Stepan Raditch emerged from the election with 60 mandates, whereas it was represented by 67 deputies in the late Skupshtina. On the face of it, this loss does not appear so serious. But if we consider the details of the party's election returns, it appears that at the last elections, in 1925, the Raditch Party scored 554,302 votes. Last Sunday, only 374,290 electoral balls were dropped into its boxes. The party, therefore, was 180,012 votes to the bad, or almost 33 per cent. This loss did not make itself felt more acutely because of the electoral system—a complicated type of Proportional Representation—which greatly favours large parties. The Raditchists lost ground especially in the urban constituencies. Zagreb, the chief town of Croatia, returned two of Raditch's opponents, Dr. Ante Trumbitch and Dr. Pavelitch, both members of the Croatian Federalist Party. To M. Raditch's Club must be added M. Ivan Pucelye, returned by the Slovene Agrarians.

The other important party in the Opposition, the Independent Democrats under Svetozar Pribitchevitch, have

Calcutta, Delhi, Simla, Lahore, Rawal
Pindi and Murree

again scored 23 mandates, the same number as last time. But according to the number of votes recorded for them, they have made considerable progress. In 1925 they scored 117,793 votes, and last Sunday 202,127. This gain does not show in the number of mandates, owing to their being in every case matched against numerically strong parties.

The remaining smaller parties have in the main maintained their position. The Socialists have begun to consolidate after the Communist crisis, and return to the Skupshtina with 1 deputy, who was returned in Slovenia. The new Chamber is composed as follows, so far as is known up to date:—111 Radicals (including some 17 Pashitchists); 63 Democrats; 23 Independent Democrats; 16 Muslims; 60 Raditchists; 20 Slovene People's Party; 1 Croatian People's Party; 9 Agrarians; 6 Germans; Croatian Block, 2; 1 Montenegrin Federalist; 1 Slovene Peasant's Party; 1 Socialist; and 1 Magyar.

The Government may well be satisfied with the outcome of the elections. Within the Radical Party, its own group came out victorious. Even if the Pashitchists choose to secede—and this is by no means certain—it will still control a reliable majority, so long as the Democratic Alliance remains loyal to it. What is not certain is whether there will not be essential personal changes in the Government, and in connexion with this it should be noted that the personal element plays a very important part just now in the political life of Belgrade.

Jerusalem, September 10.

The Director of Antiquities.

The return of Mr. E. T. Richmond as Director of the Department of Antiquities is welcome; there are comparatively few officials who can be considered experts, or even interested, in the "native cultural" surroundings in Palestine. Palestine is lucky in the choice; the only ancient art in Palestine worthy of conservation is Arab art, and the Dome of the Rock is its greatest exemplar and Mr. Richmond is the Dome of the Rock's profoundest student.

It is impossible to say whether the earthquake or the news of Mr. Richmond's appointment was the greater shock to the Jew—they reached Jerusalem within a day or two of each other. The Jews remember Mr. Richmond during O.E.T.A. days and the Samuel régime as "political officer" and as one who, to their minds, overdid his sympathy with Palestinian Arab ideals to such a degree as to be hostile to Zionism; and with his return they see a recrudescence of organised Arab hostility to the British policy of the Jewish National Home—hostility which the Jews are honestly convinced was engineered by certain British residents, officials and non-officials.

The sanest of the local Hebrew papers, *Ha-Aretz*, even voiced its conviction that the anti-Jewish malice in the new Director of Antiquities was such that he could be expected so to manipulate the development of Palestinian archaeological research as to minimize the importance of Jewish historical remains and even to argue from the absence of Jewish remains the absence of present-day Jewish claims to their national home! But the local Labour Hebrew daily, *Davar*, in a spirit of heroic faith challenged even Mr. Richmond to wipe out from Palestine the traces of Israel's past glories!

The sanest of the local Hebrew papers, *Ha-Aretz*, even voiced its conviction that the anti-Jewish malice in the new Director of Antiquities was such that he could be expected so to manipulate the development of Palestinian archaeological research as to minimize the importance of Jewish historical remains and even to argue from the absence of Jewish remains the absence of present-day Jewish claims to their national home! But the local Labour Hebrew daily, *Davar*, in a spirit of heroic faith challenged even Mr. Richmond to wipe out from Palestine the traces of Israel's past glories!

Effects of the Earthquake.

It is not possible to sum up the results of the earthquake in terms of economic loss or human distress; general statements would only exaggerate or minimize. With notable exceptions the destroyed property was inferior mud-pie architecture and can be replaced at no great cost. But (and it is not to be wondered at) local authorities would like to rebuild as solidly as possible; hence generous estimates as to the cost of reconstruction; the mayor of Nablus, for example, welcomed the visit of the High Commissioner with the request for a long-period loan of £150,000, and the Mayor of Hebron thinks that about twice as much would make good the damage in his town! Certain supervision is to be exercised over rebuilding, yet it is to be hoped that the combined supervision of the Departments of Public Works and Public Health will not be so overwhelming as to destroy the more characteristic Palestinian type of building—which makes no pretence to be either staunch or sanitary, yet is not displeasing.

Comparatively the worst sufferer in the earthquake was the village of Er-Reineh. Er-Reineh is one and a half miles north-east of Nazareth and is one of the sites identified with the Biblical Cana of Galilee. It is a poor village; the local proverb is "All Reineh for a couple of figs." The earthquake left standing only one house in ten. Er-Reineh is to be one of the first experiments in reconstruction. Lord Plumer visited the village in the course of his tour among affected areas, and (so it is reported) announced that Er-Reineh is to be rebuilt according to the most up-to-date fashion of village "town planning." The site was to be shifted to the near-by eastern hill; every family would have 600 square yards of land and a house built according to the latest architectural and hygienic requirements; the main village street would be 14 metres wide and the side-streets 8 metres. A long period loan would be given to every one whose house had suffered from the shock. Lord Plumer further announced that this scheme would be put into force immediately and that he was going to visit the place again in a month's time to see the rebuilt village! This looks ominously like the beginning of the end for Palestine's highly picturesque though squalid mud villages.

Mark Telegrams "Via **INDO**" (free)

Immigration Restrictions.

The newly applied immigration restrictions reduce Jewish immigrants to a minimum—none but wives and infant children of residents, and the “really” wealthy. There is sure to be a bitter outcry from the Jews—variations on the theme that “it is easier for a lunatic leper to pass through Ellis Island than for a Jew to enter into his national Home!” But it is difficult to see what else the Palestine Government could do. For over a year Jewish emigration has exceeded immigration by two to one (though this fact should not be over-emphasized since totals are quite small, say 200 or 250 emigrants a month), and Zionist funds have been heavily drawn upon in doles for the thousands of unemployed. To let in more “non-independent employables” would be to sin against the present principle of Palestine immigration, which is to admit as many as the country can possibly support.

Some soreness is also felt at the new instructions which are reported in the sense that the capitalist can be admitted as an immigrant only if he is “really” wealthy, whereas in the past “independent means” (defined as a minimum capital of £500) had been enough. The instructions to the immigration officials are, however, to the effect that permits should be given only to such people of means who are likely “truly” to increase the wealth of the country, e.g., a dollar-millionaire moneylender might be refused and the industrious poultry farmer with his two hundred pound capital and determination to reduce the price of eggs might be welcomed.

Teheran, September 2.

The Shah.

The Shah has gone on a trip to Azerbaijan, and arrived in Tabriz on August 31, after spending a night each in Kazvin and Zenjan. With his love for thoroughness he likes to obtain first-hand information on conditions prevailing in the various parts of his kingdom, most of which he has now visited. The Shaikh of Muhammarah and Ghavam ul Mulk, the Kashgai chief, are travelling in His Majesty's suite. Reza Shah, as is well known, is a strict disciplinarian, and the other morning he caused no little stir and very considerable consternation in official circles by paying a surprise visit to one or two Ministries at seven in the morning, the hour at which the staffs are supposed to commence work, and found hardly a single employee had turned up. This action of the Shah, which is much belauded in the Press, should have a salutary effect on the hitherto easy-going Government officials, who now know that they are liable to be pounced on at odd moments by the Head of the State himself. The Shah is a great believer in early rising; he himself is said to rise at four in the morning to listen to reports and attend to affairs of State, and since he re-organised the Army the troops have had to go to bed early and get up early. Yesterday I happened to hear the *réveillé*; it was 3.15 a.m., pitch dark, long before daylight had started to appear, and surely a stranger *réveillé* was never adopted by an Eastern army, the familiar strains of the war-time song: “Over there—Over there,” being blared out half a dozen times in quick repetition in the drill square barracks, every note being distinctly audible in most parts of the town in the absolute stillness of the night.

The American Advisers.

As I mentioned in my last letter the appointment of a Persian in the person of the Prime Minister, Mukhberes Saltaneh, as successor to Dr. Millspaugh, Administrator-General of the Finances, caused quite a flutter among the other financial advisers, and a few days after the latter's departure they had an interview with the Premier, to find out just how they stood, and consented to carry on, at least for the time being. Meanwhile more Americans are coming out for the railways, and in addition to the twelve experts and engineers already at work, and fourteen more shortly leaving the States, the Majliss recently passed a bill authorising the engagement of twenty-two more engineers and twelve foremen, from seven different countries, America, Germany, France, Holland, Italy, Belgium and Switzerland. Needless to say, none is coming from England or Russia.

The Russo-Persian Commercial Treaty.

The papers state that agreement has been reached on most subjects including trade, the Caspian Sea Fisheries, the port of Pahlavi (Enzeli), the question of Consulates, and the Customs tariff, and that only a few minor points remain to be settled. If this is so, we may soon expect to hear of the conclusion and signature of the treaty, which will do much to relieve the economic situation in North Persia.

Cholera.

We are supposed to be due here for cholera every eleven or twelve years. The last epidemic was in 1904, but sanitary and medical conditions have improved much since then, and although there have been scares once or twice since, they have fortunately never materialised. This year the outbreak has been confined to a few places on the Persian Gulf, Abadan, Ahwaz, Muhammarah and Basra, where it is already decreasing, according to the latest reports. Strict quarantine has been instituted by the Persian Government and every precaution taken at the Mesopotamian frontier, and no cases have been reported in this part of the country.

The Imperial Bank.

Operations in connexion with the building of modern new premises for the Imperial Bank of Persia are proceeding apace, but it is sad to see half of the delightful shady garden with its old trees laid waste and now resembling a brick-kiln or stone-quarry! The new building will naturally take some time to erect, and the present Bank, whose typically Persian façade, standing right in the centre of the town at the end of the principal square, makes it, in the opinion of many, one of the most imposing buildings in the capital, will not be demolished until the new one is completed.

The Weather.

The weather has cooled down delightfully, but we have not had a drop of rain for some months, not even the occasional sharp showers we are accustomed to during the summer, which are so refreshing. To make matters worse there has been a great shortage of water this year, as not enough snow fell last winter, and the roads and trees are consequently very dusty and dirty and the gardens have suffered considerably. We are, therefore, all looking forward eagerly to the first rains which should come some time this month.

A New Party.

Recently has sprung up a new party, the *Iran-i-No* (new Persia) under the auspices and patronage of the Shah, and most of the influential people and Government officials have joined it. Its aims are apparently to combat every element, whether foreign or otherwise, standing in the way of radical reform, and to spread uprightness, devotion to duty and love of country.

TIRANA.

Albania's Latest Capital.

By H. C. LUKE, C.M.G.

The present generation of men has seen what has never been seen before in the same measure, namely, the coming to life (in some cases the resurrection) of a number of independent States, not by the processes of evolution but by a stroke of the pen. But while the majority of these new or revived States have had, as in Warsaw, Tiflis, Riga, Baku, and even Erivan, an obvious capital, with Albania it has been otherwise. Here—no one town having overwhelming claims—so many have been tried that, were it not for the alliterative and much-discussed Treaty, most people would probably be unaware that for the last four or five years Albania's capital has been situated at Tirana.

For a country that has not completed fifteen years of independent existence, Albania has had a singularly varied experience of capitals. Its first administration—the Provisional Government of Ismail Kemal Bey—made its headquarters at Valona; the Governments of Essad Pasha Toptani, which preceded and succeeded that of Mpret William, were established at Durazzo, which was likewise the capital of the Mpret during his six troubled months of reign. Scutari was the seat of the "International Commission of Control," which also guided for a while the destinies of the infant State of Sqipnia; while at Korcha (Koritz) in the south there functioned in 1916-17 the "Autonomous Province" of the same name. The new (and, it may be hoped, the more settled) era in independent Albania's brief but uneasy life, which followed the end of the Great War, saw yet another change of capitals: the extremities and the seaboard alike were left in favour of a centrally situated locality half-way between the northern and southern frontiers, in the fertile lowlands which intervene between the coast and the eastern ranges.

The Albanian Government has not had the advantage, as have the Austrian Succession States, of inheriting railways, roads, public buildings and the ordinary apparatus of a territorial "going concern." The Turks, although they employed during the centuries of their rule in Albania a long succession of Albanian administrators and soldiers, many of whom conferred distinction on the Empire they served, gave Albania little or nothing in return; Albania is to-day almost the only independent country in the world without railways (even little Montenegro had, before the War, its railway from Antivari to Virbazar), although steps are being taken to remedy that dubious distinction by the construction of a line from Tirana to its port of Durazzo. The biggest building in the country is the former Vali's Konak at Scutari, which now houses the Prefect of Albania's northernmost province, the military and gendarmerie administration and the Mayor. Roads are still few and bad, and the air service, which regularly connects Tirana with Scutari, Valona and Korcha, provides a much-needed complement to the necessarily agile Ford.

It is no exaggeration to say that Tirana, a Muslim village lying in a predominantly Muslim region, consists at the moment of a bazaar, four mosques (of the jolly Bosnian type, gaily adorned on the outside with frescoes of flowers and fruit, including even the tendentious grapes), several barracks and twelve Legations (those of Great Britain and Italy alone still remain at Durazzo). As Tirana's population is no more than about 12,000, it has thus one Legation to every 1,000 inhabitants, a record which I imagine no other capital can emulate or even approach, now that Cettinje, the only possible competitor in this respect, has

ceased to be the capital of an independent country. Accommodation and social amenities for the 140 odd members of the diplomatic world are, as it may be imagined, for the moment somewhat limited; but, thanks to the enterprise of Colonel Stirling, the Adviser to the Minister of the Interior, and others, thanks also to the practical encouragement of the President, Ahmed Bey Zogu, there has recently been completed a Sports Club, at which the ladies of the Turkish Legation are constantly to be seen playing tennis, and Albanians (an untravelling people so far as Western Europe is concerned) are brought into social contact with the members of the foreign colonies. Moreover, hotels of a modest kind are rising concomitantly with the Legations, one of them, indeed, so up to date that, although the ground floor is still only framework, the first (and only other) storey is finished and functioning, quite like the American skyscraper, which completes its flats not in ascending order but in the order in which they are leased. But Tirana, mere village that it has been hitherto, is rapidly undergoing the process which I may perhaps be allowed to call Angorisation. Ahmed Zogu is nothing if not provident, and his determination is to look to the future rather than to the present, and to make of Tirana an ideal modern capital so far as the resources of his State will allow. So new roads are being aligned, old shanties being pulled down to enable this to be done, avenues of trees are being planted, public gardens laid out; sites reserved for ultimate public buildings. Those of the moment are temporary expedients of an unpretentious kind; and nothing can be more unassuming than the Presidential office building and the villa adjoining it, in which Ahmed Zogu resides. Opposite these two modest houses dating from Turkish times is the more substantial building occupied by the President's mother and his four sisters; between them a miniature public garden is making its début; to the side is one of Tirana's brightly painted little mosques, flanked by the equally attractive *türbé* of some Muslim worthy. Apropos of Muslim worthies, I was struck by the resemblance of the Albanian Muslims (originally, like their Bosnian and Cretan co-religionists, Christians who embraced Islam from political expediency), to their Georgian fellow-mountaineers, on whom their religion likewise sits somewhat lightly. If Muslim Georgians can twit their Christian compatriots with having remained Christians on account of their fondness for pork and wine, so can the Christians of Tirana smile when, during Ramadan, Muslim restaurants conduct "business as usual"—but with drawn curtains. A lofty stone tower erected by some Turkish Pasha of the seventeenth or eighteenth century is the outstanding architectural feature of the old, the recently built Parliament House that of the new Tirana; while between the two is the market place, filled on Thursdays with picturesque men and women and their equally picturesque wares, but also the scene at times of a less attractive spectacle. For it is here that malefactors condemned to death are hanged and their bodies gibbeted on the market days *pour décourager les autres*.

Mention of the market place suggests the thought of money, which in Albania has become a matter of singular complexity. In consequence of the important position in Albania held economically and commercially by Austria before the War, and despite the introduction of a new monetary system, popular reckoning knows only the Austrian crown—not the depreciated paper crown recently converted in Austria at the rate of 10,000 to the Austrian shilling, but the silver crown—with this difference, that it has now only the intrinsic value of its silver and is worth 62½ to the £ instead of 24 as before the War. I have learned since visiting Albania a thing which I had long wanted to know, namely, what had become of the pre-War silver of the Latin Union and Central and Eastern Europe. It has all—such of it as has not been melted down—found a refuge in Albania, where, whether it be franc, lira, drachma, leu, perper, dinar or lev, it figures with the Austrian coins under the generic name of crown. Five,

two, one-and-half crown or franc pieces, or their equivalents, here rejoice the eye wearied of sordid paper and the yet more sordid base metal, while it is historically pleasant to jingle once more in one's pocket a silver portrait gallery ranging from old King Nicholas and Francis Joseph backward through King Alexander Obrenovitch, Prince Milan IV., the Kings of Sardinia and the two Sicilies, Pio Nono and the Emperor Ferdinand to Napoleon, King of Italy, and Bonaparte, First Consul. Albania is also full of an equally heterogeneous accumulation of gold coins, known, irrespective of their provenance, as Napoleons; while the new coinage, already referred to, is also on a gold basis with the Albanian gold francs as its unit. Side by side with the note issue of the National Bank of Albania—an institution under Italian control—has come the new coinage. In both there are pieces of 100 and 20 francs, the former bearing, as does the five-franc piece in silver, the portrait of Ahmed Zogu. In silver there is also a two-franc piece, of which more anon. There are subsidiary coins in nickel and bronze bearing the designation of qintals and leks, twenty qintals equalling one lek and five leks equalling one franc gold. The lek takes its name from (and bears the image of) that well-known Albanian hero, Alexander the Great of Macedon, lek being the Sqipetar form of Alexander. But the twenty-franc and two-franc pieces have an interest other than the numismatic or financial. The agreement between the Albanian Government and the National Bank of Albania contains no clause whereby the former has the right to approve the designs of the coins; the latter consequently holds that it has *carte blanche* in the matter. So the twenty-franc piece recently descended upon an astonished Albania bearing, indeed, upon the obverse the head of Skanderbeg, but upon the reverse, instead of Skanderbeg's double-headed eagle (the emblem of the Republic), an unmistakable lion of S. Mark. Similarly the two-franc piece displays a patently Roman eagle, who has certainly never had more heads than one. So, pending an *éclaircissement* of the situation, these two coins are not legal tender for the payment of Albanian taxes. In transliteration, too, the Italian engravers have gone their own way. The President's name appears as "Amet," that of his State as "Shqipni," where Albanians would normally transliterate "Ahmed," and one of the two gunboats which compose the Albanian Navy displays, as anyone in Durazzo may see, the name of "Sqipnia."

His features reproduced for his people on coins and on the stamps, upon the walls of every shop in the country, above the Speaker's seat in the Chamber of Deputies (where he figures in oils, wearing the two Albanian Orders of the Bessa and Skanderbeg), Ahmed Zogu is a President whose initials are symbolical of his permeation of the affairs of his country. It is literally the case that everything in Albanian from A to Z comes under his notice and is vitalised by his energy; as those must realise who have seen in his Aide-de-Camp's office the printed time-table of his daily routine, he is the hardest worked man in Albania. And he has accomplished what he has at an age which recalls the days of Pitt: he is now only thirty-four and has been in power, either as Prime Minister or as President, for the last four years, except for the brief interregnum of Mgr. Fan (more properly Theophanes) Noli.

"Albania," wrote Gibbon, "is a country of which less is known than the interior of America"; and unknown and unlike other countries it has remained. It is a country whose President has his effigy on stamps and coins and works fourteen hours a day; a country where, until recently, no one below the social rank of a Bey was allowed to eat rice; where the commercial value of a cock is assessed by the length of his crow; where alone in the world the Catholic clergy, from archbishop to the merest Franciscan novice, wear bristling moustaches (but no beards), as their people would not respect them if they were clean shaven. And not the least interesting feature of the modern Albania is the conversion of Tirana from a sleepy Muslim country village to a capital, which is one of the political touchstones of Europe.

CORRESPONDENCE.

The columns of THE NEAR EAST AND INDIA are open for the discussion of subjects of general interest to its readers. The publication of such letters must not be taken, however, as indicating that the views expressed by the writers are those of THE NEAR EAST AND INDIA.

PROFESSOR TOYNBEE'S SYSTEM.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—May I explain the points of spelling to which you draw attention in your kind review of my volume on the Islamic World?

The D in "Riyad" stands for the Arabic letter Dad, the pronunciation of which, in Arabic sometimes approaches our D and sometimes our Z. Scholars put a dot under it to distinguish it from D=Dal. The difference of vowel in shaykh—sheykh, etc., arises from the different vowel systems of Arabic and Turkish, shaykh standing for the word in Arabic, sheykh for the word in Turkish.

Sometimes it is not easy to decide which language to use in transcribing a name. Take the case of a Turk settled in Egypt. Shall one transcribe him Serwet, as he would be called in his own family circle, or Tharwat, as he would be called by the Arabic-speaking nation of which he is Prime Minister?

Every system of transliteration is open to objections, and to have no system at all means having no index.

The basis of my system is always to use the same Latin letter for transliterating a particular Arabic letter in transcription from a given Oriental language, so as to get a consistent correspondence between Arabic letter and Latin letter for each Oriental language.

I have set out these correspondences in two columns, for Arabic and Turkish respectively, in a table at the beginning of the book.—I am, etc.,

ARNOLD J. TOYNBEE.

Castle Howard, York, September 1.

M. Basile Lappas, Greek Vice-Consul in Cairo, has been promoted to the rank of Vice-Consul of the first class.

King Fuad has conferred the Grand Cordon of the Order of Ismail upon the Marchese Paterno di Manchi, Italian Minister to Egypt.

Mr. Sydney A. Armitage-Smith, Secretary-General of the Reparation Commission, arrived recently in Bratislava with the intention of making a tour in Slovakia.

Three earthquake shocks of medium strength were felt in Belgrade at 2.46 p.m. on September 17. The centre of the disturbance was about 50 miles south of the region of Mount Roudnik.

M. Const. Negroponte, the new Greek Vice-Consul in Cairo, arrived in Egypt at the beginning of September from Athens, accompanied by Mme. Negroponte, and has assumed his duties.

Captain Turle, British naval organiser in Greece, has submitted to the Ministry of Marine his report on the last exercises, stating that he is fully satisfied with the progress of the Greek Navy.

Mr. W. Allard, late of the Irrigation Department of the Egyptian Ministry of Public Works, has been appointed Technical Secretary of the newly-formed Ministry of Agriculture and Irrigation in Iraq, to reside in Baghdad.

Yurenief, until recently Soviet Envoy in Persia, has been appointed Soviet Minister to Austria. Stark, the Soviet Envoy to Afghanistan, after a few weeks' visit to Moscow, last week left Tashkent by aeroplane for Kabul.

A bomb exploded on September 16 in the New Belgrade Hotel, in the little town of Ghevgheli, on the Serbo-Greek frontier, injuring seven people. The hotel was set alight, and the flames spread to two other hotels. At midnight all three buildings were burning fiercely.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

Further particulars may be obtained of

E. H. Keeling,
Hon. Sec.

74, Grosvenor Street, W.1.

PERSONAL AND GENERAL

TO-DAY
September 22, 1927 (New Style).
September 9, 1927 (Old Style).
Rabia I, 25, 1346 A.H., of the Muslim Calendar.
Ellul 25, 5687, of the Jewish Calendar.

Abdul Aziz al Mudhaffar, Mutasarrif of Hillah, arrived this week in London, where he intends to make a short stay.

Rev. Samuel M. Zwemer, D.D., Editor of *The Moslem World*, will be spending the autumn and winter months in India.

Lord Lamington, who returned to London last week after his visit to Saughton Grange, left again for Lamington, Lancashire.

Muzahim Beg Amin Pachachi, Iraq Diplomat Agent in London, has returned from Aix-les-Bains, where he has been staying with King Faisal of Iraq.

Dr. Shafaat Ahmad Khan, Professor of Modern History in the University of Allahabad and member of the United Provinces Legislature, arrived last week in London.

Sir Murray Coutts-Trotter was among the passengers who left London on September 15, by the P. and O. special train, to join the s.s. Macedonia at Marseilles for Bombay.

Sir Ronald Ross, Director-in-Chief of the Ross Institute and Hospital for Tropical Diseases, Putney Heath, who has been seriously ill, is now making satisfactory progress.

King Boris of Bulgaria, attended by Lt.-Col. Draganoff and Dr. Handjieff, arrived in London on September 16 from Balmoral Castle, where he had been spending two days with their Majesties the King and Queen. During his stay in London the King visited Westminster Abbey and laid a wreath on the grave of the Unknown Warrior. He left for the Continent on September 17.

His Majesty the King has approved of the following appointments:

Colonel (Colonel Commandant temporary) (Honorary Brigadier-General) C. H. Foott, C.B., C.M.G., Staff Corps, Australian Military Forces, to be Additional Aide-de-Camp to the King, in succession to Colonel (Colonel on the Staff temporary) (Honorary Brigadier-General) W. A. Coxon, C.B., C.M.G., D.S.O., Staff Corps, Australian Military Forces, who has been promoted to the rank of Major-General. On the outbreak of the European War Colonel Foott was appointed Deputy Assistant Quartermaster-General, 2nd London Division (T.F.). He joined the Australian Imperial Forces in Egypt in the following year, and before the close of hostilities saw service also in Gallipoli and France. He was mentioned in despatches seven times.

Major-General Sir Menus W. O'Keeffe, K.C.M.G., C.B., LL.D., is appointed Colonel Commandant, Royal Army Medical Corps, in succession to Lieut.-General Sir Alfred Keogh, G.C.B., G.C.V.O., C.H., LL.D. M.D., F.R.C.P., F.R.C.S. Major-General Sir Menus William O'Keeffe, who was born in 1859, was appointed Inspector of Medical Services to the War Office in 1910. His war services include the Egyptian campaign of 1882, for which he was awarded the medal with clasp and the bronze star;

the Tirah and the Mohmund campaigns; and the European War, the last of which brought him mention in despatches seven times. He is the holder of the Legion of Honour and the 1st Class Order of St. Anne with sword.

NEWS IN BRIEF.

The Governor of Samos has been recalled by the Greek Government.

M. Papadaki, Greek Consul General in Cairo, has been transferred to another post.

The Manège Theatre in Belgrade was destroyed by fire, the damage being estimated at over 3,000,000 dinars (about £11,000).

On September 17 the members of Wycliffe Hall, Oxford, returned from their Jubilee Term in Palestine, after an absence of nine weeks.

The new Session of the Albanian Parliament was opened on September 15, when Ahmed Beg Zogu, President of the Albanian Republic, addressed a joint meeting of the Senate and the Chamber of Deputies, reviewing the domestic and external situation during the past year.

Five airmen, all novices, were drowned on September 15 when a machine from the school of aviation at Hertzeg Novi, near the Bocche di Cattaro, crashed into the Adriatic. The crew of a ship in the neighbourhood rushed to the rescue, but were only able to recover the bodies of the airmen.

On October 1 the first Greek public school conducted on English lines will be opened in the island of Spetsai—a fashionable summer resort of Athenians. Mr. Eric Sloman, an old Cambridge graduate and a former master at Rugby, has been appointed headmaster of the school.

The Hellenic Government is reported to view with disfavour the proposal made by the Latins to establish a Latin residential See at Salonika, which is at present the seat of the Apostolic Vicariate of Macedonia for the Uniat Bulgarians (of the Byzantine Rite) and gives its name to provide a title for Mgr. Raffaello Rossi, Titular Bishop of Thessalonica since 1923.

A serious fire in the store-sheds of the Palestine Railways Administration near the Central Station at Haifa on September 14 did damage estimated at £25,000 to the buildings and rolling-stock of the Palestine and Hijaz Railways.

As the result of an accident at Hinaidi, Iraq, to a Bristol fighter machine of No. 30 (Bombing) Squadron, Iraq, on September 15, Wing Commander Arthur Bruce Gaskell, D.S.C., the pilot of the aircraft, was killed, and 261810 Leading Aircraftsman William Ronald Kittow-Roberts died of injuries.

The *Times* Cairo Correspondent reports that a Shakespeare company, probably directed by Mr. Robert Atkins, will give 24 performances in the Royal Opera House in Cairo under the auspices of the Egyptian Government. This innovation is due to the initiative of Aly Pasha Shamsy, Egyptian Minister of Education, who has guaranteed the expenses from the new credit for the promotion of fine arts voted by Parliament last session. The Shakespeare season is expected to begin early in November.

Lady Ramsay, wife of Professor Sir William Mitchell Ramsay, had died in Edinburgh, at the age of 75 years. She had just returned with her husband from his usual annual expedition in Asia Minor. Her marriage with Sir William took place in 1878, and she was a constant companion of her husband on his archaeological expeditions in Asia Minor. Sir William and Lady Ramsay in 1914 discovered the fragments of one of the two copies of the history written by Augustus on his own exploits. Lady Ramsay was the author of "Everyday Life in Turkey" and "The Romance of Elisavet."

Longevity in Bulgaria.

The Bulgarians have long enjoyed a reputation for longevity. They have also—possibly without knowing it—been entitled to a reputation for a Statistical Department that would be a credit to many older and more advanced States. The high standard of the latter is largely due to its late Director, M. Kyril Popoff; but it would seem that his good work is to be carried on by competent hands. The subject of longevity has been engaging the attention of the Department, and some interesting extracts from its findings are given in a letter to the *Morgenblatt* of Zagreb.

The Bulgarian peasant is not always sure of his age, he often does not know even the year of his birth, and it is matter of pride with the old people to make themselves out as old as possible. Consequently the earlier statistics gave the number of old people in Bulgaria as much higher than subsequent returns capable of being checked. The census of December 30, 1900, showed 9,934 people of both sexes of between 90 and 99 years, and 2,719 of over 100 years. After the census the oldest people were required to produce what evidence they could of their age, and as a result of this revision, the numbers of those between 90 and 99 fell to 7,577, and of those over 100 to 2,139. These returns gave 58 centenarians to every 100,000 inhabitants. Even this figure is very high, and is approached by few States. In Serbia the number is 55, in Greece 15, Portugal 7, Estonia, Spain, Hungary, Norway 1. In Belgium, Denmark, Finland, Holland, Switzerland and Czechoslovakia scarcely one inhabitant in a million reaches 100 years of age. Higher coefficients exist in some extra-European countries, as, for instance, in Columbia 33, Japan 34, Cuba 23, Brazil 22; while the United States has only 4 and Canada only 2 centenarians for every 100,000 inhabitants. The figures for people over 90 years of age per 100,000 of the population are: Austria 20, England 41, Roumania 64, Switzerland 90, Egypt 372. In Bulgaria in 1920 there were 268 people between 90 and 99 years of age per 100,000 inhabitants.

But Bulgarian statistics delved deeper. The municipal doctors were required on December 31, 1926, to cross-examine all people over 90 years of age on the following points:—1. Pedigree. 2. Manner of life. 3. Food and domestic state. 4. Character and temperament. 5. Physical constitution. 6. Intellectual state. 7. Surrounding conditions. The necessary data were collected, and each dossier was transmitted with a photograph of the person interrogated to the Statistical Department. The results so far established show: 1. A considerable reduction in the number of people alleged to be over 100 years old. Only between 7 and 8 per cent. are accepted. 2. The majority of long-lived people belong to families which are known of old to have been long-lived. All are characterised by a placidity of character and a contemplative bearing. All are of a friendly disposition, cheerful, fond of singing in their youth, but also accustomed to sing in their old age. As a rule they play some sort of instrument, drink no alcoholic drinks or only such as are prepared in their own homes, and these only in small quantities and only at meal-times; they do not smoke, eat mainly vegetable food and milk products, usually sour milk and butter milk, which constitutes the main item of nourishment in spring and summer. Meat they have very seldom or not at all. They are all industrious, early risers, sleep uncovered as long as they possibly can do so. They usually wear warm clothing—the peasant skin coat is worn both in summer and winter. Their domestic life is characterised by moderation, they have married late, usually after 30 years of age. The greater part of their life has been spent in the open air.

Turkey and a Capital Levy?

The new Turkish Grand National Assembly, which has just been selected by the President and elected by the people, has been told in a Presidential Address that it will be expected to devote especial attention to economic affairs. There follow as a matter of course a few days later in the Press suitable homilies on the subject. Under the heading "The Talisman" Yunus Nady Bey, Deputy and Editor, explains in *La République*, the French edition of *Jumhuriyet*, how economic salvation can be attained. The following extracts give the gist of the article, which suggests that Angora has heard of such a thing as a capital levy, and is realising more and more Turkey's pressing need for foreign capital:—

A nation such as ours, which has rescued itself from the greatest perils and has escaped unscathed from the most gigantic and arduous struggles, cannot fail to attain, side by side with the other great civilised nations, the higher stages of progress and of successive developments. Not to go into details, we can state as a general thesis that the great secret, the talisman of this great work, is to be found in the rehabilitation of the economy and the finances of the country. . . . Let us take for example the question of population. We need money to obtain sulphate of quinine to stamp out the fever to whose

ravages we are continually exposed. We want money to drain marshes and to instil future generations in good sites and in the best climatic conditions. . . . The economic prosperity of a people is closely linked with the numbers of the population. . . . Why is the value of our money inferior to that of the English exchange? That is the chief question around which all others are grouped. There is not such a thing as an isolated fact in economic affairs. It is the combination of economic problems which, drawing in its train social and political problems, constitutes life and society in all their forms and in all their gradations. To solve the economic and financial problem with us would be to give a new aspect and a new face to our beloved Turkey.

We can nourish the legitimate hope that the new Parliament will be able to carry out the good work in this domain and that the Government in its turn will make a point of realising satisfactory results by its untiring efforts. . . .

The High Economic Council will be appointed this year in virtue of the law passed by the last Assembly, and we have the right to expect that this valuable organism will take to heart the initiation of each one of us in the new methods of work which are required. It will have to go to the bottom of the problem and to study it in all its details, and all we shall have to do will be to associate with it a Commission of Experts, which will have to sit at the Ministry of Finance to prepare the ground for the latter. We shall thus have two excellent organisms charged with the duty of showing the country the proper means of solving all the problems on which the safety of the country depends. Nothing is harder, certainly, than to put order into our economy and our finances from one day to the next; but the act of establishing and determining the same paths which we must follow to enable us to do this acquires almost the same importance as if we had already attained the end that we wish to reach.

We are of opinion, for instance, that in the matter of capital and of the movement of credit, the Turkish State, which is nothing else than the Turkish nation itself, can very well attend to this essential problem by mobilising all the riches of the country and by facilitating the access to the country of foreign capital.

. . . We can, then, not fictitiously but absolutely really, increase the figure of our capital by mobilising the whole of our national fortune, everything we have in the way of movable and immovable property. The wealth of Turkey does not certainly consist in the 150 millions of notes in circulation, that is to say, in the fifteen or sixteen million pounds gold to which these notes correspond. No. A proper estimate of our national fortune would, without doubt, run into hundreds of milliards. But our immovable property, such as houses, shops, building sites, farms, etc., remains all the time immobilised and plays hardly any rôle in the commercial domain. Here then is an incalculable fortune that we should be able to mobilise and render negotiable to effect a complete revolution in the economic situation of the country.

. . . As for foreign capital, we shall also find the means of attracting it to the country in abundance, provided that we know how to place at its disposal all the required facilities, seeing that we live at an epoch of intensive trade in which all the nations are closely dependent one on the other in the economic and commercial sphere. We do not belong to those who know only the one method of a loan for obtaining foreign capital. A loan certainly constitutes a means of appealing to foreign capital, but for our own part we consider that we ought to have recourse to a loan only in the last resort. There are other measures, both economic and financial, to be undertaken beforehand, at the head of which we can place the rehabilitation of our exchange, which is the only means of encouraging foreign capital to come to work in our country in complete confidence.

To sum up, we will say that the only means of laying the foundation of the recovery of our economic and financial situation consists in increasing the figure of our available national capital and of our credit; to these will be added foreign capital, provided that it finds here what it needs.

NOTES OF THE WEEK

(Continued from page 355.)

of the patriotic temper which recently found vent against Turkey; or it may derive from the activities of some of the Shiahs of Iraq, who are largely of Persian origin and are by no means keen to see firmly established the present Government of Iraq, which, of course, wishes to introduce Conscription. Tribesmen of a certain well-known frontier type are seldom long absent from the game of attempting to embroil international relations, although tranquillity on the borders is increasing every year; and, of course, the outbreak of cholera has caused frontier difficulties. It seems probable, however, that the inhabitants of the Holy Cities of Iraq have had some influence in the Persian Government's decision to withhold passports to its subjects until a better understanding has been established between Iraq and Persia. At any rate it will be interesting to see whether, if the idea of Conscription is dropped in Iraq, the dropping of it will affect the attitude of the Shiahs in Iraq towards the Persian Government, and whether the attitude of that Government towards Iraq will in consequence be affected.

Book Reviews

CONSTANTINOPLE.

"CONSTANTINOPLE, SETTINGS AND TRAITS." By H. D. Dwight.
(London and New York: Harper and Brothers. 16s. net.)

The reader of this book will decide that it was a fortunate circumstance which identified the author's forefathers with East Anglia. The love of churches there bred in the bone has revealed itself in the descendant born at Skutari, and in the absence of monuments in the early perpendicular style he has lavished his affection on the mosques of Constantinople. Every section of this "character-sketch," as the author terms his book, is delightful; but both the resident and the visitor will be particularly grateful to him for the happy way in which he stresses the charms of the lesser known mosques and helps indeed towards a fuller appreciation of those that are visited as a matter of course. The richest remains of old Constantinople, we are reminded, are its churches.

Little as they are generally known, almost everyone knows something about the greatest of them. There seems to me a peculiar fitness in the name of Justinian's Cathedral, which is not exactly rendered by its current vocable. It was not dedicated to any saint, but to the Divine Wisdom; and the Turks still call it Aya Sofya. The cross no longer surmounts that old cathedral, it is true, nor are Christian forms of worship permitted within its walls. In the divine wisdom, however, there is room for more than one form of worship. And St. Sophia, whose marbles, borrowed from half the temples of antiquity, have beautified the rites not only of Muhammad and of Christ, but of Apollo, of Pallas, of Asiatic Cybele, of Egyptian Isis and Osiris and how many older divinities of the pagan world, seems to me more than any other temple to express what is universal in religion, stripped of all pettinesses of creed.

The churches of Constantinople, however, neither begin nor end with St. Sophia. There are twenty-six other buildings in Stamboul that were originally Byzantine churches. Covering as they do a period of ten centuries, they exhibit most interestingly the gradual development of ecclesiastical architecture from the Roman basilica to the high-domed trefoil church of the fourteenth century. In this book Mr. Dwight has recorded the results of his labour of love in prowling about with something more than "the least tinge of archæology in him" (which he prescribes for him who would get the best out of Constantinople) on the look out for anything that may hint at pre-Turkish origin. The chief decoration of mosques consists in the frescoing or stencilling of domes and other curved interior surfaces, and in tiles. Of the former our author writes:

Some people might object to calling it an art at all. Let such a one be given a series of domes and vaults to ornament by this simple means, however, and he will find how difficult it is to produce an effect both decorative and dignified. . . . The most complete example of good work of this kind is outside Stamboul, in the Yeni Valideh mosque of Scutari. The means used are of the simplest, the colours being merely black and dull red, with a little dull yellow; but the lines are so fine and so sapiently spaced on their broad background of white that the effect is very much that of a Persian shawl.

Stamboul is a museum of tiles. Mr. Dwight inclines to the belief that the tiles were not of Persian or Rhodian origin, but were manufactured at many centres in the Turkish Empire by craftsmen brought from Persia.

The art itself declined and gradually died out as the Sultans stopped making conquests and building mosques. For the imperial mosques are monuments of victory, built and endowed out of the spoils of war. . . . But the tiles of the imperial factories, after many fires and much thieving, still make up what is most brilliant and most durable in the colour of Stamboul. The best tiles are Nicene of the sixteenth century, that extraordinary *cinq-eto*, when so many of the best things of the world were produced. They are distinguished by the transparent white glaze of their background, on which are drawn tulips, carnations, wild hyacinths, and a certain long bent serrated leaf common to the Rhodian plate. The chief colours are a dark and a turquoise blue and a tomato red, green and yellow occurring more rarely.

If this notice seems to linger unduly on one section of this fascinating study, the reason may be found in the consciousness of how easy it is, in more hurried peregrina-

tions, to miss much of the charm on which Mr. Dwight rightly insists. Our author has been fortunate in having ample time at his disposal for prosecuting his investigations. The book, indeed, has had an eventful history. It was begun in 1907, suffered various interruptions in the next six years, was published in 1915 "under a name which the writer did not choose—Constantinople Old and New," and in part rewritten to be republished in 1927. In spite, however, of "conscientious revision," the task of keeping pace with developments in Turkey has broken down in one particular, for the reproach that Constantinople still remains an undiscovered country where "excavators take it for granted that Stamboul hides nothing worth their trouble," and the present masters take no interest in the history of the city, is in process, we may hope, of being removed.

More happily than any of those who have tried to interpret Constantinople, Mr. Dwight has caught the colour and atmosphere of the city and its surroundings, and has entered into the spirit of the people, their interests and their activities. The chapter on the Golden Horn is particularly good reading, with its description of shipping craft and the methods and beliefs of the boatmen. A feature, and a very important one, of the book is the wealth of admirable illustrations. In all his wanderings the author has rarely been parted from his camera, and it has been seemingly a very good one. Mosques, buildings, streets, landscapes, all are depicted; but a special word of praise is due to the photographs of interiors, tiles, etc., and of the street fountains, of which Mr. Dwight has made a speciality. The latter part of the book is devoted to the latter day history of Constantinople, from the revolution of 1908. Our author describes his experiences freshly and picturesquely; and rarely fails to illuminate some trait of the Turkish character or to find a new setting. Many of those who have spent a large portion of their life in Constantinople will discover in this book much that they will be sorry to have overlooked during their period of residence, and they will be grateful to Mr. Dwight for the attractive way in which he takes them over ground new and old.

THE WAR OF THE WORLDS.

"THE NEXT CHAPTER: THE WAR AGAINST THE MOON." By André Maurois. (London: Kegan Paul. 2s. 6d.)

In this little work, M. André Maurois, the eminent Franco-Jewish author, who is almost as well known in England as in France, racily and mordantly sketches the story of 1951 to 1964 as written in 1992. A world war in 1947 had resulted in the ruining of New York, London, Paris, Berlin and Peking, but by 1962 these capitals had been rebuilt. By that time, too, world opinion was controlled by five newspaper proprietors, who, in order to stave off a world-war, directed, with the use of weapons which are even early in this twentieth century almost in their hands, the hatred of the earth against the moon. This hatred aroused, they had to find means of assuaging it. Here one Ben Tabrit, of Marrakesh, steps in; and shoots destructive rays on to the Moon. Quickly the Moon retaliates; and the interplanetary war begins. . . .

It is amusing and biting. Certain tendencies and features of our own time are mercilessly exaggerated and exposed, and the satire is clever rather than subtle. An especially interesting thought was to bring in a man from the Muslim world to be the agent of the Earth's scientific war upon the Moon; that, perhaps, is the most stimulating of all M. Maurois' exaggerations.

THE DEFENCE OF INDIA.

The primary purpose of the Army in India has been defined in a resolution passed by the Legislative Assembly in 1921, and endorsed by His Majesty's Government, as "the defence of India against external aggression and the maintenance of internal order." The strength and efficiency of the force must, therefore, be measured not merely in relation to what Lord Birkenhead recently termed "local day-to-day contingencies, a border scuffle one day, a disturbance of the public peace the next," but in the light of an ever-present menace, or a combination of menaces, which it is unnecessary to specify but it would be criminal folly to ignore. "Throughout all these criticisms upon Army administration in India," said the Secretary of State, in his annual review of Indian affairs in the House of Lords in March last, "I detect a belief that these matters are primarily of concern to India alone, that there is no call upon His Majesty's Government to take part in them, and that action by His Majesty's Government in this sphere is a kind of bureaucratic interference from Whitehall." If only for the reason which we have already indicated, this is a mistaken view. None of the major problems with a bearing, direct or indirect, upon the defence of India against external aggression, whether they relate to the interchange of reinforcements, or to the potential fighting strength of the country itself which can be placed under military training, or to the Indianisation of the Indian Army, can be handled with the necessary degree of success unless they are brought under comprehensive survey from the broadest Imperial standpoint. We are fully cognisant of the storm aroused in India by the publication of the first part of the Esher Committee's report, which had as its object the determination of the part to be played by the Army in India in any future scheme of Imperial defence. To a very large extent, however, the opposition to the proposals was the result of a misapprehension. In the first case the Committee of Imperial Defence had not come into being and there was considerable confusion in the minds of many critics between the supreme direction of the military forces of the Empire in an organisation such as that contemplated by the Esher Committee, and War Office control.

Moreover, the suggestion that the Chief of the Imperial General Staff should exercise what the Committee unfortunately described as "a considered influence on the military policy of the Government of India" was widely interpreted to mean, not the general co-ordination of military resources, requirements and organisation—which was what the Committee intended—but the destruction of the fundamental British principle of control by the civil power over military matters. In no circumstances, of course, can Indian politicians be expected to regard with favour any policy which seems, however remotely, either to deprive the Indian Government, in which they hope ultimately to be in a majority, of unfettered direction of the Indian Army; or to hint at the possible employment of Indian forces for ends in which India herself is but partly concerned. In a sense this

attitude, just as that of those who were still disposed to treat the defence of the North-West Frontier as a matter outside the sphere of their interest, is a heritage from the past, from a time when the British authorities considered it unnecessary to take Indian opinion into their confidence, or explain the gravity of the danger of external aggression, and the vital connexion between India's military requirements and the military commitments of Great Britain. Fortunately, although, as the recent debate on the Skeen Committee's report clearly shows, the misunderstanding has not yet been wholly dispelled, there is an increasing disposition on the part of the more responsible leaders of public opinion to discard the earlier, and parochial view, and to recognize the obvious desirability of co-ordinating, under proper safeguards, the military resources of the Commonwealth, on the grounds of expediency alone. Little surprise, therefore, was expressed when Lord Birkenhead announced, in the course of the speech above quoted, that the report of the Indian Auxiliary and Territorial Forces Committee and the eagerly-awaited recommendations of the Indian Sandhurst Committee had been referred to the Committee of Imperial Defence.

The Shea Committee was appointed three years ago to investigate and report upon the steps necessary to improve the strength and efficiency of the Auxiliary and Territorial Forces in India. The Committee's recommendations were published at the beginning of 1925, but owing to the necessity of consulting local administrations, and the aforementioned procedure, it was not until the middle of last month that the action which the Government proposes to take on the report was officially announced. The Secretary of State has accepted the Committee's proposals, subject to two important qualifications. He does not desire that the Auxiliary Force, enrolment in which is to be confined to British subjects as heretofore, should be made liable for general service—an obligation imposed upon the Territorial Force as the second line Army. But he has agreed to the creation of urban units of the latter whose liability for service, like that of the Auxiliary Force, will be purely local. A legitimate grievance is also removed by providing that commissions in *both* forces shall be signed by the Viceroy on behalf of the King. With that exception the result is to leave practically unchanged the existing status and liability of the Auxiliary Force, no doubt, in view of the needs of the new Army in India Reserve of Officers, and the measure of the success of the proposals must be the effect they have upon recruitment for the Indian force, which, up to the present, has been singularly disappointing. As we have observed on several previous occasions what is really baffling is not the discovery of means of converting suitable human material into capable naval and military officers, for either the regular army or the reserve. The problem, the grandiloquent claims of the politicians notwithstanding, is to find the human material. The much-heralded debates in the Assembly and the Council of State on the Skeen Committee's report, which proceeded generally on the lines we anticipated, brings it no nearer a solution.

CURRENT TOPICS.

The Cinema in India.

The Government's motion for the appointment of a Committee to examine the whole question of film censorship in India, foreshadowed in these columns several weeks ago, came up for discussion in the Legislative Assembly last week. The report of the debate, which was not finished when the House adjourned, ought to make interesting reading, for the proposal was apparently opposed by the Congress party on the somewhat specious ground that it was merely another attempt to commit the Legislature to the principle of Imperial Preference. As an example of political casuistry the argument would seem hard to beat. Apparently, however, some explanation is to be found in the proposed terms of reference of the Committee. According to the wording of the resolution, the latter, it is suggested, should not only be required to report on the present system of film censorship in general, but also to consider "whether it is desirable to encourage Empire films, and, particularly, the development of film manufacture in India." Nobody will welcome the appointment of the Committee, if, as may be presumed, the Government decide to take immediate action on the resolution, more than the Commissioners of Police, part of whose official duties is to act as Chairmen of the provincial boards of censors in Bombay, Calcutta, Madras and Rangoon. At the same time it may be doubted whether a more unified and stricter system of control, even if found practicable, will effect the improvement that is needed, while the introduction of the wider issue of protection for the Imperial or local industry adds immeasurably to the complexity of the problem that the Committee will be called upon to solve.

The Reserve Bank Bill.

The uncertainty surrounding the Government's sudden decision not to proceed with the Reserve Bank Bill has been partially dispelled by Sir Basil Blackett's subsequent statement in the Legislative Assembly. It now appears that the measure has not actually been withdrawn, but the Government require more time in which to "consider the amplification of an alternative plan" in view of the extent to which the original scheme has since been modified. Whether the reference is to the latest suggested compromise, or the decision is to be regarded as indicative of the Government's desire to take stock of the entirely new situation, which has resulted from the recent debate, is not clear. The latest suggested compromise, which was under discussion when the negotiations were so abruptly terminated at, it is now obvious, the behest of the Secretary of State, envisaged a somewhat complicated system under which the main majority of the bank's directors would be elected by electoral boards consisting partly of members of the Indian Legislature and partly of representatives of the holders of a Government stock to be specially issued for the purpose of financing the bank. The outcome of the correspondence now proceeding between the Government of India and the authorities in Whitehall will be awaited with interest.

"Mother India."

The main objection to American and other non-British pictures, according to the non-official Indians who have been impressing upon the Government the need for stricter surveillance of imported films, is that they are generally subversive of the religion and morals of the people. Our own experience is that objection to them is grounded on the fact that they exhibit European or American civilisation in a way calculated to lower it in the eyes of Indian observers. That being so, while a great deal of the indignation that has been displayed by Indians of all classes on the subject of Miss Mayo's work is based upon a misrepresentation, partly unconscious but more often deliberate, of her motives, there is some force in the argument that Western people grow similarly indignant when pictures are put in the screen depicting sides of Western life which are likely to damage in the East the prestige of the European peoples. Some of the pictures are so obviously fiction of the most crude description that they

would deceive no one. Others may be truthful as far as they go, but they depict the customs and manners of the lowest classes and are, therefore, untrue as regards the generality of the peoples in the countries represented. If it is legitimate for the European to object to a crook picture displayed in India because of the effect it might have upon the Indian mind, might it not be equally reasonable on the part of the Indian, the speakers at the recent meetings of protest averred, to take exception to a book because it reflects upon the stage of civilisation which their own country has reached. The analogy cannot be pressed far for its weakness to become patent, but its use affords an interesting sidelight upon the Indian attitude towards a book in which even the *Bombay Chronicle* can discern elements of truth.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 1.

The Opening of the Bengal Legislative Council.

Sir Stanley Jackson has for the first time come into contact with the Legislature of the Province under his charge on the occasion of the opening of the Autumn Session of the Bengal Legislative Council. In the course of his opening address, His Excellency spoke of the experience he had gained through his tour in Eastern Bengal, and of the first-hand knowledge that would make things easier for him. He had been forcibly impressed by the great difference in the annual expenditure upon University education and that upon primary education, and he thinks it is a matter for serious consideration whether enough is spent on primary education. There is need for immediate action in connexion with free primary education to be introduced in the rural areas.

The Hon. Ministers, Mr. A. K. Ghuznavi and Mr. B. Chakravarty, have tendered their resignations under Swarajist pressure, and His Excellency has accepted them. When the Council met again the next day, the President of the Council announced that the Governor of Bengal had directed that the Bengal Council should stand prorogued. Later His Excellency sent for the Mayor, Mr. J. N. Sen Gupta, and for Sir Abdur Rahim, apparently in view of the formation of the next Ministry; but His Excellency is not likely to get any assistance from Mr. Sen Gupta. He "very much regrets being unable to form a Ministry or help any party in forming one." Sir Abdur Rahim at first seemed rather amenable, and discussed with His Excellency the prospects of forming a new Ministry. But all the same no definite progress has been made, and up to date no Ministers have been yet selected. The arrangements made before the political crisis demand that the Governor of Bengal should proceed to Darjeeling at once, in spite of the fruitless search for qualified successors to Mr. A. K. Ghuznavi and Mr. B. Chakravarty.

New Broadcasting Station.

A more pleasant function was the opening by His Excellency the Governor of Bengal of the Calcutta Station of the Indian Broadcasting Company. His Excellency very wisely said that, though the new concern is a private commercial enterprise, its work will be conducted in the closest co-operation with Government. As the Viceroy said in Bombay on a similar occasion, there is nothing incompatible between the making of profits and the rendering of public service. The success of the new station depends mostly upon the public service it will be able to render. After His Excellency had performed the opening ceremony, the Broadcasting Station transmitted an inaugural programme in which much local talent was heard to advantage, the Director of the Calcutta School of Music, Monsieur Philippe Sandré, providing the most artistic items of the programme. An Indian programme was also arranged, with singing and instrumental music, as well as recitations from R. N. Tagore's poems. What remains to

be deplored is the introduction of gramophone recitals in subsequent programmes. Saturdays will be devoted to pianoforte solos: this will reveal many a hidden genius. Apart from Mrs. Lonmon and Miss Korb, I know a beautiful dark woman who sings like Emma Calvé: I wonder whether the broadcasting people will find her out. The warm strains of "Carmen" would be a desirable change after the shrills of "Lakhmé."

The Y.M.C.A.'s Politics.

The Hon. Mr. Justice Pearson, of the Calcutta High Court, and Mr. B. L. Mitter, Advocate-General of Bengal, have conducted an inquiry regarding the allegations of the European Association against the political activities of the Y.M.C.A. in India. Their report shows clearly that most of the accusations were unfounded, especially the charge of selling their time to promoters of anti-British movements; for that charge there is "no sufficient evidence." Mr. Hobbs, no doubt, meant very well, but it appears that he made a mountain out of a mole-hill. It is to be noted that many members of the European Association sided from the beginning with the Y.M.C.A. The report, which covers many columns, examines the fourteen points in detail, and it is remarkable to find that, where the allegations have not been categorically denied, the facts have been merely recorded without the expression of any personal opinion, except once the remark that, in future, the Y.M.C.A. authorities should exercise greater control over lectures delivered under their auspices.

The Missing Patna Principal.

Mr. Victor Herbert Jackson, M.A. (Oxon), I.E.S., Principal of the newly-started Science College, Patna, is reported missing. Scotland Yard has issued a description of the gentleman, who reached England on furlough last week, and disappeared two days or so after his arrival. Mr. Jackson was a prominent figure in Calcutta twenty years ago, when among other posts he held that of Assistant Director of Public Instruction, Bengal. For some years he was Vice-Chancellor of the Patna University. After long leave he returned to Patna in 1924 as Principal of the Patna College, which post he held till recently, when he was appointed Principal of the new Science College. Soon after a holiday spent in Mussoorie, Mr. Jackson suddenly applied for one year's leave, and proceeded immediately to England from Ranchi.

An interesting part of Mr. Jackson's work in India will remain in the archaeological discoveries which he made in the trenches that had to be dug for the foundations of the new Patna College. They consisted of a number of clay figures of the pre-Mauryan period. Mr. Jackson wrote and published papers on the hot springs of Monghyr and on the Lomas Rishi Cave in the Barabar Hills, near Gaya. Mr. Jackson is 51 years of age, and it is believed that he still retains an interest in a farm which he bought in Canada, during one of the leaves he spent there. The University Reforms introduced by Lord Curzon were partly due to Mr. Jackson's criticisms of the many defects of the University system in India. Better news of his whereabouts will be welcome here.

Bengal National Bank Failure Sequel.

It is reported that Mr. B. N. Bannerjee, ex-Managing Director of the Bengal National Bank and ex-Director of the Bengal Luxmi Cotton Mills, who was wanted on a charge of criminal breach of trust, surrendered before the C.I.D. He was granted bail on a 50,000 rupee surety. Mr. B. K. Lahiri has also been arrested under the same charge, and he also has contrived to find a surety for half a lakh of rupees.

The Grand Trunk Canal.

It has been justly said that the story of the Grand Trunk Canal is somewhat like that of the Howrah Bridge. There is, however, a difference; for, whilst the necessity of a new bridge is not questioned, that of the canal is much discussed, not really because it would be a superfluity, but

because the revenue likely to come from the enterprise does not seem to justify the expenditure. The canal will provide a route that will be over a hundred miles shorter. Moreover, as no amount of dredging can keep the Sunderbund channels permanently clear, the provision of another route is becoming an imperative necessity. The cost will probably reach two and three-quarter crores, and the work will occupy six years. What is clear from the report is that the Committee, appointed four months ago to examine the Grand Trunk Canal project, have studied the possible revenue much more than the crying need. What could rapidly settle the question would be the serious loss that would occur if the Sunderbunds became impossible for traffic, and that may be expected to happen a very few years hence.

Co-operative Societies of Bengal.

The annual report on the working of the Co-operative Societies of Bengal shows beyond any doubt that, if conducted in view of the vital services it can render, the system could materially help rural reconstruction. It is a well-known fact that, before the introduction of the co-operative movement, the immediate and pressing needs of the cultivators were met by moneylenders who supplied both personal and agricultural requirements, charging exorbitant interest that left peasants in perpetual poverty. Now Loan Companies have been created in many districts to give financial assistance, at a moderate rate of interest. All the Credit Societies are not agricultural: there are Supply Societies, Anti-Malarial Societies, Producing Societies, etc. All have as an object to link the producer and the consumer, to promote public health and general progress. The Co-operative Societies of Bengal are doing well and deserve to succeed.

Here and There.

Mr. Dennis Rooke, the Australian airman, whose flight from England to Australia was interrupted by an accident which wrecked his machine in Gaya, is now undergoing treatment in the General Hospital of Calcutta. When he recovers he will continue his flight from here. The parts of the machine which the insurance company will think utilisable will be forwarded to Calcutta.

The report of the Management of the Zoological Garden, Calcutta, states that the casualties among the animals have been only such as are unavoidable in a tropical climate. The receipts at the gate fell heavily during the last year, though the number of visitors reached the usual figure (nearly one million); but many must have abandoned the idea of paying one rupee to get in on a Sunday afternoon, to hear a third-rate programme of music played by a third-rate band (to be kind to it!). Among important gifts deserving mention are the four lions presented by H.H. the Maharaja of Rutlam; one black leopard or two, two crabs, and a tiger cub. Two Indian antelopes, one tiger, three black leopards, eight spotted deer, one kangaroo, five wolves and a porcupine were born in the Zoo during the year under report.

A severe famine is apprehended in several Sonthal villages owing to the absence of rain and consequent failure of crops. Two hundred of the famine-stricken people marched deliberately towards the house of the Sub-divisional Magistrate of Balurghat. He came out and gave them a patient hearing. They lay before him all their grievances and sufferings. The Magistrate then assured them that Government would certainly do their very best to mitigate the sufferings of the people. He asked them to keep calm and "to pray to God for rain." In the meantime a subscription has been opened to provide food for the most destitute.

OBITUARY.

Mr. James Nicol Fleming Mitchell, of Craig Colmonell, Ayrshire, and of Lahore, India, timber merchant, of Messrs. Spedding and Co., of Lahore, who died at Lahore on February 3, aged 68, left, in addition to considerable real estate, personal estate valued for probate at £173,457, of which £57,343 is personal estate in India.

BOMBAY LETTER.*(From Our Own Correspondent.)**Bombay, September 2.***The Aftermath of the Floods.**

The floods as a general topic of conversation are dead, and all we remote from the scene of the actual havoc have to remind us of it are the frequent appeals for funds and the steady growth of the Flood Relief Fund, which is now in the region of nine lakhs of rupees. However, for those interested in the after-effects of these inundations, the reports submitted to the Government by their officers in these areas provide interesting reading; and, incidentally, show that the floods have not only done harm but a certain amount of good as well. I have already referred to the suggestion regarding town planning in connection with rebuilding activities, and in this connection also the Co-operative Department are trying out a new experiment in co-operative loans which, if successful, is likely to find universal application in India. Another report received is that of the Health authorities, and it indicates that there is not likely to be any epidemic in Gujarat as a result of the floods. The fact that something like a million five-grain tablets of quinine have been distributed there indicates that the Health Department are able to come well up to expectations in an emergency.

Non-Brahmin Party's Future.

The Non-Brahmin Party in Bombay appears to be heading for disaster to judge by one resolution, in particular, that it passed at its recent meeting. This dealt with non-Brahmins entering the Congress, and while pointing out that it was undesirable and inadvisable for non-Brahmins in the Bombay Presidency to join the Congress, individual members of the party, desirous of throwing away four annas as a membership fee, could do so. This has eventuated principally through lack of leadership, for the young and enthusiastic section of the meeting carried the more sober-minded along with them. What possible identity of interests avowed supporters of the constitution like the non-Brahmins of this Presidency can have with would-be wreckers of the Constitution, such as prevail in the Congress ranks, will require a deal of explaining.

The Legislature.

The local Legislative Council meets again towards the end of the present month, and will have to tackle a very heavy agenda indeed. Not only must it deal with the business put forward for the new session, but on the paper also appear several bills and resolutions left over from the last session when it was prematurely adjourned in view of the Gujarat floods. Several very important questions are coming up for discussion, including the University Bill, the Cotton Markets Bill and the Prevention of Fragmentation of Holdings Bill, while the non-officials' resolutions are very wide in their scope. It is to be hoped that our legislators will settle down to things and make a determined effort to clear up all arrears—but this can be done only by limiting speeches and discussions, and that perhaps is hardly fair on our verbose M. L. C.s.

Tata Steel Company.

The defeat of Mr. Shamdasani's amendment regarding the report of the Tata Iron and Steel Company's directors, which was presented to the shareholders last week, and the subsequent passage of the report, and also the directors' suggestions regarding the payment of dividends on various classes of shares, have led that gentleman to resort to his usual method of making his point of view made known to the public. He has secured notices being issued against the directors on the allegation that statements in the balance sheets for 1926 and 1927 are false, and that a sum of Rs. 1,87,43,317 odd (contingent liabilities) has been concealed. The case is on and hence comments cannot be made, but it seems a pity that something cannot be done to restrain Mr. Shamdasani's enthusiasm for airing his grievances in the law courts, for the public as a

whole are, one feels certain, thoroughly tired of his activities.

Sport.

While sport attracts hundreds in Bombay all the year round, there is little doubt that we are having more of it than we know what to do with just at the moment. Tomorrow sees the conclusion of the Rovers Football Tournament—and on the whole it has been a great disappointment. The Cheshires, local League champions, meet the Ulster Rifles in the final, and look like pulling off the double, but the form displayed throughout the tournament has not come up to expectations. At Poona the races have reached their climax, or almost so, and this is demonstrated by smaller fields but, of course, better racing. Despite this fact favourites are extremely disobliging, and the attendance so far this season has been so poor that the executive will seriously have to consider discontinuing the meeting next year. Next week Nasik will be the Mecca of all Bombay's golfers, for the annual golf week starts on Saturday, and it is during this week that the Western India Championship is decided.

Commercial Markets.

Only two features of note are apparent in the commercial markets—the slump in steel shares following the announcement of the British manufacturers' offer of a rebate, and the continued rise of cotton prices. The former is likely to be only temporary, and indigenous steel firms are not greatly concerned. But the latter seems likely to be much more permanent and mill shares in consequence are more in demand. Gold is dull, silver shows a slight improvement, exchange is quiet and securities are easier as a result of Government's offer of Treasury Bills.

CIVIL AVIATION IN INDIA.

[In a paper read before the Air League of India, on his first official visit to Karachi last month, Colonel F. C. Shelmerdine, the newly-appointed Director of Civil Aviation, dealt comprehensively with the present position and future prospects of commercial air transport in India. "India to-day," said Colonel Shelmerdine, "is more backward in matters of aviation than any other nation," but the flight of Sir Samuel and Lady Maude Hoare and other pioneers have done a great deal to arouse public interest in its vast possibilities. An Aero Club for India, to co-ordinate the activities of the Flying Clubs of Karachi, Calcutta and Bombay, was recently inaugurated at Simla and a stimulating contribution to the study of the problem is made in the current issue of the *European Association Quarterly Review*. Below are reproduced extracts from the article, which appears over the pseudonym of "Morrish."]

There is probably no country in the world more suited to flying than India. This is partly due to the fact that "air pockets" are the exception rather than the rule, whereas in most Western countries they are responsible for more crashes than is generally recognised. An "air pocket" is usually in the centre of a depression. India has its climatic depressions, as may be verified from a cursory glance at almost any meteorological report, but they are usually in the neighbourhood of mountains. The country is, fortunately, from the airman's point of view, almost immune, over the plains, from "air pockets," of which airmen, whether experienced or novices, have the greatest fear. Further it offers unlimited areas for landing grounds; cross country routes are well defined by railway lines, which obviate the necessity for flying by compass; and skilled labour is comparatively cheap. But despite all these advantages flying in India is in its infancy. It is almost correct to say that it does not exist.

The chief advantage which flying offers to civilisation is that it saves time. Journeys which by road or rail occupy many hours, can be completed in the air in probably

half the time and at correspondingly less cost, but this is a fact which has yet to be appreciated. Colonel Lindbergh has shown how four or five days may be saved through travelling by air from New York to Paris. It is true that his flight created a record, and regular services are at present improbable, but what has once been accomplished can usually be repeated and probably can be regularised, and there is no doubt that in the near future many business people who now travel between New York and France by boat will utilise aircraft for the express purpose of saving time. Similarly the air over India should be explored and utilised for travel. During the hot weather there is nothing more trying than a railway journey from Delhi to Karachi. The heat is terrific and the time taken in completing the journey is considerable. With an air service connecting the two places the heat would not be evaded, but the time spent on the journey would be far less than that which would have to be spent by train travel. The sooner it is realised that it is as easy to control an aeroplane as to drive a motor car the greater the chance civil aviation will have of coming into its own. But for this considerable funds will be necessary, and the fear of the air and the general idea that an aeroplane is a fragile piece of crockery, which the least wind or the slightest storm is capable of destroying, is largely responsible for the withholding of public support, which is so essential to air development.

Imperial Airways had similar difficulties in England, and it was not until the British Government came in and supplied the help which was so urgently required that the Company commenced to get sufficient bookings for its trans-Channel service to make it a paying proposition.

To attempt to fly from England to India is a very different proposition from that of flying from Delhi to Karachi, from Bombay to Calcutta or from Bombay to Colombo. In the first place there are no treacherous gulfs and oceans to be flown over, and the nature of the country should not make it difficult to effect a forced landing, should the necessity arise. Also the climate is good from an airman's point of view, and he should be able to get correct and current meteorological data, which are of the greatest importance and which are not available, at present, to the airman who is crossing the Mediterranean or is flying down the Persian Gulf. Also, petrol supplies are plentiful and the commodity is cheap, and in this country land is available for aerodromes at prices which are far less than in most countries and certainly far cheaper than in Western lands. But despite all these advantages flying in India is hardly known. Germany, a bankrupt nation, has been able to establish a network of airways which makes possible travel by air from any part of the country to the capital. The reason for this is that the acutely active mind of the German business man has appreciated that in flying there is money, if not at the outset then ultimately, and he has invested in what he knows is equivalent to, or better than, a gilt-edged security.

India is a country which offers more scope for initiative than probably any country in the world. The immediate results from a well-organised and well-regulated internal air service will be considerable, but before such a venture is attempted it is essential that efficient ground organisation be established, that tested machines be employed, and able pilots engaged. The initial outlay would be large, but the ultimate results should include a more developed country and a satisfactory return to the pioneer of a service which must come, in due course.

Mr. J. E. Lloyd Williams, of the Indian Police, has been appointed Chief Constable of Montgomeryshire.

The trials of military mechanical vehicles in India are approaching a definite result. Four tractors have been under trial, and the machine to meet the peculiar conditions affecting mechanical movement in Northern India best is expected to be the six-wheeled tractor. About 200 vehicles are employed in the tests, and as some degree of finality is being reached hill movements will probably be demonstrated before the Secretary for War during his visit to India.

INDIAN MAIL.

"An Amazing Opinion."

It is a matter for extreme regret that the cabled summary of the *New Statesman's* review of "Mother India" should have reached India before the book itself was readily obtainable. Alone among its Indian contemporaries the *Bombay Chronicle* is able, or willing, to draw a much-needed distinction between Miss Mayo's actual statements and conclusions and the intemperate and often erroneous inferences drawn from them by the writer of the review in question. Unfortunately its more recent references to the same subject have not been inspired by the same candour and spirit which made its original comment an honourable exception among the Indian Press. Evidently powerful forces have been at work, as the following reprint of a leading article which appeared before the change of front occurred, will show. Interest is lent to a controversy, in other respects the reverse of edifying, by the fact that Mr. B. G. Horniman, the present Managing Director of the *Indian National Herald*, prior to his assumption of his present office, was Editor of the *Bombay* journal, and his new venture has been formed to espouse the cause of the Labour movement in India:—

"Under this heading the *Indian National Herald* has chosen to fall foul of the *Chronicle*, on account of the latter having noticed Miss Mayo's 'Mother India' 'in a meek and defensive spirit.' Not having the *Herald's* reasons for denying the book whatever merit it has; nor believing in the wisdom of shutting our eyes to everything that may be sodden and dirty in our midst, simply because it is ours, we considered the work in question in the only way in which we think respectable journalism should deal with such works. The writer in our contemporary was not even aware of the work until his attention was called the other day by our and other notices of that book; and yet in less than twenty-four hours, evidently, he has been able to read, digest, and pronounce the book to be 'the product of a mind capable only of superficial observation, and so diseased as to be able only to interest itself in what is vile, vulgar, and disgusting.' We do not, like our contemporary, profess to be an authority on what is 'vile, vulgar and disgusting.' But on reading its judgment so summarily pronounced, we cannot help recalling that classic passage in Mr. Bernard Shaw's 'Man and Superman,' wherein Tanner retorts on Roebuck Ramsden who was enraged against the former's book, and had thrown it into the waste paper basket, 'without even reading it.'

"For our part," the *Bombay Chronicle* adds, "we do not proceed on that principle; and find no discredit in studying a book thoroughly before criticising it. There is nothing in the passage specifically quoted by our contemporary from our notice of the book, which we would, on second thought, alter or modify; for the work does contain much that is true, though painful; and it certainly is the result of patient study and personal observation, though we wish it had shown a like freedom from the bias, which obviously colours it almost in every line, at least in the latter half, where observation is mixed up with opinions. There is a utility in a study of works like these, which may not suit the superior mentality of the *Herald* and its conductors, but which will do no harm to those who have the moral courage and cleanliness enough to stare their own shortcomings (or those which may be represented as such) in the face; and who have the strength of will to dare to reform them. No honest Indian can read that book without pain; few can read it without totally and fundamentally disagreeing with its implied thesis of India's unsuitability for self-government; but we do not despair so far of the intellectual honesty of our countrymen, their sense of justice and fairplay, as to doubt that there would be many who would read it patiently, consider the main charges levelled in it against the country as a whole or a community at large and meet it with a rejoinder not steeped in mere sentimentalism and cheap abuse, but replete with sound convincing arguments and undeniable facts and figures which alone can count in

matters like these, not the high-and-mighty denunciation so easy, and so agreeable to our contemporary."

In the passage to which the *Indian National Herald* took particular exception the *Bombay Chronicle's* editorial comment was: "The book describes much that is abominable, and still more that is painful, though true . . . That in matters of social customs and amenities, in habits of personal cleanliness, in questions of sexual aberration or even perversity, India may show much that is deplorable in the extreme, no one will to-day venture to deny. That there is much still that the leaders and spokesmen of India may yet achieve by way of active exertion to eradicate the social sores, like infant marriage and enforced widowhood, is also beyond cavil." Elsewhere, it is pointed out that "Miss Mayo's book is certainly a work of great merit . . . and without this intrusion of a political bias against the Indian demand for self-government would easily rank as a good piece of observation and exposition."

AGRICULTURE IN INDIA.

The ninth and tenth interim reports of the Royal Commission on Agriculture in India (Cmd. 2944 and 2945) have been published, together with volumes containing evidence taken in the Punjab and evidence taken in the North-West Frontier Province. The earlier reports covered the work of the agricultural and other services in the Central and United Provinces, Bengal, Assam and the Bombay Presidency. In the first report, made up of several volumes, the evidence of officers serving under the Government of India was recorded.

Three members of the Commission—Sir Thomas Midleton, Professor N. N. Gangulee, and Mr. H. Calvert—left London last week for a brief Continental tour. They will visit the Dutch experimental station at Wageningen, the chambers of agriculture at Bonn and Frankfurt, and the International Institute of Agriculture in Rome. Embarking at Brindisi, they will arrive at Alexandria on October 3 and devote a week or so to a study of Egyptian agriculture, with especial reference to Nile irrigation.

The chairman (Lord Linlithgow) and the other members of the Commission will leave London on October 6 and embark in the s.s. *Rawalpindi* at Marseilles on the following day. Their three colleagues will join them at Port Said, and the members of the Commission will reach Bombay on October 21. They will take some evidence at Karachi, and thence proceed to Calcutta to embark for Rangoon to record evidence in relation to Burma. Next they will record Bihar and Orissa evidence at Patna, and in the second week in December will settle at Mahabeshwar (the hot weather quarters of the Bombay Government) for deliberation on the report.

Mr. A. C. Wentworth Lewis, until recently Editor of the *Englishman*, has accepted the Editorship of the *Strait Times* at Singapore. Before joining the staff of the Calcutta paper Mr. Lewis acted for some time as Paris Correspondent of *The Times*.

The Standing Finance Committee of the Indian Legislature has sanctioned a small grant for the preservation of the antiquities belonging to the Central Asian collections of Sir Aurel Stein. These antiquities are now in this country, and, with certain exceptions, it has been decided to take them out to India next autumn. A sum of £2,650 has been granted by the Committee towards Sir Aurel's report on the third Central Asian Expedition which the Government of India have decided to publish. The Committee has also agreed to the Government's proposal to invite the Director or Deputy Director of the International Labour Office to visit India this winter. Dr. Paranype, late Minister for Education in the Bombay Government and a member of the India Council, had already extended an invitation, and in the Government's opinion such a visit would enable a member of the Directorate of the International Labour Office to acquire a first-hand knowledge of labour conditions in India, and establish personal contact between the International Labour Office and the officers of the Central and Provincial Governments in India. The visit might also facilitate the establishment of a branch of the International Labour Office in India on right lines. The expenditure is not expected to exceed Rs.4,000.

NEWS IN BRIEF.

An explanatory memorandum by the Under-Secretary of State for India relating to the accounts of the Government of India for 1925-26 and the estimates for 1926-27 and 1927-28 has been issued by H.M. Stationery Office as a White Paper (Cmd. 2940).

The Secretary of State for India has received the following telegram:—Rainfall for the week ended September 7:—Normal: Chota Nagpur, United Provinces (West), Baluchistan and Rajputana (East). Excess: Upper Burma, Assam, Bengal, Orissa, Bihar, and United Provinces (East). Fair: Lower Burma, Kashmir, Central India, Central Provinces (East), and Madras Coast (North). Scanty elsewhere. Monsoon active North-East India and Burma, weak Peninsula.

A new machine for the Khartoum-Kisumu (Kenya) air service, which was opened in February and which is being run by the North Sea Aerial and General Transport, Limited, is being assembled at Aboukir and will be flown to Khartoum, whence the service is expected to be resumed on September 29. M. Allard, Director of Belgian Civil Flying, who is at present at Baghdad, will be a passenger to Kisumu.

ARMY APPOINTMENTS.

The King has approved the following appointments:—

General Sir George M. Kirkpatrick, K.C.B., K.C.S.I., is appointed Colonel Commandant, Corps of Royal Engineers, in succession to Major-General Sir James R. L. Macdonald, K.C.I.E., C.B., LL.D., deceased.

Lieutenant-Colonel S. R. Christophers, C.I.E., O.B.E., M.B., Indian Medical Service, to be Honorary Physician to the King, with the brevet rank of Colonel, with effect from February 15, 1927, in succession to Colonel C. H. Bensley, C.I.E., Indian Medical Service, who has retired.

Major-General G. Tate, M.D., Indian Medical Service, to be Honorary Surgeon to the King, with effect from February 27, 1927, in succession to Major-General R. Heard, C.I.E., Indian Medical Service, who has retired.

The following officers are appointed to officiate as Brigade Commanders in India:—

Lt.-Col. R. Q. Craufurd, 2nd Bn. The Royal Scots Fusiliers, at Ferozepur.

Lt.-Col. F. B. Lane, 4th Duke of Cambridge's Own Hodson's Horse, at Lahore.

Lt.-Col. H. M. Leapman, 2nd Bn. 8th Punjab Regiment, at Jhelum.

Lt.-Col. A. P. Dene, 2nd Bn. Duke of Cornwall's Light Infantry, at Lucknow.

Col. T. C. Catty has been appointed Brigade-Commander, Seventh (Dehra Dun), Infantry Brigade, vice Col. Bradshaw.

Col. T. U. Battye has been appointed Brigade-Commander, Ferozepore Brigade Area, vice Col. Hayter.

Col. S. B. Orton has been appointed Brigade-Commander, Allahabad Brigade Area, vice Col. Kensington.

WILLS.

Mr. George Frederick Moore, J.P., of Chardwar, Bourton-on-the-Water, Gloucestershire, retired tea and rubber planter, Chairman of the Single Tea Company, Ltd., who died on June 19, aged 72 years, left estate of the gross value of £230,936, with net personality £217,305.

Major-General Sir James Ronald Leslie Macdonald, K.C.I.E., Colonel Commandant, R.E., of 70, Wellington Road, Bournemouth, who died on June 27, aged 65 years, left £5,634, with net personality £5,537.

Colonel Philip John Hanham Aplin, D.S.O., late Indian Army (68), of Penalverne, Gorey, Jersey, who saw service in the Afghan War and Burma campaign, left estate in England of £3,073 (gross value).

Major James Nugent Blackwood Price, late King's Royal Rifle Corps, ex-High Sheriff of Co. Down, of Saintfield House, Saintfield, Co. Down, who served in the Afghan War, accompanying Lord Roberts on his march to Kandahar, and died on January 27, aged 82, left unsettled personal estate in Great Britain and Northern Ireland valued at £6,941.

Colonel John Smyth, I.M.S. (retired), and Queen's Own Sappers and Miners, of Apsley Road, Clifton, Bristol, left £15,528, with net personality £15,444.

Mrs. Margaret Diana Barnes (98), of Beaumont Street, Oxford, who lived through the Indian Mutiny at Umbala, widow of George Carnac Barnes, left estate of the gross value of £27,731.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Loans and the League.

If it had served no other useful purpose it must be admitted that the League of Nations has proved invaluable in connexion with the negotiation of loans for countries in need of assistance. It has now promptly given its sanction to the second loan desired by Greece—the Second Refugee Loan it will probably be convenient to call it, though the further settlement of the refugees is only one of the purposes for which it is required. As already stated, the amount of the loan will be £9,000,000, one-third of which will be for the refugees, one-third for debt redemption, and one-third for the payment of outstanding arrears. The loan, which will presumably be issued mainly in London like the 1924 loan, may be expected in the course of the autumn. This new loan will bring the total of Greece's external debt to £60,723,160, without taking into account the amounts outstanding of the 3 per cent. Loan of 1903, the 5 per cent. Canadian Loan of 1923, the 8 per cent. Railway Loan of 1925, and the 8½ per cent. Swedish Match Loan of 1926, and also the War Debts. Allowing for all these items, Greece's external debt will amount to about £14 per head, which, while considerable, cannot be regarded as an excessive total for a country with potentialities such as Greece undoubtedly has; but it must be emphasised that Greece's ability to shoulder this debt depends on stable conditions—the need for which incidentally is insisted upon in the report by Mr. Richard Turner, extracts from which will be found elsewhere in this issue and to which I refer below. The question of a further loan for Bulgaria has also been mooted at Geneva, but in this case the matter is still in the preliminary stage and there will be no further developments until the Finance Committee of the League has investigated the country's financial position. Bulgaria, it must be added, has not the resources at her disposal that Greece has, and the fact that she is not an important exporting country must necessarily limit her capacity to meet external obligations.

Smyrna-Aidin Railway Recovery.

A distinct improvement is shown by the report of the Ottoman Railway from Smyrna to Aidin for the half-year ended June 30 last. Compared with the first half of 1926 the total receipts were £200,925 as against £162,379, goods receipts rising from £100,273 to £132,059, which indicates very plainly the improvement that is taking place in the trade of Turkey. Conversely there was a decrease in the working expenditure from £133,817 to £128,658, the net income being £72,267 as against £28,562. An agreement has recently been concluded by the company with the Turkish Government in respect of war damages and losses, providing for the payment of £618,138 as reparation. This amount, however, will not be due until the Government buys the railway on the termination of the concession, though payment can be made in advance, and

it will carry interest in the meantime. Under the agreement the company is authorised to raise its rates, and it is provided that if the interest cannot be met by special charges it will be payable when the line is acquired. From the improvement that has taken place in the goods traffic receipts it may perhaps be too hastily assumed that the right to raise its rates will mean a further improvement in the company's results, but it is by no means clear that this will follow, for if rates are raised above a certain level they simply provide an inducement to competition on the part of other forms of transport, though as far as the region served by the line is concerned the lack of proper roads provides at present a certain guarantee against motor car rivalry. As I recorded in these columns recently, motor transport is now seriously affecting the railways in Roumania. Is it inconceivable that in the future this might not be the case also in Turkey?

Openings for Motor Cars.

I have frequently expressed regret at the fact that our motor car manufacturers have so far not taken adequate advantage of the opportunity afforded them by the great and growing markets of the Near East. It is not so in the case of motor cycles, for the British product is in increasing demand in the markets in question, and if this is so in one instance it is difficult to see any valid reason why it should not be the same in the other, for British motor cars are of the same high quality as British motor cycles. One drawback which has militated against a demand for British cars is that sufficient steps have not been taken to make them known in the Near East. Wherever motor cycle competitions are held British motor cycles are to be found competing, and, what is more, they generally take the first places; but when motor car trials are held in the Near East the competition is principally provided by our rivals. This is only one reason why we take a back seat in this trade. Another is that if the Near East markets are to be catered for adequately there must be provision for repairs on the spot. It must not be necessary for the owner of a car to have to wait until a spare part is sent out from England. I refer to this matter now, on the eve one might

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,

Directors :

E. W. H. BARRY, Esq.

C. De CERJAT, Esq.

SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.

General The Hon. SIR H. A. LAWRENCE, G.C.B.

Lieut.-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.

A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

say of the Motor Show, because developments in the Near East to-day are of such importance that it is quite clear that it is worth while making a really good attempt to obtain some of the trade that is and will be available. I need only mention in this connexion the gradual development of long-distance motor services, the growth of motor transport in countries like Roumania where, as I point out elsewhere, it is now affecting the railways and is expected to present a permanent problem just as it is doing in this country. As illustrating the position I cannot do better than quote some figures for the imports of cars into Constantinople. For 1924 the total was 850, while for the first seven or eight months of this year the figures were 1,495. These total speak for themselves as to the extent to which the "unchanging East" is altering its ways.

Sudan Trade Position.

No improvement is shown in the figures for the trade of the Sudan for the first six months of this year. The value of the total trade at £E7,201,966 shows a decline on the corresponding figures for the previous year of £E14,558, and the only item in the list which has increased is exports, due, of course, to cotton, which at £E4,184,465 are up by £E162,451. If, however, the various imports and exports are examined it becomes evident that the figures are not quite so disappointing as they appear to be at first sight. Thus in Government imports, which show a decline of £E60,789 at £E1,008,554, the only significant decreases were £E97,725 in respect of refined sugar and £E45,786 for arms and explosives. On the other hand, timber and railway sleepers at £E60,235 showed an increase of £E34,201, machinery one of £E33,823 at £E168,525, and metals and metal ware one of £E22,821 at £E244,578. In public imports, however, the position is otherwise. The main decrease was in cotton piece-goods, the value being only £E388,027 as compared with £E515,517, figures which illustrate very plainly the incidence of the economic crisis through which the country has been passing. Of equal significance was the increase in the value of the imports of dura from £E111,652 to £E159,722. There were, however, encouraging increases in the imports of machinery—£E48,917 as against £E45,640—and of metals and metal ware—£E85,351 as against £E78,482. Of the exports, roughly three-quarters represented raw cotton, the total of which was 621,125 kantars of a value of £E3,069,107 as compared with 475,001 kantars of a value of £E2,752,815. As my readers are aware, the failure of the dura crop has been the key to the situation in the Sudan, and as, according to the latest reports, this year's dura crop promises to be good, it may be assumed that from now onwards conditions will begin to improve, and that before very long the change will be reflected in the trade figures.

Greece's Problem.

In the report on Greece to which I have referred which takes events down to last May, Mr. Turner deals in detail with the economic situation of the country and the various vicissitudes of the past year which culminated in the formation of the Coalition Government and led to a feeling of improved stability. Mr. Turner stresses the financial exhaustion from which Greece is suffering as a result of developments during the past fifteen years in the course of

which her extraordinary expenditure has totalled about £173,000,000, of which a little over one-fifth has been met by foreign loans. The fact that the country has been able in addition to meet her foreign obligations speaks volumes for the economic soundness of the country and for the prospects for the future, given, of course, freedom from internal or external complications. As Mr. Turner rightly says Greece's need now is for stable conditions, and provided they obtain the outlook for the country must be of the brightest character. In the refugees, whose settlement will be completed as a result of the forthcoming loan, Greece has acquired an asset which promises to be of incalculable value in the future, but the potentialities of the refugees will take time for realisation, just as the economic recovery of the country generally, as Mr. Turner suggests, is likely to be a matter of time.

Ottoman Debt Negotiations.

Further negotiations are to take place next month in Paris between representatives of the bondholders and the Turkish Government. Details of the settlement reached with regard to the Ottoman Debt have been given in these columns. At the forthcoming meeting, according to a Reuter message from Constantinople, the delegates will discuss the assignment of Turkey's guarantees for the payment of coupons and the form of the new council for the administration of the debt. It is stated that the Turkish Government "is not disposed to assign the guarantees controlled by the Council, as it considers it sufficient to make provision for the necessary credits in the national Budget." This attitude, if maintained, will not prove the best way of improving Turkey's credit, for if the solution seems satisfactory to Angora it is likely to prove quite otherwise to the money markets to whom Turkey will ultimately look for a loan.

British Trade with Turkey.

As is well known, the products of Lancashire have always been the outstanding item in British trade with the Near East outlets, and the fact that these markets as a whole, either on account of conditions arising from the War or because of new and increasing competition, are not now providing us with the same opening provides one reason for the depression which the cotton county has been experiencing for some time. Some significant figures bearing on this point are given in an article in the current issue of the *Journal of the British Chamber of Commerce of Turkey* on "Great Britain's Decreasing Exports to Turkey." For the first six months of 1925, 1926, and 1927 the value of the exports to Turkey of the United Kingdom was respectively £2,249,185, £1,774,867, and £1,687,055. There was, in short, a steady decrease, accentuated last year no doubt by the industrial situation in this country. Of the three totals given cotton piece-goods were responsible respectively for £1,360,761, £884,319, and £826,067. It has to be remembered that raw cotton has fluctuated considerably during the period in question, and further figures given in the article of the volume of exports of cotton piece-goods are somewhat more encouraging. The totals in square yards for the three periods were 46,746,300, 32,581,100, and 35,938,600, and it may be taken for granted that but for the coal strike the middle total would have been much larger. Making allowance for conditions in 1926, the comparison of the figures given

for 1926 and 1924 for the countries exporting cotton manufactures leaves the conclusion that we have lost ground to a marked extent in the Turkish market. It is at any rate cause for reflection that with the exception of Italy, who heads the list, all other countries but Great Britain have increased their exports—Japan, Belgium, and Czechoslovakia to an appreciable extent.

The Shipping Exhibition.

The Shipping Engineering and Machinery Exhibition which is now open provides a wonderful display of the products of some of the most important lines of British industry. It is true that as an exhibition of the shipping industry it is not at all comprehensive, but the reasons for that will be readily understood, and there is an admirable display of small motor craft by the leading makers which is one of the most interesting features. It would seem an almost impossible task to make a really attractive display of some of the exhibits, but this feat has been accomplished throughout the exhibition, and whether the exhibit be pig iron or special steels it is shown in the most attractive manner. That fact speaks eloquently as to the rapid education of the British manufacturer in the art of advertisement. Notable features of the exhibition are the display of models of marine turbines and of large water turbines. There are also excellent ranges of hand tools, etc., and altogether the exhibition provides most pleasing evidence of the fact that British enterprise is still to the fore.

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 20.

There is a traditional saying in the Stock Exchange that a three weeks' account—one of course is in progress now—is always unfavourable to prices. The use of the word "always" is disputable; but this account, so far at any rate, is living up to the tradition. For the feature of the past week has been a very decided easing off of the boomlet in industrial shares which has been so persistent of late. In some expert quarters voices are loudly declaring that the period of activity in industrial shares is definitely over, and that the movement has been overdone. Such a view is not out of accord with logic and reasonable expectation. But there are some shrewd observers who are inclined to "wait and see" for a week or so before accepting this opinion. Certainly the position in the markets at the moment is rather baffling to the prophet. If an effective check has really come to the industrial share movement, it has come at the moment when statistical data at last look more like justifying such activity than for a long time past. The August overseas trade returns, though not brilliant, are the best for a long time, and railway traffics are good; but the stocks and shares principally concerned, especially Home Rails, do not respond.

The recent slackening in the demand for industrial and speculative securities has not had the customary effect of helping the gilt-edged market. The reason for this lies of course in the fact that this section of the Stock Exchange has been marking time, pending the publication of the terms of the Treasury's conversion offer. These were published yesterday morning and were fairly well received.

The P. & O. and its New Capital Plans.

A curious position has arisen in connexion with the P. and O.'s plans for raising new capital. Last week, as was noted in this column, the directors announced their intention of issuing £1,000,000 of new stock at the price of £200 for £100 stock. The meeting of stockholders held on Wednesday to sanction the scheme was the scene of a protest which caused the Chairman, Lord Inchcape, to adjourn the meeting to October 12. The new capital, as everyone recognises, is needed to pay for new tonnage

already ordered; and the bonus which the terms of the proposed issue offer to stockholders is welcome. The point objected to by the deferred stockholders is that the benefit of this advantageous issue is extended to preferred as well as deferred stockholders. By the terms of the existing charter of the Company, however, the directors are bound to offer the opportunity of subscription to both equally. It will be interesting to see what *dénouement* of the situation Lord Inchcape and his colleagues evolve in the next few weeks. There is a case, no doubt, for the revision of the Company's charter; but this can hardly be effected by October 12. One obvious way out of the difficulty would be to obtain the new capital required by an issue of prior charge stock, and to scrap the present proposals. But there are reasons for doubting whether the Board would take this step. It would, indeed, be curious if the quite intelligible protest of the deferred stockholders had the effect of robbing themselves as well as the preferred stockholders of the bonus which the proposed new issue terms promised them. The whole episode is worth watching as a curiosity in the history of company finance.

Prosperous Transport Companies.

It appears that the motor transport companies continue to gain ground at the expense of the railway companies. Doubtless their progress would have been even greater had our summer not been so thoroughly bad. We are reminded of these points by the speech of the Chairman of the Belfast Omnibus Company at the Company's Statutory meeting. "The bad weather," he said, "has necessarily been reflected in our traffic receipts." But in spite of this and other difficulties, "the directors are confident that the prosperity of the Company is an assured one." Whatever may be the future of this particular company, it cannot be doubted that these words represent the position of the industry as a whole. Two of the largest motor transport companies operating in the provinces are the National Omnibus and Transport Company and the United Automobile Services Company. Both companies were severely hit in the years immediately succeeding the collapse of the post-Armistice boom, but both now seem to have turned the corner. In recent years each company has paid an ordinary dividend of 10 per cent. The ordinary shares of the National Company yield £7 5s. per cent., while those of the United Company return £7 12s. per cent. It is not certain that the period of fluctuating earnings is at an end, but both shares seem a fair investment of their class. One of the most prosperous of the London undertakings is Thomas Tilling; but the present quotation of the ordinary shares, which yield only £4 14s. per cent., fully discounts the immediate future.

Artificial Silk: The Justification of a Warning.

A week ago we referred to the position of the artificial silk industry. We admitted that the industry is passing through a period of marked prosperity. But, having in mind the advance in prices that has recently occurred in the shares of artificial silk companies, we added that "care should be taken to see that the shares do no discount the future too far ahead." The week had not run its course before events had justified this caution. The accounts of the Bulmer Rayon Company for the period from November 1925 to January 1927 were published, disclosing a loss of £32,390. This was almost immediately followed by the announcement that Fras. Hinde and Hardy were unable to recommend the payment of an ordinary dividend for the past financial year. It is true that both these results were affected by last year's industrial troubles, but when due allowance has been made for this fact it is impossible to conceal a sense of disappointment. The market, indeed, was quick to read the signs, for there was a fairly general decline in artificial silk shares. The upward movement was undoubtedly being overdone and the reaction is a very welcome movement. The market will be distinctly healthier after having been brought face to face with hard facts. We repeat that great caution should be exercised in regard to the shares of the newer companies in particular.

THE SMYRNA DRIED FRUIT TRADE.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended September 10 :—

The arrivals of sultanias on the Smyrna market since the opening of the season are estimated at 11,200 tons, and the sales to date are put at 9,500 tons. Closing prices Smyrna, per cwt. c.i.f. : Type 12, 41s. ; type 13, 47s. ; type 14, 52s. ; type 15, 56s. The position now appears to have steadied down. The market is amply stocked with low and medium grades, but the shortage of good qualities continues. Arrivals of fruit from the interior are coming down freely, but present prices are likely to be maintained throughout this month owing to the heavy weight of forward engagements that have to be covered in. Prospects would point to easier markets in October onwards for low and medium grades, but values for better-class fruit will depend on the extent of supplies available.

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 9,100 tons, and the sales to date are put at 8,690 tons.

The market is active ; all arrivals are being absorbed as they come forward. Prices over the week have continued to advance for all grades and qualities. Figs are being marketed this year much more rapidly than was the case last season. The yield last year was 29,000 tons. This year's estimate is 20-21,000 tons.

EGYPTIAN DEVELOPMENTS.

The Alexandria Correspondent of the Federation of British Industries states that an ambitious scheme is on foot to link Cairo with Suez by an aerial railway, i.e., carriages and locomotives suspended on metal cables. A wealthy group is interested and ready, it is said, to spend £E150,000 on installation and give the Government half any profits.

The Government have accorded two well-known engineers permission to prospect for manganese in the Red Sea region. The difficulty in the past has, however, been to get at that mineral and molybdenum, which are in arid spots where labour is scarce and where mining would have to be carried on in face of almost insuperable obstacles.

Sea fishing is to be taken up on a larger scale, and an English expert has been engaged. The canning industry here is nil. British manufacturers are also to be asked to endeavour to cater for the tarboosh market ; it is not thought that British firms have hitherto devoted much attention to the trade. The railway authorities are still busy buying new rolling stock. Most interesting of all is the suggestion to have a railway depôt on the quay at Port Said. Should passenger trains actually be run down to the boats it would be a happy day for the traveller.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.)

EGYPT.

Bristle Paper.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of bristle paper required by the Ministry of Finance. October 15.

Files, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of tools for artisans such as files, hammers, augers, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. October 3.

Steam Salvage Tug.—The Director-General, Ports and Light-houses Administration, Arsenal, Alexandria, invites tenders for the supply of a steam salvage tug as per conditions of tender and specifications obtainable from Secretariat Department, Arsenal, against payment £E4 per set. October 24.

Bedsteads.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of bedsteads iron, required for the year 1927-1928. October 25.

Machinery.—The Controller of Technical Education, Ministry of Education, Sharia, Qasr el Aini, Cairo, invites tenders for the supply of machinery and machine tools for the Model Workshops and Trade Schools, Bulaq Technical School and the Intermediate School of Agriculture at Moushtuhor. October 17.

Diesel Alternator Groups.—The Egyptian Ministry of Public Works invites tenders for the supply at site of the Aft Power Station, of four diesel alternator, groups and accessories, including alternators, switchboard, transformers, power station auxiliaries, hand-operated travelling crane, workshop equipment (including machine tools, lathes, drills, etc.) mechanical and electrical testing instruments, station electric lighting. October 12 (D.O.T.).

Turbo Alternator Groups, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Belgas Power Station of three Turbo alternator groups, and accessories required for the Public Works Ministry (October 26) ; and for the supply and erection at site of Esna Barrage grounds of two Turbo alternator groups, and accessories, required for the Public Works Ministry. November 2.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses :—

Anchor Line.—S.s. Assyria for Bombay (Birkenhead, September 26). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Calcutta (Birkenhead, September 29) ; s.s. Mahout for Calcutta (Birkenhead, October 6).

Bibby Line.—S.s. Herefordshire for Port Said, Colombo, and Rangoon (Birkenhead, September 28).

British India Line.—S.s. Dumana for Bombay and Karachi (London, October 1) ; s.s. Merkara for Colombo, Madras, and Calcutta (London, October 8).

Cunard Line.—S.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, October 1) ; s.s. Cypria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool October 15, and Swansea October 18).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 1).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, September 30) ; s.s. Mirzapore for Colombo, Madras, and Calcutta (London, October 1) ; s.s. China for Bombay (London, October 6) ; s.s. Nagoya for Colombo, Madras, and Calcutta (London, October 15).

Prince Line.—S.s. Algerian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, September 24) ; s.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 4).

Ellerman and Papayanni Lines.—S.s. Lesbian for Oran*, Algiers*, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool September 24, Swansea* September 24) ; s.s. Serbino for Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, September 29) ; s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona*, Venice, Trieste, and Fiume* (Liverpool October 1, Swansea October 6) ; s.s. City of Oxford for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Liverpool, October 6) ; s.s. Mardinian for Gibraltar, Malta, Patras, Piræus, Volo*, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 8) ; A steamer for Gibraltar, Malta, Alexandria, Jaffa*, and Haifa* (Glasgow, October 17).

* Subject to sufficient inducement. Cargo taken on through Bill of Lading to :—Algerian ports via Algiers ; Moroccan ports via Gibraltar ; Tripoli (Barbary) via Malta ; Syria and Cyprus via Alexandria ; Greek outports via Piræus or other convenient port ; Fiume via Trieste.

ANCHOR LINE

LIVERPOOL TO BOMBAY.

KARACHI via Bombay, calling at Gibraltar and Egypt.

LARGE STEAMSHIPS. UPPER DECK CABINS.

MODERATE FARES.

RECOGNISED BY INDIAN GOVERNMENT.

Indian Government Vouchers accepted.

Passenger sailing dates :—

*ASSYRIA	Sept. 30	CALIFORNIA	Oct. 26
*BRITANNIA	Oct. 12	*ELYSIA	Nov. 10

*First class passengers only. Specially low fares.

SPECIAL NOTICE.

New T.S.S. California, 17,000 tons, carrying 1st, 2nd and 3rd class passengers, sails from Liverpool Oct. 26 ; Marseilles Nov. 1.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

Motors and Motoring.

By G. B. B.

New Models at Olympia.

There are those who hold that it would be better in many respects, were British motor manufacturers to be able to produce fewer models, arguing that by so doing they would be able to produce cheaper and still cheaper cars. Evidently the firms interested do not share that view, for from what I can learn there will be more new models exhibited at next month's motor show at Olympia than ever before. Naturally a certain amount of secrecy is observed—as to what these are, but equally naturally a certain amount of information has leaked out, and perhaps I shall not be indiscreet if I say that I think it will be found that Coventry and Birmingham makers will be well in the forefront.

He would be a bold man, as readers are aware, who expected any great improvements in the remarkably efficient production, the Austin "Seven"; a production which can only be described as an engineering triumph, but I fancy the Longbridge works will again spring a surprise on the motoring world. In which direction it will lie I am not permitted to say, but as an engineer of some experience I know what the "Seven" can do, and, knowing also the resources of the works and the energy, enthusiasm, and driving power of Sir Herbert Austin, I am looking forward to seeing something which shall be as much in advance of the present models as that is above the average productions of other countries. The Austin exhibit, it is safe to say, is one that will be visited by everyone who enters the doors of Olympia, and high as the sales of that company's cars have been in the past, I anticipate that next year will see all previous records easily broken.

The Vauxhall stand will also be one that should not be missed. I am asked not to give a description of the new 20-60 h.p. at the moment, as certain of the details and the prices have not been finally settled, but I can say it will be a thoroughly sound engineering proposition. It is not divulging any secret to say that the design of this new 20-60 h.p. car has occupied the company for the past two years.

Earlier I coupled Coventry with Birmingham, and in

so doing I had, of course, in mind the world famous firm of Humber, Ltd. I was able to test, recently, their 20-55 h.p. model and I found no difficulty in keeping to 25, 45 and 60 m.p.h. on second, third, and top gears, and that in spite of the fact that the weather conditions were far from ideal. Indeed, on the journey we encountered one of the semi-blizzards for which this summer has been remarkable. The tour taken was through Dartmoor, first from Ashburton to Princetown, and then across the moor back to Moretonhampstead and Exeter, and anyone who knows the gradients and the wind force that can be found on Dartmoor will agree that that was a reasonably fine performance. The run from Postbridge past the Warren, which has a gradient of about one in ten, with one in seven in places, was done at 40 m.p.h. on top gear. There is, I think, no need to say much more. We were, by the way, in a five-seater, four-door tourer model, but I can vouch for the fact that the four-door saloon, the *laudalette*, and the limousine on long wheel base chassis are just as fast and as comfortable.

Another car for which I have a liking and which should certainly be seen by everyone at the forthcoming show is the Clyno. This company will be showing their new 9 h.p. and 12-35 h.p. models and one of their distinctive features will be a new design of radiator which has been chosen not only on efficiency, but also on artistic lines. As a matter of fact, it will be found to blend admirably with the general design of the coachwork. As regards the quality of the Clyno engine, chassis, and body work there is, I take it, no need to say anything save that they are all on sound lines and in accordance with the best and most modern practice. The Clyno is now so well known that, like good wine, it needs no bush so far as the British public is concerned. In the Near, Middle and Far East it is not so well known, but that is a matter that need not be gone into here. I might add, however, that both models mentioned above are roomy, seat four people, and are excellently upholstered. The specification of the 12-35 h.p. car includes spring gaiters, shock absorbers, automatic windscreen wiper, petrol gauge, while the new saloon model will include fittings not usually found in cars of the same price.

Another car which will be found largely in evidence on the road next season will, unless I am very much mistaken, be the new "Standard" model. The 14-28 h.p. four-cylinder "Pall Mall" saloon is, as every discriminating motorist knows, one of the best productions of its class obtainable, and in saying that I speak from experience. I have never yet met a dissatisfied "Standard" owner, and I do not suppose I ever shall. All the cars turned out by the Standard Motor Co., Ltd., are finished by a special cellulose process which is more lasting than any enamelling work, can be cleaned without trouble, and always looks new and fresh.

The Alvis Car and Engineering Co., Ltd., is another Coventry firm of which a good deal may be expected in the future. They did big things, it will be remembered in the Junior Car Club's Sporting Car race at Brooklands about six weeks ago, finishing first and second, and when I say that the leading car maintained an average speed of 63½ m.p.h. for four hours it will be realised that the Alvis is not only a fast but a reliable proposition.

M. André Citroën considers his Citroën to be easily the leader of the 11.4 h.p. class, and in this he will find a large army of Citroën users to agree with him. Personally, I like the four-door saloon model which is fitted with four-wheel brakes, although the three-seater coupe is quite its equal from an engineering point of view. The equipment on the Citroën models is on the generous side, comprising as it does sun shield, window winders, spring blinds for rear window, carpet, driving mirror, scuttle ventilator controls, five lamps, electric lighting and starting, and a host of other adjuncts too numerous to mention.

Whilst writing of cars mention should be made of the Renault light six, with a 21 h.p. engine. The list of models produced by this firm is extensive enough to meet all needs, comprising as it does a standard open tourer, a seven-seater tourer, a standard Weymann type saloon, a standard metal pannelled saloon, a seven-seater Weymann type saloon, a seven-seater pannelled saloon, and a coupe which has won approval in the ranks of discriminating motorists. The Renault four-cylinder 14-45 h.p. is another fine production which well upholds the reputation of this old-established firm.

Motor Cycles.

When writing of Coventry and Birmingham opportunity must be taken to mention motor cycles, even though I am writing an article on cars. Not so very long ago it seemed likely that the British motor cycle industry would be killed by fierce American competition, but sterling merit and dogged perseverance has told, and to-day, the British motor cycle is unequalled throughout the world. Take the Humber, for instance, whose 3.49 h.p. model did so well in the recent International Six Days Reliability Trial. I can speak from experience as to the excellence of the Humber models just as I can speak of the all-round merit of B.S.A. productions, which won the manufacturers' team prize in the same competition, losing no marks and winning six gold medals. The course, as all my readers will recollect, was a gruelling one, and the performance was one that can only be classed as very fine.

The new Hudson is another motor cycle which has a host of admirers. Regarding it, it is perhaps sufficient to say that it made the fastest time in the Irish "motor cycle Derby," the Leinster hundred mile contest. The Ariel works, Ltd., of Selly Oak, Birmingham, are also turning out a very fine model which, I am pleased to note, has ample ground clearance coupled with a low riding position. This machine also won three gold medals in the Six Days Trials, and after the finish inspection showed that the machines were in perfect condition and that they had come through the contest without the slightest mechanical defect becoming manifest. At some future date I may be able to deal at greater length with this subject and to say something about such sterling machines as the Rex-Acme, the Norton, the Triumph, the Rudge-Whitworth and others, but the space allowed me is now filled. But I may say, as one who has had nearly 20 years' experience in motor cycling that the present-day machines reach a level of engineering excellence which I myself thought a few years ago that it would never be able to reach.

The output of the Anglo-Egyptian Oilfields for the week ended September 16 amounted to 3,605 tons.

COMPANY NOTES AND REPORTS.

NATIONAL BANK OF EGYPT.

Position at July 31, 1927, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share Capital (300,000 fully paid Shares of £10 each), £2,925,000. Reserve Fund: Statutory Reserve, £1,462,500; Special Reserve, £1,145,625; Current, Deposit and other Accounts, £14,642,280; Egyptian Government, £17,801,012; Sudan Government, £132,361; Mixed Tribunals, £1,612,592; Bankers' Accounts, £267,700; Cheques and Bills Payable, £243,742; Sundry other Accounts, £1,818,979—£42,051,791. Securities: Egyptian Government Securities and Securities guaranteed by Egyptian Government, £1,355,896; British Treasury Bills and National War Bonds, £11,244,104—£12,600,000—£25,200,000.

* By authority of the Egyptian Government these Treasury Bills are deposited in lieu of gold. (See *Journal Officiel* of October 30, 1916).

THE P. AND O. MEETING.

The extraordinary general meeting of the P. and O. Company, held on September 14, had to be adjourned on account of the opposition of the Deferred stockholders on a technical legal question. The meeting was convoked to pass a resolution increasing the capital by the creation of £1,000,000 Deferred stock, and the opposition was principally directed against the right of the Preferred stockholders to participate in subscribing to the new issue. It is provided in the company's charter that both classes of stockholders shall have equal rights in such a case, and the company has therefore no option but to permit the Preferred stockholders to share in the issue. It is understood that the adjourned meeting will be held on October 12, when the directors will no doubt be in a position to submit proposals which will be acceptable.

The Bank of Athens announces an interim dividend of 5 drachmæ per share on the ordinary shares; payable September 22 (coupon 54).

The Commissioner for Cyprus in London reports that the orange crop of Cyprus for 1926 was a record one. The Agricultural Department being now in a position to fumigate oranges before export enables producers to comply with quarantine regulations in Egypt. The planting of mulberries is increasing. This is welcome news in view of the habitual shortage of food for silkworms. The conditions of the cereal crop is, on the whole, excellent, and gives promise of a good harvest, in marked contrast to last year, when blight in the early summer ruined much of the wheat.

British Consular Reports

V.—GREECE.

The Report on the Industrial and Economic Situation in Greece, by Mr. Richard Turner, O.B.E., Commercial Secretary, H.M. Legation, Athens, dated May 31 last, which has just been issued, is of special interest on account of the developments in Greece in the period with which it deals. Mr. Turner lays stress on Greece's need for stable political and financial conditions to enable the country's economic recovery, which, it is pointed out, must be a matter of time. We give the following extracts:—

Economic Situation.

While the year 1925 was characterised by a reaction from the inflation of the foregoing years, the year 1926 saw a further aggravation of this situation, the main cause of which was the increasing lack of confidence, both at home and abroad, in the financial stability of the country, due to the continued state of political unrest, the arbitrary measures taken to improve the state of finances, and the anticipation of possible further measures of even more drastic nature. Further, there was a growing conviction that the credit of the country had been, and was being, pledged—largely for unproductive purposes—to an extent that would very heavily burden any future administration.

The second Forced Loan of January, 1926, by which all notes of Drs. 50 and over in value were cut, reducing their value by 25 per cent., further damaged the credit of the State, while the continuation of the heavy taxation on Joint Stock Companies, and particularly on the banks, further straitened the existing scarcity of money. Other factors could also be mentioned which tended indirectly to a further depreciation of the drachma, and an increased instability of the exchange, as for instance, the increase in the public debt, and an increasing disparity between expenditure and revenue, due to a growth of the former and an unsatisfactory return of the latter resulting from, on the one hand, the difficulty of collecting taxes, and, on the other, reduced imports and increased smuggling consequent on the increased duties under the new tariff, which came into force at the beginning of the year.

It is maintained that the number of industrial and commercial enterprises has, of recent years, increased more rapidly than, thanks to the supervening events, the capacity of consumption of the country justified, with the result that while considerable capital has been thereby immobilised, profits for the individual undertaking, owing to competition, were often unsatisfactory. The completion of the establishment of the refugee population, and their conversion—which in certain instances is proceeding rapidly—from a pauperised section of the community to a valuable and productive factor in Greek economy, will tend to remedy this condition. Furthermore, if the banks, under the leadership of the National Bank, maintain a conservative policy with regard to credits, and resist pleas to increase the fiduciary circulation, the less economically robust concerns will disappear or be absorbed.

The abnormal political conditions obtaining in the earlier part of 1926 did not last throughout the year. In August, General Kondylis overthrew the Pangalos régime and proclaimed a general election. This took place in November, and as a result of it a Coalition Government, composed of the leaders of the various parties, was formed. While the activities of such a Government are hampered by the necessity of reconciling divergent party views, the measures it promulgates have the advantage of having received the sanction of all the parties, and of being, therefore, less likely to be subverted by subsequent administrations. The feeling of improved stability which followed the constitution of the present Government was reflected in the exchange rates.

Reorganisation of National Finances.

The Government recognised as their first and most important task a reorganisation of the national finances, and a committee was appointed, whose report may be briefly summarised in the word "Economy." The Budget for 1927-28 has not yet been laid before the Chamber, but great efforts are being made to effect economies in administration. That a balance will be attained in the budget for the current year, is probably impossible, but given stable political conditions, and an endeavour to realise the contemplated economies, it should not be impossible to foresee the fulfilment of this much-to-be-desired result within the next few years.

At the present moment Greece is suffering from the financial exhaustion due to the tremendous strain put upon her during the last 15 years. During this period her extraordinary expenditure, for her wars, the settlement of refugees, etc., has amounted to some £173,000,000, of which only £36,000,000 have been furnished by foreign loans. During this period the country has, in one way or another, made shift to meet her ordinary expenditure, and has met her foreign obligations in gold. This is a performance of no mean magnitude, and may be taken as evidence of the economic resilience of the country, though the part played by the abnormal profits accumulated during the War must of course be borne in mind, as also the very material assistance rendered to their country by Greeks resident abroad.

While it has not yet been possible to present the Budget, the Government has achieved one great step towards setting the finances of the country on a more stable basis. The arrangement reached in London in April regarding the Greek War Debts, with the consequent removal of certain of the difficulties in the way of obtaining loans for Greece, had a favourable effect, both actually and psychologically, which again was reflected in the exchange rates. The returning confidence in the economic stability of the country is also shown by an increase in the home remittances of Greek emigrants. These remittances, it may be added, constitute one of the important sources of "invisible income" that contribute to adjust the adverse trade balance. It will be seen from the table that in 1926 these remittances amounted to some seven million pounds. This figure comprises only the sums that passed through the banks; a further considerable amount is, however, remitted through other channels. Furthermore, the amount of capital held abroad by Greeks, either by those residing abroad, or as investments by Greeks living in Greece, is very considerable, and it seems evident that some part of the Greek foreign trade is financed by this means.

Throughout the year the depreciated rate of exchange for the drachma, coupled with the shortage of loanable capital, the increasing cost of living, and the general feeling of uncertainty, resulted in decreased consumption, which, together with an increased output by the Greek industries, led to smaller imports from abroad. From the beginning of 1927, however, an upward movement of imports is reported, while, during the later half of April and May, more liveliness was noted in the retail trade, even in the shops selling so-called luxury goods.

Shortage of Capital.

The main difficulty of the country at the present moment

JOHNSTON LINE

is the shortage of liquid capital. Throughout the past year, money became increasingly tight. The banks restricted the granting of capital for commercial purposes, demanding very wide security, and while the official rate of interest of the National Bank was in July fixed at 11 per cent., the "maximum" rate of interest was 15 per cent., and in practice anything from 20 per cent. to 30 per cent. had to be paid for money. Even at these prices, however, some firms were obliged to take up credits, with, in many cases, the results that might be foreseen. The policy of the banks was dictated, not only by a desire to enforce commercial continency, but also by necessity, the general economic and commercial depression having effectually "frozen" the credits given in the preceding period of fictitious prosperity, while the uncertain conditions during the earlier part of 1926 had driven what available liquid capital there was either out of the country, or into investment in real estate or other object, where it would not be so readily available should the State contemplate another forced loan or similar measure. The unwillingness to put money into commercial enterprises was also manifested by the deposits at the banks; during the year, the "time" deposits at the National Bank decreased from 956 million drachmæ to 844 million, while the "sight" deposits and savings bank deposits increased from 1,678 million drachmæ to 2,581 million. Since the beginning of the current year, the "sight" and savings bank deposits have shown a further upward tendency. This increase of deposits has not, however, at once been made available to the business public, the official rate of interest being still maintained, partly doubtless as a result of the intentional restriction of credits for commercial and industrial purposes, and partly because of the utilisation of the money by the National Bank towards the end of the year for payments to refugees, which, however, doubtless tended to put money into circulation. On the other hand, it is maintained that now, in May, 1927, the scarcity of loanable capital is less marked, and, in the provinces at any rate, loans on good security are said to be obtainable at less than the official rate.

There has, as mentioned above, become evident a somewhat livelier movement in trade during April and May, but it would not be advisable to count too confidently upon the year 1927 being anything more than slightly better than its predecessor. Merchants and others are still, in many cases, finding it difficult to fulfil their obligations and, if the suggested stabilisation of the drachma takes place—even though it is stabilised at about the present level, which, it is maintained, is approximately that warranted by the cost-of-living index and other circumstances—the country will have to go through the attendant discomforts, involving the liquidation of insecurely established concerns, banking as well as commercial and industrial.

Greece's Need.

What Greece needs is first and foremost stable political conditions, both internally and externally. Of only slightly minor importance is financial and monetary stability. Given these, her own industrious and intelligent population will, if allowed to develop their own and the country's resources *gradually*, without the false stimulus of a sudden abundance of liquid capital, show that they have not only been able to bear the strain of the last 15 years, but, with the additional vitality and capacity for production derived from a well-established refugee population, that they can recreate the economic strength of the country. This, however, will take time and patience, and will demand sacrifices of individual interests—always a difficulty for a people of individuality and initiative. Greece has overcome great difficulties in the past, and, it is to be hoped, will do so in this instance; the fundamental necessity for her, and for those who desire to trade with her, is, once again, stability.

Agriculture.

General.—The total superficial area of Greece is

estimated at about 120 million stremma, of which 36½ million are under cultivation. The following shows the distribution of the cultivated areas and forest lands (in stremma):—Forests, 15,000,000; brushwood areas, 500,000; cultivated lands: suitable for cereals, 10,300,000; suitable for pulse, 600,000; suitable for potatoes and kitchen gardens, 270,000; suitable for pastures, 520,000; suitable for tobacco, 650,000; suitable for cotton, 180,000; olive groves, 5,000,000; vineyards, 1,500,000; currant vineyards, 700,000; fruit trees, 1,000,000; total, 36,220,000.

During the year under review, no new measures for development of agriculture were taken, but increased attention was given to measures for the extension of mechanical cultivation, use of chemical manures, prevention of diseases of plants and their cure, improvement of agricultural instruction, and strengthening of rural credit. More than 4,000 agricultural associations now exist in Greece, and the National Bank of Greece, which pays special attention to rural credit, has extended loans amounting to 48½ million drachmæ for agriculture during 1926. Special efforts are being made for the extension of wheat growing, chiefly in Macedonia, with the object of rendering Greece more self-supporting in this respect, and reducing the imports of this article of food.

Such figures as are at present available, showing general agricultural production during 1926, as compared with that of 1925, are of special interest. They show a considerable increase in the value of both olive oil and tobacco. The figures for the 1926 crop of pulses and potatoes are not yet available.

The production of wheat is of the greatest interest to Greece and every effort is made to encourage farmers and to establish the refugees as agriculturists in Macedonia and Thrace. The Greek Government realise the importance of developing the uncultivated areas in those districts, and, as stated above, their aim is to make Greece self-supporting and thereby save the very large sums of money at present expended on imports of wheat and flour. The local annual consumption of wheat amounts to approximately 650,000 tons, of which less than half is produced in the country.

The production of wheat during the last four years is as follows (in tons):—1923, 240,000; 1924, 230,000; 1925, 342,000; 1926, 290,000. The figures for all cereals (including wheat, barley, meslin, maize, oats, rye) for the same period are:—1923, 624,100; 1924, 638,600; 1925, 938,000; 1926, 792,000.

The olive oil production in Greece varies considerably from year to year, two bumper crops very seldom coming in succession. Great hopes were founded on the 1926 crop, but unfortunately early in the year the olive trees were attacked by the *Dacus* fly, which caused great damage and a very appreciable reduction in the output for the year. This reached only 63,045 tons instead of 95,000, as anticipated.

Wine production is one of the principal industries of Greece. Enough wine, which is of excellent quality, is produced to meet local requirements, and the yearly exports to France and Germany are considerable, while the efforts being made to find other markets are meeting with some measure of success. The exports for 1926 amounted to 105,000 tons, as compared with 10,000 in 1918. Vineyards occupy approximately 1,500,000 stremma, two-thirds of which are in Old Greece. The cultivation of the vine had almost died out in Macedonia when the industry was revived in 1924 by refugee vine-growers from Broussa, Smyrna and later from Bulgaria. The State has assisted the revival by advancing approximately Drs. 6 million to the cultivators in the Salonika area, and by distributing seven million plants and cuttings among the refugees. These were obtained from France and the Greek State nurseries, and special measures are being taken for the prevention of *phylloxera*, which had been the cause of the reduction of cultivation in Macedonia in recent years. The production in Macedonia for 1925 amounted to 10 million

kgs., and it is anticipated that there will be a rapid increase in a year or two.

The total production of wine for the whole of Greece during the year 1924-26 was as follows (in tons):—1924, 252,067; 1925, 260,912; 1926, 275,000.

The Currant Trade.

The currant trade of Greece, on which the prosperity of the Peloponnesus largely depends, has been suffering in post-War years from various adverse conditions. The principal of these are over-production, the inflation and rapid fluctuations of Greek currency, and the largely increased competition of foreign fruits.

Successive Governments have been compelled to come to the assistance of the growers and trade during the last five years, and to provide funds for the purchase of quantities of the fruit in order to maintain prices by the reduction of the stocks available for export, as it was not possible, owing to commercial conventions, to increase the quantity of fruit liable to retention in the country under the Retention Law, the maximum of which was fixed at 35 per cent.

As no funds were available for this purpose in 1924 when the crop proved to be one of the largest on record, a fresh export tax was imposed on the eve of the commencement of the export season. This amounted to Drs. 1,200, payable on every ton of fruit exported, and was the equivalent of the sum of Drs. 30 on each pound sterling value of currants declared for export.

By a law-decree of August 10, 1925, an independent or autonomous Currant Organisation was established to take over the administration and manutention of the trade, formerly entrusted by charter to the Privileged Company for the Protection of the Currant Industry, which had been bought up by the Government in 1924. This Organisation is administered by a council on which sit representatives of the Government, the National Bank of Greece, and of the trade. The decisions of this council are controlled by a committee of three Government representatives and two delegates of the trade.

With a crop estimated to exceed 150,000 tons harvested during the summer of 1925, the Currant Control Organisation again imposed the export tax of Drs. 1,200 on the exports of the 1925-1926 season, in addition to the maximum retention tax of 35 per cent. in kind. This enabled the purchase of 23,500 tons which were withdrawn from the market during the season and sold locally to the wine and spirit manufacturers, as compared with the 25,500 tons, which had been bought in by the Government during the preceding season.

The present export season opened on September 1, 1926, with a crop at first estimated to reach 140,000 tons, of excellent quality, plus 10,000 tons in fruit and retention warrants carried over from the previous season. The size of the crop proved, however, to have been over-estimated, as subsequent counts placed it at the correct figure, which is shown to have been 126,000 tons.

The Hellenic Government having in the meanwhile denounced their commercial conventions, the Organisation considered itself free to impose a higher retention tax, and this was fixed at 52 per cent. in kind. The export tax of Drs. 1,200 was maintained in spite of the increased retention tax, and an additional sum of sixpence per cwt. was imposed on all shipments, the proceeds of this levy to be used for expenditure on an advertising campaign.

The taxation paid on export of currants, expressed in sterling at the rate of exchange prevailing at the end of April, 1927, is, therefore, as follows:—50 per cent. Retention Tax, paid in Retention Warrants purchased in the open market, the price of which is fluctuating, but may usually be placed at a little below that of the fruit, 8s. 10d.; Export Tax of Drs. 1,200 per ton, 3s. 8d.; Advertising Tax, 6d.; total, 13s. Taking the present price f.o.b. of average provincial fruit, this amounts to an export tax of 50 per cent. upon the value of the fruit, borne by the consumer.

CHESS.

By "CARO-KANN."

The solution to last week's end-game is as follows:—1, K—Kt3, K—B2; 2, K—R4, P—Q4; 3, PxP, PxP; 4, P—Kt5, PxP; 5, KxP, K—Q2; 6, K—B5, P—Kt4; 7, K—Kt5, K—K3; 8, K—B4, P—Q5; 9, K—K4, P—Q6; 10, KxP, KxP and draws. It is interesting to note that if White captures the Rook's pawn he loses. There are, of course, a number of alternative lines of play, but that given is probably of most interest.

I give this week an end-game which occurred recently in off-hand play.

White to play. What result?

PLAYING CARDS MONOPOLY IN TURKEY.

A Law was recently passed by the Grand National Assembly creating a monopoly in Turkey of the manufacture, importation, and sale of playing cards with the exception of those for children's card games. A tax of 100 piastres per pack will be levied on all playing cards, 75 per cent. of the resultant revenue being ceded to the Red Crescent Administration. Importers and holders of stocks must declare the kind and quantity of cards held or on order to the Defterdarab of their locality, the cards thereafter becoming subject to the Monopoly regulations, one of which requires the stamping of each packet with the Monopoly Mark. At present the monopoly is being administered by local Treasury Departments.

According to a statement of the President of the Union of Roumanian Cereal Exporters, Roumania will be in a position this year to export one million tons of wheat.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended September 14:—

Egyptian Futures.—Sakel Contract.—Heavy fluctuations have been experienced in this contract since we last wrote. During the earlier days of the week, especially just prior to the American Bureau report, published last Thursday, values showed a decided hardening tendency. Immediately after the American crop and condition figures were known, a rapid rise in the level followed, the November position at the height of the movement being traded in at 21.30; subsequently heavy realising began to make its appearance, and prices started to react. Liquidation from all quarters was in process up to yesterday evening, but during the later trading the market began to show signs of developing more resistance and some recovery from the lowest took place. To-day, under the influence of a sharp rise in New York, the turn round has been more emphatic, so that we finish the week with the list showing 23 to 45 points decline for near and 48 to 52 points down for distant positions. During the entire week trade support has only been moderate, except perhaps to-day, when spinners have again begun to show signs of increasing interest in their various qualities. Should prices stabilise round the present level, or preferably appreciate gradually, it would appear probable that a considerable broadening in the demand would take place. Generally speaking, consumers are not carrying large stocks; certainly to date they have purchased very little new crop cotton, and it does not appear feasible that a buying movement on their part can be deferred much longer. The Alexandria market seems to have passed through pretty much the same process as we have experienced this side, drastic realisation there causing a heavy decline from the high level reached earlier in the week. The receipts are starting to show the increasing weight of the crop movement, but so far, very probably only a very small quantity of new crop Sakel cotton has arrived down in Alexandria.

From one or two sources we have received complaints of damage through damp and cold weather, but these lack general confirmation. Whilst recent events have undoubtedly left the market in a healthier state owing to the evening up of the accumulated long interest, the position still lacks the weight of trade support essential to give the necessary solidity to any permanent advances from the present level; therefore, whilst undoubtedly "bullish" on the situation, we would only advise conservative commitments until a more decided view can be obtained.

Upper Contract.—Quite a fair business has taken place in this option during the past week, and price movements have approximated fairly closely with the fluctuations in the American market. Further speculative buying during the early days of the week was the principal feature, but more later heavy liquidation has been in progress, with the result that the advances registered prior to last Thursday's Bureau report, have been more than neutralised. Spinners still abstain from purchases of note, and arrivals of new crop cotton in Alexandria are increasing daily. Provided values in the American market are maintained round their present level, we consider prospects still favour the "long" side, but it must be confessed that at the moment trade support is not sufficient to encourage a very decided view of the market.

Egyptian Spot.—The demand has again been moderate during the past week, the erratic fluctuations that have been witnessed effectually curbing any tendency to increasing activities on the part of the trade. The inquiry still runs mainly on the Fully Good Fair and slightly above Sakel qualities, and the Good Fair to Fully Good Fair Upper grades. The higher class cottons in both varieties have again been generally neglected; the tendency for consumers to concentrate more on the very inferior qualities,

is still in evidence, and probably the greater part of the business transacted during the past week has taken place in these at values ranging from 12d. to 16d. per lb. C.i.f. cottons have been rather neglected, and the absence of new crop business in this department is still a feature.

Sudan Sakels have enlisted a fair measure of support, and as a result of this, the intermediate cottons, namely, SSS and SSSS qualities, are now practically exhausted. In the White varieties, only a moderate turnover has taken place. The values to-day, for the first time since the commencement of the week, have shown a firmer tendency, and as a result of this the spot demand already shows signs of broadening, a tendency that we think would become more pronounced provided consumers are given the encouragement of steady and hardening markets from now onwards.

The forwardings for this week total 5,759 bales Egyptian and 3,290 bales Sudans. Quotations of Sakel are advanced 5 to 10 points. Uppers are reduced 30 points. Estimated sales for the week, 1,400 bales Egyptians and 2,950 bales Sudans. F.G.F. Sakel to-day 20.50d. F.G.F. Upper to-day, 16.05d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended September 8, state:—

Since our last report, the futures market after a rather quiet opening closed very active, prices securing a fresh important advance. The week's summary of price movements is as follows: Sakellaridis.—November, 42.05 dollars, 2.32 dollars up; January, 41.75 dollars, 2.28 dollars up; March, 41.45 dollars, 2.18 dollars up. Ashmouni: October 31.60 dollars, 1.67 dollars up; December, 31.77 dollars, 1.65 dollars up; February, 32.00 dollars, 1.70 dollars up.

Sakel.—After a series of rather quiet sessions during which transactions were almost exclusively professional, the market during yesterday's session jumped about 1½ dollars as a result of the publication of the second Bureau Report on the state of the American crop, which gave the condition as 56.1 and the probable production as 12,692,000 bales against 69.5 and 13,492,000 bales a month ago, and 56.6 and 15,166,000 bales a year ago. Naturally, the figure of 12,692,000 bales given as probable production of the American crop cannot but be considered as bullish, and it is slightly more pessimistic than the figure generally anticipated by the market. The advance has been induced principally by heavy speculative buying, and there is no doubt that the market must be at present overloaded with bull positions.

In view of the continued moderate demand from abroad, the commercial houses have continued to keep out of the market. As we have said in our previous reports, business concluded so far with spinners for new crop shipment is very small, not to say nil, and it is feared that by reason of this arrivals at Alexandria, as soon as they become of any volume, might weigh on the market.

Uppers.—After a quiet opening, this market closed very active and prices have risen considerably for the same reasons given above.

The demand from abroad has been a little better this week, the Continent being the principal buyer.

The week's receipts amount to 61,591 krs. against exports 44,133 krs.; the stock in Alexandria stands at 1,959,861 krs.

The official figures of arrivals and exports for the period September 1, 1926, to August 31, 1927 are as follows:—Arrivals: Lower Egypt 5,206,000 krs.; Upper Egypt, 3,235,000 krs. Total 9,441,000 krs. Exports: Sakel, 3,235,989 krs.; Ashmouni, 4094,681 krs.; Various 529,717 krs.; Total 7,860,387 krs.

Spot.—Minet el Bassal has only been open four days

this week owing to holidays. A very fair business has been done and sales amount to about 9,100 bales, of which we estimate 3,600 bales Sakellaridis, 5,100 bales Ashmouni and Zagora, 400 bales Pilon and a few bales of White. The spot situation is about the same. The arrivals of Sakel have been readily sold at good prices and there is at present sufficient demand to absorb the Upper arrivals without weakening of premiums.

Sakellaridis.—A fair business has been done covering all grades. Spot differences are unchanged except the low grades, which are inclined to ease.

Ashmouni and Zagora.—A good business has been done mainly in the good grades. Spot differences are generally without change.

Pilon.—A good business has been done chiefly in the better grades. Spot differences are a little easier.

Other Varieties.—A few bales of White have changed hands at about last week's differences. Other varieties are neglected and no business is reported.

Up-Country.—Business in Upper Egypt has been rather active this week; on the other hand, in Lower Egypt hardly any business has been concluded. The relative stagnation of the interior markets is due, as we have previously said, to the fact that export houses are, this year, out of the market on account of lack of forward engagements with spinners.

Crop 1927.—The reports which we have received this week from our interior agencies make rather contradictory reading. Indications are that in some districts the crop has turned out well and that in others the crop has suffered and that the results will not be satisfactory on account of the leaf worm attack, excessive heat and scarcity of water. Any forecast at the present time on the final results of the crop would be rather hazardous. The Government has not yet published the acreage figures. Picking in Upper Egypt is general now, and in Lower Egypt it is developing steadily and is slightly in advance in comparison to last year.

The Eastern Telegraph Company has declared a second quarterly interim dividend of $2\frac{1}{2}$ per cent., free of tax.

The Bombay Gas Company announces an interim dividend at the rate of 8 per cent. per annum (less tax).

The Eastern Extension Australasia and China Telegraph Company has declared an interim dividend for the three months ended June 30, 1927, of 5s. per share.

Egypt's imports for August amounted in value to £3,918,747, against £4,776,018 for the corresponding month last year. The exports totalled £3,461,894, as compared with £2,237,864 for the corresponding month last year.

Notes of the Week.

Yugoslav-Bulgarian Relations.

The difficulties in the way of establishing relations between Yugoslavia and Bulgaria on a permanently satisfactory footing are well exemplified by recent occurrences. At Geneva there was a meeting between the Foreign Ministers of the two countries, and, although no tangible outcome resulted or indeed was to be expected, a point was gained by friendly intercourse between the two Ministers in the correct atmosphere that must be supposed to envelop the League of Nations. Almost immediately afterwards, however, two outrages were perpetrated in Southern Serbia—a bomb exploded in a hotel in the frontier town of Ghevgheli, and four days later a train was blown up on the Nish-Ghevgheli section of the Belgrade-Salonika railway line. As these outrages are attributed to Macedonian *komitaji* activities, the Yugoslav Minister in Sofia has made representations on the subject to the Bulgarian Government. The relations between the two Governments are, fortunately, sufficiently correct to prevent any serious developments from these incidents; but they serve to embitter feeling between the two peoples at a time when racial animosities show a tendency to die down. When these outrages occur so far in Yugoslav territory the Yugoslav Government must find it difficult to convince the Bulgarian Government that it is more incumbent on Bulgaria to prevent her *komitajis* from crossing the frontier than on Yugoslavia to take the necessary precautions to guard her frontier effectually. A grave responsibility rests on any country that allows these *komitajis* to roam at large; but, whereas in Bulgaria they can pose as peaceful inoffensive citizens, it is only when they cross the Yugoslav frontier that they are declared *komitajis*, and it is a matter for surprise that a country of such a high military standard as Yugoslavia cannot guard the two or three hundred kilometres of frontier that are exposed to these *komitaji* raids. As Bulgaria pleads the smallness of her defence forces as her excuse for failing to stamp out the *komitaji* nuisance, the more practical course for the Yugoslav Government to adopt, instead of representations after the event, would be to come to an arrangement by which Bulgaria is held responsible for guarding, say, a hundred kilometres of the frontier involved and Yugoslavia places an effective barrier to future raids on her side of the other portion.

The Jewish Trial in Turkey.

A trial which has keenly interested public opinion in Constantinople, if not throughout Turkey, has just been concluded with the acquittal of the accused. The funeral of a Jewish girl, who had been murdered by a Turkish youth of good extraction, was made the occasion of a Jewish demonstration, and in the conflict that followed with the police a number of Jews were arrested on the charge of insulting conduct towards the Turkish Republic. The Turkish Press played the rôle of its yellow contemporaries in other parts of the world and tried to create a case against the whole Jewish community, which has hitherto been conspicuous for its law-abiding character and general usefulness in Turkey's economic scheme. Turkish judicial procedure is, therefore, entitled to full credit for not allowing itself to be stampeded by popular clamour. The acquittal of the eight Jews arrested, on whom the Public Prosecutor demanded sentences of from one to three years' imprisonment, will go far to spread confidence in the impartiality of Turkish justice; and it is to be hoped that the Public Prosecutor's threat to carry the case to a higher Court will not be persisted in, in the wider interests of Turkey herself. The Constantinople verdict, following hard on the judgment in favour of Turkey in the Lotus case, delivered by the Permanent International Court of Justice of The Hague, may legitimately put Turkey in good humour with herself. She has now the stronger reason for seeing that the favourable impression which will have been created abroad is maintained, and is not allowed to be affected by lapses in administrative procedure.

The New Yugoslav Cabinet.

With the resignation of one Minister and the shuffling of a few portfolios, M. Voukitchevitch has reconstructed his Cabinet with far fewer changes than were confidently expected. Only one new Minister has been appointed, a member of the Slovene Clerical Party, and thus effect is given to the arrangement made before the General Election between the Prime Minister and Dr. Koroshetz, the Slovene leader. The Government may, therefore, be expected to meet the Skupshtina on October 5 with a majority of 212, out of a total Chamber of 315 deputies. Whether the coalition rests on a satisfactory foundation

the event will prove. The Party Clubs are apt to play a dominant part in Yugoslav politics, and it is not yet established that they have accepted the new dispensation. Speculation on the subject continues to be rife in the country; but the main point that emerges from the multiplicity of rumours is that M. Voukitchevitch is well able to keep his own counsel and has shown some skill in keeping his hold on the situation. Efforts are still, apparently, being made to reunite the Democrats and Dissident Democrats; but they would seem to be inspired by M. Pribitchevitch, the leader of the latter, who is anxious to undermine the position of the Prime Minister. There is also some talk of the Slovenes' amalgamating with the Radicals, on the analogy of the Democratic Union, which comprises Democrats and Bosnian Muslims—a sign of the growing discontent over the futility of a number of small parties. If the present coalition can hold together, there is a fair prospect of important and useful legislation being passed by the Skupshtina during the next Parliamentary period.

The Policy of the Wafd.

The Wafd has refuted the prophets who would see only dissension in its ranks, and has unanimously elected Mustapha Pasha Nahas as its Leader and Chairman of the Wafd Parliamentary Committee. The question of a candidate to be put forward for the Presidency of the Chamber has been postponed. In view of the fact that the full meeting of the Party has endorsed the manifesto previously issued in the name of the Wafd, and that the manifesto was a scrupulously "correct" document, the situation in Egypt bids fair to justify the optimism of those who have found reason to anticipate a steady improvement in Anglo-Egyptian relations. The manifesto announced the intention of the Wafd to work for the realization of Zaghoul Pasha's principles and to strive amicably for independence, without hatred or animosities; to maintain the coalition of parties and to cultivate friendly relations with Foreign Powers in general and with Great Britain in particular. If this policy of proceeding slowly can be carried out with the full support of the nation, there is little reason why the various questions still outstanding between Egypt and Great Britain should not find a smooth and satisfactory settlement.

Turco-Iraqi Relations.

The appointment of Talaat Kaia Bey as Turkish Consul-General in Iraq is a most welcome sign of the growth of good will as between Turkey and Iraq. In some quarters suspicion may still exist on the duration of the integrity of Kemalist motives in regard to the new Arab State, but actually nothing is known to have happened to suggest, even in the slightest way, that the Turks are not loyally abiding both by the spirit and the letter of the Angora Treaty, made in June last year between Great Britain, Turkey, and Iraq. Iraqis themselves appear to be convinced of the friendliness of Turkey, and hope for a considerable tightening of and increasing cordiality in relations between the two countries. Iraq has, of course, suffered much through the prohibition, by the Turkish Government, of foreigners entering the districts north-west of Mosul. Trade between Turk and Iraqi has been precluded. Now, however, with the official representation of Turkey at Baghdad, and—as is to be soon expected—the representation of Iraq at Angora, it is to be hoped that some of the products of northern Iraq may find a market in Turkey. Hopes of Iraq's future were always problematical, unless the frank friendship of Turkey were implied, and now that unmistakable signs of the Kemalist attitude have been shown, whole-hearted efforts may be made, without a sense of strain, in the task of national reconstruction. This *rapprochement* between Turkey and Iraq is all the more to be welcomed in that it is manifested at a time when Perso-Iraqi relations are in a bad way. It is true that Persia is suspicious of Turkey as well as of Iraq at the present moment, but there is no need to attribute to Angora a political motive in choosing this time for establishing a Consulate-General in Baghdad (and in giving promise of a Legation

there), for this is but a natural development of the agreement reached in Angora last year. Probably it would appear to many Iraqis no exaggeration to say that Iraq's best interests are bound up with the existence of a strong and friendly Turkey.

Anglo-Iraqi Negotiations.

Jaafar Pasha, Prime Minister of Iraq, has preceded his King in arriving in London to discuss with the British Government the questions of Iraq's entry into the League of Nations, of the extent to which Iraq must follow British advice, and of the financial obligations of the Arab State towards Great Britain. In all probability decisions will have been made by this time in these directions on the British side, and it remains to be seen how far the Iraqi point of view coincides with them. Little is to be gained by attempting to pre-judge the decisions arrived at, but we are confident that either the granting or the withholding of concessions will be made as between friends. Differences of opinion are known to exist, most notably, perhaps, on the issue of Iraq's defence; but recognition of this fact by no means implies enmity or the adoption of a superior attitude. The cause of Iraq, as interpreted by the present governing authorities of Iraq, could hardly be in more persuasive hands than those of King Faisal, Jaafar Pasha, and Muzahim Beg Pachachi; and it is to be hoped that the greatest generosity, consistent with the security of Iraq and the real interests of Great Britain, will be displayed by the representatives of Britain in the forthcoming negotiations. Judged even on the inadequate basis of subsequent results in Iraq, decisions on the present problems between Britain and Iraq offer no easy face; but the long and wise view, we trust, will prevail, and be patiently accepted by the people of Iraq.

Iraq's Persian Problem.

It would be an excellent thing if, during King Faisal's forthcoming visit to London, discussions could be indulged upon the unfortunate situation which has arisen between Persia and Iraq. We recorded last week the steps which the Teheran Government has recently taken to protect Persian interests in Iraq. The matter is by no means a trivial one; future relations between Persia and Iraq are of the highest importance, and must ever be carefully watched. The position is permanently complicated if only through the ownership by Persians of property in Iraq and through the wealth which Persians bring to Iraq, and can be regulated only by frank and open treatment as between Persian and Arab. Unhappily the hoped-for reconciliation between Sunni and Shiah is at the moment apparently receiving a set-back, both locally in Iraq and in the general world of Islam, but until it is achieved Perso-Iraqi relations, it would seem, stand little chance of running smoothly for any length of time. To allow present feelings between Persian and Iraqi Arab further scope for exacerbation would be the highest folly, for neither Persia nor Iraq can disinterest itself in the other's future. Holy Cities are notoriously difficult, but the problem is not one that can be overcome by ignoring it and merely hoping for better things to come. Persian influence in Iraq is a chronic fact, and must be recognised as such. But Persia for her part must recognise that the exercise of religious influence should, unless the unloosing of fanatical feelings be desired, be most sparingly used. Is it too much to hope that the problem between Persia and Iraq, if brought insistently to the attention of the enlightened heads of the Persian and Arab States, will find a working solution?

Domestic Politics in Persia.

The appearance in Persia of a new party, the *Iran-i-Noh*, has led certain Western commentators to suppose that constitutionalism in Persia is losing its hold; Reza Shah has, in fact, been called a Dictator greater (in dictation, that is,) even than the Ghazi himself or Signor Mussolini. But although the Shah of Persia favours the scheme of the new party—we are informed that the Court Minister, Taymoor Tash, has lately himself become a

member of it—it is, we repeat, an error to presume that *Iran-i-Noh* is a Fascist organisation, destined to undermine the Majlis. For the Persians are very jealous of their Constitution; and if the Majlis choose to manifest their fidelity to the Constitution by largely identifying themselves with the *Iran-i-Noh*, who shall say them nay? We understand that this new party represents all that is best in Persian politics, including and absorbing, very notably and significantly, the organisation called "Young Persia," which was composed of the Persian intelligentsia, Persians, that is, who had been educated abroad and who had seen something of the world. At the same time it is true that Orientals in general do not take kindly to the conceptions of parliamentarism, which, according to them, are applicable at the present time to one country only, namely, Great Britain. The various trends, developments, perversions—call them what you will—of Parliamentarism in the Near and Middle East form and will continue to form a fascinating study. But those Occidentals who are flattered by the East's desire to "Westernize" itself should never forget that the traditions of autocratic rule in the East cannot quickly be swept away. In Persia and Turkey, for example, the political observer, while examining the respective constitutions, will hardly fail to take into account the existence, and the significance, of efficient armies. It is a patent fact that, in the East, he who controls the Army controls also the political elements in the State; and, although here and there an Oriental may be found to lament the inability of civilians to control military activities, there is, generally speaking, little sign that the majority of the inhabitants concerned are not well content with, and even proud of, the existing state of affairs.

Modern Science at Mecca.

Nothing could so emphasise the resolve of the Islamic people to take that of the West which is good and to adapt it to their own uses, and still to preserve their individuality, as the announcement, in *Umm al Qora*, King Ibn Saoud's official journal, of the improvements which are to be made in the amenities of Mecca. And nothing, we may add, could so display the ignorance of the West as the supposition, already put forward in the Press, that even the Holy Places of Islam are yielding to the irresistible superiority of the West, and that all barbarisms, solecisms, and so forth, will eventually be submerged under the all-conquering wave of the scientific West. For the truth is that King Ibn Saoud is, according to his word and as far as his resources allow, bent on improving the lot of pilgrims to the Holy Places. No one who has followed his career will be surprised at the report that a pump has been fixed over the Zemzem well, providing water for building purposes, that the court around the Kaaba is to be concreted, or even that cover is to be provided in the court of the Mosque to protect pilgrims against the sun which they have endured so long on their journeyings. The other report, that all the pilgrim roads to Mecca, and also the roads to Arafat, Madina, and Yanbu, are to be fitted for motor traffic, merely refers to a foregone conclusion. Motor traffic is well established in the Hijaz, and is likely to increase as fast as the resources of the country permit. As in other parts of Arabia and of the Middle East generally, the motor scores heavily pending the construction of railways—which, incidentally, were recommended at the Mecca Congress last year, but for which funds will take time to collect. But the flimsy suggestion in the British Press that King Ibn Saoud is out mainly to advertise the Hijaz, on the lines of some American "booster," is offensive; for the Wahhabi leader's interests are concentrated on the welfare of Islam. One might have thought that those who now marvel at the attempt to "bring Mecca up-to-date" would have been restrained in their headlines and comments by recollection of the alleged "barbarism" and "fanaticism" of the Wahhabi ruler. But no: the significance of one of the interesting movements of modern times is largely missed. King Ibn Saoud is a man who looks before and after; from both the past and the present

he accepts that which is suitable for his purpose—the regeneration of Islam. And so he at once modernises Mecca and leads Muslims back to the pristine purity of their religion.

Homes for the Armenians.

The victorious Western world, whose conscience so many times has been rent, is perhaps a little fatigued with the problem of the future of the Armenian race, but in this fatigue considerable danger lies. The Armenians are a gifted people who can be of immense value either to the West or to the East or to both; if the West shows itself aloof, however, the gifts of this folk will quite possibly be put at the disposal of the country which has recently shown to Europe the greatest hostility, that is, Soviet Russia. Now four years ago Dr. Nansen was instructed by the League of Nations to establish Armenian refugees in the Republic of Erivan, and to raise an international loan for the purposes of irrigation, which is essential to the settlement. He has failed, largely owing to the fact that the British Government set the example of refusing to lend money upon Soviet security alone. In these circumstances, Dr. Nansen, at the League of Nations Council meeting on September 22, declared that it was useless to continue further effort, and stated that, unless help were immediately forthcoming, it were better for the League to dissociate itself from this Erivan scheme. Now we hold no brief for this particular scheme; the objections to it are self-evident. You cannot properly conduct a League experiment in a country which is not a member of the League. But Dr. Nansen's appeal had its effect, and the Council adopted M. Titulesco's report. A final appeal is to be made to all nations in the League to support Dr. Nansen's scheme for an Armenian national home and a request is to reach the various States to subscribe to a loan. It is a difficult decision to make. For the League to relinquish a task to which, with all the appearance of fulfilling unescapable promises, it resolutely set its hand, would be extremely bad for its prestige. Yet this may come about. If it does, there is all the more reason why Western States should support the lead that France is giving in Syria for settling the Armenian people. To allow both schemes to fail would be such a blot on Western civilisation as would brand the present generation for centuries. It is manifestly to the advantage of the West—if one must, in these days, appeal to sordid motives alone—to have the Syrian-Armenian experiment succeed, just as it would be disadvantageous to the West if the Jewish National Home in Palestine were to fail and the Bolshevik scheme for colonising Jews in the Crimea were to succeed.

THE WAHHABIS AND GREAT BRITAIN.

Late, but not too late, the British Government has recognised the greatness of the Wahhabi revival in Arabia and the sincerity and friendship of the Wahhabis' leader, King Ibn Saoud. The Treaty of Jidda, which we reprint elsewhere in this issue, is a tribute to both the parties concerned in it, but mainly, perhaps, to the Arabs' representatives, because they, unversed, as it were, in statesmanship, if trained in desert diplomacy, displayed common-sense of the highest order. The Arab signatory, together with those Arabs who prompted and subsequently ratified his signature, was conciliatory without being submissive; he knew precisely how strong his position was, yet did not over-assert his strength. In short, this Treaty was made as between friends, not as between past enemies, nor even potential enemies. Nothing, we are convinced, could so secure British influence in Arabia as continued co-operation with the Wahhabis, at all events while they are controlled by their present chief; and nothing, we flatter ourselves, would so help on the tremendous task to which King Ibn Saoud has set his hand as persistent following of the policy—from which, indeed, he has not swerved from the beginning of his wonderful career—of intimate friendship with the British. It is well that the people of Great Britain, whose interest in Arabia is perhaps spasmodic and is easily destroyed by the impression, vaguely but not unjustifiably derived from previous British policy in Arabia, that the Government often fails to discern the real flow of the current over the immemorially shifting sands of Arabia—it is well that they should know that, as far as bedrock can be found in Arabia, the British Government is firm on it when the leader of the Wahhabis is treated as the man of the moment, and perhaps of a thousand years. For ourselves, we think that Great Britain should count herself fortunate in having had at her disposal so persuasive a negotiator as Sir Gilbert Clayton to deal with an Arab monarch whose significance for so many years previously she had failed to comprehend, and who might, therefore, have been inclined to hold himself as aloof as did the Imam Yahia of the Yaman when Sir Gilbert Clayton took to him unpalatable proposals last year. In fact, the more one examines the details of this Treaty of Jidda, the more one marvels at the restraint and wisdom which have characterised the Wahhabi participants.

First of all, of course, Great Britain recognises the political and territorial increase of the Wahhabis since the signing of the Anglo-Najdi Treaty in 1915: that was a foregone conclusion. Britain will certainly harbour no irredentists who might be moved to pine for re-assumption of control over the lands which once ex-King Husain ruled with so slight a regard for the interests of Islam, not to

speak of the interests of the Hijazis themselves. Next, the contracting parties undertake to withstand the temptation to allow raiding parties over the borders between Najd, Hijaz and the rest of Northern Arabia. Provision is made for equal protection and privilege to be granted to Mussalmans under British tutelage, when they are on pilgrimage, as to other Mussulmans. Another Article recognises the Hijazi or Najdi nationality of King Ibn Saoud's subjects when they are in territory under British control or charge; and *vice versa*. A very important and gratifying Article records the undertaking of the Wahhabi leader to maintain friendly relations with the territories of Kuwait and Bahrain, and with the Shaikhs of Qatar and the Oman coast. This Article should remove considerable anxiety from the Persian Gulf. An undertaking is given by King Ibn Saoud to co-operate in the suppression of the slave trade within his dominions. This Treaty, which is to be known as the Treaty of Jidda, is to last seven years. As it stands, it is, as we have said, highly creditable to both sides, and should do much to ensure the peace of Central, Western, and Northern Arabia. But in one of the Notes appended to the Treaty the thorny question of the Hijaz-Transjordan frontier, though handled as delicately as is a rose, is seen not to be robbed of its thorns. The British Government stands by the position which it took up when it saw that the possession of Aqaba and Maan was good for the present security, and, conceivably, the future prosperity of Transjordan and Palestine; and the Wahhabi Government stands in regard to this annexed territory exactly where ex-King Husain stood. That a *modus vivendi* should have been found and accepted, however, is scarcely a surprise. Nor should there be anything but praise for the compromise which has been reached over the conditional prolongation of the British right to manumit slaves. In the matter of slavery there is, of course, a vast difference between the Eastern and Western points of view, deriving largely from Western ignorance on what slavery in Arabia consists of; but we should say that King Ibn Saoud's intentions in respect of slavery in the Hijaz have much more chance of being realised than, say, have Ras Taffari's intentions in the same direction in Abyssinia.

Two points which some observers had thought might be raised in this Treaty receive no mention: the question of the Hijaz Railway, and the question of the abrogation of Capitulations in the Hijaz. For the present, however, perhaps enough has been achieved. The Railway problem is presumably postponed until some Allied pronouncement is made upon it; there is little ground for supposing that it will not be finally regularised to the satisfaction alike of the Wahhabis and of the French and British Mandataries. The main thing is that the tension between the Hijaz and Great Britain is not only eased but also converted into demonstrable friendship. Future difficulties between the two countries must all be minor when compared with the preliminary difficulties, now happily dissipated by Great Britain's tardy but resounding recognition of King Ibn Saoud. Changes there are in process in British mandated territories in Arabia, but none, perhaps, so stirring as those which have been brought about farther south by the genius of the ruler of the Wahhabis. The year 1927 will be a landmark in the history of Anglo-Arab relations. The steps that led up to it were, indeed, slow enough, for in 1925, when the Treaties of Bahra and Hadda were signed, it was evident, even to those who had not the wit to perceive it before, that in King Ibn Saoud Great Britain had probably its staunchest, and certainly its strongest, Arab ally in Arabia. But, as we have stated, let the British people be thankful that it has the Treaty, and make use of its good fortune to take its share in what is probably the most vitalising movement in all Asia.

The Near and Middle East

From Our Own Correspondents.

Jerusalem, September 17.

The Homogeneous Executive.

Hitherto the local "Palestine Zionist Executive" has been a "democratic" body, large enough to contain one or more representatives of nearly every party and interest within the Zionist movement. Thus everybody's feelings were considered, or at least uttered, in the local Zionist Councils, and initiative was inevitably blunted where any radical action was contemplated; nobody pretends that the National Home has recently been going with a swing. This is now to be changed. Instead of the fifteen or so representatives the Fifteenth Zionist Congress at Basle has set up an executive consisting of Colonel Kisch, Mr. Harry Sacher and Miss Henrietta Szold, not one of whom is subject to any party allegiance, while all three are "English-speaking" in origin, the first two being extremely English (the Guards and Oxford) and the third completely American. The East-European temperament is, for the time being, to be eliminated from the helm. The advantages of such an executive are obvious. The crux of the National Home experiment is the political relationship that can be maintained between the Jewish leaders and British officialdom. Comprehension and appreciation of the Arab seem to come easily and naturally to the ordinary British official; but the Jew is to-day, in the eyes of the average simple-minded British official, the same abnormal, unreasonable, incomprehensible and even cantankerous being that he was to the Roman official of the first century. The British official tries desperately hard to tread the narrow path of the Balfour Declaration, and his single consolation is to be scolded by Jew and Arab alike. It remains to be seen how a completely Anglicised Zionist buffer will help the Jewish cause.

Burying the Kishon.

Some record ought to be preserved of the date Sunday, September 11, 1927; for that date marked the beginning of the end of "that ancient river, the River Kishon." The Kishon, which once served the Jews so well in their emergency is now by the self-same Jews to be reduced to the confines of a drainpipe; big Jewish labour gangs left Haifa last Sunday with the object of "draining the Kishon," generally reducing it to order and reclaiming the thousands of acres which the Kishon had reduced to malarious swamps. It will not be long, seemingly, before the Kishon will be as inconspicuous as the River Fleet in London, to emerge shyly in the shape of a sewer-exit somewhere along the front of a Liverpool-like Haifa.

Unemployment.

The following official Zionist statement shows the means being adopted to cope with unemployment:—
"The programme of work in Haifa and Afuleh provides

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq and Persia.

for a loan of £50,000 out of Keren Hayesod Funds. Together with the drainage works which the Keren Kayemeth is carrying out on the Kishon, this will provide work for 900 workmen. The works comprise the erection of buildings in the following agricultural settlements: Kinnereth, Markenhof, Beth Alpha, Tel Yoseph, Ain Harod, Tel Adas, Nagingad, Jadjur, Nachlath Jacob, Hittim, Daganian A. and B., Zrifin, and the Transylvanian Settlement. Construction work is costing £26,400, employment being given to 300 workers. Water supply works in the Nuris complex and Kfar Yehoshua will employ 220 workmen, £18,000 being allotted for the purpose.

"These undertakings employing a total of 1,500 workers, will not only greatly allieviate unemployment in Afuleh and Haifa, but will also commence a new chapter in the history of the Emek. The erection of dwellings, water supply and the solution of the irrigation problem in the farms of the Emek and lower Galilee with Keren Hayesod and Karen Kayemeth funds, will contribute in no small measure to the economic and sanitary welfare of these settlements and hold out healthy prospects for the future of their population."

The Jewish Communities Ordinance.

Some weeks ago the *Official Gazette* published the text of the Jewish Communities Ordinance, which had been the subject of anxious negotiations for over three years. The purpose of the Ordinance is to give the Jewish community the right of administering certain self-imposed taxes through the means of an officially recognised Elective Assembly. The ordinance gives the right to any Jewish group to vote itself out of the main Jewish body and to form a separate, self-administered group also officially recognised. This provision had been inserted to please the *Agudath Yisrael* (a hyper-orthodox section in Jewry); and they have been prompt to take advantage of it. More serious, however, is the fact that a larger and somewhat less pugnaciously orthodox section of local Jewry, which had not hitherto fallen foul of the general Jewish community organisation, has also voted itself out of the main body. The chief reason which prevents the whole of Palestine Jewry working in harmony is the subversive principle of "votes for women." Also the community, according to the privileges granted in the new Ordinance, can tax itself for educational needs; and where education is concerned the gap between the old-fashioned orthodox and his Westernized and emancipated brother is as wide as that between the eleventh and the twenty-first centuries.

CYPRUS.

Nicosia, September 13.

Return of the Governor.

Sir Ronald Storrs returned to Cyprus on September 9, landing at Limassol, where Lady Storrs met him on the pier. Elected Members of the Legislative Council awaited him in the Customs Offices, and their reply expressing the thanks of the inhabitants was handed to him by Mr. Luke

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS.

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

"Warison, London."

Pierides, the member for Larnaca and Famagusta, in whose house the letter was drawn up. It expresses the deep gratitude of the members and of Cyprus for the boon conferred by the relief from the "Tribute," and the desire that the expression of this gratitude may be conveyed to H.M. Government and to the Secretary of State for the Colonies. It assures H.E. of the readiness and desire of the members to co-operate in every measure that may help to advance the development of the island.

Island Satisfaction.

The remission of the Tribute has been received with feelings of the greatest satisfaction and rejoicing. The Press gives voice to the general feeling, and congratulates Sir Ronald Storrs on the historic fact that this long-hoped-for relief has been brought about in his day, and by his efforts. The sum of over £32,000 will now be available annually for island development, and it is to be hoped that it will be utilised on really useful work. It was, of course, only to be expected that in some papers there should be a note of qualification in respect of the condition which calls for the annual payment of £10,000 towards Empire Defence. It is true, they remark, that this is but an insignificant amount, having regard to the colossal sum required for Imperial Defence; but it must be borne in mind that Cyprus is not willingly, but unwillingly, a part of the British Empire. Is it right then that she should contribute towards its defence as a whole? Greek Cypriots cannot cease to hope for the day when her national aspirations will be fulfilled.

Treatment of Visitors.

It would appear that the recent complaints by tourists of difficulties and annoyances encountered on disembarking and at the Customs offices have led to the issue of directions which aim at giving greater facilities. These include arrangements for a better system of interpreting the various languages in use, which should help the Customs officials and the police. It is hoped also that some assistance will be afforded by the officers of the vessels that bring visitors to the island.

Forest Fires.

Two serious forest fires have occurred in the great Troodos Forest—one near the picturesque and much-visited Monastery of Trooditissa, a few miles from the summer camps, and the other near a monastery situate in one of the most charming spots in the great pine forests. In each case the fire was clearly one of malicious incendiarism. As is now usual, the blame is laid on the Government and the Forest Department by the Press, which persists in arguing that goats do not cause the damage ascribed to them, and that more harm is done by acts of retaliation due to the enforcement of laws for exclusion.

Nationality of Cypriots Abroad.

The large colony of Cypriots in Egypt continue to work and hope for a settlement of their claim to rank as British subjects. A telegram of thanks and congratulations for the act of relief to Cyprus had been sent to the Governor by the large body in Alexandria. They have decided to appoint a representative to work for their cause in England, in the person of M. Zeno Zachariades, a merchant established in London.

Cairo, September 17.

The Political Situation.

By the time this letter reaches you, the manifesto, which the Wafd is expected to issue after its meeting to-morrow, will be in your hands, and there will be official confirmation of the decision unofficially communicated to the public after the first meeting on Wednesday last to the effect that the Wafd would work for the continuation of the coalition with the Liberals. Beyond that there is nothing of great interest to report in the political situation, and at the time of writing there is still considerable uncertainty with regard to the choice of a successor to Zaghloul Pasha.

As an alternative to the selection of a committee to run the affairs of the Wafd the name of Mustapha Nahas Pasha is very freely mentioned as a possible successful candidate for the leadership of that body. The chances of Fathallah Pasha Barakat, who is unfortunately laid up with serious eye trouble, appear to be daily dwindling, although he might be given the presidency of the parliamentary committee. For the Presidency of the Chamber nothing definite is yet known. Possibly no decision will be taken until the two other posts have been filled, and most probably not until the eve of the reassembling of Parliament, when the choice will be made by agreement between the Wafd and the Liberals.

Meanwhile Sarwat Pasha remains in Alexandria and all attempts at obtaining any statement from him with regard to either the present situation or the conversations in London have proved abortive. In this he is undoubtedly very wise, for no useful purpose could be served at the present juncture by any discussion of external questions, and far more satisfactory results will be obtained from leaving the Wafd undisturbed to settle its own domestic troubles.

Special Powers for British Consular Courts.

The British Consular Courts in Egypt are about to receive special powers to deal with British subjects guilty of drug trafficking and cognate offences. These powers will be given them by amendment of the Order in Council, which has hitherto expressly prevented the Courts from dealing with such cases, as they come within the jurisdiction of the Mixed Courts. The latter, however, can inflict only ridiculously mild sentences, and it has become the custom for the police, in order to secure punishment for foreign offenders on the same lines as that awardable to natives under Egyptian law, to bring foreign delinquents before their respective Consuls, who with the exception of the British have been able to award these higher penalties. Since it was intolerable that British offenders should be so favoured by contrast with Egyptians and other nationalities the above amendment of the Order in Council was sought, but as soon as the agreement of the Powers can be secured to an extension of the jurisdiction of the Mixed Courts in these matters, in the sense that these offences will be treated as misdemeanours and not contraventions and thus carry much higher penalties, all cases of this description will revert once more to the Mixed jurisdiction.

The Tribute Loans.

Now that the service of the Tribute loans has been resumed as the result of the decision of the Mixed Courts declaring Egypt liable, the Egyptian Government is considering the possibility of taking the place, which, until the War, the Ottoman Government took, in regard to the operations connected with the service of the 1891 and 1894 loans which are carried out in London. As a first step the Egyptian Legation has been instructed to send a delegate to attend the annual drawing for the 1891 loan which will be made at the offices of Messrs. N. M. Rothschild and Sons this month.

In this connexion it should be mentioned that the Egyptian Government is still not paying its share of the interest on the 1855 loan, which was included as part of its pre-War tributes, but which was excluded from the decision of the Mixed Courts, as the circumstances of its contraction were quite different from those of the 1891 and 1894 loans, in regard to which Egypt received definite consideration and gave definite undertakings. Part of the interest charge on the 1855 loan was also borne by Cyprus, and it is in respect of this that the British Government has recently given the Island relief. But so far nothing has been done in respect of the Egyptian portion, in re-

gard to which it is understood that negotiations are still going on between Cairo and London.

The Kosti Affair.

It is officially stated that advice has been received from the Egyptian Legation in Berlin to the effect that, thanks to the friendly offices of the German Government, Moscow has agreed to allow the Egyptian members of the crew of the Kosti to return to Egypt and is in fact repatriating them at its own expense. The Egyptian Government has now asked Berlin to try to secure the release of the cargo on the ship when it was seized, but it is extremely doubtful whether this *démarche* will meet with success, since the Odessa Court condemned the owners to heavy costs and the cargo will certainly be held as guarantee of payment or be sold to cover the amount.

Some surprise has been expressed that in view of the special relations between the two countries Egypt should not have asked the British Government to act for it in this matter. The explanation is of course that diplomatic relations do not exist between London and Moscow, and, although the Foreign Office could have obtained the good offices of some other Government on friendly terms with the Soviet, it was considered that in this special case it would be better if Egypt sought these good offices herself and, as Berlin is in closer relations with Moscow than any of the other European Governments, the Egyptian Minister in Berlin was instructed to approach the Wilhelmstrasse, which readily fell in with the suggestion.

Baghdad, September 15.

The Kadhimain Riots.

A special Court of Inquiry was set up by the Government of Iraq to investigate the serious riots which occurred at Kadhimain on the tenth day of Muharram. One British and one Arab judge, and one representative of the Iraq Army composed the Court. The usual violently conflicting evidence offered by witnesses made it impossible for the Court to ascertain the exact cause of the outbreak, which developed into a free fight between the civil population (excited by the religious demonstrations in which they were engaged) and members of the Iraq Army. Some discussion had taken place between the Ministries of Interior and Defence on the desirability of sending armed troops to Kadhimain for the Muharram celebrations, Interior thinking such a precaution neither necessary nor desirable; and in the end it was decided to hold certain troops ready at their barracks in case of need, and to allow a number of soldiers under their own officers to proceed unarmed to Kadhimain to take part in the mourning processions. These men, numbering 879 under 40 officers, were under strict orders not to interfere in any way with the people, nor even to assist the civil police except on written authority. It seems that some of the military police, in spite of this warning, interposed in a quarrel between two civilians, and that one of them drew his revolver and fired, thus infuriating the people, who turned on the soldiers.

The Court found that the presence of the unarmed soldiers was unwelcome to a section of the populace, who would on the slightest provocation have turned hostile.

The Commandant of the Military Police, whether he issued orders to fire or not, failed to carry out his duties by not preventing his men from firing on the people. Had the Military Police been under proper control, no trouble whatever would have occurred. Rais Awal Haji Muhyi al Din, the officer in charge of the Military Police, was suspended from his duties, but was subsequently acquitted by a court martial.

Al Aqid Subhi Halim, the Army member of the Court, did not agree with the findings, and has published a minority report in which he attributes the riot to general hostility to the Iraq Army on the part of the populace, even going so far as to conclude that the assault was general and prearranged.

Cholera.

The efforts of the Health Directorate to prevent the spread of the cholera epidemic to Baghdad have so far been successful, the nearest infected village being Sirah, some thirty miles to the south. Between July 23 and August 22 the total number of deaths at Basrah was 232 out of 293 cases, while at Amara, the only other large town affected, only 9 deaths occurred out of 14 cases. These figures show how successful were the strict measures taken to prevent the spread of cholera up the rivers. Inoculation, though not thought necessary in Baghdad, has been vigorously carried on in the southern liwas, and the export of organic substances from the affected areas has been prevented by the usual measures. Travellers from Iraq to Syria, Palestine, and Persia are subjected to medical examination and, if necessary, are detained. At Hinaidi a strict watch is kept on the roads, no camel caravan or other transport from the south being permitted to pass through the cantonment of the Royal Air Force.

The High Commissioner.

The Acting High Commissioner, Mr. B. H. Bourdillon, having gone on leave, his duties have been temporarily taken over by the Air Officer Commanding, Sir Edward Ellington. Sir Henry Dobbs is expected back early in October.

The American World Flight.

Brock and Schlee, the two American airmen who are attempting to fly round the world, reached Baghdad on September 2, six days after leaving Newfoundland. They had flown from Constantinople in fifteen hours, through the most trying conditions of fog, wind, and rain, and owing to mistaken directions from the Turks had made an unnecessary détour which necessitated their flying the last hundred miles to Baghdad after nightfall. The airmen had intended to land on the aerodromes of Imperial Airways on the west bank of the Tigris, but in the darkness made instead for the lights of the R.A.F. aerodrome at Hinaidi. Very lights and flares were shown, and the Pride of Detroit made a safe landing, her aviators becoming the guests for the night of 55 Squadron. They left early next morning for Bunder Abbas on the Persian Gulf, 900 miles from Baghdad. No adjustment of any kind was needed to the engine.

General News.

The Prime Minister left on September 8 for France, where he hopes to meet King Faisal. He was accompanied by Raouf Beg Chadarchi, Minister of Justice, who is on his way to London. Nouri Pasha, Minister of Defence, has returned from a meeting with King Faisal and his father in Cyprus.

A serious fire occurred in Baghdad on August 14 in a most congested part of the city's business area. A shop stored with sulphuric acid caught fire, and the flames spread to the valuable goods stored in the khan within which the shop was situated. Large supplies of wool, wood, and leather were destroyed, the total value being estimated at £50,000, but there was no loss of life. The Baghdad fire brigade was assisted by three engines of the R.A.F.

Fahad Beg al Hadhal, paramount shaikh of the Anazah tribe in the Iraq-Syrian desert, died last week in hospital in Baghdad. He was brought in by aeroplane for a serious operation, which, partly owing to his great age (he was said to be over eighty) was unsuccessful. A striking and romantic figure, well known and respected from Damascus to Baghdad, is thus removed from the world of desert politics.

The Shiah section of the politically-minded in Baghdad have inaugurated a new paper—*An-Nadha-tul-Iraqiyah*—which will represent their views. Its first number was vehement in attack on the present Cabinet.

A reception held by the German Consul on the eighth anniversary of the promulgation of the Weimar Constitution was attended by the Acting High Commissioner, the Prime Minister, and a number of Iraqi and British officials.

NEWS IN BRIEF.

H.M. cruiser Conquest, dépôt-ship Cyclops, and six submarines arrived on September 19 at Beyrout for a week's visit.

During the absence of Sir Gerald Strickland M.P., Head of the Ministry in Malta, who left for England on September 20, Professor Bartolo is acting Head of the Ministry.

Mr. Joseph Grew, first United States Ambassador to Turkey since the War, last week arrived in Constantinople to succeed Rear-Admiral Bristol, who was High Commissioner there for more than eight years.

Captain Pelletier D'Oisy and his fellow-pilot Gonin have completed a remarkable flight round the Mediterranean, during which they covered over 6,000 miles in six days. Their actual flying time was only 85 hours. Their stops were made at Vienna, Bucharest, Beyrout, Cairo, and Casablanca, whence they made a non-stop flight of 1,242 miles to Paris in less than twelve hours, in spite of very unfavourable weather.

Okhtin, who has been appointed to succeed Nikiferoff as Soviet representative in Mongolia, was Soviet Envoy to Mongolia in 1921 and representative at Kermanshah (Persia) in 1923-25.

The Lebanese Press Union has protested to the French Government and the Press Union in Paris against the suspension, without trial, of those Lebanese newspapers which had displeased the French Administration in Syria by their comments on the recent disclosures of frauds and embezzlements in the Customs and the local Departments of Public Health and Public Works.

THE ANGLO-HIJAZI TREATY.

[The Anglo-Hijazi Treaty has been published by H.M. Stationery Office as Cmd. 2951 (2d.). We reprint it here, retaining the official spelling.—ED.]

Treaty between His Majesty and His Majesty the King of the Hejaz and of Nejd and its Dependencies, together with Notes exchanged.

Signed at Jeddah, May 20, 1927.

[Ratifications exchanged at Jeddah, September 17, 1927.]

His Majesty the King of Great Britain, Ireland and the British Dominions beyond the Seas, Emperor of India, on the one part; and His Majesty the King of the Hejaz and the Nejd and its Dependencies, on the other part;

Being desirous of confirming and strengthening the friendly relations which exist between them and of consolidating their respective interests, have resolved to conclude a treaty of friendship and good understanding, for which purpose His Britannic Majesty has appointed as his plenipotentiary Sir Gilbert Falkingham Clayton, and His Majesty the King of the Hejaz and of Nejd and its Dependencies has appointed His Royal Highness the Amir Faisal ibn Abdul-Aziz, his son and Viceroy in the Hejaz, as his plenipotentiary.

His Highness the Amir Faisal ibn Abdul-Aziz and Sir Gilbert Falkingham Clayton, having examined their credentials and found them to be in good and due form, have accordingly agreed upon and concluded the following articles:—

ARTICLE 1.

His Britannic Majesty recognises the complete and absolute independence of the dominions of His Majesty the King of the Hejaz and of Nejd and its Dependencies.

ARTICLE 2.

There shall be peace and friendship between His Britannic Majesty and His Majesty the King of the Hejaz and of Nejd and its Dependencies. Each of the high contracting parties undertakes to maintain good relations with the other and to endeavour by all the means at his disposal to prevent his territories being used as a base for unlawful activities directed against peace and tranquillity in the territories of the other party.

ARTICLE 3.

His Majesty the King of the Hejaz and of Nejd and its Dependencies undertakes that the performance of the pilgrimage will be facilitated to British subjects and British-protected persons of the Moslem faith to the same extent as to other pilgrims, and announces that they will be safe as regards their property and their person during their stay in the Hejaz.

ARTICLE 4.

His Majesty the King of the Hejaz and of Nejd and its Dependencies undertakes that the property of the aforesaid pilgrims who may die within the territories of His Majesty and who have no lawful trustee in those territories shall be handed over to the British Agent in Jeddah or to such authority as he may appoint for the purpose, to be forwarded by him to the rightful heirs of the deceased pilgrims; provided that the property shall not be handed over to the British representative until the formalities of the competent tribunals have been complied with and the dues prescribed under Hejazi or Nejdian laws have been duly collected.

ARTICLE 5.

His Britannic Majesty recognises the national (Hejazi or Nejdian) status of all subjects of His Majesty the King of the Hejaz and of Nejd and its Dependencies who may at any time be within the territories of His Britannic Majesty or territories under the protection of His Britannic Majesty.

Similarly, His Majesty the King of Hejaz and of Nejd and its Dependencies recognises the national (British) status of all subjects of His Britannic Majesty and of all persons enjoying the protection of His Britannic Majesty who may at any time be within the territories of His Majesty the King of the Hejaz and of Nejd and its Dependencies; it being understood that the principles of international law in force between independent Governments shall be respected.

ARTICLE 6.

His Majesty the King of the Hejaz and of Nejd and its Dependencies undertakes to maintain friendly and peaceful relations with the territories of Kuwait and Bahrain, and with the Sheikhs of Qatar and the Oman Coast, who are in special treaty relations with His Britannic Majesty's Government.

ARTICLE 7.

His Majesty the King of the Hejaz and of Nejd and its Dependencies undertakes to co-operate by all the means at his disposal with His Britannic Majesty in the suppression of the slave trade.

ARTICLE 8.

The present treaty shall be ratified by each of the high contracting parties and the ratifications exchanged as soon as possible. It shall come into force on the day of the exchange of ratifications and shall be binding during seven years from that date. In case neither of the high contracting parties shall have given notice to the other six months before the expiration of the said period of seven years of his intention to terminate the treaty it shall remain in force and shall not be held to have terminated until the expiration of six months from the date on which either of the parties shall have given notice of the termination to the other party.

ARTICLE 9.

The treaty concluded between His Britannic Majesty and His Majesty the King of the Hejaz and of Nejd and its Dependencies (then Ruler of Nejd and its then Dependencies) on the 26th December, 1915, shall cease to have effect as from the date on which the present treaty is ratified.

ARTICLE 10.

The present treaty has been drawn up in English and Arabic. Both texts shall be of equal validity; but in case of divergence in the interpretation of any part of the treaty the English text shall prevail.

ARTICLE 11

The present treaty shall be known as the Treaty of Jeddah. Signed at Jeddah on Friday, May 20, 1927 (corresponding to the 18th Zul Qa'da, 1345).

GILBERT FALKINGHAM CLAYTON.
FAISAL ABDUL-AZIZ AL SAUD.

(1.)

Sir G. Clayton to His Majesty the King of the Hejaz and of Nejd and its Dependencies.

Your Majesty,

I have the honour to remind your Majesty that, in the course of our negotiations, which have happily resulted in the conclusion of a treaty of friendship and good understanding between His Britannic Majesty and your Majesty, the question of the frontier between the Hejaz and Transjordan was discussed, and I explained to your Majesty the position, as defined in a draft protocol submitted by me to you, which His Majesty's Government have taken up on this question and to which they must adhere.

His Majesty's Government regard the above-mentioned frontier as being defined as follows:—

"The frontier between the Hejaz and Transjordan starts from the intersection of meridian 38° E. and parallel 29° 35' N. which marks the termination of the frontier between Nejd and Transjordan, and proceeds in a straight line to a point on the Hejaz Railway 2 miles south of Mudawwara. From this point it proceeds in a straight line to a point on the Gulf of Aqaba 2 miles south of the town of Aqaba."

Respects.

GILBERT CLAYTON,
His Britannic Majesty's
Commissioner and Plenipotentiary.

Jeddah, May 17, 1927 (18th Zul Qa'da, 1345).

(2.)

Abdul-Aziz ibn Abdul-Rahman al Faisal al Saud to His Britannic Majesty's Commissioner and Plenipotentiary.

(Translation.)

In reply to your letter dated the 18th Zul Qa'da, 1345, on the subject of the Hejaz-Transjordan frontier, we note that His Majesty's Government adhere to their position, but we find it impossible, in the present circumstances, to effect a final settlement of this question. Nevertheless, in view of our true desire to maintain cordial relations based on solid ties of friendship, we desire to express to your Excellency our willingness to maintain the *status quo* in the Ma'an Aqaba district, and we promise not to interfere in its administration until favourable circumstances will permit a final settlement of this question.

Respects.

(Sealed) ABDUL-AZIZ IBN ABDUL-RAHMAN AL SAUD.
19th Zul Qa'da, 1345 (May 21, 1927).

(3.)

Sir G. Clayton to His Majesty the King of the Hejaz and of Nejd and its Dependencies.

Your Majesty,

In continuation of our conversations relating to the question of the slave trade, I have the honour to inform your Majesty that His Britannic Majesty's Government feel it their duty to abstain at present from renouncing the right of manumitting slaves, which has long been practised by His Majesty's consular officers, and which enables them to liberate any slave who presents himself of his own free choice with a request for liberation and repatriation to his country of origin.

I wish to assure your Majesty that His Britannic Majesty's Government's insistence on this right is not intended to mean any interference in the affairs of your Government or any infringement of your Majesty's sovereignty; but that it is due to His Britannic Majesty's Government's resolve to carry out a duty which they owe to humanity. I would add that His Britannic Majesty's Government will be prepared to consider the abolition of the right of manumission as soon as it becomes clear to both parties that the co-operation stipulated in Article 7 of the Treaty of Jeddah has resulted in the enforcement of such practical measures as to render the exercise of the right of manumission no longer necessary.

I trust that your Majesty will appreciate the attitude of His Britannic Majesty's Government in this matter and that you will see fit to acquiesce in the procedure which I have described above.

Respects.

GILBERT CLAYTON,
His Britannic Majesty's
Commissioner and Plenipotentiary.

Jeddah, May 19, 1927 (18th Zul Qa'da, 1345).

(4.)
Abdul-Aziz ibn Abdul-Rahman al Faisal al Saud to His Britannic Majesty's Commissioner and Plenipotentiary.

(Translation.)

In reply to your Excellency's letter No. 2, dated the 18th Zul Qa'da, 1345 (May 19, 1927), relating to the manumission of slaves, I am confident that the British agent at Jeddah will always act in accordance with the spirit in which our agreement was arrived at, and that he will not permit any confusion as this might have undesirable effects on the administrative and economic aspects of this question.

Respects.

(Sealed) ABDUL-AZIZ IBN ABDUL-RAHMAN AL SAUD.
 19th Zul Qa'da, 1345 (May 21, 1927).

(5.)
Sir G. Clayton to His Majesty the King of the Hejaz and of Nejd and its Dependencies.

Your Majesty,

With reference to the proposal put forward by your Majesty for the inclusion in the treaty of an article providing that His Britannic Majesty's Government should take no measures to prevent the purchase and importation of whatever arms, war material, ammunition, machines or implements which the Government of the Hejaz and Nejd may require for their own use, I have the honour to inform your Majesty that His Britannic Majesty's Government are of the opinion that this is a question which need not be dealt with in the body of the main treaty.

I am, however, empowered by His Britannic Majesty's Government to inform your Majesty that the embargo on the export of war materials to Arabia has been removed, and that, if your Majesty should see fit to place orders for arms, ammunition and war material with British manufacturers, in accordance with the conditions set forth in the Arms Traffic Convention (1925), for the use of the Government of the Hejaz and Nejd, His Britannic Majesty's Government will not prevent the export thereof or place any obstacle to their importation into your Majesty's territories.

I shall endeavour, in answer to your Majesty's desire, to present your Majesty with a copy of the convention referred to above as soon as may be. Respects.

GILBERT CLAYTON,

*His Britannic Majesty's
 Commissioner and Plenipotentiary.*

Jeddah, May 19, 1927 (18th Zul Qa'da, 1345).

(6.)
Abdul-Aziz ibn Abdul-Rahman al Faisal al Saud to His Britannic Majesty's Commissioner and Plenipotentiary.

(Translation.)

In reply to your letter dated the 18th Zul Qa'da, 1345 (May 19, 1927), relating to arms, I wish to thank you for your statement which makes it clear that the importation of arms into Arabia is not prohibited.

Respects.

(Sealed) ABDUL-AZIZ IBN ABDUL-RAHMAN AL SAUD.
 19th Zul Qa'da, 1345 (May 21, 1927).

(7.)
Sir G. Clayton to His Majesty the King of the Hejaz and of Nejd and its Dependencies.

Your Majesty,

With reference to article 4 of the Treaty of Jeddah, I have the honour to confirm the statements I made to your Majesty in the course of our conversations, in which I stated that the sole object of the insertion of that article in the treaty is, first, to establish the present procedure formally, and, secondly, to furnish His Britannic Majesty's Government with such assurances as might enable them to bring that procedure to the notice of all Moslems in British territories.

I wish, moreover, to assure your Majesty that the presence of that article in the treaty does not affect and will not be interpreted as affecting the procedure relating to the belongings of deceased persons other than pilgrims, which remain subject to the rules of reciprocity which are the basis of the usual practice between independent countries.

Respects.

GILBERT CLAYTON,

*His Britannic Majesty's
 Commissioner and Plenipotentiary.*

Jeddah, May 19, 1927 (18th Zul Qa'da, 1345).

(8.)
Abdul-Aziz ibn Abdul-Rahman al Faisal al Saud to His Britannic Majesty's Commissioner and Plenipotentiary.

(Translation.)

In reply to your letter dated the 18th Zul Qa'da 1345 (May 19, 1927), relating to the disposal of the belongings of our subjects in your territories and your subjects in our territories, I wish to assure your Excellency that the procedure will be, as you state, in accordance with international practice, by which we mean that the belongings will be entrusted to our tribunals, who will hand them over to the British agent after the legal formalities and the collection of the dues, and that, *mutatis mutandis*, the belongings of those of our subjects who may die in British territories will be handed over to us by the British agent at Jeddah.

Respects.

(Sealed) ABDUL-AZIZ IBN ABDUL-RAHMAN AL SAUD.
 19th Zul Qa'da, 1345 (May 20, 1927).

PERSONAL AND GENERAL

TO-DAY

September 29, 1927 (New Style).

September 16, 1927 (Old Style).

Rabia II, 2, 1346 A.H., of the Muslim Calendar.

Tishri 3, 5688, of the Jewish Calendar.

Sir Dorabji and Lady Tata left Liverpool on September 24 in the Carinthia for New York.

Mr. Charles T. Allen C.I.E. leaves London to-day on his return to India.

Lord Sinha returned last week to Queen Anne's Mansions, S.W.1, from the Continent.

Earl and Countess Winterton are expected back in London from Scotland to-day (Thursday).

Lady Sheila Jackson, Lady Franks and Miss C. M. Franks, and Sir P. C. Mitter left Marseilles on September 23 in the P. and O. s.s. Kaiser-i-Hind for Bombay.

Lieut.-Colonel Sir Cecil Kaye, C.S.I., C.I.E., Lady Kaye and their two daughters sailed from Liverpool on September 27 for Calcutta in the s.s. City of London.

Jaafar Pasha, Prime Minister of Iraq, and Raouf Beg Chadarchi, Minister of Justice, arrived in London last week and are staying at the Hyde Park Hotel.

King Fuad of Egypt is to be entertained by Their Belgian Majesties in the Palace of Brussels during his State visit to Belgium at the end of October.

Lady Margaret Lindsay, eldest daughter of the Earl and Countess of Crawford, is shortly leaving England for India on a visit to Captain and Mrs. Edward Campbell at Lucknow.

The Secretary of State for the Colonies has appointed Mr. W. C. Bottomley, C.B., C.M.G., O.B.E., to be an Assistant Under-Secretary of State in the Colonial Office to fill the vacancy resulting from the retirement of Sir Charles Strachey, K.C.M.G., C.B.

AN ANGLO-IRAQI LUBRICANT.

"THE LETTERS OF GERTRUDE BELL." *Selected and Edited by Lady Bell, D.B.E.* (London: Ernest Benn. £2 2s., 2 Vols.)

It was no easy task to found the Kingdom of Iraq. The years during which the work was in progress formed a critical period in the history of Great Britain. The War was not yet over when it began; there followed the long-drawn-out and distracting experience of the Peace Conference while it was gathering momentum, and the final stages were reached in the midst of an ill-informed, but by no means negligible, campaign in Great Britain for the evacuation of the country. In such circumstances it is hardly a matter for surprise that the process of laying the foundations was subjected to "ups and downs." Still less need it be wondered at that different people evolved different plans, or that each was convinced that his alone was the right one and that all the others were wrong. It is quite conceivable that other plans would have succeeded; but the fact remains that for one reason or another they were ruled out of court, and that the scheme which, for better or for worse, was ultimately adopted was laid down and carried through by His Majesty's Government. Among those whose recommendations were not acted upon there has arisen a more or less lively controversy over the quarter where blame should be allocated for the failure to make things other than they are. That things as they are happen to be shaping quite well is lost sight of or ignored in these critical circles. According to the degree of intellectual honesty of the individual, silence is maintained in regard to the present state of affairs, and attention is still concentrated on some episode of the past—the Mesopotamian rebellion (*scilicet* 1920), or the millions of the taxpayers' money poured into the desert (*scilicet* 1916-1919).

The cold truth is that for a new State, created in very difficult circumstances, Iraq is doing remarkably well. There is certainly no precedent to justify the contention that it ought to be doing better; and it would be very hard to indicate any solid reasons for supposing that any of the rejected schemes for the building up of the State would have proved more successful in a short time. Differences of opinion arose on many points: whether the Arabs of Iraq should govern themselves or be governed by the British; whether the country should be a republic or a monarchy; if the latter, who should be the ruler; how far should Great Britain relax her control, and so on. There is a tendency among those who would have had things take a different course to attach responsibility to one or another hypothetical master-mind, which becomes for them the evil genius of Iraq. It is more than likely that history, looking at the course of events dispassionately, will decide that many forces were at work to produce a single resultant, and will apportion to a number of prominent actors their appropriate rôles with happier discrimination.

Among those who occupied a prominent position in the Iraq drama was Gertrude Bell, a woman of many parts—scholar, traveller, archaeologist, linguist, Orientalist, who throughout an eventful career never lost the charm of her sex nor allowed her duties or interests to veil the outlook of a naturally affectionate character. Her acquaintance with the East began with a visit to Teheran in 1892. In 1899 she went to Jerusalem to perfect herself in Arabic, and in May, 1900, spent her "first night in the desert," the beginning of a series of desert excursions, which led up to her memorable exploit—the journey to Hayil—undertaken in the early months of 1914. The outbreak of the War thus found her an acknowledged authority on Arabia. In November, 1915, she was sent for to join the Arab Bureau in Cairo, but within two months she was on her way to Mesopotamia *via* India. She stayed at Basrah until April, 1917, when she joined Sir Percy Cox in Baghdad, to assist him in his task as head of the Civil Administration. The War was still in progress, even in

Mesopotamia, and questions of future policy regarding the country had not arisen. The Army was in supreme control, and Sir Percy Cox's appointment as Civil Commissioner in July, 1917, merely regularised his status as in control of all matters of a non-military character connected with the administration of the conquered vilayats. In February, 1918, he was summoned to England to confer with the Government, and it was on his way back to Baghdad, while spending a few days in India, that he received instructions to go as British Minister to Teheran. For a year and a half after the Armistice Sir Percy Cox was in Persia. The administration of Mesopotamia during this period proceeded under the control of Colonel, afterwards Sir Arnold, Wilson on the only possible lines: the previous rule, of the Turks, had been almost entirely an exotic one and with the defeat of the Turkish army the personnel had disappeared, leaving no one to carry on the work of government. The British authorities had perforce to create a provisional administration from the only sources available, namely, British and British Indian personnel drawn from the Army or borrowed from India. By the end of the War there can be no doubt that the people of Mesopotamia were prepared, more or less wholeheartedly, to accept a permanent British administration. No definite decision on the subject, however, was reached. With the publication of the Anglo-French Declaration a new turn was given to the course of events, for "within a week," as we learn from Sir Percy Cox's contribution to the "Letters," "the idea of an Arab Amir for Iraq was everywhere being discussed and in Muhammadan circles met with universal approval, though there was no consensus of opinion as to who should fill the rôle." The local situation in Iraq was further complicated by events in Syria, and when the Amir Faisal was proclaimed King of Syria the Iraqis responded by proclaiming his brother, the Amir Abdullah, King of Iraq. Nationalist propaganda increased. In May, 1920, the British Government decided to recall Sir Percy Cox from Teheran and to send him back to Iraq; but it wished him to come first to London for consultation. Before he could pass through Baghdad on his way home, a self-appointed Committee of fifteen Baghdadis had met the Acting Civil Commissioner, Sir Arnold Wilson, to express opposition to the proposed Mandate. A passage from Sir Percy Cox's narrative in the second volume of "The Letters of Gertrude Bell" may here be quoted:—

"After hearing what they had to say, Colonel Wilson had undertaken to urge H.M.'s Government to expedite to the utmost a definite pronouncement of policy, and in communicating the purport of the interview to London, he suggested the abandonment of the idea of a provisional Government; recommending in the alternative that, as soon as the terms of the Mandate had been settled, a Constituent Assembly should at once be convened to deliberate upon the future form of Government. An announcement was accordingly drafted, in the terms of which, just before leaving Baghdad, I concurred so far as concerned myself, and with the approval of H.M.'s Government this was sent to the leading delegates a few days later on the 20th June (1920). It stated that Mesopotamia was to be constituted an independent State under the guarantee of the League of Nations and subject to the Mandate of Great Britain, and that Sir Percy Cox was to return in the autumn to establish a provisional Arab Government, pending preparation of a permanent organic law, to be framed with due regard to the rights, wishes and interests of all communities of the country. But, alas, by now the fuse of disaffection had burnt too close to the powder, and probably nothing could have prevented the explosion. On 2nd July the tribesmen at Rumaithah, in the Lower Euphrates area, broke into open revolt."

By the time Sir Percy Cox reached London there were only two possible alternatives, after the rebellion had been suppressed—to abandon the Mandate and evacuate Iraq, or to set up at once a national Government. Sir Percy Cox threw the whole weight of his influence into the latter scale and was commissioned to undertake the task of setting up a national Government. He is entitled to his epilogue:—

"It is no little satisfaction to me, six years later, to know that the ship thus launched on a somewhat tempestuous sea has safely reached port, and that, so far as we are concerned, the venture may

be regarded on the whole as an imperial success. The Kingdom of Iraq has been placed on its feet, and its frontiers defined; its future prosperity and progress rest with the Iraqis themselves."

This historical summary is necessary, if we are to appraise Gertrude Bell's part in the placing of the Kingdom of Iraq on its feet. She has been termed "the power behind the throne," "the virtual ruler of Iraq," "the creator of the Kingdom of Iraq." Not one of these positions did she ever arrogate to herself. In "The Letters of Gertrude Bell," we have a running commentary on those stirring and difficult times in Iraq. The Letters, it is true, have been "selected and edited" by Lady Bell. They do not purport to tell the whole story as Miss Bell wrote it in a very wonderful series of weekly letters for the most part to her father, Sir Hugh Bell; but they do provide a valuable and vivid setting to the story as it was being unrolled at the time. From internal evidence we must infer that much of the strictly political part of the correspondence has been omitted, in particular passages in which the writer will have discussed the other actors on the stage. These letters "home" were her substitute for a diary and they bear the impress of a candid and truthful recital set down for the benefit of those to whom she could unburden herself without reserve. Incidentally they reveal a very beautiful and touching picture of the relations between Gertrude Bell and her father, relations which are not without their bearing in any estimate of the character of a very delightful and talented woman.

In the founding of the State of Iraq the part played by Gertrude Bell was that of a perfect lubricant of Anglo-Iraqi relations. Sir Percy Cox records that directly the news of our occupation of Baghdad got abroad he was

"perforce overwhelmed with visitors; first the notables of Baghdad and then the tribal Sheikhs from near and far, many of whom had never submitted to the authority of the Turkish Government and were complete strangers to Baghdad. Some attempt had to be made to determine and record from whence these visitors came, what their relations were to one another, and what was their relative importance among themselves, matters not at all easy for new comers to diagnose. . . . All sheikhy visitors from the countryside had to be interviewed, entertained, given small presents and sent back to their homes with injunctions to keep the peace and get busy with their agriculture; so that a great proportion of my time during daylight was spent in these interviews and Miss Bell acted as the strainer, through which the individuals filtered through to me."

Personal touch is the secret of permanent success in the East. The military could not be expected to spare time to maintain it in the only way that would have satisfied the people of Mesopotamia, where every Shaikh expected to interview—and at his own length—the chief British authority. Even the Civil Commissioner had other things as well to do, and it was fortunate for Iraq and for Great Britain that Gertrude Bell was there to supply the connecting link between the people of the land and the newcomers. No one combined the wide and the intimate knowledge of the country and its people that she had acquired, while retaining such a lively sympathy for and interest in every detail of their lives. It meant more than is generally appreciated for these shrewd men of the desert that they could come in to Baghdad to take stock of these new invaders of their territory and be confronted with someone who knew them almost as well as they did themselves and whose understanding sympathy with them bore the hallmark of whole-hearted sincerity. No appeals nor decrees could ever have reached the heart of the people as these exchanges of confidence with the "Khatun." One of the problems, wrote Miss Bell, was

"how to get into touch with the Shiah, not the tribal people of the country; we're on intimate terms with all of them, but the grimly devout citizens of the holy towns and more especially the leaders of religious opinion, the Mujtahids, who can loose and bind with a word by authority which rests on an intimate acquaintance with accumulated knowledge entirely irrelevant to human affairs and worthless in any branch of human activity. . . . for the most part they are very hostile to us, a feeling we can't alter because it's so difficult to get at them. . . . Until quite recently I've been wholly cut off from them because their tenets forbid them to look upon an unveiled woman and my tenets don't permit me to veil—I think I'm

right there, for it would be a tacit admission of inferiority which would put our intercourse from the first out of focus."

In the end it was these Shiah extremists, or one of them, who made the first advances to Gertrude Bell, and the first meeting, two hours in length—in Kadhimaïn—closes with the words: "I . . . took my leave in a midst of a shower of invitations to come again as often as I liked."

Inevitably the Arabs would be encouraged by the existence of such a champion at headquarters to hope for the realisation of aspirations formed as early as in 1918. From the outset Miss Bell was in favour of the grant of a wide measure of self-government to the Iraqis; but until the return of Sir Percy Cox to the country in October 1920, there had been no question of substituting Arab for British administration. This policy had been evolved in London; and was accepted by Sir Percy Cox, because he knew that it was in all the circumstances the only alternative to evacuation. Writing on September 27, 1920, Miss Bell states:—

What I hope Sir Percy will do is to give a very wide responsibility to the natives of this country. It is the only way of teaching them how hard the task of government is. I think we must now wade through a long period of uncertainty and mistakes which, if they are wise enough and we patient enough, may result in a more equitable division of our respective spheres of activity. Up to now we've done it all. I should stand by and let them do it all for a bit and then see if a better adjustment is not possible.

Miss Bell was too loyal a British subject and too loyal to her chief, Sir Percy Cox, ever to go beyond the strict terms of her reference, and she was under no illusions as to the part that she was playing. She knew what was being said of her and wrote:—

(September 19, 1920).—You will, therefore, believe me when I tell you that it is only quite recently that I have realised how prominent a place I have occupied in the public mind here as the pro-Arab member of the administration. Over and over again lately I have heard from the frequenters of coffee shops, my own servants and casual people up and down the bazaars, that I am always quoted in the coffee shop talk as the upholder of the rights of the Arabs. I have invariably replied that the talk is incorrect; it is H.M.G. which upholds the rights of the Arabs and we are all of us the servants of H.M.G.

(September 17, 1921).—It's not at all true that I have determined the fortunes of Iraq, but it is true that with an Arab Government I've come into my own.

(December 4, 1921).—You mustn't think for a moment I have any part in settling these problems (Mandate, etc.). I know about them because Sir Percy tells me about them in outline, but I'm merely an onlooker, and, although Faisal is very friendly and agreeable he doesn't, quite rightly, consult me. . . . All I can do and all I try to do, is to give as accurate an impression as I can of what people are saying and thinking.

It may be that the edifice that is the State of Iraq appears to some to be not quite complete. What remains of the building operations, however, is necessarily in Arab hands, and Great Britain is standing by to proffer advice when necessary. During the more critical years of the period of construction Gertrude Bell played an invaluable rôle, and it is probable that British relations with other Eastern countries would have often been of a happier nature if a similar rôle could have been played with equal distinction and success. Her position admittedly was in many ways anomalous, and sooner or later this aspect of a unique record would tend to become paramount. By this time, however, the East had fixed so firm a grip upon Gertrude Bell that she could not tear herself away; she continued her arduous labours for the country to which she had given so many years of untiring cheerful devotion until her stock of physical energy came to a sudden end and she died peacefully in her sleep on July 12, 1926. Within a year there have been signs that some of Iraq's troubles are being less easily adjusted in the absence of a wonderfully efficient lubricant.

H. T. M. B.

Eight hundred officers and men of the Royal Air Force left Southampton in the transport Dorsetshire on September 20 for service in the East. Over 700 of the airmen were bound for Basrah. The ship also carried military details numbering about 600 for Iraq and India.

Refinery at ABADAN, PERSIA

ANGLO-PERSIAN OIL CO., LTD.

Producers of "BP" Products

The range of products manufactured by the Company and its subsidiaries includes:—

Aviation Spirit, Motor Spirit, Lamp Oils, White Oils (Turpentine Substitute), Gas Oils, Tractor Vaporising Oils, Diesel and Semi-Diesel Oils, Fuel Oil, Lubricating and Batching Oils, Paraffin Wax and Candles.

THE SIMLA ROADS CONFERENCE.

The problem of rural transport in India continues to receive an increasing measure of public attention. As we have earlier indicated, the development of railways has not only displaced the grand trunk roads from their original importance, but has considerably influenced and altered the character of roads in general, the latter becoming more or less feeders to the railways. The consequence is that the construction and maintenance of roads, except in the immediate vicinity of the provincial capitals, has been neglected. Military requirements and the demands of foreign trade are the chief factors that up to the present have governed the construction of rail roads and the aggregate mileage of about 38,000, connecting all parts of the country, cannot be deemed wholly unsatisfactory, having regard to present needs in that respect. But with the increasing use of motor vehicles of all descriptions for commercial, industrial and private purposes, the question has assumed an entirely new aspect. It is surprising how, quite apart from the conditions in the large towns and cities, the people living in rural areas are rapidly becoming educated to the latest form of transportation. The process has been attended with results and consequences which form a striking twentieth-century commentary upon Macaulay's contention that "of all inventions, the alphabet and the printing press alone excepted, those inventions which abridge distance have done most for the civilisation of the species." "It is difficult," said the Taxation Inquiry Committee, "to exaggerate the political and economic advantages of rapid means of transport in India, and the development of motor transport services should, in the opinion of the Committee, be encouraged by Government." It will, no doubt, be argued that "roads follow the car." While that may be true of other countries, it is demonstrably far from the case in India, as with the exception of those serving the large town and cities, roads in that country have never been constructed for other than tonga and bullock traffic, and if there is to be any real improvement of communications in the interior on modern lines, with permanent bridges and wide metalled thoroughfares suitable for the heavier motor vehicles, the problem must be tackled on a comprehensive scale.

Roads are now a provincial transferred subject and are mostly in the hands of local bodies whose functions in this respect are more or less confined to maintenance. At present the road cess and certain grants constitute practically their sole resources for that purpose, but there is a regrettable paucity of reliable and up-to-date statistics respecting roads and the funds allotted for their upkeep and repair in India. According to the "Imperial Gazetteer" there were 37,000 miles of metalled roads and 136,000 miles of unmetalled roads, in addition to some unclassified ones, at the beginning of the present century. The total cost of their maintenance was returned at the equivalent of roughly £4½ millions. In spite of the concentration

upon the railways the past twenty-five years have undoubtedly witnessed a not inconsiderable expansion, but the expenditure even now falls very far short of that, say, in this country, where the 178,000 miles of public highway cost the taxpayer and ratepayer something like £50,000,000 annually. The desirability of a Central Road Board for the purpose of advising in regard to, and co-ordinating the policy in respect of, road development in India, with particular reference to the increasingly important part which mechanical transport is destined to play in that connexion, and to determine the most suitable method of financing the various Imperial and local projects, has already been discussed at some length in these columns. We then outlined the progress made in the formation of provincial Road Boards and the steps taken in Bombay, in particular, following the adoption of a resolution at the Cawnpore meeting of the Associated Chambers of Commerce, on the motion of Sir Joseph Kay, the Bombay delegate, in favour of some form of central organisation to supervise and co-ordinate their activities. At that time the attitude of the Legislative Assembly had not been determined, but a resolution had been moved in the Council of State, early in February, which recommended that the proceeds of taxation on motor transport should be placed in a separate account for road development, and that, from the fund so formed, the Central Government should make annual allotments to the Provincial Governments for the upkeep and development of their road systems. The resolution was ultimately withdrawn in favour of an amendment moved by the Hon. Sir Arthur Froom, under which a Committee of both Houses of the Central Legislature was required to "examine the desirability of developing a scheme, to inquire whether it could be financed, and to consider the formation of a Central Road Board for the purpose of advising in regard to and co-ordinating a policy in respect of road development."

The proposal, as amended, was accepted by the Government, with some reservations. As Sir Charles Innes had made plain at the Cawnpore meeting the Government's view was that the development of motor transport was for the time being mainly a matter for the Road Boards of the different provinces, and the idea of a central all-India organisation was a question which ought to be reserved for future consideration. Apart from the necessity of avoiding any appearance of interference by the Central Government with the work of the Ministers operating in their own sphere, the Government felt that public opinion should first be educated to a wider realisation of the importance of mechanical transport. The Government spokesman added that it would at the same time welcome a careful survey of the main lines of road communications with a view to find where improvements and extensions were necessary. On that understanding, and provided that the Provincial Governments also agreed to the proposal, the Government of India, he said, would accept—or, at any rate, would not oppose—the amended resolution. Particular interest, therefore, attaches to the conference which opened at Simla on September 22 and was attended by the

Ministers concerned from every province, except Bengal, where at the time the Governor-in-Council was again in charge of transferred subjects, for reasons to which we refer elsewhere in this issue. The proceedings were private, but Sir B. N. Mitra, Member for Industries and Labour in the Central Government, presided and the declared object of the gathering was to consider the whole question of roads development and control in the light of the Council of State debate and earlier discussions on the same subject at the periodical Conferences of Provincial Finance Members. The real task of such a conference is obviously not to work out detailed schemes of road improvement but to determine the form of administrative organisation best calculated to ensure that this aspect of the general problem of transport and communications will come under competent and continuous control. If, as is probable, the committee of investigation which the Conference will appoint decides in favour of a Central Board, it will have also to discuss the financial resources available for its work, and how they can be utilised to the best advantage in co-ordinating and stimulating local effort. The military authorities are also interested in the project, for the relative backwardness of civil mechanical transport is one of the principle obstacles to the early mechanisation of the Army on anything approaching an adequate scale.

CURRENT TOPICS.

Lord George Hamilton.

To Lord George Hamilton, whose death is recorded on another page, belongs the distinction of having been at the India Office for the record period of 8½ years. His first official acquaintance with its august but somewhat gloomy precincts dates from 1874, when, upon Disraeli's assurance that "there is no necessity of speaking either Hindustani or Persian"—a reference to his reluctance to accept an earlier offer of the Under-Secretaryship for Foreign Affairs on account of his "most indifferent" French—Lord George agreed to represent India in the lower House, with Lord Salisbury as his chief. A severe drought in Bengal gave him an unusually speedy opportunity of proving his worth, and the Prime Minister, incidentally, of justifying a much-criticised appointment. The reception accorded to his handling of a supplementary vote of £10,000,000 for the usual famine relief measures cannot fail to have been gratifying to both the youngest member of the new Ministry and its distinguished head. But it is strange for a younger generation to recall that it was in his successful piloting of the Bill which created the title of Empress (or Emperor) of India that his most signal triumph was gained. By comparison the years of his subsequent tenure of office as Secretary of State were relatively peaceful, though many difficult problems, such as the policy to be followed in respect to the occupation of Chitral and the vexed question of the cotton excise, demanded his early attention on the assumption of office. With his resignation on the fiscal issue in 1903 Lord George's direct official connexion with India ceased. By a strange irony of fate one who throughout his term of office had always emphasised the constitutional supremacy of Whitehall in the domain of Indian finance was destined fourteen years later to be primarily responsible for the ruthless exposure of one of the gravest drawbacks to an arrangement, the merits of which he had so long and ably extolled. It is to Lord George's everlasting credit that, as Chairman of the Mesopotamia Commission of 1917, he did not shrink from a task which in any other circumstances cannot fail to have been of the most painful nature.

The Reforms in Bengal.

After a deadlock lasting for three weeks, and seemingly indeterminable, it was announced last week that the Nawab Musharuff Hassain and Sir Provash Mitter have

agreed to form a Ministry in Bengal. Whether the new combination possesses the qualifications that alone can ensure stability, in view of past events and the present position in the Council, cannot easily be judged from this distance. The hope, however, appears slender for the necessary attributes have been summarised as ability, freedom from pecuniary worry, some sort of social standing, and a real following in the Council. It is the last qualification which presents the greatest difficulty. In the present state of flux it does not admit of easy definition, but it should above all embrace some guarantee that the new Ministry has sufficient support to ensure a reasonable tenure of office. The Nawab Hassain, who was one of the principal supporters of Sir Abdur Rahim's campaign against the late Ministers, is a prominent Muslim business man. Sir Provash Mitter, it is understood, has the support of all the Independent Hindus. According to *The Times'* correspondent the Ministry has an adequate majority, if the 44 officials, nominated members and European non-officials are included among its supporters. At the same time there is considerable force in the view of a Calcutta contemporary that "there is small chance of permanent stability in Council politics so long as the Swarajists remain wedded to their sterile and dreary creed of non-acceptance of office, and so long as the friends of the Constitution, mainly Muhammadans, are rent by internecine feuds." It was, it reminds us, Mr. S. N. Mallik who once wittily said that the Reforms would work very well in Bengal if only every member of the Council were a Minister. Meanwhile it is interesting to recall, in view of the importance attached in some quarters to Sir Provash's previous ministerial experience, that the new Minister, in his evidence before the Reforms Inquiry Committee, unreservedly condemned dyarchy. "Soon after joining Government I realised," he said, "that the system was unsatisfactory and unworkable."

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 8.

The Viceroy Addresses the Legislature.

His Excellency the Viceroy's speech was accorded a mixed reception. Whilst Pandit Motilal Nehru thoroughly appreciated the "human element" introduced by Lord Irwin in his views and his sincere depth of feeling, the *Tribune* (Lahore) thinks that the supreme representative of England in India should not be content with convening a conference as a solution to all problems. The *Muslim Outlook* also thinks a conference will not help. The Viceroy's address was couched in stirring terms. It won appreciation from many quarters, but it has as yet failed to achieve practical results. Immediate results were not, however, to be expected. Pandit Motilal Nehru's conviction is that "no alien Government, however kind and sympathetic, can successfully interfere in communal quarrels," and that what is wanted is strong action on the part of the representatives of the people themselves. With due deference, the Pandit submits that the one remedy to all communal troubles is the grant of responsible Government. The *Bengalee* praises highly the sincere and earnest effort towards peace-making, deploring at the same time the lack of practical suggestions. The *New Empire* believes in the quality of soul, which counts more in India, and appeals to the moral sense that is innate in every man in this country; and it describes the Viceroy's speech as an epoch-making document and a fountain-source of inspiration to all idealists. The *Englishman* highly commends the honesty of purpose that has inspired the Viceroy, but thinks the only remedy is the proper education of the masses, a necessarily slow process, creating the need of urgent palliative measures in the meantime. What these measures ought to be is not, however, explained by any of

those who find fault with the platonic appeal of the Viceroy.

Sir Stanley Jackson.

As reported in last week's letter, the Governor of Bengal had to leave for Darjeeling, as previously arranged, with- ing having been able to form a Ministry. This delay will give an opportunity to the leaders for suggesting a solution to the pending difficulty which they have themselves created.

On his way to Darjeeling His Excellency and Lady Jackson opened the Kanchrapara Technical School, and listened to a Municipal address detailing the progress of primary education and water-supply in the Kanchrapara Municipality. The Technical School is a scheme of great utility. Sir R. N. Mukerjee had to face many struggles before it could be put into operation. The practical training given there will render valuable public service. Lady Jackson was presented with a miniature model locomotive constructed in the Technical School by the boys. The Governor of Bengal and Lady Jackson will pay a short visit to Simla next month. The question of the Bengal Ministers will perhaps be settled in the meantime, though there are no signs of it for the present. It is whispered that Sir Provash Mitter has been asked by cable to accept office, but that it is doubtful whether he would consent to work in harness with one of Sir Abdur Rahim's nominees. Even from Darjeeling His Excellency may be able to explore all the possible avenues in which a pair of suitable Ministers may be found. The situation is certainly strange, and many think it did justify a change in the Governor's programme.

The Reserve Bank.

It is generally admitted that India stands in needs of a Reserve Bank, though not, I think myself, by those whose opinion I rate highest. It has been explained that the Reserve Bank has for an object to give India financial autonomy. That autonomy cannot exist under the present system, the control being shared between the Imperial Bank, the Government of India, and the Secretary of State. Now after much deliberation, the principle of an electoral college scheme seemed to have been adopted, and that the majority of the Bank's directorate should be Indian members. The original directorate suggested by Sir Basil Blackett was to be replaced by one chosen by an electorate college consisting of members chosen by persons having the qualification of paying income tax on the Rs. 5,000 scale. Something like the American President's election: the more money, the more votes. The Reserve Bank is not expected to give facilities to the agriculturists. There is so little prospect of an amicable and definite settlement, that postponement is desirable, as the debate on the Reserve Bank seems to be "foundering in the whirlpool of communal troubles," as Sir Basil Blackett expressed it. Experts hold the view that a Reserve State Bank should be free from Government control and from all political influence. This is what the Reserve Bank of India cannot achieve. Hence the difficulty of a settlement.

Miss Mayo's "Mother India."

A sensible review of "Mother India" has been written by Miss Cornelia Sorabji, who knows a thing or two about Indian women in general and Indian widows in particular. She ends her review with a mention of Mathaji Maharani, a well-known orthodox Hindu female saint, who died, after sixty years of meditation and active work among Hindu girls, to whom she gave education. Had she been alive to see the day's scandal around Miss Mayo's book, it is most probable that in her great wisdom she would have said: "Great is he who can bear to hear and see what is wrong and set to repair it." The Indians' argument is to tell us about the blemishes of society abroad: does that remove an iota of the defects of Hindu society?

Dr. Tagore in Trouble.

The Malayan Press has been down on the poet for his views on the British Expedition to China, especially the sending of Indian troops, whilst he is collecting funds to support an institution which must be permeated with his influence and his ideas. Pressed to explain certain violent expressions supposed to have been found in a paper, such as "Asia prepares her weapons in her armouries for a target which is bound to be the heart of Europe," Dr. Tagore said: "In India I have my relations with Government officials, in spite of any difference of opinion. Lord Lytton often came to see me. I am often invited to Government House. They know my opinions. I am not a politician. Whatever opinions I may express about deeds done, are said for the sake of humanity, and not because I belong to any political party." Dr. Tagore has categorically denied having written the incriminating article. "I never had any dealings with the *Shanghai Times*," he said. "I certainly do not agree with the sending of Indian troops to China, but I don't know what the *Shanghai Times* means by attributing to me such views on the attitude of Asia towards Europe. I never gave expression to such sympathy for any alleged preparation made by Asia. My mission is to bridge the gulf, widening every day, between the two hemispheres." In many instances the words of the poets have been altered beyond recognition and published as personal interviews by unscrupulous editors.

World Fliers in Calcutta.

The American world-fliers Brock and Schlee arrived yesterday in their monoplane *Pride of Detroit*. They came from Allahabad and landed at the Dum-Dum Aerodrome. The airmen did not like the Indian monsoon. They are leaving immediately for Rangoon, and will proceed to Japan via Siam and Indo-China. They hope to perform their world trip in 28 days. From Calcutta to Rangoon they have to cover 650 miles; from Rangoon to Bangkok 340 miles; from Bangkok to Hanoi 540 miles, from Hanoi to Hong-Kong 530 miles, from Hong-Kong to Shanghai 750 miles, from Shanghai to Tokyo 1,000 miles, from Tokyo to Midway Is. 2,500 miles; from Midway Is. to Honolulu 1,700 miles, from Honolulu to San Francisco 2,200 miles and then to Detroit another 1,600 miles, a total of 11,810 miles from here to Detroit. As the monoplane is not fitted with floats enabling it to alight on the water in case of emergency there is some anxiety about the flight over the Bay of Bengal. Colonel Fraser Hunter has kindly placed at the disposal of the airmen the latest maps issued by the Survey of India. They show the best route to avoid the treacherous Bay currents. The American colony wanted to give a dinner to their brave countrymen, but the proposal fell through, the airmen wishing to leave at once.

Beam Wireless Service in Calcutta.

There has been quite a rush of messages for despatch on the newly-opened beam wireless service. The rates are comparatively cheap and the public have immediately responded. The radio rate is about 75 per cent. of the cable rate in the case of full rate messages and about the same as the other classes of telegrams. A week-end telegram may be sent any day of the week and reach on a Monday morning, two weeks before the mail, at the small cost of two and a half annas per word. The beam wireless service is bound to become popular.

The One O'clock Gun.

There is again a question of depriving Calcutta of its most useful time-gun. Three years ago, for reasons of economy, it was stopped. The Corporation, seeing the inconvenience caused to the citizens volunteered to pay the cost of the upkeep, a trifle, compared with the huge sums otherwise wasted, and the gun was restored. Now the Corporation refuses to pay the increased cost. Why the sum should have come up from Rs. 1,000 to Rs. 3214-6-0 is a mystery. But somehow the ammunition used is charged

for at the rate chargeable to non-military bodies in accordance with Army Regulations, and this is surely one of the causes of increase. Government is prepared to meet half of the expenditure. Let us hope the Corporation will graciously vote the balance. The gun serves a general public purpose. If men were sent with a subscription list, every one in Calcutta would gladly pay his or her mite to keep the one o'clock gun going. It is useful to factories and shops; to all people going to work or leaving work at that hour. It is the arbitrator in a city where no two clocks are giving the same time. Calcutta cannot do without its time-gun.

Here and There.

It is rumoured that the famous French tennis players, Jean Borotra and René Lacoste will be coming to India next cold season. As they are coming on some other business they will have to be persuaded to play against some of the crack players of India. If Mr. Sleem came down to Calcutta, it would make an interesting match. Otherwise the only proposition will be Okomato and Ueda.

A German girl, Margaret Grubenhoff, was converted to Hinduism the other day and married to Mr. Kiran Chandra Bagchi, an electrical engineer. The bride looked charming in a silk sari and a wealth of gold bracelets. She distributed food to the guests among which were high caste Hindu gentlemen and so-called untouchables. They all cheerfully partook of the sweets given by the new convert. The bride is 23 years of age. She is a great admirer and lover of things Indian. Her name now is Sreemati Indubala Devi.

It is proposed to introduce a measure called the Bihar and Orissa Mica Bill. The Government are satisfied that a grave abuse exists in all places where mica is stored or sold. And it will provide for the licensing, with suitable restrictions, of all persons finding, possessing, stocking or selling mica. The place from which the mica is taken, the quantity and its destination, will have to be recorded on a document. The stealing of mica and the trafficking in stolen mica have become a growing evil for which there was no legal protection. The deposit of Rs. 1,000 to get a licence as mica dealer will keep back a great number of doubtful characters. Even the miner will have to pay a deposit of Rs.100 to work in the mine.

THE OLD AND THE NEW IN INDIA.

(From a Correspondent.)

A law, forbidding child marriages, before a certain age, has just been sanctioned by the Maharaja of Kashmir, thus demonstrating how drastically, within their own territories, Indian rulers deal with these points, which the Government of India naturally approach with the greatest delicacy and care.

Probably 80 per cent. of the Hindu population are with this change at heart. Many began by frowning on the proposal, as nowhere in the world is it more difficult to overcome inherent prejudice—especially those relating to religion—than in the East.

We, in England, have blamed those that have shown themselves averse from changes; we have regarded them as people loving darkness rather than light, forgetting possibly in the process of our reconstruction that that very darkness represented a certain idealism, and that any change that attacked it, was bound to arouse its resentment.

Kashmir has now, as the result of this new law, put herself on the side of such progressive States as Baroda, Mysore, Kotah, and Gondal, whose rulers possess perhaps a vision somewhat in advance of the age as it stands to-day in the East. It is not too much to expect that these States will one day represent the conscience of the whole of civilised India, having been the ones to open a path towards a better future. Always a difficult task to be the regulator of human development, even when inspired by the knowledge that the process of transforma-

tion, once accomplished, is the answer to many unsolved enigmas, these rulers have gone forward with the process of reconstruction within their territories in a way that calls for the admiration and sympathetic co-operation of the Government of India. For social reform in a land teeming with superstition, and hidebound by custom, which has no present desire to accept the enlightenment of modern science, requires an infinite patience and devotion if progress is to be maintained and an attempt made to lift even a fraction of that grievous weight of ignorance. It means that the pioneers of that reform must bear their share, and more than their share, of the load. They will need courage to meet the disillusionments that will be theirs, the strength to face stark facts without shirking their grim significance, and only in this way will all barriers break and all the ancient superstitions dissolve in the light of a new knowledge.

It is inevitable, perhaps, that all such random reflections on the old and the new India should conclude with a reference to Miss Mayo's "Mother India."

Alone among all her fellow Indian critics Miss Cornelia Sorabji, surely one of the most splendid and devoted workers in the cause for which Miss Mayo pleads so eloquently, recognises "the tremendous courage which has gone to the delivery of her message." The keynote of Miss Sorabji's comment is struck in the opening paragraph. "Soon after the only occasion on which I heard Stepniak speak," she writes, "I happened to be the fellow-guest of a Russian Princess in a country house in Cumberland. 'Tell me,' I said, 'is it true what Stepniak tells us of Poland and of Russia?'"

"It was a lovely day, soft and sun-misted, following upon the rain and soddenness which is more typical than sunshine of those Northern regions. My Russian Princess looked out of the window, thinking awhile—then she turned to me and said, 'Stepniak paints Russia always like yesterday, never like to-day.'"

"Now, having read 'Mother India' twice—once rapidly getting no more than an impression, once very slowly, weighing words and statements against knowledge or experience—I feel that the least unfair criticism which can be passed on the book in one sentence, is something like that—'painted like a Yesterday of rain and gloom, not like a To-day of sunshine and of hope.'"

"And even that is not accurate, for although no sufficiently stressed, the double impression is there."

But perhaps Miss Sorabji's most notable contribution to the study of a work, the reception of which, alike in thought and deed, "will be the test of the manner of the people we are in India" is her personal recollection of the author's visit.

Each chapter, she points out, "is in itself an exquisite bit of writing, showing us that had she been so minded, Miss Mayo could have written the poetry of allegory or or the appreciation of beauty (and nothing else) in individual mountains—and so made herself the most popular of American tourists." Why she deliberately chose the infinitely harder task may be left to be told in Miss Sorabji's own words:—

"That is what impelled Miss Mayo to her task. Not political propaganda, no vulgar thought of what India could snatch or claim for herself. No: only the thought of what she could give, what incense of service from the hearth fire of the humblest, of the countless dwellers in the villages and villages and villages. . . . What incense of service they could render, these dwellers-in-other-than-villages, these well and strong and capable ones—what service they could render to these children of 'the stark homes of want' and through them to the Mother walking in the mists of that grey-blue smoke, with the blue stars shining in her hair, among the paddy stalks and the ghost grass, and the white stems of the flaming cotton trees. . . ."

"Yes—I know it. For she told this to a small group of us sitting in the twilight hour in an Indian garden, the winter of 1926. We had spoken of high politics, and we had been disunited; and then she spoke: and she told us of a wonderful experience in some western jungle which

turned her thoughts to India; and she told us of how the vision of Mother India came to her in the Indian villages among the smoke of the wood-fires.

The telling bound us each to each, as it were, forthwith: our differences dropped away. And one, who had seemed, perhaps, most aloof and isolated of us all, said to me—"I wish, feeling thus, we could begin now, all over again, the discussion just ended."

"And that discussion. It was the answer to a question put by Miss Mayo herself.

"What," she had asked—"would unite you in India?" Under the spell of her words, almost we had found solution 'Sacrifice and Service for Mother India'—That was her answer.

"Strange that the written word, now, should rouse and infuriate. But my own belief is that what came to us from her, in the dawning garden, was indeed the true impression; and that she has something to give us all, which will help and unite and energize—if only we will allow."

And then, with the dawn of a new outlook on the prejudices of a past age, India will take her place for ever in the newer civilisation that has overspread the world.

CORRESPONDENCE

THE MUSLIM CASE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Your correspondent in his article, "India and the Reforms," published in your issue of September 15, propounds the problem that "if our (British) efforts to introduce democratic principles (in India) tend to promote and to intensify communal and religious antagonism between the people themselves, how can it be either wise or logical to persist in these efforts?" Curiously enough, one of the remedies suggested by him merely carries, in his own words, one step further the trend towards democracy which he has himself condemned. But to this I shall revert later.

At the outset I wish to make a humble effort to supply the answer to the question propounded by your correspondent. He admits that the unfortunate racial antagonism which at present prevails in India is of recent growth and he appears to assume, not merely that this antagonism has been, to a certain extent, fostered by the introduction of democratic principles in India, but that it is a necessary result of the introduction of such principles. In my opinion, the present-day tension between the different communities is not the result of the introduction of democratic principles, but is the result of the omission of the different communities to arrive at a settlement among themselves with regard to their rights and obligations under the altered form of constitution which was ushered in by the Montagu-Chelmsford Scheme of Reforms in 1919. If a clear understanding had been arrived at at the outset with regard to all or, at least, the greater part of the subjects which were likely to be affected by the Reform Scheme, a great deal of subsequent bitterness and antagonism between the communities would have been avoided.

An understanding with regard to the representation of the Hindu and Muslim communities in the various Legislatures of the country was arrived at, and was embodied in what has subsequently been known as "The Lucknow Pact," and although, from many points of view, the settlement then arrived at has worked unfavourably to Muslim interests, the Muslims have faithfully adhered to the terms of that Pact. One of the essential terms embodied in the Pact and accepted by both the communities, was that the Muslims would be entitled to elect their own representatives to the Legislatures without interference by other communities, and that as a necessary consequence of this Muslims would have no voice in the election of the representatives of other communities. So far as this went, it afforded a satisfactory solution of the representation of the

two communities in the various Legislatures and this principle was applied by the Government, not only to the Muslims, but also to some other minor communities, for instance, the Sikhs, who were given separate representation in the Punjab Legislative Council. This was, however, not enough. There were several other questions of importance which required settlement and were left unsettled, and with regard to which, consequently, the position of the different communities was not clearly defined. It was hastily assumed that, an agreement having been reached on the question of representation, other problems affecting the different communities would become easy of solution and would be dealt with as they arose in the course of time. Unfortunately, this expectation has not been realised. When those problems arose, the better organised and the better educated community, which also happened to command permanent majorities in all the Legislatures, with the solitary exception of the Punjab Council, took advantage of its position and dealt with those problems in a manner satisfactory to itself, but unacceptable to the other communities. In the Punjab, although that community did not command a majority in the Council, it occupied a position of great advantage in being able to control practically all the departments of Government owing to the preponderance of its members in the employ of those departments. This gradually gave rise to irritation and acrimony, which has, unfortunately, resulted in a complete loss of confidence and an attitude of suspicious distrust between the different communities.

Another factor which has recently contributed materially towards the accentuation of the tension between the two communities, is the effort which is being made on behalf of the Hindu community to do away with the system of separate representation, which was guaranteed to the Muslims by "The Lucknow Pact" and the abolition of which the Muslims justly regard as spelling ruin to their interests. What is required, therefore, is, in the first instance, an assurance that the guarantees already given to the different communities for the safeguarding of their interests shall be maintained. In the next place, an effort must be made to induce the two communities to arrive at a settlement with regard to the other questions to which the working of the reforms during the last seven years has given rise, and which are being agitated at the present moment between these two communities. For this purpose, I will suggest the holding of a conference in each province to which prominent members of the different communities representing all shades of opinion should be invited for the purpose of discussing these problems and arriving at a settlement concerning them. No settlement, however, will have any chance of effecting a reconciliation between the different communities unless the Government is also a party to it. The principles mutually accepted in these conferences could then receive legislative or executive sanction, as the case may be. The same procedure could be adopted with regard to the Central Government if it were considered necessary, but, happily, there does not exist much conflict of opinion with regard to that aspect of the question. The conflict is confined principally to matters of local or provincial interest.

A settlement arrived at on the lines indicated above will ensure the political co-operation of the different communities in all matters affecting the welfare and advancement of the people of the country and such co-operation is bound to engender a spirit of mutual confidence and goodwill. In the course of time this spirit of confidence will become strong enough to enable the weaker and minor communities voluntarily to dispense with any special guarantees for the safeguarding of their interest. So long, however, as that stage is not reached, these guarantees will be absolutely essential for the peaceful working of any form of constitutional government in India.

Your correspondent suggests two remedies for the present situation, a democratic advance in provincial matters, and an imperialistic retrogression so far as the Central Government is concerned. All that I would wish

to add to his proposals concerning the provinces is that the aspect discussed by me above should not be lost sight of in carrying out these proposals. With regard to his proposals as affecting the Central Government, happily, even the Government of India is not likely to subscribe to them, and one need really discuss them no further. It has never been suggested that the introduction of the Indian element into the Viceroy's Executive Council has tended in any way to weaken the authority of the Central Government and it is too late in the day to suggest that the constitution of that Council should be placed on the same basis on which it rested nearly twenty years ago.—I am, etc.,

ZAFRULLA KHAN,
Barrister-at-Law, M.L.C. (Punjab).

London, W. II.

INDIAN MAIL.

The Jute Forecasts.

The expectation that the final district returns of the jute crop, issued last week in Calcutta, would disclose a probable outturn which, if not as large as the exceptional 1926 figure, would be at least in excess of the normal consumption level, variously estimated at between 90 and 100 lakhs of bales, has been realised. As the last season's crop proved to be nearly 1,500,000 bales greater than that indicated in the corresponding return for that year, renewed efforts have been made, at the instance of the Bengal Chamber of Commerce and the Jute Mills Association, to devise a system under which the forecasts shall approximate more closely than they have done in the past to the actual crop. Under recent orders of the Bengal Government, which came into effect from the beginning of the current year, a radical change has been introduced in the method of compiling the jute forecast figures. For the first time a number of superior grade and trained officers have been made responsible for checking the pancha-cutting experiments. This year's forecasts were prepared under the new system, which, in the opinion of the authorities, is calculated to produce as accurate an estimate as may be expected in existing conditions. At the same time, as Sir Charles McLeod has pointed out, in the course of an instructive article in a prominent financial contemporary, the often wide discrepancy between the original estimates and the final outturn cannot entirely be attributed to the failure of the human element. The weather is an even more potent factor. In spite, therefore, of all these additional precautions an unduly protracted break in the rains, or an excessive rainfall over an extended area, many still mean a difference, ultimately, of several million bales in either direction.

The Army in India Reserve.

The new scheme for the Army in India Reserve of Officers has been in operation now for over a year. At first the number of applications for Commissions in a force the members of which assume much wilder responsibilities than officers of the old I.A.R.O., did not come up to expectations. Now there is substantial ground for hope that the Army's requirements will eventually be met. The improvement, the *Times of India* suggests, is probably largely due to the reports of officers who have completed a period of training and on return to their professions or businesses have reported favourably on a system which has been devised as much in the interests of the individual as of those of India itself. The number of newly-commissioned officers is in the region of 60 per month and the total strength of the Reserve at present is between 700 and 800. It is, of course, to be expected that certain areas are able to supply far more candidates than others, and Calcutta is to the fore in its contribution of Reserve officers. Bombay, on the other hand, has not yet furnished what may justly be regarded as a representative quota but the *Times of India* is probably correct in assigning the reason in part to the trade depression, involving a proportionate decrease in the number of eligible candidates. Approximately 60 Indians, or one-tenth of

the total, have received Commissions, and generally the new scheme, details of which have already appeared in the *THE NEAR EAST AND INDIA*, affords reasonable prospects of success. It is probable that as more officers who have completed their annual training return to their civil employment the number of applicants will increase, for the testimony of personal service and experience is an excellent recruiting agent. An encouraging feature is that commanding officers have reported very favourably on the officers gazetted to regiments.

A MASONIC APPEAL.

Sir Basil Blackett has issued an appeal for contributions to the Building Fund of the Proposed Masonic Temple in New Delhi. Although no special effort has hitherto been made, the gross amount collected or promised for the fund is approximately Rs.33,000, and a suitable site was recently obtained in Queensway, New Delhi, from the Government of India. It is not yet possible to give an exact estimate of the cost of erection of the proposed building, but it is clear that a sum of not less than 2 lakhs will be required. At the same time the fraternity feel that it would not be safe to ask for less than Rs.2½ lakhs in all, if they are to be certain of having the funds available to cover all contingencies.

A preliminary sketch drawing by the architect, Brother J. P. Davies, has been prepared. In addition to the rooms required for the various lodges and chapters likely to use the temple, it is proposed to provide, in the plans, for a dining hall which will be available for the use of non-Masons as well as Masons. A dining hall where public dinners and similar function can be held is badly needed in New Delhi, and the income which will be earned by letting out the hall will, it is believed, much more than cover the interest and depreciation charges on the additional capital sum required for its erection. Sir Basil Blackett concludes:—"May I make one personal appeal? I have been connected with the fraternity from its inception. Before a few months have passed, I shall be leaving India. Nothing would give me greater pleasure as a Mason and as a friend of India than to know before I go that the project for a masonic temple in New Delhi for which I have worked has passed beyond the stage of preparation and is well on the way to becoming an accomplished fact."

Donations should be sent to the Honorary Treasurer of the Fraternity, Worshipful Brother Stewart, at Freemasons' Hall, Qudsia Bagh, Delhi.

OBITUARY.

LORD GEORGE HAMILTON.

THE NEAR EAST AND INDIA regrets to announce the death, on September 22, at the advanced age of 81, of Lord George Hamilton. A son of the tenth Earl and first Duke of Abercorn, he was educated at Harrow and served for a time in the Rifle Brigade and the Coldstream Guards. At the General Election of 1868 he was elected for Middlesex, and when the county was divided in 1885 he represented the Ealing Division throughout the remainder of his political career. In 1874 he was appointed Under-Secretary of State for India, under Lord Salisbury, and in July, 1885, he became First Lord of the Admiralty in the latter's first Administration, holding that office, with the exception of a brief interval, until 1892. In 1895 he returned to the India Office as Secretary of State, continuing in that office until he resigned on the Tariff Reform issue in 1903. Sworn a member of the Privy Council in 1878, Lord George received the G.C.S.I. on his retirement, which did not, however, mark the cessation of his public activities. In 1905 he was appointed Chairman of the Royal Commission upon Public Law and Unemployment and afterwards as Chairman of the Mesopotamia Commission. He married, in 1871, Lady Maud Caroline Lascelles.

Zafrulla Khan, M.L.C., Bar-at-law, an advocate of the Lahore High Court, has been deputed by the Muslim members of the Punjab Legislative Council to proceed to England in order to place before the British public the view point of his community on matters likely to come under review by the forthcoming Statutory Commission. He has arrived in London and is anxious to get in touch with individuals and organisations interested in Indian affairs.

The Imperial War Graves Commission announce that the memorial erected by them at Neuve Chapelle to commemorate the services of the Indian troops in France will be formally unveiled by the Earl of Birkenhead, Secretary of State for India, on the morning of Friday, October 7. The Government of India has arranged for a detachment of Indian troops to be present. On the Neuve Chapelle memorial, which has been designed by Sir Herbert Baker, R.A., are recorded the names of those of the dead of the Indian Army who fell in France and whose graves have never been found; those who fell in Belgium are, it will be remembered, recorded on the Menin Gate.

A certain number of places will be reserved for those wishing to attend the ceremony, who should communicate with the Secretary, Imperial War Graves Commission, 82, Baker Street, London, W.1, as soon as possible. The nearest towns to the site of the memorial are Lille (13 miles), Bethune (7 miles), and Armentieres (8 miles).

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Balkan Roads and Motors.

In discussing openings for motor cars in the Near East last week I cited Roumania as an instance of a country where the use of the motor is on the increase. Elsewhere in this issue are given the figures for the registration of motor vehicles in Roumania on January 1, 1926, and January 1, 1927, and while on the former date the total was 11,725, on the later it was 15,895, the principal increase being in touring cars, the number of which rose from 6,807 to 11,308. These figures show plainly enough that in Roumania at any rate the Balkans can furnish one motor market worth the attention of British manufacturers. Unquestionably the rate of increase in the use of the motor in Roumania would be much more rapid if only the country were blessed with a good road system; but as is the case unfortunately throughout the Balkans, the roads, broadly speaking, are mere apologies for means of communication. It is true that in Transylvania and Bukovina the roads are good, and Yugoslavia also possesses an excellent road system in Croatia and Slovenia; but these provinces formed part of the former Austria-Hungary, and it is a regrettable fact that except for the roads made during the Great War but little has been done to the road systems of the Balkans since the time of the Romans. If Rome had not endowed the region with some of her wonderful roads it is open to doubt whether in the intervening centuries any attempt would have been made to make good the deficiency. A good deal is being done to-day in the Balkans in the matter of road making, notably in Bulgaria, where the system of forced labour has been made use of for the purpose, in Yugoslavia where the utility of the motor seems to be more widely appreciated than in some other regions, and in Greece in connexion with the various reclamation and other schemes, but the work to be done is so extensive that it is very clear that in the most favourable circumstances many years must elapse before the Balkans as a whole are criss-crossed with roads fit for motor car traffic. That fact places a very definite restriction on the extent of the market for motor cars in the Balkan countries.

British Trade Methods.

I have on various occasions recently discussed the shortcomings of British trade methods in the Near Eastern markets generally and particularly in the Balkans. In the further extracts given this week from the very valuable report on Greece by Mr. Richard Turner will be found a detailed criticism of the position as regards that country. As he points out, British manufacturers have a good name in Greece, but that is the case not only in that country but throughout the Near East, for it is universally recognised that quality is a distinguishing characteristic of British goods. The question of prices has been an obstacle, however, in the Greek market as in other Near Eastern outlets, and while the recent movements of the exchanges of our principal competitors have modified the position in our favour, the factor still tells against us to some extent. It was suggested recently, it will be remembered, that there is such a thing as giving our customers commodities of too good a quality and that the production of slightly inferior articles would be to our advantage. That is a large question, and, taking everything into consideration, it would seem undesirable to do anything to affect the one

factor which more than any other gives British goods their advantage in the world's markets. Once the certainty that the same quality no longer holds good is gone, our manufacturers would be simply as those of any other country, and the competition for trade from our point of view would be intensified. That at any rate is how it seems to me with the qualification, however, that our manufacturers must study their markets and send to them the type of goods that is demanded. Quality is an asset so valuable that it would not be worth relinquishing it for any consideration. After all, sooner or later, conditions so far as the exchanges are concerned will become more or less normal, and when that happens our competitors will have to depend on the quality of the goods they offer and not on prices to make them attractive purchases. When that happens it can safely be assumed that British trade will come into its own. If, however, the quality of British goods is all right, there are many ways in which the methods of our traders can and must be improved. Mr. Turner gives some instances of this to which it is worth calling attention. There is, for example, the inadequacy of the information supplied by British representatives which places concerns tendering for contracts at a marked disadvantage with their rivals. Mr. Turner further cites a number of clerical shortcomings of the kind likely to prejudice business, all of which must be avoided if we are to hold our own in the Balkan markets.

Old Greek Gold Loans.

Despite Greece's political vicissitudes during the past few years, the country has all along been able to retain the confidence of the foreign money markets, and the latest development will do nothing to diminish the trust reposed in a country which has all along contrived to keep its foreign engagements. It is announced by the Council of Foreign Bondholders that the International Financial Commission at Athens has agreed, in the interests of the bondholders of the old Greek Gold Loans, to a proposal of the Greek Government to add to the minimum interest payable on coupons due October 1, 1927, a further 24 per cent. of the nominal interest, on account of the plus-values of 1926, this representing the amount which the Greek Government considers to be not in dispute. Thus holders of £100 4 per cent. Rentes of 1889 will receive, in addition to the half-yearly minimum interest of 16 gold francs, a further 24 gold francs on account of such plus-values, or 40 gold francs in all; and holders of £100 5 per cent. Funding Loan of 1893 will receive, in addition to the

BANK OF ROUMANIA LIMITED (FOUNDED 1866).

quarterly minimum of 10 gold francs, a further 30 gold francs on account of the plus-values, or 40 gold francs in all. Allocations on account of sinking fund will be increased by 8 per cent. in gold francs.

Progress and Trade Routes.

The influence of the motor ship on trade routes was discussed in a paper read at a meeting of the Institute of Marine Engineers at the Shipping, Engineering and Machinery Exhibition by Mr. A. C. Hardy, B.Sc., F.R.G.S. He pointed out that steam and the Suez Canal brought the Mediterranean into prominence as a trade route, and that Panama belonged essentially to the oil and motor-ship age. As he justly remarked, however, the motor-ship has made no alteration in trade routes; its effect has rather been in the direction of the speeding up of commerce, and in this connexion Mr. Hardy made the point that it is on the long distance routes that the motor-ship has its great advantage over the steamship. If the motor ship has left the trade routes as they have been, it is in the main simply because the ocean highways are so fixed by conditions that little latitude is open for change, and an alteration, if it does come now—one of great magnitude, that is—will be due to the development of a country or to the cutting of some new canal. On land, however, as we know, oil has begun to have a pronounced influence on trade routes, especially in the Near East, where the various motor services are developing rapidly. It is impossible to provide railways on an adequate scale to serve undeveloped countries, because they simply would not pay, and it would therefore be impossible to obtain the necessary capital for their construction. The motor car has made it possible to fill this gap in communications, and it can confidently be said that its utility in this respect is only at its commencement.

Another Bank Amalgamation.

Last week the interesting news was forthcoming that negotiations are in train for the amalgamation of the P. and O. Banking Corporation with the Chartered Bank of India, Australia, and China. This development follows on a number of amalgamations in recent years between British banks which operate outside this country. The official view as regards the amalgamation of banks which operate here is that any further unions would be contrary to public policy on the ground that it is not in the common interest that banking competition at home should decrease, but the position as regards British banking overseas is naturally quite different. It is a question in that case of meeting competition, and it goes without saying that the union of forces means a considerable advantage.

The Rubber Position.

It would be idle to suggest that developments in regard to rubber have not been disappointing. It was fully expected that when the export quota fell to 60 per cent. stocks would soon begin to decrease and prices to rise, but the converse has been the case, and to-day we have the London stocks at a figure of about 67,000 tons and the price of the commodity only fractionally above 1s. 4d. Many explanations have been put forward for the existing situation, such as the temporary reduction of the output of cars in America, and smuggling, which is said to be

responsible for 2,000 tons per month; but when all is said and done it cannot be controverted that the root factor in the depression is the failure of consumption to develop along the expected lines. It must be remembered, too, that the summer is always a dull period, and that there has not been any great increase in the London stocks in the last few months, so that there are grounds for assuming that with the autumn demand for rubber the restriction scheme will gradually begin to justify itself. So far as can be seen, the view of the market which I gave some time ago still holds good. By the late spring there will be a buoyant market, followed by a further increase in stocks accompanied, of course, by the inevitable fall in the raw commodity.

COMMENTATOR.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Ironmongery, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of ironmongery, rope steel wire, wire metal white, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. October 6.

Marine Units.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of two marine units for ferryboat for Beni Suef Provincial Council. November 1.

Envelope-making Machines, Etc.—The Ministry of Finance invites tenders for the supply of 2 envelope-making machines, automatic, to be equipped if possible with a special device for printing "O.H.E.M.S." simultaneously in Arabic and European characters. Output to be from 60 to 100 envelopes per minute, according to size; 2 direct current motors, 110 volts, to operate above machines; 2 sets of cutting knives for making envelopes (large size) by hand; 1 paper-cutting machine, large size, 70 x 100 cms., with 110 volts d.c. motor for operating same; 3 paper-ruling machines and accessories; printing machines. December 5. (D.O.T.)

Bristle Paper.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of bristle paper required by the Ministry of Finance. October 15.

Steam Salvage Tug.—The Director-General, Ports and Light-houses Administration, Arsenal, Alexandria, invites tenders for the supply of a steam salvage tug as per conditions of tender and specifications obtainable from Secretariat Department, Arsenal, against payment £E4 per set. October 24.

Bedsteads.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of bedsteads iron, required for the year 1927-1928. October 25.

Machinery.—The Controller of Technical Education, Ministry of Education, Sharia, Qasr el Aini, Cairo, invites tenders for the supply of machinery and machine tools for the Model Workshops and Trade Schools, Bulaq Technical School and the Intermediate School of Agriculture at Moushtuhor. October 17.

Diesel Alternator Groups.—The Egyptian Ministry of Public Works invites tenders for the supply at site of the Aft Power Station, of four diesel alternator, groups and accessories, including alternators, switchboard, transformers, power station auxiliaries, hand-operated travelling crane, workshop equipment (including machine tools, lathes, drills, etc.) mechanical and electrical testing instruments, station electric lighting. October 12 (D.O.T.).

Turbo Alternator Groups, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Belqas Power Station of three Turbo alternator groups, and accessories required for the Public Works Ministry (October 26); and for the supply and erection at site of Esna Barrage grounds of two Turbo alternator groups, and accessories, required for the Public Works Ministry. November 2.

GREEK (MODERN) SELF-TAUGHT

(In Greek and Roman Characters.)
By NICHOLAS ANASTASSIOU.

Bachelier Diplome du College Grec de Halki.

Containing:

The Alphabet.	Railway.
Phonetic Pronunciation.	Steamboat.
Classified Vocabularies.	Hotel, etc.
Conversational Phrases, etc.	Elementary Grammar.
Travelling.	Money, with illustration of Coinage.

Red Cloth, 4s. net; Blue Wrapper, 3s. net. Postage, 3d. extra.

Sold by all ENGLISH and FOREIGN BOOKSELLERS. Write for Prospectus and Catalogue No. 25.

London: E. MARLBOROUGH & CO., Ltd., 51, Old Bailey, E.C.4

The Salonika Reunion Parade of the British Salonika Force gather for their annual parade and service on Horse Guards Parade on October 2 at 11 a.m. There will be an inspection by the Chief of the General Staff, General Sir George Milne, followed by a service, and then the "march past" the Cenotaph, where wreaths will be placed. After the muster there will be a dinner.

The death occurred last week in Edinburgh, at the age of 79, of the Very Rev. James Alexander M'Clymont, C.B.E., D.D., Principal Clerk of the General Assembly of the Church of Scotland, and a former Moderator. A visit to the Near East resulted in the publication of an illustrated work on "Greece" in the "Beautiful Books" series. Dr. M'Clymont visited mission stations in India and Ceylon, and he also visited Canada as a delegate to the Pan-Presbyterian Council, Palestine, and Egypt, where he officiated for a time as Chaplain.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, September 27.

If there was little reason for the rise of the recent activity in miscellaneous industrial shares, there seems to be equally little reason why it should have collapsed at this particular time. Indeed signs of reviving trade, better railway traffics, and a batch of surprisingly good iron and coal companies' results seem to provide a better basis for optimism than existed when the upward movement began. It is, however, a little early to assume that anything more than a temporary lull has occurred; and indeed the later days of this week have seen some symptoms of returning strength. Meanwhile the oil share market remains very depressed, and while a recovery in raw rubber prices has somewhat relieved the malaise in the rubber share section the position there is not cheerful, while the shadow of the conversion operation hangs rather heavily over the gilt-edged market. It also has to be remembered that the close season in the new capital market is now over, and from now onwards a stream of attractive new issues will compete with existing issues for the attention of the investor. Then again we are running into a period when the possibility of dearer money becomes a serious consideration. The general position is therefore somewhat uncertain at the moment, but there are many shrewd observers on the Stock Exchange who believe that the autumn has busy days in store.

Hopes for Home Rails.

Although it does not amount to anything substantial, there has at last been a slight revival of public interest in the home railway share market and the tone is a little better. The outlook is certainly more favourable than the recent phase of neglect suggests. The traffic figures for the current financial year compare, on the whole, favourable with those for the corresponding period of 1925—comparison with 1926 being valueless owing to the strike—and expenditure should be lower, though since the British companies still refuse to publish regular net revenue figures, the extent of economies is a matter of guesswork. Two of the big four companies—the Great Western and the London and North Eastern—show an increase and the reduction in the London Midland and Scottish, and Southern figures is not considerable. Passenger receipts have been lower all round, but freight traffic makes a satisfactory showing. Indeed, Sir Josiah Stamp, the President of the Executive of the L.M.S. is somewhat optimistic in this connexion. "The traffic position," he says, "is, on the whole, hopeful." Trade is "gradually getting better" and "freight receipts should show a continuance of the gradual upward tendency which has recently been experienced." A further encouraging factor has been the outcome of the meeting between the

L.M.S. officials and representatives of the men held at Liverpool. The tone of the meeting was excellent, one of the resolutions pledging the meeting "to use every endeavour, by mutual co-operative effort, to further the business interest of the L.M.S. railway." Stockholders will follow this experiment with the greatest interest.

The Rubber Situation.

The trend of the price of rubber has been slightly more encouraging to the holder of rubber shares. The price of rubber advanced to rs. 4½d. per lb. on rumours of a further cut to 50 per cent. in the exportable allowance and of a reassessment of estates. But it cannot be said that the autumn revival that was being predicted some weeks ago has definitely set in. At the moment there are no signs of an appreciable advance in the near future, but it is not likely that the price will fall very much below the recent low levels. For the present there is a tendency to "wait and see." This is no doubt largely due to the fact that the restriction year ends next month. In view of the failure of the scheme—from the growers' standpoint—it is natural that there should be rumours of a revision of the scheme in order to protect growers' interests more effectively. It would be surprising, however, if this course were taken after the Government has accepted the recommendation of the World Economic Conference, which urged that everything possible should be done to remove restrictions on trade. Perhaps the most consoling feature of the situation is that American demand continues on a good scale. It is, in fact, larger than last year. The holder of good rubber shares should not despair. This, in fact, does not seem to be the moment to discontinue the exercise of patience.

Some Prosperous Iron and Coal Companies.

For many months we have been receiving an almost unbroken stream of exceptionally depressing reports from iron and coal companies. But this week the customary gloom has been relieved by a number of very good reports. There are two of particular interest—namely, that issued by the Staveley Coal and Iron Company and that issued by the Sheepbridge Coal and Iron Company. The Staveley Company's net profits for the year ended June 30, at £244,978, show an expansion of over 200 per cent. Thus the directors, have been able to restore the dividend of 7½ per cent., last year's figures being 5 per cent. The net profits of the Sheepbridge Company for the same period were £116,417, as compared with £68,722 a year ago. The ordinary dividend is raised from 5 per cent. to 7½ per cent. Several smaller companies have published reports which also show a satisfactory recovery. But one swallow does not make a summer; it would be disastrous to argue from the particular to the general. Moreover, the report of the Sheepbridge Company points out that conditions are to-day much less favourable for these companies than they were some time ago. Coal prices have continued to decline until the end of the financial year, while pig-iron prices have fallen back to their former unsatisfactory level. In short, the investor has no justification for concluding that there has been any general improvement in the outlook for iron and coal companies.

NOTICE IS HEREBY GIVEN that the next ORDINARY GENERAL MEETING of the South Indian Railway Company, Limited, will be held at the Offices of the Company, 91, Petty France, Westminster, S.W.1, on Wednesday, the 12th October, 1927, at 11.30 a.m., for the purpose of receiving the Directors' Report and Statements of Accounts for the Year ended 31st March, 1927, and for the transaction of the ordinary general business of the Company.

The Transfer Books will be closed from Saturday, the 17th, to Saturday, the 31st day of December, 1927, both days inclusive, for the preparation of the half-yearly warrants.

Transfers will not be received at the Office while the Books remain closed.

The Warrants payable on and after the 2nd January, 1928, will be forwarded to the Proprietors on the 31st December, 1927.

By order,

ALEX. MUIRHEAD,

Managing Director.

Company's Offices:—

91, Petty France, Westminster, S.W.1.

21st September, 1927.

Shipping Intelligence

GREEK SHIPPING IN 1926.

The Greek mercantile fleet, which has been steadily increasing since 1919, continued to add to its size, notwithstanding adverse conditions and financial difficulties (it is stated in the recently issued British Consular report on Greece in 1926). On December 31, 1926, the Greek merchant service comprised 1,207 ships, of which 472 were steamers with a gross tonnage of 929,619 (an increase of 17,010 tons on the official figures for 1925), and 735 sailing vessels, with a tonnage of 59,656.

The British coal stoppage, which was prejudicial to so many industries, also affected Greek shipping to some extent. A monthly average of 83 vessels, representing a tonnage of 81,352, were idle during the first six months of 1926 owing to lack of freights. The situation improved appreciably during the third quarter, as a large number of Greek cargo boats were engaged in the transport of coal from Germany and other coaling centres. Prices for charter and freights rose, and a number of Greek companies benefited considerably during this period of activity. The monthly average of boats lying idle in Greek harbours decreased from 83 to 44, representing a tonnage of 35,210.

Statistics obtained show that 31,117 vessels of all nations entered Greek ports during 1926, as compared with 31,964 in 1925.

The movement of Greek and foreign passenger and merchant ships in the port of Piræus showed a slight increase in 1926 as compared with 1925. During the year under review 8,273 ships entered the port of Piræus, 6,401 being under the Greek flag, and 1,872 of other nationalities, the chief of which were: Italian, 675; British, 420; French, 137; Roumanian, 116; German, 92. The number of Russian ships calling at Greek ports has been trebled during the last three years, 33 ships having called during 1926, the majority carrying coal and wheat. At the end of 1926 the Soviet Government imposed an additional assurance of 12 per cent. on Greek vessels serving Russian ports, to be taken up with the State Assurance company "Arcos," on the plea that Greek vessels were old.

The volume of shipping calling at Salonika has hardly varied in the last four years. The total number of steamships calling during the year 1926 was 1,666, of which 1,064 were Greek, 168 Italian, 130 British. The port is still congested, owing in part to the allocation of the west mole to the Serbs, who make no use of it. The east mole is given up to the coasting trade, so that the only quay space available for the landing of cargoes is the 400 yards frontage of the Greek free zone. Cargo ships are moored end-on to this quay and discharge into lighters, which then transport the goods the few yards to the quayside. Foreign-going passenger ships are moored to the outer

breakwater, about a quarter of a mile out, and passengers must reach them in open boats. Ships discharging coal are also berthed at the breakwater, and the inconvenience caused thereby to the passenger ships alongside has been the subject of vain appeals to the harbour authorities by the agents of both the Lloyd Triestino and the Byron Steamship Company.

The total number of steamships calling at Patras Harbour during 1926 was 419, of which 167 were Italian, 82 British, 63 Yugoslavian, 23 Dutch, 23 Greek, 22 Norwegian, and 19 German.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, October 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maihar for Calcutta (Birkenhead, September 29); s.s. Mahout for Calcutta (Birkenhead, October 6).

Bibby Line.—S.s. Gloucestershire for Port Said, Colombo, and Rangoon (Birkenhead, October 5).

British India Line.—S.s. Dumana for Bombay and Karachi (London, October 1); s.s. Merkara for Colombo, Madras, and Calcutta (London, October 8).

Cunard Line.—S.s. Pavia for Gibraltar, Malta, Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza, also Algiers and Volo if inducement (Liverpool, Glasgow, and Swansea, October 1); s.s. Cypria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool October 15, and Swansea October 18).

Johnston Line.—S.s. Quernmore for Piræus, Volo, Salonika, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 1); s.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 15).

P. and O. Line.—S.s. Rawalpindi for Bombay (London, September 30); s.s. Mirzapore for Colombo, Madras, and Calcutta (London, October 1); s.s. China for Bombay (London, October 6); s.s. Nagoya for Colombo, Madras, and Calcutta (London, October 15).

Prince Line.—S.s. Soldier Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 4); s.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, October 8).

Ellerman and Papayanni Lines.—S.s. City of Oxford for Oran, Gibraltar, Malta, Alexandria, Jaffa, and Haifa (Swansea September 30, Liverpool October 6); s.s. Gerano for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Gravosa, Ancona, Venice, Trieste, and Fiume (Liverpool October 1, Swansea October 6); s.s. Mardinian for Patras, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool October 6, Swansea October 8); s.s. Malatian for Malta, Alexandria, Jaffa, and Haifa (Glasgow October 17, Liverpool October 20); s.s. Bavarian for Oran, Algiers, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 29). Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume, via Trieste.

The Bank of England are prepared to receive the coupons due October 1 on bonds of the Greek Guaranteed £2 ios. per cent. Gold Loan of 1898. The necessary lists can be procured on application at the dividend pay office.

The Barsi Light Railway Company recommends a final dividend of 3 per cent., together with a bonus of 4 per cent. (14s. per share in all), making, with the interim distribution, a total of 12 per cent. for the year to March 31, 1927.

The directors of the South Indian Railway Co., Ltd., have decided to recommend that a final dividend for the year 1927 of 2½ per cent., less income tax, be paid from surplus profits on January 2, 1928, making, with the guaranteed interest of 1½ per cent. payable on the same date, a total payment of 4½ per cent. for the half-year ending December 31, 1927, and, together with the payment that was made on July 1, 1927, a total payment of 8 per cent. for the year, being the same as the dividend paid for the previous year.

Motors and Motoring.

By G. B. B.

The Indian Market.

One of the most disquieting facts made plain in the recently issued official returns relating to imports of motor vehicles, including taxi-cabs, into British India is the extraordinary increase in the number of American made cars sent into the country. An analysis of the figures shows that in the year 1925-26 some 329 British made cars were admitted to Indian territory. In the succeeding twelve months, 1926-27, this total had risen to 471, an increase which is certainly marked, and which, taken by itself, would seem satisfactory.

Unfortunately, however these figures have to be examined in connexion with those for cars made in other countries than our own, and we are then faced at once with the fact that in 1925-26, the United States sent 1,072 similar vehicles into India, or, roughly, rather more than three times as many. For every British car, just over three cars of American origin were bought. By the end of the 1926-7 year, over 1,700 American built cars had passed into India, an increase of 70 per cent. in the year, compared with a British increase of about 40 per cent. showing that, roughly speaking, about four American cars came in for every British car.

We might look at these figures another way. India is a country which should be one of the easiest in the world for British manufacturers to supply. Yet we find that for the year 1926-27, whilst 471 British cars came into the country, over 3,230 cars of other than British origin were imported. The figures are very significant. If we look at the declared value of the car imports the story is no better. British cars to the value of Rs.16 lakhs were bought by India in 1926-27. The value of cars imported other than British, was Rs.65.1 lakhs. There is no need to labour these figures. They speak for themselves.

They mean that unless British car manufacturers make their products known in the Indian market that market, which might so easily be their own, will be lost to them. For every car they sell in the country the foreigner sells seven! The only thing that can save the situation is advertising. And that is just the thing the British manufacturer appears to think is quite unnecessary abroad.

Readers of THE NEAR EAST AND INDIA will remember how this subject was discussed in these columns a year or so ago. The dangers of non-advertising were stressed, and, with an expert knowledge of the country and its markets, British manufacturers were told plainly that the American manufacturers would capture the market unless they took reasonable steps to let the Indian buyer know what they had to offer. The advice given was not taken; British advertising of motor cars in journals that reached the Indian purchasing public continued negligible and the result was that last year we sold only 471 cars in India.

Of course, the opportunity has not gone for ever, simply because at heart the Indian buyer has a strong desire to buy British goods. His only trouble is that he does not know that, in the motoring world at any rate, they exist. Foreign makers know the vast potentialities of the Eastern market and, taking advantage of British apathy, are doing their best to persuade the Indian buyer that their products hold a supreme position against which British makers are afraid to compete. I know this sounds brutally frank, but it is cold fact.

THE SMYRNA DRIED FRUIT TRADE.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended September 17 :—

The arrivals of sultanias on the Smyrna market since the opening of the season are estimated at 16,400 tons, and the sales to date are put at 13,000 tons. Closing prices Smyrna, per cwt. c.i.f. : Type 12, 41s.; type 13, 47s.; type 14, 52s.; type 15, 56s.; type 16, 61s.; type 6, 38s.; type 19, 41s.; type 21, 41s.; type 20, 36s.

The market closed firm. Business throughout the week has been very active. A strong demand is developing for low grades and rain-damaged fruit, and prices for these descriptions have toned up, marking a small advance towards the end of the week. Good grades continue scarce; best grades are unobtainable.

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 11,980 tons, and the sales to date are put at 11,164 tons. The market closes strong. It is now generally recognised that the crop is considerably short of earlier expectations and will not exceed 20,000 to 21,000 tons. Merchants are anxious to secure supplies against their commitments, and the demand from this source must necessarily continue active for some weeks to come. Stocks remaining, estimated at about 8,000 tons, are considered insufficient to meet requirements. Higher prices must be expected.

It is expected that Roumania will export this year approximately 100,000 wagons of wheat.

King Boris of Bulgaria, who had been staying in Florence for some days, left that city on September 24.

The Ransome Machinery Co., London, have received an order for steel piling, for the India Store Department.

The numbers are announced of 302 bonds of the Ottoman Four per Cent. Loan of 1891 (secured by the Egyptian Tribute) drawn for redemption on October 10.

The Ooregum Gold Mining Company of India announces dividends, payable on October 29, to holders registered on September 20, 1927, as follows :—Preference, of 1s. per share; interim of 9d. per share on both Preference and Ordinary shares, less tax.

Kitson and Co., Ltd., of the Airedale Foundry, Leeds, have received a contract for two superheated locomotives of the Kitson-Meyer type for the Kalka-Simla section of the North Western State Railway, India.

British Consular Reports

V.—GREECE.

(Continued from page 381.)

The following further extracts are given from the report on the industrial and economic situation in Greece of Mr. Richard Turner, O.B.E., Commercial Secretary, H.M. Legation, Athens:—

Commerce.

It is estimated that the value of the Greek imports during 1926 amounted to 10,080 million drachmæ, and of the exports to 5,174.5 million drachmæ, giving an excess of imports amounting to 4,905.5 million drachmæ. The corresponding figures for 1925 were:—Imports, 10,209,523,000 drs.; exports, 4,541,360,000 drs.; difference, 5,668,163,000 drs.

It has, unfortunately, not been possible to obtain an estimate as to the stocks of goods existing in the country, but, in view of the considerable amounts imported in 1925 and the restricted consumption during 1926, there is reason to believe that at the commencement of the current year they were considerable, especially in such lines as textiles, chemical and pharmaceutical products, and glass-ware. The prospects for the current year are more favourable, as the exchange rate of the drachma has shown a distinctly steady tendency, while the tightness of money has been somewhat lessened. To judge by the customs receipts during the first few months of the year, there would appear to have been some increase in imports as compared with the previous year, and it is possible that the increased optimism, owing to the more favourable political situation, and the conclusion of the arrangement regarding Greek war debts to the United Kingdom, have given some impetus to trade.

While during the whole of 1926 buyers held back, and when they did buy, considered in almost every instance price before quality—to the considerable detriment of the better quality British goods—the first months of 1927 have seen a distinct improvement in the retail trade. Although there is still a tendency to buy the cheaper lines, the popularity of British goods—for instance, in textiles—shows some signs of reasserting itself—at any rate, in the better-class shops.

It should be borne in mind, however, that, should the plans at present cherished for a stabilisation of the drachma take a concrete form, it cannot be expected that the country will show itself a materially improved market for British products in the immediate future. Given stable conditions, however, certain factors may tend to improve the buying capacity of the market more than could otherwise be anticipated. Among these may be mentioned the possibility of works of public utility being put in hand, such as the settlement of refugees, road-making and drainage, and an industrial loan for the improvement of the industries of the country. Another factor to which attention must undoubtedly be paid is the improving conditions of the settled refugees, who, it is hoped, will before long in many districts become sufficiently productive to be an economic element of importance as consumers.

As regards the trade in *automobiles*, of which there are over 14,000 registered in Greece, and probably some 11,000 to 12,000 actually in use, no very large increase can be expected until there is a great improvement in the roads outside the towns. At present the majority of cars in use are to be found in Athens and Piræus. In the larger provincial towns there are also a number of cars, but in the country districts the number is small. An improvement in the roads will doubtless lead to a considerable increase not only in cars for transport of passengers, but also in the use of motor transport, which again would contribute in no small degree to the development of agriculture. Even in the towns the streets are very far from being good, and for

use in the country a car with a capacity for taking steep gradients and with a good clearance is an absolute necessity. The question of cooling must also be taken carefully into consideration. A good cheap light "over-seas" type of car with a left-hand drive is what is required by the market, which is at present supplied mainly with American makes, with some Italian and French. On this, as on other markets, the manufacturer contemplating working up a business must give careful consideration to the question of spare parts. Similarly as regards tyres, consideration must be given to the very rough usage to which they are exposed.

British Trade.

British goods have a good name in Greece and—prices being equal or approximately so—would generally sell better than those of their competitors. In a branch such as textiles, for instance, the words "made in England" are regarded as a guarantee of quality, but the price difference is often so great that a trader, even though he prefers to carry British goods, is forced to extend his buying from other countries in order to keep pace with competing firms. In suitings and men's underwear, especially, British goods should be able to hold their own despite the price difference, even more than in some other lines, but a close study of the market is necessary to success. One of the largest Athens houses states, "I cannot recall having received a single visit for a year or more from a British traveller dealing in men's wear. They will probably tell you that it does not pay to send men out; but how can other firms afford it?" Another Greek agent in the textile branch, after referring to the effect of the high sterling exchange, says: "Lately, however, with the stabilisation of the

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK
LIMITED

Head Office: 41, Lombury, London, E.C.2

French and Belgian francs, and the fast improvement of the Italian lira, British prices compare more favourably. One would ask for greater adaptability from British makers, with a view to complying with the requirements of the Greek market, namely, imitation of French fashion as regards designs, colours, etc., of dress fabrics, imitation of Continental finish on white goods, and generally the matching of inferior grades of textile goods, which would result in cheaper prices."

On the other hand, it is satisfactory to note that certain British textile houses are following the competition closely and studying the requirements of the market, with satisfactory results. Similarly, as regards credits, British firms, working, be it well understood, with reliable agents of whom they have long experience, have seen their way to giving payment facilities to sound customers. The Greek market is gradually reverting to pre-War credit conditions, which Continental firms are generally ready to grant. The cash against document terms, on which many British shippers insist, are, it may be readily understood, not found attractive in comparison. Again, in certain classes of machinery Germany takes the lead, not perhaps so much as a result of price difference, as because of the meticulous care taken in supplying agents with the requisite information and by reason of generous credit terms. On a market like Greece, and particularly under conditions such as those obtaining during the past year, the credit question is an exceedingly difficult one. No hard and fast rule can or should be applied; the local agent is in practice the only man who is in a position to judge as to the credit terms to be given to the individual customer. The need for care in choosing an agent cannot be too often emphasised.

In some lines, such, for instance, as in the sale of motor cars and tyres, particularly to taxi-drivers, local agents have often been inclined to give terms which can scarcely be remunerative to their principals. These agents are inclined to excuse themselves by arguing the necessity for establishing a connexion which may lead to profitable business in the future, but the wisdom of the policy is open to question.

At the risk of repeating what has already been stated *ad nauseam*, the attention of British firms should be more carefully directed than it often is to the organisation of the clerical side of export business. Dissatisfaction is often expressed, for instance, by representatives of British engineering houses, who complain of the paucity of the information, drawings, advertising material, etc., furnished them by their British houses, and point to the very full details of specifications, prices, blue prints, working directions, advertising material and so forth with which competing foreign houses furnish their representatives. Other complaints which are received from Greek importers in other lines also point to an inadequate organisation of the clerical side of the British exporting houses. The under-stamping of letters addressed abroad, with its irritating effect upon the recipient and the possible refusal

to accept the communication at all, has often been mentioned. More important, however, is the omission of enclosures, the faulty compilation of invoices, the late dispatch of bills of lading, and particularly the omission of certificates of origin.

CHESS.

By "CARO-KANN."

The solution to last week's end-game is as follows:— 1, P—B4, K—K4; 2, K—B2, K—K5; 3, P—Q6, P—B6; 4, P—Q7, P—R7; 5, P—Q8 (=Q), P—R8 (=Q) and draws. Obviously at move 2 Black only has to play the King back to force a draw.

White to play. What result?

The match between Capablanca and Alechin for the world championship promises to give a most exciting struggle. Twenty games are to be played, and so far each player has won one game and two have been drawn. On the reports of the play up to the present it seems likely that the holder will succeed in retaining his title but there will probably not be much difference in the scores when the match is concluded.

The Mysore Gold Mining Company announces an interim dividend of 9d. per share, payable October 15.

It is reported that the Soviet Government has placed an order in Germany for 51,000 tons of steel pipes, valued at about £1,000,000, for the Batum-Baku pipeline.

An official report on fruit crop prospects in Roumania states that towards the end of August torrential rains accompanied by hailstorms damaged fruit trees and vines in various part of the country.

ROUMANIAN MOTOR MARKET EXPANSION.

As illustrating the point so frequently made in these columns that the markets of the Near East are providing constantly increasing outlets for motor cars—a fact to which British manufacturers as a whole have hitherto paid little attention—we quote extensive extracts this week from a report by the United States Consul at Bucharest, Mr. J. Rives Childs, on the expansion of the market for motors in Roumania. The tables he gives (which have been abbreviated for considerations of space) show the development of the market and the small part played in it by British cars. The report runs as follows:—

Registrations of automobile vehicles, which numbered 11,725 at the beginning of 1926, increased within 12 months to 15,895, according to official returns from the 71 districts of Roumania. The following tabulation shows the kinds of automotive vehicles included in these registrations, as at January 1, 1926 and 1927.

Class of vehicle.	1926.	1927.	Increase or decrease.
Touring cars	6,807	11,308	+ 4,501
Lorries	3,677	2,942	— 735
Motor cycles	757	862	+ 105
Motor buses	401	666	+ 265
Tank lorries	53	36	— 17
Road tractors	30	81	+ 51
Total	11,725	15,895	+ 4,170

It will be noted that the most striking increase occurred in touring cars, 4,501 units having been added during this 12-month period. This represents an increase in registration of no less than 66 per cent. and accounts for no less than 90 per cent. of the total addition. The number of lorries has actually declined—accounted for by the progressive scrapping of old army stocks.

Automotive vehicles of American manufacture show a steadily increasing tendency to distance foreign competitors, as may be observed from the following table of the distribution of automotive vehicles according to countries of origin:—

Country of origin,	1926.	1927.	Increase or decrease.
United States	3,974	7,825	+ 3,851
Italy	1,726	2,463	+ 737
France	1,577	1,725	+ 148
Germany	1,393	1,709	+ 316
Austria	932	887	— 45
Great Britain	178	260	+ 82
Czechoslovakia	59	105	+ 46
Roumania	35	63	+ 28
Others (including unidentified)	1,851	858	— 993
Total	11,725	15,895	+ 4,170

* Exclusively commercial lorries, manufactured by the Astra Steel Works.

It would appear from the first of the foregoing tables that some 4,900 automotive units were imported into Roumania during 1926, as shown by the gross increase in registration of all classes of automotive vehicles; in the second table, however, showing distribution of makes according to countries, the gross increase is 5,208. This difference is accounted for by the fact that since January 1, 1926, it has been possible to identify the makes of many previous unidentified units; these have gone to swell the number of foreign makes, balanced in part by cars retired from use.

An exact computation of the number of new units added during 1926 is impossible, owing to the fact that Roumanian customs statistics show only the gross weight of imports of automotive vehicles and give no indication of imports by units.

Roads a Factor in Expansion.

Roumania now ranks sixth among petroleum-producing countries, and the availability and comparatively low cost of gasoline, at present retailing at 7.50 lei per litre (about

28.35 lei per gallon), is a factor naturally calculated to give impetus to the development of the local automotive trade.

Furthermore, Roumania has an extensive system of roads, in which the main highways are constructed for the most part of plain macadam and kept in fair condition. The best roads probably are in Transylvania and Bukovina, provinces acquired from Austria-Hungary in the peace settlement; there, also, the scenic advantages offer special attractions to the Roumanian automobile tourist. Generally speaking, during the summer months one may traverse the main highways in almost any part of the country, by light or by heavy car.

Finally, there may be noted, as important contributory causes to the growth of the automotive trade in Roumania, the growing disorganisation of the railway system and the constant increase in railway rates.

The chief limitation on the development of automobile sales in Roumania is the fact that, in the country's total population of approximately 17,000,000, some 80 per cent. are peasants of simple habits and frugal tastes, among whom the use of the automobile will hardly become common for many years, especially since land ownership, by the terms of the agrarian reform instituted after the War, is rigidly restricted in amount.

There remain as potential consumers some 3,400,000 urban inhabitants, among whom the purchase of automobiles continues to be restricted to those of comfortable incomes, although there is an increasing tendency on the part of the less well-to-do classes to make sacrifices in other respects for the sake of acquiring a motor car.

The market for closed cars is improving, with the exception of the coach; the latter is least popular, on account of the extent to which chauffeurs are employed. The preference shown for the touring model is likely to be accentuated rather than diminished, by reason of the surtaxes imposed as of April 14, 1927, on the imports of automobiles weighing more than 1,200 kilos. The best season for sales is from May to September, inclusive, when the roads are generally dry (although very dusty) and hence comparatively favourable for touring. During the winter months, from November to February, road and climatic conditions are such that travel by automobiles beyond the limits of the cities is difficult and frequently impossible.

The importation of used cars into Roumania is impractical, as they are subject to the same import duty, handling costs, and transportation charges that are assessed on new cars. Before the War an automobile was expected to last 10 years, but now purchasers are more concerned for an automobile that embodies the latest improvements; consequently, automobiles of other than the cheaper makes are offered for resale by their original owners after two or three years of use. These are disposed of largely to chauffeurs, who show a decided preference for stock models of touring cars rather than for the conventional taxicab.

Few Motor Buses.

Motor buses in all Roumania numbered only 401 at the beginning of 1926 and only 666 at the beginning of 1927. The great majority comprised old chassis of light lorries and touring cars converted into buses by the addition of locally made bodies, mostly of the charabancs type and generally of cheap construction.

JOHNSTON LINE
Mediterranean, Black Sea and Danube.
REGULAR SAILINGS from:
 Antwerp, Swansea and Liverpool to: Piræus, Syra, Volo
 Salonica, Smyrna, Constantinople, Bourgas, Varna, Constanza
 Sulina, Tulcea, Galatz, and Braila.
 For Freight and other Particulars, apply:
JOHNSTON LINE, LTD., 6 Billiter Street, London,
9, Mount Street, Manchester.
and FURNESS, WITHEY & CO., Ltd., Royal Liver Building, Liverpool

Outside Bucharest the bus lines are not well defined, and are largely in the hands of private chauffeurs with too little capital for their efficient exploitation. While the disorganisation of railway transportation makes for the multiplication of motor buses, the importation of bus bodies is precluded by the surtaxes on automotive vehicles weighing more than 1,200 kilos—a fact which, together with the character of the public catered for by the bus lines, makes it improbable that any market may be developed in the near future for American motor buses.

At present the actual and potential market for motor lorries, other than the light lorry of 1 or 2 tons capacity, is very limited, owing to the poor roads in the country districts. Except for the needs of a few of the larger cities, the demand is restricted practically to the chassis of light cheap lorries on which locally made motor-bus or delivery bodies may be mounted.

The sale of motor cycles in Roumania is restricted, not only by the condition of the roads (which are less adapted to the easy running of motor cycles than of automobiles), but especially by the fact that the price of a cheap touring car does not exceed that of a first-class motor cycle.

Registrations of motor cycles increased by 14 per cent. during 1926, from 557 to 862. In addition to two well-known American makes, the best selling motor cycles are the Douglas (British), the Sarolea (Belgian), and, more lately, the Delta (German). Of the approximately 120 motor cycles sold in Roumania since January 1, 1927, it is estimated that some two-thirds were the Delta and Sarolea.

A Bulgarian High Court official on September 20 called on Sir William Erskine, British Minister in Sofia, to express the thanks of the King of Bulgaria for the cordiality of the reception extended to him on his recent visit to Great Britain.

The production of Hamilton's Concessions (Roumania) for the week ended September 23, amounted to 1,440 tons (10,080 barrels).

The production of the Anglo-Egyptian Oilfields for the week ended September 23 amounted to 3,565 tons.

TURKISH MARKET FOR BICYCLES.

The trade in bicycles in Turkey is greatly handicapped because of the lack of good roads and streets. Despite the low purchasing power of the mass of the population, it is believed the sale will be developed extensively with an improvement in roadways (says an American Consular Report). Throughout the greater part of the interior, however, the principal modes of transportation are extremely primitive, consisting of horse-drawn carriages and wagons, oxcarts, donkey trains, and camel caravans. The principal means of transportation in the city of Constantinople are trams, automobiles, and carriages.

The number of bicycles in all of Turkey is estimated at 5,000, of which 1,000 are in the city of Constantinople and the remaining 4,000 are scattered throughout the interior. They are used primarily for pleasure purposes, not more than 20 per cent. being used for commercial or governmental purposes.

All bicycles are imported, as there is no domestic industry. Since 1919 fully 90 per cent. of the imported machines have been of French manufacture. This preference is largely attributable to the favourable rate of exchange of the French franc with the Turkish pound—the prevailing belief that French bicycle manufacturers are better organised for export and to the fact that French products are better advertised than those of other European manufacturers. Furthermore, the French influence in Turkey, particularly in cultural lines, has always been predominant. The French newspapers have a considerable circulation in Constantinople, and the youth of the country follow very closely all news items referring to French bicycle races and other sporting events. Consequently there is a natural tendency for the younger people to acquaint themselves with all leading French bicycles, and they generally follow with keen interest the results of the various French makes in the races.

German and English bicycles have a small sale, which promises, however, to increase. During the last six or eight months, as a result of the recent stabilisation of the French franc, prices of French bicycles have been materially increased, which is favouring the introduction of English and German bicycles.

NEW COMPANY.

MENZALEH CANAL.

The Menzaleh Canal and Navigation Co. (Shipping), Ltd., has been registered as a private company with a nominal capital of £30,000 in £1 shares. The objects are to carry on the business of shipowners and builders, ship repairers, marine and general engineers, water, road, rail, and air transport contractors for passengers and freight, transport, traffic, and shipping agents, etc. The permanent directors are: F. Murrell-Wright, The White House, Port Said, Egypt, director of companies (managing director); H. B. Greville, Oakfield House, Worth, Sussex, director of companies (chairman). Until otherwise directed, all general meetings shall be held in Egypt.

The President of the Albanian Republic on September 20 signed a decree pardoning 372 persons condemned for hostility to the present régime.

Lieutenant-Colonel Harold H. Thorburn on return from leave in October will assume the duties of surgeon to the Viceroy of India, and Lieutenant-Colonel J. N. Walker whom he relieves will shortly afterwards take up his new appointment as an inspector-general of civil hospitals.

According to the Damascus newspaper *Al Ifba*, some Muslim women asked the Government for special protection, as they intended to appear unveiled in public. The Ulama, or Muslim clergy, petitioned the Government to forbid this "licentious act," so the Government declined to permit public unveiling of Muslim women and broke up a demonstration organised by the disappointed ladies.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson, in their report for the week ended September 21, state:—

Egyptian Futures.—Sakel Contract.—Immediately after our last report values began to show more resistance, operators working on the long side deriving encouragement from the reactionary tendency then in evidence in the American markets. Little change in the level, however, took place until Saturday's session, during which some very low forecasts of the Egyptian Government's crop estimate due for publication began to be circulated; on these a rush of short covering and fresh buying orders came in, with the result that prices were rapidly advanced to the best of the week, i.e. 20.10d. for January. The above-mentioned report, when received on Monday, showed a yield of 2,598,000 kantars, and was construed to be rather "bearish," both by our market and Alexandria, as considerable liquidation ensued and has since been in progress, with the result that prices at to-night's close show a decline of 102 to 108 points for near and 85 to 98 points for distant positions on the week. Support from trade sources continues to be of a decidedly moderate character, and whilst the market generally has resisted this factor during the past few weeks, it is now beginning to have a more pronounced effect on the situation. It now appears rather probable that we are only just beginning to feel the real effects of the very heavy sales out of the Sudan crop to local spinners during the summer months. Their purchases of this cotton have evidently placed them in a strong position as far as supplies are concerned, and they are very definitely abstaining from purchases of Egyptian Sakel until some definite ideas can be formulated regarding the real level warranted by this season's production. At the time of writing, we cannot see any evidence of active trade support developing, and with the heavier movement of the crop now imminent we consider operators should proceed with extreme caution. At the same time, we do not subscribe to the general view that the Government estimate can ultimately be construed as a "bearish" factor, as even taking into account the coming Sudan crop provided consumption proceeds along normal lines, it would not appear that there is much margin for an appreciable surplus at the end of the present season. On the whole, the Alexandria market has shown a weaker tendency than that prevailing latterly at this side; this is probably due to the increasing weight of arrivals still finding exporters with so few new crop contracts to fill. On the whole, we are at the moment inclined to regard the present level with a certain amount of distrust, and would certainly prefer not to recommend purchases until we can discern distinct evidences of more active trade support developing; in the meantime, should the market show a distinctly advancing tendency without the stimulus of the above factor, short sales are probably to be preferred.

Upper Contract.—Persistent long liquidation has been in evidence in this contract throughout the past week and prices have declined 99 to 110 points for near and 99 points for distant positions. The main factors of the downward movement have been the recent weaknesses witnessed in the American markets and also the attitude of local consumers who still maintain their policy of holding off. The market has now had a substantial "shake-out," and much of the long interest worked up during the early summer months has been liquidated. On the whole, we favour purchases on weak markets, but would prefer to see the trade operating more extensively before advising anything but the most conservative commitments.

Egyptian Spot.—Erratic fluctuations in futures have again unsettled the market, and only a moderate inquiry for spot Egyptian has resulted in consequence, although,

at the same time, a somewhat improved business has taken place in Sudan cotton. Prices have again drooped. A considerable drop has now been witnessed (290 points for F.G.F. Sakel) from the highest point seen this season, and probably this fact will shortly receive full consideration by spinners. In the meantime, we can only await some show of stability, for, whilst the present ups and downs continue, the boldest buyers are apt to look askance at the market. No feature of importance has appeared in the local spot inquiry, the bulk of which has been concerned with cotton below F.G.F. in grade, of whatever growth was in demand. All "Good" and "Fine" cottons are hanging fire at the moment. There has been a recrudescence of the inquiry for very low and inferior cotton at from 3d. to 7d., and it is understood that more business has resulted than is usually the case when these qualities are in request. There has been possibly rather more doing on c.i.f. terms this week, but activity in this direction still appears to be woefully curtailed.

Business in Sudan Sakel has been fairly well distributed on the whole, but the tendency, if anything, has been towards the cheaper varieties, of which, with the exception of the SSSSSS, only a very small selection now remains. White Sudan still figures prominently on the inquiry board each day. Forwardings to spinners for the week ending the 16th inst. were returned as 3,230 bales Egyptian and 3,144 bales Sudan. Estimated spot sales for the week, 1,100 bales Egyptians and 5,500 bales Sudan. Quotations all round show a net decline of 120 points (Fair Sakel exceptionally 145 points) on the week. F.G.F. Sakel to-day, 19.30d. F.G.F. Upper to-day, 14.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended September 15, state:—

Since our last report the futures market has been very active, and heavy fluctuations have been registered. The week's summary of price movements is as follows:—Sakellaridis: November, 40.07 dollars, 1.98 dollars down; January, 39.97 dollars, 1.78 dollars down; March, 39.70 dollars, 1.75 dollars down. Ashmouni: October, 29.57 dollars, 2.03 dollars down; December, 29.95 dollars, 1.82 dollars down; February, 30.35 dollars, 1.65 dollars down; April, 30.55 dollars, 1.55 dollars down.

Sakel.—The bullish enthusiasm created by the figures of the Second American Bureau, published the 8th inst., was short-lived. This is due to the fact that, contrary to all expectations, New York has not maintained the rise secured, which alarmed the bullish operators here and induced hurried liquidations; thus, November which had touched 42.40 dollars on the day of the publication of the Bureau reacted strongly and was quoted on the 13th instant at 38.50 dollars. At the low levels, the trade came into the market for fairly large quantities, and this produced a good effect and thus a part of the lost ground was recovered. The demand from abroad, while not important, has been slightly better than last week. Arrivals of new crop cotton have easily found buyers, but the cotton which has arrived on the market to date only amounts to some few hundreds of bales, and we are wondering what will happen when the arrivals become heavy. There are very few open engagements with spinners, and we cannot see any signs of the eagerly awaited real revival in the demand.

Uppers.—This market has followed the fluctuations of Sakel, but towards the close it has been weaker than the latter. The demand from abroad continues to be fairly good.

The week's receipts amount to 188,531 krs. against ex-

ports 58,415 krs.; the stock in Alexandria stands at 1,968,775 krs. (rectified).

The official figures of arrivals and exports for the period September 1, to September 8, as as follows:—Arrivals: Sakellaridis 16,833 krs.; Ashmouni and Zagora 88,308 krs.; Various 3,593 krs.; Scarto 1,868 krs.; total 110,602 krs. Exports: Sakel 28,538 krs.; Ashmouni 29,770 krs.; Various 4,015 krs.; total 62,323 krs.

Spot.—A much improved business has been done during the past week at Minet el Bassal and sales amount to about 16,500 bales, of which we estimate 5,100 bales Sakellaridis; 10,500 bales Ashmouni and Zagora; 700 bales Pilon and 200 bales White. New crop Sakel, though arriving slowly, is easing the spot situation a little, and is being fairly readily disposed of. The Uppers situation is as last week, the demand being sufficient to maintain spot parities well for the moment.

Sakellaridis.—A rather better business has been done, and there is a persistent demand for the low grades which are, however, not very plentiful. There has been business in all grades and the new cotton has been absorbed quite freely. Except for the lower grades, which have stiffened somewhat, spot differences are without change.

Ashmouni and Zagora.—A good business has been done in all qualities. Spot differences are generally un-

changed and very steady, with a tendency for the lower grades to harden.

Pilon has been in good demand chiefly for the better grades. Spot differences are generally a little firmer.

White.—A fair business has been done at about last week's differences.

Other Varieties are neglected and no business is reported.

Up-Country.—The ginning factories in Upper Egypt are becoming packed with cotton; on the other hand, the arrivals at the factories of Lower Egypt are not yet very large. The grower is not difficult to deal with, generally, speaking, but there are no anxious buyers.

Crop 1927.—During the week under review the temperature has been, on the whole, favourable to the crop. The pink boll worm attack has, in certain districts, increased somewhat; in others, the attack is only moderate or even light. We do not think a heavier damage than last year should be expected. In Lower Egypt picking is becoming general with varying results as to yield per feddan and the quality of the cotton. In Upper Egypt, the second picking has commenced in the southern districts; our agencies report that the results are satisfactory both as regards quantity and quality. The Government announces that the publication of the acreage figures and the first crop estimate will be made on Monday, 19th instant.

Notes of the Week.

Komitaji Activities.

After a brief interlude, during which its energies were deflected to domestic feuds, the Macedonian Revolutionary Organisation is once again on the warpath, and this time the more usual *komitaji* methods of raids by armed bands have given place to merely terrorist acts—the blowing up of buildings and railways. After outrages at Ghevgheli and on the railway line between that frontier town and Nish, the Organisation turned its attention to Salonika; but the project with which it is credited of blowing up various buildings in that town has been for the moment frustrated by the arrest of its agents. Serious as this new development undoubtedly is, it has this satisfactory aspect, that it may be taken to denote difficulties experienced by the Organisation in maintaining the operations of armed bands. As in the case of ordinary brigands, the *komitaji* is dependent to some extent—often very largely—on the support or connivance of villagers, who secretly sympathise with him in his quarrel with the powers-that-be. When, however, the *komitaji* becomes a worse infliction than the Government official, the sympathy of the villagers is apt to be withheld. This would seem to have been happening in Southern Serbia and, possibly, on the Bulgarian side of the frontier, with the result that raids have fewer attractions for the henchmen of the Organisation. A smaller number of desperadoes has been found to undertake the more despicable work of the anarchist, and it devolves on the Balkan peoples to take adequate measures for their self-protection. The first must be to co-operate on a friendly and equal footing and to abandon the policy of holding the Bulgarian Government solely responsible for these terrorist acts. The situation in Bulgaria is well known to all who have taken the trouble to investigate it—with the strong Macedonian leaven in the country that has hitherto made it difficult for any Government to proceed against the Revolutionary Organisation as it might against a handful of Communist extremists. If these recent outrages, however, can be brought home to the Organisation, it will have placed itself outside the pale, even with the latitude frequently allowed to revolutionary effort in the Balkans, and the Bulgarian Government should, consequently, find its hands strengthened in deal-

ing with the more responsible section of the Macedonians. Friendly conversations are more likely to be productive of good as an opening move than disciplinary measures.

Balkan Glasshouses.

As the Macedonian question is essentially an international one, it would be best if it could be discussed in round-table conference with representatives of Serbia, Bulgaria, Greece and the Macedonians themselves, under a neutral chairman. The exchange of views would be helpful for all concerned. If there is any truth in the allegation that the recent outrages are intended as reprisals for harsh measures adopted in Yugoslavia against Macedonian students, an opportunity would be given to the Yugoslav Government to refute the statement or to appreciate the wisdom of a more tolerant policy. The Macedonians themselves might even be brought to realise that their scheme for an autonomous Macedonia is now no longer practicable and might see reason to modify their policy. A Balkan State will lightly lay a charge against another on very inadequate evidence, but will wax most indignant when a similar charge is brought against it. The Greek Government at the present time is being held in Turkey just as much responsible for the activities of Checkass Samy's band in Anatolia as the Greeks themselves hold the Bulgarian Government responsible for Macedonian outrages. In Greece the insinuations of the Turks are regarded both as a terrible affront and as palpably ridiculous, yet neither in Yugoslavia nor in Greece is any incongruity felt in bringing the same charge in similar circumstances against the Bulgarian Government. If the Macedonians are now committed to "war to the knife," there is no time for the neighbouring States to hold aloof and expect others to pull the chestnuts out of the fire for them. By luck or better administration the Greeks have been more successful so far in protecting themselves against individual desperadoes; they have certainly relied more on their own efforts and less on representations in Sofia than the Yugoslavs have. Perhaps statesmanship in Athens will go farther and realise the advantage of trying to help the Bulgarians to do what ought to be done, instead of trying to drive them to do it by that most unlikely of methods, humiliation.

The Pangalist Effervescence.

The day may come when Greece will feel quite dull without the periodical Pangalist troubling of her political waters. The ex-Dictator has been overthrown for fourteen months, and throughout this period has been kept in prison or under arrest without trial. Any righteous indignation that may have been evoked by General Pangalos's high-handed acts when he was in power has had ample time to evaporate, and to be followed by an attitude of mind approaching disgust at the detention of a prisoner for so long without trial. Efforts to work up popular indignation against the ex-Dictator have not been particularly successful, except in the case of the agreements concluded under his régime with Yugoslavia regarding the Salonika Free Zone. The result of the delay in bringing the ex-Dictator to trial has been that every few months a movement in his favour has been discovered, to be followed by a few arrests and deportations. If the Greek Press is to be believed, quite a substantial portion of the time of successive Cabinets has been occupied by discussions on Pangalist movements, but until recently no attempt was made to take the only effective step for their suppression, by bringing on the General's trial. With the appointment of a Parliamentary Committee to prepare the indictment against General Pangalos fresh activities on the part of his supporters have been brought to light, and further arrests and deportations have become the order of the day. The "Pangalos affair" is practically the only matter making for political unrest in Greece at the present time, and it is most unfortunate that such dilatory tactics should have been adopted in closing an episode which should have been disposed of a year ago.

A New Catholic Bishop in Greece.

It may prove difficult to determine how much of Orthodoxy and how much of politics there is in the objections raised in Greece against the appointment of a Roman Catholic Bishop of Salonika. There is, no doubt, a general feeling among Greeks that the six higher prelates of the Roman Catholic Church in Greece—three Archbishops and three Bishops—are adequate for the numbers of the Greek Catholics, which are said to amount to about twenty-five thousand. The original bishoprics date from Turkish times; but, as the Greek Government accepted the creation of the Athens See, and the Vatican does not recognise the necessity of asking for the consent of the civil power for its appointments, the present protest has been based on the personality of the new Bishop. Before his consecration, the Greek Government notified the Archbishop of Athens that it could not favour the creation of a Salonika bishopric, and that it would not be able to accept the nomination of the priest whom it was proposed to instal as the new Bishop. In spite of this communication, the consecration took place, and the Greek Government has retorted by giving orders that the Bishop is not to be allowed to land at Salonika. The new Bishop, who is an Italian priest, hitherto resident in Corfu, appears to have attained some notoriety in Greece, and the objections raised against his promotion may be not altogether racial in origin. The delicacy of the situation is shown by the fact that the Greek case employs arguments that would serve the Turkish Government well in respect of the Oecumenical Patriarchate. "It is simply a question," it is urged, "of the exercise by the Hellenic Government of the uncontested and incontestable right, which the Government of every sovereign State possesses, of being master in its own house. . . . The Greek Government is free not to tolerate on Greek territory the presence of an undesirable, whether he be a Catholic Bishop or anyone else." Yet the validity of this contention was challenged when the Turks employed it to justify their deportation of the Oecumenical Patriarch.

The Council's "Day of Salamis."

Yet another seemingly simple question which has been submitted to the League of Nations has been found, on the lines of the dispute between Hungary and Roumania,

to provide that tribunal with an opportunity of producing almost as many opinions as there are members. The Greek Government, shortly before the outbreak of the War, ordered from a German shipbuilding yard, a cruiser, to be called in due course *Salamis*; it has no desire now to take delivery of this vessel, but the German firm, which is supported in the matter by the German Government, is equally insistent on having the transaction completed. Unfortunately in cases of this description the League is unable to pose as an impartial arbiter, as every constituent State finds in the question a problem of high European politics. Greece bases her claim to annul the contract on the ground that Germany is prohibited by the Treaty of Versailles from manufacturing or exporting war materials; to which it may be presumed that the German firm replies by pointing out that the contract was entered into before the Versailles Treaty was drawn up. When it was suggested that the dispute should be referred to the International Court of Justice at The Hague, the Council was at once divided on the question whether it was more derogatory to proclaim its own inability to reach a decision or to abandon its competence in the matter. The German member of the Council prevented any chance of there being unanimity in regard to reference to The Hague Court by maintaining that the matter ought not to come before the Council at all, as it was merely a question of money, and that, rather than displaying doubt as to the Council's powers by referring the dispute to The Hague, it ought to dismiss the case. In the end the Council took refuge once more in postponement, and charged a body of fourteen jurists to report on the case before the Council's next meeting.

The Situation in Egypt.

The party declarations of both the Wafd and the Liberal-Constitutionalists in favour of a continuation of the coalition between them have been sealed, as it were, by a meeting between the Prime Minister, Sarwat Pasha, and the new Wafd leader, Mustapha Pasha Nahas. This meeting is stated to have given satisfaction to both parties, and, as a result of it, the situation in Egypt is again freed from any cause for immediate uneasiness. It stands for the time being where it did before the death of Zaghloul Pasha. The Wafd seems to have reposed considerable confidence in Sarwat Pasha, and is content with the arrangement that gives it so much power in the Legislature, while leaving the Executive free to benefit from the tact and resourcefulness of the Prime Minister. The latter leaves Egypt this week to rejoin King Fuad for the State visits to Paris and Brussels, and will be able, it is hoped, to pay a further visit to London to carry the negotiations with the British Government to a more definite stage. During this interval Mustapha Pasha Nahas should have opportunity to strengthen his position in the Wafd, in regard to which he is helped by a career that has proclaimed him an honest and straightforward politician.

Economics in Syria.

There are those who believe that the solution of the Syrian problem is purely economic; but render the life of the Syrians prosperous, they say, and the political troubles will speedily dissolve. They are not wholly right, but it is a fact that the Mandatory Power for Syria has at times forgotten that the people of Syria—if we cannot talk of a Syrian nation—is in the main a business people. Signs have been manifested, however, of an improvement in the economic situation, and it is stated that the French have recently taken two important decisions to facilitate trade and commercial progress in the country under their control. First, they intend to refund to the Lebanon Republic and to the Syrian States their shares of the Customs revenues accumulated during the last eight years or so. This money, which is to be paid in cash, is to be spent on public enterprises, such as irrigation, the making of new roads and the repairing of old ones, the establishing of hygienic methods in the towns, the subsidising of local industries (such as silk and wool), the develop-

ment of summer resorts for tourists, and so on. Since £1,200,000 would in this way be forthcoming to the Lebanon alone, considerable alleviation of the situation may be expected. The Lebanon is stated this summer to have entertained 12,000 strangers; which means an income of £300,000. It is estimated that four times that number could easily be attracted, if better accommodation were available. Secondly, the French have lifted the embargo on the exportation of native products—a tremendous boon to the farmers. It is estimated that a hundred thousand tons of barley, dariseed and wheat will be exported this year; which, together with other commodities, will represent about £1,500,000 worth of goods. These acts of the Mandatory Power in Syria deserve prominence; and the significance of the second step will be better appreciated when it is added that the trade balance has always been unfavourable to Syria since the assumption of the Mandate. But the difference between imports and exports is diminishing progressively. In 1926 (the statistics being based on the paper Syrian pound, which is equivalent to 20 French francs) imports reached the value of £563,350,000, and exports only £527,240,000.

Roads and Railways in the Middle East.

There is considerable speculation at the present time upon the possibilities of railway construction in the Near and Middle East. The internal combustion engine, it seems, is insufficient for Western Asia, and permanent railroads are demanded. In Persia, for example, they dream night and day of the great iron route from Bandar-i-Gez on the Caspian to Khor Musa on the Gulf; in Iraq, the prolongation of the line from Kirkuk to Mosul is eagerly awaited, and the more optimistic spirits talk confidently of a line from Baghdad to Haifa on the Mediterranean; and in the Hijaz, railroads from Mecca to Madina, Jidda, and other Red Sea ports are apparently taken as an eventual certainty. One cannot help thinking, however, that both Persians and Arabs would do better for the present to concentrate upon their motor traffic, whether by air or by land. Railways are not easy things to make to pay, and they are generally a State, not an individual's burden; motor-routes, on the other hand, need merely preservation to ensure their being used. The possibilities of motor car development in these three countries, Persia, Iraq, and the Hijaz, provide, in fact, an ever-growing market, and it may be permitted here to express the hope that British manufacturers, now that political conditions have manifestly reached an adequate degree of stability, will make belated amends for the almost complete indifference which they have hitherto assumed towards the Near and Middle East.

The Perso-Turkish Frontier.

The strained relations between Turkey and Persia which arose out of frontier incidents, and to the importance of which we referred some weeks ago, are not yet eased, for the border "brigands," as those Kurds are called who appear to roam as they please between Turkey and Persia, are reported still to be active. Nor is there apparent any disinclination on the part of Angora or Teheran to deny official participation in these activities. Persians are attributing to the Kemalist Administration the malevolent design of attempting to alter the Turko-Persian frontier; Turks, on the other hand, complain that the marauding bands, who, by the way, are stated to have made attacks recently on Kozlerkeuy, are certainly supported by the Persian Government. The problem really seems to derive from the inability of Turks and Persians to hit upon a common form of treatment of the Kurdish question. Some of those Kurds who find residence in Kemalist Turkey intolerable since the stifling of the Kurdish rebellion in 1925 and who have consequently crossed over the border into Persia are naturally regarded with different feelings by Turkey and Persia. The Iraq Government, it will be remembered, often invited the participation of the Persian Government in a solution of various Kurdish troubles; but, on the refusal of Persia so to co-

operate it wisely refrained from suggesting that what Persia desired above all things was a prolongation of the Kurdish problem. Turkey, on the other hand, being unable to secure the collaboration of Persia in her attempt to solve the Kurdish question, is accusing her neighbour of bad faith. In such a temper as both sides are displaying, and on such a frontier as theoretically divides Persia from Turkey, "incidents" are highly possible; further developments, which the report on this question of the Turkish Ambassador to Persia to the Angora Government ought to bring in train, will be eagerly watched.

The Soviet Pact with Persia.

The long-delayed Guarantee and Neutrality Pact between Persia and Soviet Russia has at last been signed: this consummation of Bolshevik hopes occurred at Moscow on October 1. In addition to the Pact, which, according to the approved plan, binds each of the two contracting parties to abstain from aggression against the other and interference with the internal affairs of the other (the idea of Persia's interfering with Moscow's affairs!) and to enter into no political alliances and agreements, or economic boycotts and blockades, directed against the other, there were also signed an exchange of Notes concerning the trade relations between the U.S.S.R. and Persia, an agreement on the subject of the Caspian Fisheries, a Customs Convention, and an exchange of Notes concerning the port of Pahlavi (Enzeli). No further details are yet to hand, except that the import of Persian goods into Soviet Russia is facilitated, up to a fixed quota, and that Persia is allowed free passage over Soviet territory for goods in course of being exported to other countries. It is idle, in the absence of full details, to examine the significance of this Treaty, which would seem, from the summary of it, to have gained for the Persians many of the points over which they have had such anxiety. But whether that victory is a genuine one will be seen only when it is established at what expense it has been won. It is true that the tendency at the moment in Persia appears to me rather to regard Turkey as a greater danger than Soviet Russia, and it is curious that this Perso-Soviet Treaty, which to all appearances might as well have been signed when Taymoor Tash, the Court Minister, was in Moscow, should actually have been signed at a moment when Persia looks with anxiety towards her North-Western frontier. That fact may or may not be a coincidence. "Coincidences," however, are the breath of Bolshevik diplomacy.

THE NEW ALBANIA.

The speech delivered by the President of the Albanian Republic at the recent opening of the new session of the Parliament at Tirana ranged over most of the questions that are engaging public opinion in the country itself and are of interest to those outside Albania who are following her fortunes closely; but, although direct and forceful, in keeping with Ahmed Bey Zogu's character, the speech, it is to be feared, will carry with it little more conviction than is the fate of the majority of official utterances of this kind. A loyal and impartial Albanian, however, will derive some satisfaction from the fact that the spokesman of the Republic saw no reason to apologise for its existence. Whatever the future may have in store, Albania constitutes to-day an independent State, which, thanks to the existence of the League of Nations, feels able to hold its own in any European assembly. A trade agreement is at present being negotiated with Great Britain, and similar treaties will, it is hoped, be concluded also with France, Egypt, Turkey and Japan. There may even be a Concordat with the Vatican in the near future. The Albanian Government favours a policy of *rapprochement* with all the Powers, and especially with neighbouring States, and declares its readiness to conclude with them treaties of a political and economic character. On the subject of the Treaty of Tirana Ahmed Bey Zogu said, perhaps, neither more nor less than he had to say. It was with the object of strengthening further Albania's friendly relations with Italy that this Pact of amity and security had been signed. It was not directed against any Power, but "only reaffirms and consolidates the integrity and independence of Albania. All statements to the effect that the Treaty of Tirana was a limitation of Albanian independence are nothing but insinuations. The Treaty respects Albanian sovereignty, and," the President added, "the Albanians, who have suffered so much to gain their freedom, would never place themselves under the yoke of any nation." If he had left his subject at that point, some of his audience would, no doubt, have been better pleased. Ahmed Bey Zogu, however, seems to have decided that something more was required than negative phraseology. He passed to a warm tribute to the Italian Government for the political help and support given to Albania for the organisation of her army and for her economic recovery, and conveyed a special greeting to "our great friend Signor Mussolini for the sincere friendship which he has always shown us."

Unless his personal relations with the Italian Dictator called for some such explicit utterance, the Albanian President would seem to have gone out of his way to confirm the opinion of those of his countrymen who complain of excessive subservience on his part to Italy. It is a mistake in one and the same breath to arrogate complete independence for one's country and to represent its existence as being largely conditioned by the continued favour of an outside power. The President's political critics may well argue that, if the integrity and independence of Albania stand in very fact where he has placed them, then his remarks regarding Italy and Signor Mussolini have reference not so much to the country and the people as to his own person. In those circumstances it was not altogether necessary to intrude them upon a joint meeting of the Senate and the Chamber of Deputies, as they could

be conveyed more appropriately in a private communication from the President to his benefactor. The point, however, raises the whole question of Albania's position in Europe. Whatever may be the situation to-day or in the future, there can be little doubt that when Ahmed Bey Zogu made himself responsible for the Government of Albania the chances of the country's being able to work out its own salvation single-handed were remote. The only two alternatives presenting themselves may well have appeared to him to be help or absorption, and he turned to the quarter where he imagined that there would be a better chance of obtaining the former and staving off the latter. In a battle of wits between Rome and Tirana it is not a matter for surprise, if the greater has won all along the line. To-day Italy's economic hold on Albania is fairly complete. The National Bank of Albania, founded two years ago under the auspices of the League of Nations, is for all practical purposes an exclusively Italian institution, which controls the banking system and the currency. Around it and from it have grown other undertakings which dominate the whole economic development of the country, so that Albania can hardly arrange for any public work or big public enterprise apart from certain definite concessions, except with Italian money. In the majority of cases this state of affairs could lead ultimately only to one result—the complete absorption of Albania by Italy. Whether it will do so or not rests on two factors, the spirit of the Albanian people, and in a minor degree the character of Ahmed Bey Zogu. At present the latter is playing a lone hand. Circumstances seem to have prevented him from availing himself of the help of those who might be expected to prove his best advisers, and he finds it necessary to keep to a very large extent to his own counsel. Whether he is as much in Italy's pocket as he is represented to be only he himself knows. A man whose patriotism and personal integrity are above reproach might easily satisfy himself that the line mapped out for the building up of an independent Albania is in all the circumstances the only one possible and may be confident of his own power to say at the right moment, "Thus far and no farther." On the other hand, complete economic and financial subjection is a dangerous quicksand, which it is easier to continue to live in half-buried than to extricate oneself from alive.

Possibly the main difficulty in Albania to-day is that no one in the country knows where he actually stands. A sturdy spirit of independence characterises the Albanian people as a whole, and they are conscious, as far as they themselves are concerned, of not having bowed the knee to anyone. A small section may be basking in the sunshine of Italian favour; yet another section is profoundly uneasy over the President's relations with the Italian Government, not able to learn the real situation, but inclined to believe the worst. If the President is well advised, he will contrive to declare himself more fully than he has done hitherto, before it is too late. If his aim is to place Albania on her own feet, free and independent, he must carry the Albanian people with him, for he will never do it single-handed. Nor is it likely that Italy or any other country can count for all time on Albania as a subservient tool for purely selfish purposes. The people may be bemused for a period, because in financial and economic matters they are easily taken out of their depth; but when once they come to appreciate the inwardness of any foreign designs upon their country, they are likely to make short shrift of anyone whom they suspect of having betrayed Albania. If Italy's intentions are honourable, she will be careful not to tighten her stranglehold on the country, for fear of jeopardising her own position or that of her present protégé, Ahmed Bey Zogu. The latter has proved himself to be the only man for the moment able to hold the Albanians together, and for this reason should be given the fullest opportunity to substantiate the wisdom of his policy. He can, however, only hope to be given this opportunity, if he takes the people more completely into his confidence. By his present tactics he is playing into the hands of his political opponents.

The Near and Middle East*

From Our Own Correspondents.

Constantinople, September 28.

The Jewish Incident.

The last week has seen the fortunate closing of a question which, at the outset, had every appearance of becoming a minority question of the greatest importance—that of the Jewish incident. The ten unhappy individuals accused of seditious manifestations have been completely vindicated, and relief and reassurance have been brought to the whole of the Jewish community in Turkey by their acquittal.

That they were perfectly innocent has been obvious all along, but even so the situation of the Jews in Turkey became such as to cause the gravest apprehension for their future. From various parts of the country came reports of scandalous treatment of Turkish Jews, and there is not the slightest doubt that such behaviour was largely provoked by the shameful manner in which the Turkish Press took up the question of the alleged incident. Whilst the Court proceedings were still on, a certain Jew, wishing to help the cause of his unfortunate contemporaries, wrote a letter to Ismet Pasha stating that the case was in no way such as represented by the Press and begging for the Premier's intervention. This letter brought down a storm of indignation on the poor man's head who had dared to "slander" the irreproachable Press, but this storm suddenly cleared at the unexpected acquittal of the Jew by the Court. It is to be hoped that the Court's verdict in the Jewish trial will prevent the Press in future from making the regrettable and humiliating blunder of rattling their sabres at the wrong time and for a mistaken purpose.

The Yildiz Casino.

Turkey has lost its "Monte Carlo," and "zero" has turned up for Signor Maria Serra, who had staked everything on the even chance of sanctity of contract. Maria Serra is the concessionaire of Yildiz Casino, which was raided and closed by the police, under the personal direction of the Public Prosecutor, a fortnight ago. What has led up to this remarkable action it is difficult to say, but the justification of such action appears, to the casual observer, even more difficult to find.

A year ago Maria Serra obtained the concession for the exploitation of Yildiz Palace as a casino, and for this purpose spent £20,000 in decoration and transformation. His contract, which stipulated that he could run a *salle de jeu*, was passed and confirmed by the Council of Ministers despite the fact that a law existed prohibiting the playing of games of hazard. This contract was described by certain papers at the time of its being granted as ceding to Serra the *Monopole de Jeu*. At the official inauguration of the Casino Jemil Bey, Minister of Interior, was the first to enter the *salle de jeu*, which he formally opened; and play began immediately. The Casino is called the "Casino Municipal de Yildiz" and the playing counters bear that name. Municipal fiscal controllers have all along

sat opposite each chief croupier, and police agents were stationed at the main door. The Municipality is an interested party in the Casino's takings, and the Prefect was often to be seen walking through the gaming room. In spite of all this the place was raided and closed like any ordinary gambling hell run on the lines of those seen on the films and in which the public is sent into convulsions of fear and trembling at the sound of the secret bell proclaiming discovery by the police.

The police, while giving no explanation for their action at the time of the raid, subsequently declared that gambling in the Casino is illegal; that Turks should not be allowed to play; that Government officials should be prevented from entering the gaming room. As regards Turks not being allowed to play, a ruling saying that there was nothing to prevent them has been previously obtained, while the task of preventing high officials from entering the *salle de jeu* is one of some difficulty and requiring delicate handling.

Those unfortunate enough to have been present at the night of the police visit are now up for trial. At the first hearing of the "Gamblers Case" nearly all those accused pleaded "not guilty" but of the three who unhesitatingly admitted playing one expressed his inability to understand the consistency of the charge. He mentioned "Minister of Interior," "Municipal Casino," "Police surveillance," "Illegal," and so on. The case does seem slightly complicated, and the judge's task is certainly an unenviable one.

General News.

During the last four days a terrible fire, extending over 1,000 acres, has menaced the Alem Dagħ forests, but the latest news states that it has now been mastered and that the forests have been saved.

The wreckage of an aeroplane was sighted off Marmara Island a few days ago and the Turkish authorities have succeeded in salvaging certain parts. It was at first believed that the machine was one lost recently by the Greeks, but the latter have informed the Turks that no Greek aeroplane has crashed in that vicinity. Steps are now being taken to identify the wrecked aeroplane which it is thought might possibly turn out to be that flown by Cocks and Saltau and lost between Konia and Constantinople on May 26.

GREECE.

Athens, September 19.

A Roman Catholic Bishopric.

The stagnation of the sultry summer months has been enlivened by an incident. If the facts as stated by the newspapers are the facts, the Vatican desired to create a Bishopric at Salonika. Since there is no Concordat and consequently no Greek representative accredited to the Holy See, it proceeded to do so on its own initiative, and an Italian priest, long resident in Corfu, was consecrated there, the Catholic Archbishop of Athens assisting. Whether the Greek Government protested before the event, and, if so, to whom, is not clear; but, now that the consecration is an accomplished fact, it is using the Aliens'

School of Oriental Studies, London Institution

(University of London), Finsbury Circus, E.C.2.

ORIENTAL LANGUAGES AND RELIGIONS

Instruction is given in the principal languages of the East, and of Africa, and in Oriental and African History, Religions and Customs.

Law to forbid the new Bishop to land at Salonika. Since all religions are free in Greece, and the Greeks pride themselves on their tolerance (and, on the whole, rightly), it seems illogical to interfere in the internal affairs of another Church. The Catholic population of Salonika and the neighbourhood is almost entirely non-Greek, and the majority Italian. An Italian Bishop, therefore, seems a particularly suitable appointment. One wonders whether the incident would have arisen, had the newly-appointed Bishop been of some other nationality. But other factors are, no doubt, involved, besides national prestige. Beneath its tolerance, the Orthodox Church cherishes a deep animosity against its greater rival; and the tradition of the Orthodox Church that makes all ecclesiastical appointments the occasion of incidents, long-drawn-out intrigues, seeks to operate, even in matters which do not concern it. Assaults on Archbishops by hired half-wits are becoming a feature of religious life in these parts (two have occurred in the last six months), and the new Bishop, should he ever land in Salonika, will certainly require a body-guard, when he walks abroad. However, *qui mange du Pape en meurt* is a useful political axiom, and it will be interesting to see how the incident ends.

O Tempora! Olympus.

It is a matter for general satisfaction that the danger that the summit of Lykabettus would be utilised for the erection of a Casino has been averted. But now another danger has appeared. One would suppose that in a country like Greece, still half-pagan in sentiment, and cherishing a profound respect for its ancient mythology, the summit of Mt. Olympus would be a sacred place, an impressive sanctuary, if ever there was one, to be approached with reverence and awe. But in the last few days, a mob of foreign and native alpinists and journalists have ascended to the summit in a blaze of publicity. Rivers of ink flowed before and after the ascent; a cinematographer accompanied the climbers, a champagne banquet on the mountain side celebrated their safe descent, and more banquets their return to Athens, where in a veritable frenzy of mutual admiration the expedition terminated. One asks in amazement, "What is it all about?" Olympus like most of the Greek mountains, is easy enough to ascend. There is a fairly difficult, but not dangerous piece of rock climbing just before the summit; otherwise, it is a mere walk. If the object is to celebrate the fact that it is the first time (as we are told) that Greek mountaineers have stood on the summit, then one can only feel surprised, and hope that it is not true. If we are told that the motive is altruistic, viz., to "open up" Olympus in the interests of a starving peasantry, we can only respectfully reply that we do not believe it.

Only two motives can account for such an orgy of advertisement; desire to get personal publicity, or desire to make money, both intelligible motives, especially the latter, but one is justified in asking, "Cannot these desires be gratified somewhere else?"

Olympus holds a unique position among the mountains of the world in the imagination of thousands of people. It is not merely the property of the Greek nation, which, rather, holds it in trust for the whole world. No building, observatory or any other, should be allowed to disturb the noble amphitheatre with its ring of peaks that forms the summit. One of the lower peaks, to the north, is already crowned by the rough chapel of St. Elias, raised by local piety and in harmony with its setting.

With regard to the lower slopes, if a hotel is wanted, a simple hostel could be erected at the monastery of St. Dionysius, which already extends hospitality to visitors to the mountains. Elaborate foot-paths and sign-posts are an abomination.

The danger that places of beauty and interest in Greece are about to be spoilt by unwise and uncontrolled exploitation is thus a real one. Fortunately, as the Lykabettus affair has shown, public opinion is awake and can be made effective. Here is another occasion on which its voice should be heard: Delphi is likely to afford another before long.

Cairo, September 24.

The Political Situation.

The political atmosphere has cleared during the past week to the extent that the Wafd has defined its future policy and has selected a leader in succession to Saad Zaghloul Pasha. The "declaration of faith" published by the Wafd Committee is an eminently satisfactory document, and meets with general approval. If the party can manage to shape its actions along the lines therein outlined, all will be well with the Coalition, the Constitution and Anglo-Egyptian relations; which seems to be what all parties, excepting of course the Nationalists, desire. As the Liberal-Constitutionals have since expressed their wish to maintain the Coalition, there appears good prospect of a peaceful interval until Parliament reassembles late in November. The selection of Nahas Pasha as president of the Wafd will not be officially announced until the meeting of the party the day after to-morrow, but it can be taken that his nomination is a *fait accompli*, and there is good reason to expect that he will become Chairman of the Wafd Parliamentary Committee and most probably Speaker of the Chamber of Deputies, both of which posts Zaghloul Pasha combined with the presidency of the Wafd itself.

Various interpretations have been laid on the length of the meetings which considered the manifesto, the selection of Nahas Pasha to succeed to the leadership of the Wafd and of William Makram Ebeid as Secretary of the Wafd in succession to Nahas Pasha and the part which Mme. Zaghloul is playing in the affairs of the Wafd. Some European circles have gone so far as to say that all these are so many sure indications that the Wafd will quickly become disunited, that the Coalition will be of short duration, and that Anglo-Egyptian relations will suffer very much in the near future. It is quite possible that events will come to justify these forecasts altogether or in part, but it seems scarcely encouraging to meet the moderate and conciliatory profession of faith issued by the Wafd with a cold douche of prediction of failure. That profession of faith came by its tone as a welcome surprise; it appears to be a sincere effort to respond to the necessities of the situation and to follow in the footsteps of their late leader, who certainly during the last few months of his life preached and practised the principles of co-operation and entente; and, although admittedly Nahas Pasha and William Makram have in the past been identified with what had come to be known as the Left of the Wafd, it should be borne in mind that responsibility of office has before now caused many an extremist to moderate his words and his actions very considerably.

For all these reasons it seems in the highest degree premature and certainly impolitic to cry failure at the present juncture. Rather is this the occasion for the encouragement—either directly in so many words or indirectly by the avoidance of any utterances of a critical nature—of the men, who, whatever their ends may be, are trying hard to keep the ship from rocking as the result of the shock of Zaghloul Pasha's death and to steer it to safe anchorage. Should they fail through lack of union or take a course detrimental to Anglo-Egyptian relations, then and then only will it be time to speak bluntly and severely. But until that regrettable eventuality materialises, and certainly during these early weeks,

when the party is trying to collect itself again, let us give it the sympathetic attention and encouragement which are what it badly needs and are the surest means of attaining a satisfactory issue out of the present impasse.

A Shakespearean Troupe for Egypt.

Hearty congratulations are due to Aly Pasha Shamsy, the Minister of Education, and those who carried out the negotiations in England, at their success in arranging for an English troupe to give twenty-four Shakespearean representations at the Royal Opera House this coming winter. It had been hoped to fix these performances for the month of March, so that in addition to affording an opportunity for Egyptian students to see on the stage some of the plays which form part of the educational syllabus, an extra distraction might be provided for visitors. Unfortunately the Opera season does not finish until the end of March. This will be too late; and so the troupe will have to come in November, the only vacant period. Next year it is intended, however, to adjust the matter so that it may be possible to get in some performances of English drama before the end of the winter season.

In this connexion it may be pointed out that this is the first official effort to add to the attractions of the winter season. We have, it is true, an opera season, a series of race meetings, dances at the hotels and amateur theatrical performances given by the British community. But beyond these very little effort is made to entertain and distract the visitors who come to this country every winter, and certainly no attempt is made to make use of the undoubted advantages which this country possesses over other winter resorts in the matter of climate, topography and local colour.

There is, in fact, no organisation such as exists at Continental winter resorts, for providing a programme for the entertainment of visitors once they are here. Something of this kind was done before the War with very satisfactory results, and that practice could profitably be re-introduced. There is indeed no reason why either a sub-committee of the Tourist Association, which does such yeoman work in advertising Egypt abroad and in arranging the tourist courses so as to avoid hotel congestion or an entirely separate committee should not be formed to deal with the question of arranging special entertainments for visitors, which is just as important as the question of getting them to come to Egypt.

The "Digging" Season.

By the end of the month excavation work in Upper Egypt will have begun in full earnest. Dr. Howard Carter and Mr. Lucas left for the Valley of the Kings this week to tackle the inner chamber of the tomb of Tutankhamen, where the former is alleged to have stated he has detected traces of a fifth chamber; and Mr. Cecil Firth has arrived and is about to resume the work which he has been conducting with such signal success on behalf of the Egyptian Government at the Step Pyramid at Sakkara. Dr. Reisner, who has spent the whole summer at the Pyramids collating the data from the interesting tombs he has discovered on the Boston-Harvard concession, will also shortly resume field-work. The various concession-

naires have decided to start earlier than usual this season in order to escape the attentions of visitors who in recent years have so seriously interfered with the progress of work, that in some cases the expeditions have been compelled to shut down prematurely for this reason. By starting early the excavators will have got through most of the work which they intend to carry out during the winter season by the time the tourist invasion is in full swing.

GORDON MEMORIAL COLLEGE.

An interim meeting of the Gordon Memorial College Fund was held on September 25 at the offices of Messrs. Glyn, Mills and Co., in order to give the trustees and members of the executive committee an opportunity of meeting the new Director of Education in the Sudan and the Principal of the College, Mr. J. G. Matthew, who is shortly returning to the Sudan to take up his post. The Chair was taken by Sir Reginald Wingate, and among those present were:—Sir John Maffey, Governor-General of the Sudan and *ex-officio* president of the College, General Sir Archibald Hunter, Mr. Montagu Collet Norman, Sir Edgar Bonham-Carter, Dr. Andrew Balfour, and Mr. E. N. Corbyn, the late Principal of the College.

Sir John Maffey said that he thought the time had now come to create a portfolio to take charge of the various subjects, such as education and health, these being brought together under a Departmental head. It was always quite simple to get technical experts to keep in touch with the times, but a policy was always likely to be lost sight of, if left too much to the technical experts. There was a keen Medical Department in the Sudan, studying such matters as sleeping sickness, bilharzia, and other tropical diseases. In the same way, there was a large Educational Department, and it was a question for consideration as to how the money could be spent to the best advantage. He felt sure that the medical development would extend very largely all over the Sudan, and this would provide a large outlet for the students of the Kitchener Medical School in Khartoum.

A vote of thanks to the chairman was proposed by Sir Edgar Bonham-Carter, and seconded by General Sir Archibald Hunter.

PERSIAN AFFAIRS.

The October issue of the *Asiatic Review* contains an extremely valuable article upon Persia, contributed under the auspices of the "Asian Circle," a group with expert knowledge of Asia. The article points none too happy a picture of present-day Persia. The deference of Riza Shah to the Shiah priesthood is, in the eyes of many Persians, an unfortunate development; nor is anxiety absent from the existing relations of Persia with Russia, Turkey, and Iraq. From the internal aspect, the two points given greatest attention are the departure of Dr. Millspaugh, and the experiment of constructing a railway from Bandar-i-Gez to Khor Musa. The suggestions are made that, unless a member of the U.S. Financial Mission now in Persia be appointed to succeed Dr. Millspaugh, it were better that a non-European were appointed; and that road construction in Persia might have been preferable to railway construction. Incidentally, the decision to establish a 4 ft. 8½ in. gauge is deplored.

Another article traces the story of extraterritoriality in Persia, and will certainly interest students of a question which is perhaps more of theoretical than of practical importance.

M. Nechitch, Yugoslav Minister in Sofia, has provided the Bulgarian Foreign Office with a summary of the documents found on the Macedonian *komitajis* shot or captured after the recent outrages in Yugoslavia. The documents show that these men were in communication with Macedonians in Bulgaria.

PROFESSOR TOYNBEE'S SYSTEM.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—Professor Toynbee seems to think that he must have a special transliteration system of his own (thus adding another to the thousands that preceded his) simply because the letters of the Arabic alphabet are differently pronounced by the various countries that use it. Let him consider the word, "Inquisition" differently pronounced in England, France and Germany. He would surely not dream of altering the spelling to indicate the pronunciation. But perhaps the Roman alphabet is more sacred to him than the Arabic. Then, instance the name of Egypt's present Prime Minister, he asks in despair: "Shall one transcribe him Servet . . . or Tharwat . . . ?" Incidentally in the same issue your Cairo Correspondent spells him "Sarwat," and why not "Saroit" as in the French Press? Professor Toynbee's difficulty is a mole-hill compared with such mountains as Cholmondeley, Marjoribanks, Cirencester *et hoc genus omne*. Would he seriously suggest either that we should write these names as pronounced or pronounce them as written?

We shall never get this matter of transliteration right if we allow pronunciation (with its myriad local variations) to affect our judgment. A few years ago the Permanent Committee on Geographical Names was set up by the R.G.S., to attempt the task of standardising transliteration, but in the case of names in Arabic script it has allowed too wide a latitude owing to the pernicious influence of pronunciation. Some day perhaps we shall recognise the desirability of having one Roman sign and one only for each letter of the Arabic alphabet. And then, as the last letter of the name of the capital city of Najd is pronounced in Arabic neither as D nor as Z, perhaps Professor Toynbee will allow the use of the double consonant DH which in principle is no more objectionable than the KH in his *Shaykh* or *Sheykh*.—I am etc.,

"ALBANIA'S LATEST CAPITAL."

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In his very entertaining article on "Albania's Latest Capital," published in your issue of September 22, Mr. Luke falls into a curious error in affirming that "Scutari was the seat of the International Commission of Control." As a matter of fact, that Commission collectively never set foot in Scutari during the whole eleven months of its existence. I believe, indeed, that I myself was the only member of it who did so even individually, and that was only because I happened to find myself at a loose end for a day or two whilst awaiting the arrival of my colleagues at Valona. Scutari, for various reasons into which it would be useless to enter now, was never more than the centre of the famous "ten-kilometre zone" administered first by "Amirali Hinglizi" (sc: Admiral Sir Cecil Burney) and subsequently by the late Colonel Philips at the head of an Allied military force.

Incidentally, I should be curious to know whence Mr. Luke derived the notion that "until recently" rice was the exclusive food of Beys. It may conceivably have been so amongst the Mussulmans of Tirana, but certainly, in the North, as much as forty years ago I dipped fingers in many a pilaff with Malisors of no social position whatever,—I am, etc.,

HARRY H. LAMB.

52, Morpeth Mansions, S.W.1. September 23.

HUNGARY AND ROUMANIA.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—As I was a member of the South-European Section of the unhappy Peace Conference of Paris, perhaps THE NEAR EAST AND INDIA will give me the hospitality of its columns to express my opinions on the subject of the dispute between Hungary and Roumania.

I am frankly pessimistic about the future prospects of peace between Hungary and her neighbours. Something, indeed, might be done to remedy permanently the situation between Hungary and Yugoslavia on the lines proposed by Lord Rothermere (and it should be added that the same may be said with regard to the injustice of the existing frontier between Yugoslavia and Albania)—that is, by putting pressure on Yugoslavia in her own interests to give up those small portions of her territory which are compactly inhabited by Hungarians and Albanians. But the question *vis-à-vis* Roumania and Czechoslovakia is a much more radical one. Tinkering with the question will do no more than put off the day of reckoning, although some of the major injustices to Hungary (notably the latter's incontestably sound claim to the large Danubian island called the Great Schütt) might be remedied in the same way.

Geography is the main determining factor in the delimitation of suitable and stable frontiers. The natural frontier of Hungary to the East is the watershed of the Carpathian Mountains, which circle round to the north and indissolubly unite into a single economic unity Hungary, Slovakia and little Ruthenia. Similarly, the last two territories are by it cut off from all natural union with the Bohemia of the Czechs. As Lord Rothermere has pointed out, Czechoslovakia is an absurd, unnatural invention, a State shaped like a tadpole, sprawling across the map at right angles to all the spurs of the Carpathians, and preventing every easy communication between district and district throughout its length. How, indeed, the question ever can be given its rightful solution before a crisis forces Europe to act in an emergency, it is difficult to say. But let no one be deceived into imagining that the present situation can endure, or even that the Slovaks and Ruthenes would prefer to remain as they are. Though it is true they resented the Hungarian yoke before the War, they have now discovered that they have fallen from the frying-pan into the fire. Before, they enjoyed at least unity with their co-religionists and natural markets for their produce. Now they have nothing on the credit

side save that of a language resembling in certain respects that of their oppressors. The proper solution is to restore them to Hungary, with a guarantee, however, of local autonomy.

With regard to Roumania, the problem is again different; and here there is a faint hope of a peaceful settlement on one condition, namely that Hungary and Roumania have the wisdom to join hands. The question is essentially a psychological question and therein, accordingly, there lies contained a germ of hope. For here the geographical factor tends to unite the two countries rather than divide them. The Carpathians no longer form a natural barrier along the old frontier; they break up into a mighty ganglion of broken ranges. Moreover, the Roumanian majority in Transylvania is passionately Roumanian and is composed of some of the best elements among the Roumanians. To restore Transylvania to Hungary is unthinkable. Yet the strip of purely Hungarian territory attached to Transylvania at the base of this mountain triangle forms the only easy line of communication between one Roumanian valley and the next. It also provides the natural market towns for the mountaineers. On the other hand, in the apex of the triangle, in the very heart of Roumania, there is another compact mass of Hungarians, known as the Zeklers. Hence, whether Transylvania be attributed either to Roumania, as at present, or to Hungary, gross injustices must abound.

The solution is a Romano-Hungarian dual monarchy. This solution would unite two areas economically interdependent and geographically undivided. And nothing prevents this obvious solution save an accidental animosity existing between the two peoples. The Hungarian affects to despise the Roumanian, because the Hungarian aristocracy, which voices Hungarian public opinion, learnt to despise, and not without reason, the corresponding Roumanian class. But the Roumanian aristocracy, which may leave something to be desired, should not be regarded as representative of Roumania, whose peasants are a truly sterling people. And now that they have come into possession of their land, they are destined more and more to play a leading rôle in the government of the country. If the Hungarian realised this, he would soon lose his contempt for the Roumanian; and the Roumanian, if he were not afraid of the Hungarian obtaining once more his ascendancy in Transylvania, is perfectly well disposed otherwise towards him. It rests, therefore, with these two peoples to face the facts; and very little encouragement by England, who is disinterested and greatly respected in both countries, might very well accomplish the miracle. It is, in the last resort, merely a question of negotiating a treaty and a constitution giving a large measure of local autonomy. Finally, as testimony to the truth that this solution is not so chimerical as some would suppose, it is an incontrovertible fact that, if Roumanians had not behaved so aggressively and stupidly at the time when they invaded Hungary when the Bolshevik Bela Kun was flung from power, many prominent Hungarians were in favour of offering the Crown of Hungary to King Ferdinand.

Of course, pending the present dispute, nothing very much can be done. But I am convinced that, as soon as this is settled, it would be possible to bring about a better understanding between the two countries, such as might gradually pave the way for that union which is the only solution offering any basis for a really amicable and stable settlement.

The present dispute ought to be able to be settled directly between the two countries by means of friendly disinterested intervention by Great Britain and Italy, both of whom are on particularly good terms with both disputants. By direct negotiation neither side need go back on the positions respectively taken up—whereas before the League it would be difficult to avoid a decision on matters of principle. Hungary is right in thinking that it would be a dangerous precedent to lay down the principle that, provided foreign interests are not singled out for special treatment, a country is at liberty to pass any laws

it likes even to the prejudice of foreign capital invested in that country. On the other hand, Roumania's case is a strong one given the special circumstances and the fact that she is not according her own nationals greater privileges than those she is willing to afford the Hungarian landowners. It seems to me, therefore, that the best chance of an honourable settlement is for both sides to stick to their principles, but for Roumania—not with a view to establishing a precedent but solely with a view to proving her desire to eliminate ill-feeling—to show herself rather specially generous to Hungary.

The union of Hungary and Roumania, if it could be brought about, would not only remove one of the gravest causes of unrest in Europe, but would also be a guarantee for future peace in the Balkans. A Romano-Hungarian dual monarchy would be a great power forming a barrier between Russia and the Balkans. Such a combination would not only prove an obstacle in present circumstances to the infiltration of Bolshevik propaganda but, later, when Russia, as is probable, resumes her imperialist policy in the Balkans, a formidable obstacle to the realisation of any such nefarious designs.—I am, etc.,

J. S. BARNES.

THE HIJAZ, THE SOVIETS, AND THE ANTI-WAHHBIS.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—As you remarked in your issue of September 8: "it is sometimes possible to take the Soviets too seriously," but your return to the subject of Russian trade with Arabia in your issue of September 22 suggests that you have overlooked your own warning. The strangest thing is that apparently your remarks are based on information from Riga and Moscow. This is, indeed, passing strange in view of the silence of your Jidda Correspondent on so important a matter. It may, therefore, interest you to have inside information from Jidda itself, which I left at the end of July, a day or two before the last of the two or three Soviet ships, whose main purpose in coming to Jidda at all was to bring Russian Muslim subjects desirous of performing the pilgrimage. Not unnaturally they filled up their empty spaces with merchandise, but it would be interesting to know the evidence on which you admit that "the price of Russian sugar and flour was sufficiently reduced to keep out similar products from India." Such a statement is pure nonsense. You omit all mention, on the other hand, of certain Russian products which were so welcome that many of us may be excused for hoping that the encouraging results of this year's expedition may not discourage the Soviet authorities from repeating the experiment in the future. Whether we like the Soviet folk or not—and personally I have a great liking for the present Soviet Consul-General at Jidda—we must admit that we cannot have our caviare and vodka without trading with them directly or indirectly.

While on this subject may I deprecate your tendency to take seriously or even semi-seriously the tit-bits of anti-Wahhabi gossip emanating from localities so far from the scene that they cannot possibly be *au courant* with actual events? It must be galling to the old Hashimite brigade to see the new prosperity of the Hijaz, but they need not waste their money maintaining a newspaper crusade against one who is there to stay. Rumours of risings against King Ibn Saoud, emanating from the mandated territories, may be dismissed for what they are worth—nothing. If I may quote from the "Shropshire Lad":—

And easy, smiling, seasoned sound,
Sate the King when healths went round.
They put arsenic in his meat
And stared aghast to watch him eat;

Them it was their poison hurt.
I tell the tale that I heard told.
Mithridates, he died old.

As a comparatively old resident in the Hijaz I have yet to meet a member of the "National" or "Liberal" party!—I am, etc.,

H. ST. J. B. PHILBY.

Book Reviews

SECTS OF PALESTINE AND SYRIA.

"*PROPHETS, PRIESTS, AND PATRIARCHS.*" By Harry Charles Luke. (London: The Faith Press. 6s.)

There are few better guides to the ecclesiastical distinctions of the Near East than Mr. H. C. Luke, whose writings are known to every student of the Eastern Mediterranean and Western Asia. In this delightfully produced volume he has collected articles written at various times for the Pro-Jerusalem Society, the Central Asian Society, *The Times* and the *Egyptian Gazette*. On the whole, they collate very well, to form a most readable and informative little work.

Mr. Luke never errs on the side of hilarity, and his descriptions always bear the dignified, unruffleable stamp of the British official. But he has a keen and shrewd eye, and also an ear for the humorous situations which abound in the Near East. From his chapter called "A Jerusalem Miscellany," for example, we are tempted to quote the story of the Patriarch who refused to dine with the author until he had cancelled the invitation to a Bishop whom the Patriarch had just unfrocked. But perhaps of even higher risible point is this story of Jerusalem:—

Passing, one Friday afternoon, the place where the main road from Jaffa enters the outskirts of Jerusalem, a colleague of mine was the spectator of an incident as ludicrous as it was characteristic of this amazing city. Dashing up from the direction of Jaffa at breakneck speed he saw a Ford car, containing an obviously moribund cow sitting propped up in the back seat beside an extremely agitated Jew. Just at this point the car broke down, and my friend was able to probe the mystery of its ill-assorted occupants. The cow, he learned, had suddenly sickened, and its owner was straining every nerve to get it to a Kosher slaughter-house before sunset should herald in the Sabbath, so that it might be slaughtered before it breathed its last and its meat might not be wasted.

But whether you wish to know of Easter or Christmas in Jerusalem, of the Samaritans and their Passover, of the Old Man of the Mountains, of the Shiahhs and Sunnis, of the Bahais, the Metawileh, the Nosairieh, and the Druses, or of the numerous Christian sects in the Holy Land, Mr. Luke is as instructive as he is reliable a teacher. The profound student of the Holy Land may find little that is new to him, but for the general reader this volume, which is finely and most usefully illustrated, is admirably designed. No better introduction to the study of what, historically speaking, is quite the fullest section of the world's earth, could be provided, and Mr. Luke, who has many successes to his credit, is once more to be congratulated on the way in which he has absorbed and then preferred his varied information.

THE MISFORTUNES OF MACEDONIA.

"*AU PAYS DES MARTYRS.*" Notes et Souvenirs d'un ancien Consul-Général d'Autriche-Hongrie en Macédoine (1904-1909). (Paris: J. Gamber.)

Since almost as much ink has been spilt, as there has been blood shed, over Macedonia since 1903, it may seem audacious to recommend to the reading public yet another book on this well-worn subject. Nevertheless, the collection of articles which has just been published by Gamber, of Paris, under the title "*Au Pays des Martyrs*," is eminently worth reading. In spite of its slightly suggestive title it is not by any means to be classed as "propaganda" literature, for although the author does not attempt to conceal his opinion that the Bulgars were treated unjustly at Neuilly in 1919, as they had been at Berlin in 1878, or that the British Squadron cut a sorry figure at Dulcigno in 1880, he is as fair to the Greeks and Serbians, as occasion arises, as he is pitiful of the Bulgarians of the Arnauts in their misfortunes. Nor does his manifest feeling for the oppressed Christian cause him to withhold sympathy or even praise from the Turk, whenever such seemed deserved, and not even "Abdul the Damned" himself is refused that degree of merit,

which History (with the big "H") will no doubt accord to him. Humane sympathy indeed is the key-note of these essays—to a degree remarkable in a bureaucrat of the old Austro-Hungarian Imperial régime. For the author, M. Alfred Rappaport, after many years in the Austro-Hungarian Consular Service, became one of the small band of European officials charged with the task of reforming Macedonia under the Mürzsteg Scheme of October, 1903, and he closed his career as Head of a Department at the Ball-platz. In reading his book one's attention cannot fail to be arrested by the phrase in which he notes the surprise with which he detected in his very delightful Russian colleague, M. Demeric, "a benevolence, a spirit of conciliation and a sentiment of justice and humanity which, in striking contrast with the views of so many of his compeers, were not restricted to any one nationality or religious confession," nor can one fail to reflect that—*mutato nomine*—the same might be predicated of the writer himself.

Apart from that, the articles present a picturesque as well as accurate sketch of the condition of the country and the course of its history between the years 1903 and 1914, drawn by the hand of one who had enjoyed the closest possible inside view of both, and it is illustrated by numerous photographs, taken by the author himself in the course of his frequent peregrinations, which are typical and in themselves excellent, though unfortunately they have been not too successfully reproduced. It remains only to mention that it is written in a facile style of French, remarkable even in a graduate of the old Theresianum.

THE HISTORY OF ROME.

"*A HISTORY OF THE ANCIENT WORLD.*" By M. Rostovtzeff. (Oxford University Press. 21s.)

Those of our readers who took our advice and bought the first volume of Professor Rostovtzeff's "*History of the Ancient World*" will not have repented their bargain. We were at the time informed that he was preparing for the issue of a second volume to treat of the History of Rome in the same manner in which he handled that of Egypt, of the great Mesopotamian Empires and of Greece, and now we have the promised volume, as Vol. II of the work. We have already written somewhat fully on the nature of the merits of the former book. In the work before us we have the advantage of one great story, handled as such, and one on the social and economic side

its Offices, 12, St. Mary Axe, E.C.3,

and may be had from W. H. Smith & Son, Wyman & Sons
Ltd., and other chief Newsagents at home and abroad

of which the author is one of the greatest living authorities. He is thus enabled to take us from Italy of the earliest times down to Constantine in the space of some 360 pages, of which nearly 100 are devoted to notes facing pictures, and yet to give a satisfyingly full and rounded story. The learning and literary ability which make it possible for such a seemingly impossible task to be performed and which make the reading of the book so entirely pleasurable are truly wonderful. While nothing in the political history of Rome is slurred over, that side is rightly dwelt on mainly in order to illustrate the social and economic growth of Rome from its origins as a small settlement to its glories as metropolis of its own magnificent Empire and to the beginnings of its decay. It is perhaps in his study of the causes leading to its final decline that the author contributes most of the general body of thought on Roman History.

As in the previous volume immense interest is added by the quite marvellous collection of beautiful illustrations contained in it. Of these there are nearly one hundred pages, many of them containing several subjects. They have been selected with great care and knowledge, a very large proportion being little known to the ordinary student, and are superbly reproduced. Indeed, it is almost incredible that such a book can be sold at so low a price. We may perhaps be allowed to regret that an unfortunate slip has allowed Gregory of Nazianzus to be referred to as "of Nazianzen."

NEWS IN BRIEF.

On account of the alarming spread of infantile paralysis in Roumania, the proposed visit of the Italian Naval Training Division to Roumanian and Bulgarian Black Sea ports has been cancelled.

It is reported that a motor-car, containing the wife and children of Ismail Pasha Sidki, a former Egyptian Minister of the Interior, fell into a canal at Cairo. All were saved except the chauffeur.

Lieut.-Commander C. D. Duncan-Best, R.N., has been appointed Assistant Collector of Customs and Harbour-Master, Famagusta, Cyprus, his appointment dating from September 1.

Mr. J. A. Crawford, Sub-Governor of the National Bank of Egypt, with Mrs. Crawford, left Cairo on September 18 for leave in England, and will be returning to Egypt towards the end of November.

The transport *Neuralja* sailed for Egypt from Southampton on September 29 with twenty officers and 500 other ranks of the 1st The Royal Dragoons, under the command of Major E. W. T. Miles.

Archdeacon and Mrs. Lunt are returning to Cairo on October 17. The Archdeacon is resigning his appointment in Egypt at the end of the coming winter and will be returning to England in March or April next.

The programme of public lectures arranged at University College, London, for the first term of the new session includes one on "The Working of the Dyarchical System in India," by Professor S. Ahmad Khan, of the University of Allahabad.

Tzena Beg Kryeziu, Albanian Minister to Yugoslavia, last week left Belgrade for Prague in order to present his letters of credence to President Masaryk, as he is also accredited as Minister to Czechoslovakia.

Seven superior officers and two civilians were last week arrested in Greece as organisers of the last Pangalist attempt at a *coup*. The son of General Pangalos is reported to have been among them, and a warrant was issued for the arrest of Mme. Pangalos, who has since given herself up to the police.

It is reported that, owing to the dissolution of the Central Division of the Army Headquarters in Teheran, General Morteza Khan, who was mainly responsible for placing the present Pahlavi Shah on the throne, is now without a post.

M. Duverne, who made a journey by motor-car through Central Africa two years ago, left Paris on September 28 by motor-car on a trip to Indo-China. He will travel via North Africa, Persia, and India. He expects to cover a distance of nearly 17,000 miles.

Owing to the depredations of some 200 Behramavendis (who are homeless wanderers) and the various brigands who have joined them, the Persian Government last month had to clear and patrol the caravan road near Teheran. The men working on the new motor road were still exposed to sniping.

Eighty delegates from Latin countries arrived at Bucharest at the end of September to attend the sixth Latin Press Congress, which opened on October 1. The congress is intended to develop closer intellectual relations between Latin nations. The visitors intend to make a tour through a large part of Roumania.

According to an Athens message three *komitajis* were recently arrested near Amatovo in a further attempt to wreck the Simplon-Orient express near Ghevgheli, the leader of the gang being Cozanoi. Three bands of *komitajis* also appeared in the Florina district (near Monastir) and others near Strumnitsa.

After spending exactly three months in Constantinople, Ghazi Mustapha Kemal Pasha left there on September 30 on board the yacht *Ertogrul* for Mudania. Thence he went to Broussa, and after a brief stay proceeded to Angora. The Turkish Popular party congress is fixed for October 15, when the President will deliver his 1,400-page speech.

In accordance with instructions received from the Greek Government, the Greek Chargé d'Affaires in Sofia, M. Bibica-Rosetti, on September 30 drew the attention of the Bulgarian Government to the recent activities of the Macedonian Revolutionary Organisation, and pointed out the undesirable effects which these activities were capable of producing upon the development of good relations between Bulgaria and Greece.

M. Célestin-Auguste Jonnart, the French diplomatist, who died in Paris on September 30 after a short illness, at the age of 70, was selected in 1917 to be chief of the Allied Mission to Greece, the purpose of which was to negotiate the abdication of King Constantine.

On September 30 and October 1 Bulgaria, according to arrangement, paid the quarterly 5,000,000 gold francs (£200,000) on the Reparations Debt and 2,000,000 gold francs on the Occupation Debt. On October 15 the quarterly interest of 30,000,000 levas (£44,770) on the Refugee Loan will be paid.

PERSONAL AND GENERAL

TO-DAY

October 6, 1927 (New Style).

September 23, 1927 (Old Style).

Rabia II, 9, 1346 A.H., of the Muslim Calendar.

Tishri 10, 5688, of the Jewish Calendar.

Mr. and Mrs. Philip MacFadden have left the Ritz Hotel for India.

Mrs. Annie Besant, who on October 1 celebrated her eightieth birthday, is sailing for India on October 12.

Sir Bertram and Lady Hornsby were among the passengers who sailed in the s.s. Mooltan from Marseilles for Port Said.

General Sir Charles and Lady Harington left London on September 29 for Karachi, embarking on the Mooltan at Marseilles.

Lieutenant-General Sir Herbert Holman was among the passengers in the Maloja from Bombay, which arrived at Marseilles on September 30.

Sir Grimwood Mears was a passenger to Bombay and Sir F. and Lady Rowlatt to Port Said in the s.s. Mooltan which left Marseilles on September 30.

Earl Winterton, M.P., and Countess Winterton arrived on September 29 at 61, Eccleston Square from visiting Mrs. Robert Williams at Park House, Deeside.

Mr. J. Sandeman Allen, M.P., and Mr. J. Ellis Nuttall, M.P., arrived in Bucharest on September 24. The object of their visit to Roumania is to inquire into the question of navigation on the Danube, and in particular, into that of cabotage.

Major-General Sir Courtenay and Lady Manifold entertained at luncheon at the Ritz Hotel on September 27 the Maharaja Gaikwar of Baroda and the Maharanee of Baroda. The other guests included Major-General Sir Havelock Charles, Colonel J. Churchill, and Colonel Gaikwar.

Sir Thomas Middleton, Professor N. N. Gangulee, and Mr. H. Calvert left London on September 20 for a tour of agricultural organisations on the Continent. They will join their colleagues of the Royal Commission on Indian Agriculture en route for Bombay at Port Said in the middle of October.

The Right Hon. Sir Samuel Hoare, Bart., M.P., Secretary of State for Air, Minister in Attendance, and Lieutenant-Colonel Sir Francis Humphrys, his Majesty's Envoy-Extraordinary and Minister Plenipotentiary at Kabul, arrived at Balmoral Castle on September 27. The Right Hon. Sir Samuel Hoare, Bart., M.P., and Lieutenant-Colonel Sir Francis Humphrys had audiences of the King. Sir Samuel Hoare left the Castle on October 1.

THE BRITISH SALONIKA FORCE REUNION.

The annual muster of men and women who served in the Salonika Army during the Great War was held on October 2, this being the first Sunday after September 30, the anniversary of the armistice with Bulgaria. The members assembled on the Horse Guards' Parade, where they were inspected by General Sir George Milne, Chief of the Imperial General Staff, who commanded the Salonika Force. A short service was conducted by the Rev. J. D. S. Parry-Evans, who served on the Salonika front. The parade then marched to the Cenotaph, where wreaths were laid on behalf of the members of the British Salonika Force and by representatives of our Allies in Macedonia. After passing the Cenotaph the column returned to the Horse Guards' Parade, where proceedings were concluded by the singing of the National Anthem.

A violent earthquake is reported to have occurred last week at Sivas, in Turkey.

JERUSALEM AND THE EAST MISSION.

The Annual Meeting of the Jerusalem and the East Mission, usually held in the first week in October, has been postponed to Friday, December 9, in order to synchronise with the tenth anniversary of the Liberation of Jerusalem. Bishop MacInnes will be coming home specially for the meeting, the Archbishop of Canterbury will speak in the afternoon at the Church House, and an evening meeting will also be held at the Central Hall, Westminster, the same day.

The King of Egypt left Vichy for Le Creusot on September 28 after giving the Mayor 30,000 francs for the poor.

The *Izvestia* reports that Starla, the Soviet envoy to Afghanistan, was taken by air in a Dobrolet machine from Tashkend to Kabul, across the Hindu Kush, at an altitude of 18,370 feet.

Notice has been given in the *London Gazette* that the Cyprus (Appeal to Privy Council) Order in Council made by the King on June 27 will come into force on October 1.

The Palestine Government has decided to advance £100,000 to landlords to repair and rebuild buildings damaged by the recent earthquake.

Cziganovitch, the Serbian, who gained notoriety in connexion with the murder of the Archduke Francis Ferdinand, died on September 27 at Skoplje (Yugoslavia). His accomplice, Princip, died ten years ago in an Austrian prison.

The Macedonian Prosheff, who on December 11, 1926, tried to shoot his two compatriots, Dr. Athanasoff and M. Slavia Iwanoff, and has been undergoing his trial in Vienna, was on September 28 sentenced to three and a half years' imprisonment with subsequent deportation.

Acting on the advice of the Minister of Finance, M. Markovitch, the Yugoslav Cabinet on September 28 decided to reorganise the finances of Yugoslavia and to bring about sweeping economies in expenditure. The economies are, first, the abolition of six Ministries, leaving only twelve; secondly, the suppression of various public departments, whose duties will be absorbed by others; thirdly, reorganisation of the Civil Service; and, fourthly, the putting upon a commercial basis of all the productive enterprises of the State, either by their sale into private hands or by leasing them to independent but semi-official companies or by the reorganisation of certain enterprises which the Government considers should be under private control.

SHELL

A SUPREME COURT IN INDIA.

In the second of the series of three Rhodes Lectures on "The Judicial Committee of the Privy Council and Unity of Law in the Empire," Professor Morgan dealt recently with India in its relation to the Judicial Committee. Whatever might have been our mistakes or faults in relation to India, he said, he was sure that disrespect for the law of the country, which in many particulars resembled nothing so much as that of the later days of the Roman Empire, was not one of them. On the other hand the Judicial Committee has been criticised by many members of the Indian Bar for going back to the Sanskrit Law and ignoring custom, but after all custom, even when established to the extent that prevails in India, must submit to the tests of justice, equity and good conscience. Often the principles of native law have been enforced in resistance of attempts to introduce alien conceptions of English law. There had, Professor Morgan concluded, been a consistent opposition to any sort of proselytizing in the interests of English law and even in cases where, for example, the common law of torts had been applied in India it had been done in no insular spirit, and full regard was paid to civil and religious usage and custom. And the arrangement, tardily ratified by the Indian Legislature, under which the field of selection of the two Indian representatives will henceforth be considerably widened, is likely further to improve the position in the foregoing respect. But the main objection in India to the Privy Council, which extends equally to any attempt made to strengthen or consolidate its status, is the extent to which its existence is held to retard the ultimate realisation of a Supreme Court of Appeal in India itself. The latter is by no means a new idea. On the contrary it has been before the Indian public and the Central Legislature for some years past. The position in India is that a litigant who is dissatisfied with the decision of a High Court or a Chief Court may appeal, if he is so disposed, to the Judicial Committee of the Privy Council. The final court of appeal in Indian cases is, that is to say, in England and not in India. The position is to a certain extent the same in some of the great Dominions. But Canada, Australia and South Africa each has its own Supreme Court of Appeal. In Canada and Australia a litigant has the right to appeal from his provincial High Court to either the Colonial Supreme Court, or to the Privy Council direct, as he may decide. In South Africa on the other hand there is no appeal, as of right, from the Provincial High Court to the Privy Council. The litigant's appeal must be to the Colonial Supreme Court unless the Royal

Prerogative is exercised on the advice of the Judicial Committee.

The latest proposal advanced by Sir Sankaran Nair at the recent Simla session seems to have been that some scheme on the lines of the Canadian and Australian system should be adopted in India. He would establish a Supreme Court of Appeal, but he would not deprive litigants of their right to appeal direct from their Provincial High Court to the Privy Council. He appears to have relied mainly on the argument that in certain cases the Judicial Committee have refused to intervene by reason of their want of knowledge of local conditions. But, as was pointed out in the debate in the Council of State, recent appointments to the Committee have more or less nullified this contention. In the past discussions of the subject the delay and expense attendant on the existing system have been put forward as reasons in favour of a change. That delay does occur is undeniable. But it is questionable if the proposed new system would be more expeditious. Indian law courts are well known for their dilatory ways. And if, as Sir Sankaran Nair suggests, the new Supreme Court is to be vested with criminal appellate jurisdiction then it is likely to be overwhelmed at an early stage of its work. Nor is there reason to anticipate that the cost of litigation would be lessened by the change. Counsel are not likely to charge less in the way of fees than they charge in England. Moreover the location of the Court will affect the expense of resorting to it. If it is to be at Delhi then in most of the cases Counsel will have to be brought at enormous expense from one of the Presidency towns where there is a strong Bar.

There appears to be no good ground for thinking that the decisions of an Indian Supreme Court would give greater satisfaction than is given by the decisions of the Judicial Committee. Indeed it is difficult to see how it would be possible to constitute in India a Court that would command the confidence of litigants to the extent that the Judicial Committee commands that confidence. The Judges in the new Court would have to be Indians and Europeans with experience at the Bar and on the Bench. And questions of race and creed could not be completely overlooked when the appointments were being made. For there would be trouble if the balance as between the great communities were not accurately and rigorously maintained. Moreover the Law Lords, whose accumulated legal knowledge and experience add such great weight to the decisions of the Judicial Committee, would be absent. On the whole it may be safely asserted that a case for the establishment of an Indian Supreme Court has not been made out. It may be true that the existing system has its disadvantages and possibly anomalies. But there is no good reason for thinking that an Indian Court would be free of these difficulties. On the contrary all the available evidence suggests that it would be slower, more expensive and less efficient than the existing tribunals.

CURRENT TOPICS.

India and the Western Front.

Lord Birkenhead, who unveils to-morrow the War memorial erected at Neuve Chapelle to commemorate the services of the Indian troops on the Western front, has special claim to that distinction. Apart from being Secretary of State, he was "Eye-witness" to the Indian Corps in France and has therefore an intimate knowledge of the magnificent work performed by the Indian Army and Native State forces in circumstances of supreme difficulty and hardship. The choice of Neuve Chapelle as the site of the memorial and the selection of the contingent of Indian troops which is to be present from among those offices and other ranks who were engaged in the battle are no less appropriate. The 1915 operations constituted the Indian Corps' first real baptism of fire, although the earlier days, when the Indian reinforcements opportunely took part in the first battle of Ypres, had already provided certain units with experience of the grim horror of the struggle in the West. Speaking in the House of Commons on November 26, 1914, the Under-Secretary of State observed: "... but the Indian troops themselves have by all accounts acquitted themselves in accordance with the expectations of those who best knew them. They have soon adapted themselves to conditions of fighting which are as novel to them as to our own men. They have stood the shell-fire steadily, and when the times comes to give the details of their action in the recent fighting, it will be, I am sure, a record of which India and Britain will be proud."

Looking back over four long years of war, and reviewing the mighty battles which from 1916 onwards marked its course, Neuve Chapelle itself, with its 400 or 500 guns and front of four brigades, is apt to be overshadowed, and its meaning and importance overlooked. Yet it was a remarkable achievement; bought, it is true, at heavy cost but charged with significance to those who looked ahead. One whose earliest Indian acquaintances were formed in that very sector may perhaps be forgiven for suggesting that in this case, at least, a contemporary view gives a clearer and juster picture of the battle than has been formed by those whose attention has been held by the vaster conflicts which succeeded it. "For the first time, the British Army has broken the German line and struck the Germans a blow which they will remember to the end of their lives. The importance of our success," *The Times* proceeded, "does not lie so much in the capture of the German trenches along a front of two miles, the killing of some 6,000 Germans and the taking of 2,000 prisoners. It is the revelation of the fact that the much-vaunted German Army-machine on which the whole attention of a mighty nation has been lavished for four decades is not invincible." A legend had been broken, and in its breaking the troops of the Indian Empire had performed a central and decisive part.

The First Indian Finance Member.

Few men in contemporary Indian politics are better qualified to pass a considered judgment upon the working of dyarchy than Mr. Sachchidananda Sinha, extracts from whose recent address to the East India Association on "Dyarchy in Indian Provinces—in theory and practice" are reproduced elsewhere in this issue. A barrister with a large practice and a man of affairs who ran the *Hindustan Review* as a hobby, he was returned for the third time, unopposed, to the Central Legislature at the end of 1920. At the first meeting of the newly-constituted Legislative Assembly, early in the following year, Mr. Sinha was elected Deputy-President—the senior office being at that time reserved under the Government of India Act for a nominee of the Governor-General. In May, 1921, he became a Member of the Executive Council of the Governor of Bihar and Orissa, and was also appointed President of the Legislative Council of his native province. The first Indian to be entrusted with the finance

portfolio in a provincial government, Mr. Sinha held charge of that responsible office from November, 1922, until his retirement last year and the present sound financial position of Bihar and Orissa is due in a large degree to his skilful handling of the provincial finances. One of the most familiar grounds of complaint against the diarchical system of government is that the Finance Member, being a member of the Executive Council, is also in charge of some spending departments. There must, therefore, it is held, be a natural, if unconscious, desire on his part to promote the interests of those departments at the expense of others, and particularly of the nation-building departments under the control of the Ministers. So far as his own administration was concerned, Mr. Sinha had no difficulty in refuting the allegation when, in his last Budget speech, he showed that out of a total amount of 190 lakhs of rupees made available for new schemes since his assumption of office, 78 per cent. and 22 per cent. had been allotted to the Transferred and Reserved departments, respectively. There is more force in the contention of the minority report of the Reforms Inquiry Committee that the constitutional position in this respect is an anomalous one, for had Mr. Sinha been an elected member of the Legislative Council and a Minister, he would have been debarred under the Devolution Rules from holding the finance portfolio at all.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 15.

The Bengal Ministry.

Rumours are current in political circles that Sir Rajendra Nath Mukherjee has been asked to give his views on the formation of a new Ministry. Someone resigning from the Bengal Chamber of Commerce Constituency would make room for Sir Rajendra in the Council. From the Governor's speech, on the occasion of the opening of the Kanchrapara Technical Institute, in which His Excellency expressed his appreciation of Sir Rajendra's friendship and his high opinion of him, as also from the subsequent departure of the latter for Darjeeling, it was easy enough to surmise that something would be done in connexion with the vacant seats in the Ministry. Some say that Sir Rajendra Nath Mukherjee may not be willing to share the burden without a following in the Council, so that the Governor would have to fall back on the resourcefulness of Nawab Musharaf Hossain in finding a Hindu Minister. Others believe that the prospects of a purely Rahimite Ministry are not wholly unthinkable. The *Statesman* persistently mentions one of the young Zemindar aristocrats of Bengal as eligible. There may be a sensational announcement before the week is over.

Reserve Bank Bill Dropped.

What the Press describes as "a bolt from the blue" was the sudden announcement, by Sir Basil Blackett, that as there seemed to be no possibility of compromise on the Reserve Bank Bill, it would not be proceeded with during this session. Useless to say that it was a great disappointment to many. Non-official circles have commented on the Government decision severely. Even Sir Victor Sassoon, who had little sympathy with any of the proposed schemes, declared that the last scheme was the only practical suggestion that met with Indian aspirations, and that the sudden withdrawal constituted a justifiable grievance. Mr. Srinivasa Iyengar calls it "trifling with the liberty and dignity of the Assembly." Sir Alexander Murray still believes that a Central Bank should be established, but his ideal is a Shareholders' Bank. He hopes that the announcement that "no time had been allotted for further consideration of the Reserve Bank Bill" does not mean

an end to all efforts to place India on a footing of equality with other advanced countries, in the matter of credit and currency.

Sir Basil Blackett has tendered his resignation, but Lord Irwin has not accepted it.

New Delhi Decorations.

The Government of India have approved of a scheme the object of which is to entrust Indian artists with the decoration of certain buildings, thus encouraging Indian arts and crafts. Several domes and ceilings are suitable for decoration, and could hardly be treated better by foreign artists, less acquainted with the traditions, the styles and the requirements of the place. The Indian artists will be invited to send designs for approval. The designs selected by the Committee (but who will be on that Committee?), will then be painted to the actual size, and the canvases will be fixed on the walls, or domes, or panels by a special process of pasting called "marouflage," which, so to speak, amalgamates the wall and the painting in such a way as to give the impression that the painting was done on the wall. Climatic conditions and the peculiar quality of the building materials used in India make it an impossibility to paint straight on the surfaces that need decoration. If Sir John Marshall, the Director of Archaeology in India, is to be Chairman of the Committee, and if he is to nominate the members of that Committee, there is a certainty of harmonious arrangement, and of respect for the traditions—at least—but the Indian artistic hybrid impression given by New Delhi will be increased instead of being corrected. One wonders whether Sir John Marshall approves of Delhi as it is now?

Three World Cyclists.

The three young Parsis who left Bombay on October 15, 1923, with the ambitious object of encircling the globe on their bicycles, except, of course, when prevented by large expanses of sea or big rivers, have come back via Calcutta, after a most difficult journey through the thick forests of Mandalay. Wild beasts and other dangers were in their way, but they courageously crossed to the Indian frontier through the Manipur State. Their route was deliberately planned to be the most difficult overland journey. They went through the four great deserts of Persia, Mesopotamia, Syria and Sinai, which were never before crossed by any cyclist. Six went away, but only three have persevered; the others gave up the difficult task in its early stages, and went back home. They found Baluchistan a dangerous country, on account of the prevailing hatred for all European-clad people. They had to disguise themselves to pass unheeded. Sand with, here and there, a camel carcase, was all they could see in the Persian desert. Chalky remains of poor, lost travellers were often met with. In the Mesopotamian and Syrian deserts, sandstorms were frequent. The heat sometimes reached 130 F., and the cyclists could not touch any part of their machines. The worst was the Sinai desert. The sight of the sand dunes is, they say, an unforgettable horror; but they met a railway line and they had to walk along it, on the sleepers, pushing their bicycles in front of them. From Asia they crossed to Africa, then had to sail to Italy. Near Genoa, they were imprisoned as spies, but were soon set free. They went to Switzerland and found it cold. They crossed several European countries, and sailed again for Ireland and thence to the State of New York, where, the roads being of concrete, they could easily do 100 miles a day. The roads became rough again in the Wild West, and sometimes the globe-trotters had to walk up-hill, pushing the bicycles all the time. Then they reached Japan, Manchuria, and China. They found the latter a most interesting country, but full of obstacles on account of floods, civil war, pirates, extremes of heat and cold, epidemics and what not. They suffered in Indo-China from a severe immigration law recently introduced. Siam was visited by them too, also Burma. They have covered 40,000 miles.

Gwalior's Agricultural Scheme.

The Department of Agriculture and Colonisation, Gwalior Government, have inaugurated a novel scheme, thanks to which all immigrants returning to India from the Colonies, who have hitherto had to work in the docks for lack of more suitable employment, will be able to settle in Gwalior, where land, implements, seeds and other facilities will be given to them. There will be no caste nor creed difficulties. The Gwalior Government are spending crores of rupees in irrigation and agricultural co-operation. Educated unemployed middle-class men can find assistance, if they only make up their mind to settle to an agricultural life. The scheme is indeed worthy of notice, and it is to be hoped that many will take advantage of it. The return to the land is the salvation of India.

The Opium Inquiry.

The representatives of the Indian Association gave evidence before the recent Opium Inquiry Committee. They recommended that early steps should be taken by the authorities for closing all opium dens, and penalising smoking. Many people use opium for medicinal purposes. Some believe it to be a panacea for all their ills, but a great percentage take it for intoxication and pleasure. The Chinese are habitual opium smokers, and they smuggle large quantities into India, selling it mostly to the mill-hands, and keeping smoking dens. From moral and physical considerations, opium consumption should not be allowed. The objectionable practice which consists in doping children to keep them quiet ought to be severely punished. Opium is a danger to the race, and its medicinal value is doubtful, concluded the experts. Next week there will probably be a conclusion to the inquiry.

Here and There.

Referring to the respect due to the widows of India, Mr. Gandhi urges the young men of worth to marry widows, and only the widows, until they are all happy again, with homes of their own, instead of being "not the guardian angels of the family," as the critics of Miss Mayo's book put it, but the scapegoats of all misfortune or ill-luck. May the young men of India listen to the master's voice, and free the millions of young women sentenced to a life of misery (whatever Indian journalists may say to the contrary).

His Highness the Nawab of Bhopal, in the course of a speech on the occasion of the opening of the Legislative Council in Bhopal, a recent innovation, said he had before him a number of schemes for the improvement of conditions in his State: communications, stability of land tenure, colonisation, improved agriculture, extensive survey for a suitable system of irrigation, spread of education, facilities for medical relief, sanitary conditions, adequate supply of filtered water, and, on the top of all that, commercial and industrial development. A tall order. The best of all are the wish to relieve communal tension, and the proud statement that, in Bhopal, all communities, Hindus, Muhammadans, Sikhs, Christians and Buddhists (and others, they say) live in perfect harmony and goodwill.

The motion in the Council of State for an annual grant of fifty lakhs of rupees for ten years, to assist the development of Indian industries, in order to remove the chronic poverty of the country, was lost in spite of convincing arguments.

The King has approved the extension of the term of office of Sir William J. Keith as member of the Executive Council of the Governor of Burma from January 1, 1928, to April 30, 1928.

The King and Queen have intimated their intention of being present at the *matinée* which is being organised, and will take place in London on November 3, in aid of the Delhi Cathedral Appeal. The Countess of Pembroke and Montgomery is Chairman and the Marchioness of Titchfield Vice-Chairman, and the executive committee responsible for the arrangements includes the Marchioness of Salisbury and the Countess of Birkenhead.

BOMBAY LETTER.*(From Our Own Correspondent.)**Bombay, September 16.***Sir Leslie Wilson.**

Sir Leslie Wilson's tenure of office as Governor of Bombay is fast drawing to a close, and the very high regard in which he is held in the Presidency is indicated by the movement in certain quarters to seek for an extension of his five-year period of office. In this connexion it is pointed out that he commands respect from all classes of the community and his many schemes for the amelioration of the sufferings of the people should not be hampered by having to be carried on by a new Governor, who may not be in quite the same happy position. There seems no tangible reason why these efforts should not be made; except that it might first of all be discovered what Sir Leslie's opinion is in this connexion. A five year stretch as Governor of a large Presidency like Bombay is no light task, and though it would be a great tribute to the able manner in which Sir Leslie Wilson has discharged his trust were he to be asked to stay on, it seems more than likely that he has a not unnatural desire to return to England, to his country seat, and if that is so it would be hardly fair to ask him to give up a well-earned rest.

Flood Havoc.

Incidentally, His Excellency has just returned from his tour of the flood-stricken areas in Gujerat. Accounts have appeared daily of his anxiety to see all that there was to be seen and the pains that he went to to gratify this desire. But it has remained for a private correspondent of mine to supply me with details outside the ken of the ordinary Indian Press correspondent in these areas. From this correspondence it appears that not only did Sir Leslie, in suitable "district" garb, walk and walk and walk so that he saw even the meanest of the affected areas, but that in doing so he has lost "a few pounds in weight." As to the truth of this I am unable to give any guarantee, but it certainly is a fact that Sir Leslie was always supplied with a notebook and pencil during the course of his wanderings and was very diligent in taking notes of the complaints and suggestions of the people with whom he came in contact.

The Port Trust.

The accounts of the Port Trust for the past year show a deficit of over eleven lakhs, and to meet this it has been decided to call on the revenue reserve fund. The decrease of exports of cotton and seeds are apparently mainly responsible, for the deficit is in evidence despite a reduction of twelve lakhs of rupees by economy measures. It seems high time that the question of the decline of Bombay as a port was examined very carefully. It once upon a time boasted of being the cheapest, and it was on this basis that its trade was built up. Its supremacy is now threatened by the intense competition from Karachi and the other western ports of India, and more vitally in the matter of costs. There appears to be a strong case for a drastic cut in the port charges and a general increase in the administrative efficiency of the port.

Y.M.C.A. Banned.

A mild sensation was caused during the week by the acting G.O.C. Bombay District placing the Y.M.C.A. out of bounds for troops. This followed the raid of the police on the room of a member named Spratt, an English Communist, and their seizing a certain amount of proscribed literature that was in his possession. Spratt immediately vacated his room—though it was stated in the local Press that he was turned out by the Committee—and has subsequently been arrested by the local police. Sir Arthur Yapp was interviewed in London in connexion with the ban and erroneously pointed out that the Y.M.C.A. was hardly ever used by the troops; as a matter of fact, it is very largely patronised by troops, and it is

to be hoped that the ban will be removed at a very early date. The Y.M.C.A. Central Branch in Bombay provides several perfectly harmless entertainments each week, and if the troops are not allowed to patronise these there is no knowing where else they may not go to pass their leisure moments.

Beam Wireless.

In view of the natural conservatism of business men, the response from this quarter in connexion with the beam wireless service has been very encouraging. The rates are 25 per cent. lower than those for cables—but the saving of money is not the only point that business men look for, and many of them are hanging fire until such time as the I.R.T. has proved itself capable of not only giving a cheaper service but as efficient a one. So far the most salutary result of the inauguration of the new service has been the cut that the cable companies have been obliged to make in their rates—and we look to further cuts in the future.

Commercial Markets.

The money market has shown a very firm tendency during the week and Calcutta reports the movement of funds for the financing of the jute crop. Treasury Bills offerings have led to an easier tone in gilt-edged securities and little business is passing. The applications for six months' Bills are not quite as much as are desired, and there seems to be a likelihood of Government offering three months' Bills shortly. Sterling exchange is firmer in sympathy with the money market, and these conditions have led to a steadiness in gold. Silver also remains practically unchanged at the close after a slight rise during the week.

DYARCHY IN THEORY AND PRACTICE.

An interesting and stimulating contribution to the study of Dyarchy was made by Mr. Sachchidananda Sinha in a paper read before the East India Association at the Caxton Hall on Monday. Sir Louis William Dane, G.C.I.E., C.S.I., Chairman of the Council, presided. Mr. Sinha, as President of the Bihar and Orissa Legislative Council and also as Finance Member of the provincial administration for more than five years, has had unique opportunities for observing the working of dyarchy in a major Indian province. During that time he served under no less than four Governors—two permanent and two officiating, and members of all parties have testified to the signal abilities with which he discharged his onerous and responsible duties.

Although the subject of his paper was "Dyarchy in Indian Provinces—in theory and practice," the speaker said he intended to discuss the problem not from the political but the administrative standpoint. After emphasising the importance of the forthcoming Statutory Commission, and reviewing briefly the nature of its task, Mr. Sinha said that he had been moved to undertake the survey "in the hope that my statement and the discussion on it may, to some extent, enable the Commission, whenever appointed, to appreciate the inherent difficulties of the present situation in India, as the result of the many serious administrative defects brought to light in the working, during the last seven years, of the system of dyarchy in the Governments of the major Indian Provinces."

"As administrative problems and political developments," Mr. Sinha proceeded, "cannot be dealt with as if they were inscribed on *tabula rasa*, it seems to me necessary to advert, howsoever briefly, to the system of government which obtained in British India before the Reforms were introduced at the beginning of 1921. I am not going to inflict upon you any historical sketch of the origin and the growth of the administrative and political system which had come to exist in British India, culminating in the constitutional changes associated with the names of Lord Morley and Lord Minto. My object is to indicate

—on authorities which cannot be assailed on the ground of any anti-government feeling—the defects which were found in the British Indian administration as it then existed—defects not only from the point of view of the thinking and politically minded classes in India, but also from that of those (whether British or Indian) who would favour a liberal and progressive constitution for that country, in the interest of the British Commonwealth as a whole. To begin with the authoritative declaration made with the imprimatur of the Secretary of State for India, we find the following statement in the Material and Moral Progress Report of India for 1924-25, presented to Parliament and issued as a Blue-book last year:

“Unlike other countries, in which the permanent officials are controlled by Ministers, the administrators of India not merely execute a policy, they also initiate it. For many decades the Indian Civil Service was not only an administration but it was also a government.”

“I may next invite attention, as bearing on the same subject, to the statement of an ex-Prime Minister of Great Britain—the Right Hon. Ramsay MacDonald. After studying the British Indian system in the course of several visits to India—during one of which (1913-14) he traversed the whole country as a Member of the Royal Commission on the Public Services—this is how Mr. MacDonald described the system of government in British India in his book called “The Government of India,” which was issued in 1915:

“The Indian Civil Service is more than a collection of individuals. It is a bureaucracy with a corporate life, a machine, a freemasonry. It moulds the raw recruit into its own image. It has to work as a whole. Many officers become wheels in a mechanism working by rule and regulation (and), the machine reduces its parts to mechanisms. (Thus) the machine of Government has become a thing apart, and by separating itself from the organised life of India, it has over-emphasized the fact that India is ruled by foreigners. . . . Secretariats become all-powerful; not a sparrow falls but is recorded, reported, and re-recorded, docketed, initialled and minuted; not a suggestion emanates from below but is regarded with suspicion or hostility as something of a foreign origin; not a thing is done without involving the whole machine in the doing of it. Then, it is the Government on one side and the people on the other. Such is both the mechanism and the psychology of the Service, and the one cannot be separated from the other. All this is unhealthy, is bad government, cannot last.”

“I shall quote one more passage—taken from the editorial columns of a well-known Anglo-Indian daily, issued from Allahabad—the *Pioneer*. This is how this journal (which is generally and perhaps not unjustly regarded as the spokesman, in the Press of India, of the official hierarchy sketched the British Indian administrative system as it obtained on the eve of the introduction of the Montagu-Chelmsford Reforms, in 1921. Said the *Pioneer*: ‘The most perfect system of administration which the world has ever seen has come to be regarded by many—and an increasing number—as a topheavy bureaucratic hierarchy, Byzantine in method if not in spirit, detached from practical conditions, mechanical and doctrinaire.’ No wonder, if after this, an enthusiast for Indian Reform like the late Mr. Montagu characterized, in the course of a speech delivered in 1917 in the House of Commons, the system of government that then obtained in British India as “wooden and antediluvian.”

“I have no desire to multiply such extracts, for those already brought together from authoritative and unimpeachable sources clearly establish a consensus of weighty opinion as to the nature of the administrative system that obtained in British India till 1920. It was run—and run very efficiently—by the Indian Civil Service, from their own point of view as to what was good for India, but it was clearly one in which even the educated, thinking, and politically minded classes had no lot or part. The latter could perhaps partially influence the administration, but could not either control or direct the policy of the Government. I myself was for more than one term an elected

member of the old Imperial Legislative Council, in which the elected element was overborne by the nominees of the Governor-General and in which, therefore, howsoever much reason and argument might be—according to us—on our side, the strength of voting was always against us. Even if we had possessed much greater influence, it would not have been a sound system, since it is a well-known political maxim that influence is not government. The Morley-Minto scheme thus did not afford a sound basis for the steady development of the Indian constitution towards the establishment of responsible government.”

(To be continued.)

INDIAN MAIL.

The Native States.

There have been few more interesting illustrations, says the *Times of India*, of the rapid but quiet progress which is being made by some of the smaller Indian States than that which is revealed by the quinquennial review of the administration of Shrimant Babasaheb Pantsachiv, the Chief of Bhore, who has just celebrated the fifth anniversary of his accession. The anniversary celebrations were conducted with considerable pomp and ceremony, and included a fine darbar in which the loyal congratulations of his people were conveyed to the Chieftain by the State Kharbari, Rao Bahadur G. H. Anjangaonkar. In the course of this speech, a remarkable summary of the achievements of the five years towards democratic government was given, in which it was shown that a number of inequitable taxes, such as house-tax, she-buffalo tax, marriage and remarriage tax, had been removed even though it reduced the State revenue by Rs. 13,000 annually; that free primary education had been introduced; that local self-government institutions had been launched in the form of municipalities and sanitary boards; that all salaries had been revised and increased and pension and gratuity rules introduced at a cost of Rs. 32,000 yearly; that the Meeting Prohibition Act had been abolished in order to permit and encourage free speech; that the police department had been reorganised; that the system of administration by Council had been introduced and the Budget system made applicable; that special magisterial and sessions courts had been created for the speedy disposal of criminal work; that the long-standing forest grievances of ten villages had been removed by the deforesting of 514 acres to make it available for cultivation; that large sums of money had been loaned for road construction and repairs and for bridge construction; and many other reforms introduced of a local nature. In a nutshell, the small State of Bhore has in five years been given improvements which have increased the expenditure of the Darbar by more than Rs. 60,000, made up of about Rs. 20,000 in the revenue department, Rs. 10,000 each in the police and public works department, Rs. 7,000 in the judicial, Rs. 6,000 in education, and about Rs. 3,000 each in forests and medical.

Equally significant, from another standpoint, is the address delivered by the Nawab of Bhopal on the occasion of the inauguration last month of the first Legislative Council in Bhopal. His Highness, who succeeded to the *gadi* on the abdication of the Begum, his mother, eighteen months ago, outlined a comprehensive programme of five years' development. It provided, he said, for an improvement in communications, a measure to secure greater stability of land tenure, improvements in agriculture, a survey for irrigation, the advancement of education, better facilities for medical relief, better hygienic conditions, and commercial and industrial development. The Nawab explained that the object for which the Council had been constituted could be attained only if the deliberations were kept free from personal animosity, religious intolerance, or sectarian jealousy. Fortunately, the relations between the people of the State belonging to different religions or castes had always been of the happiest description.

With reference to the claim of “Bhopal for the

Bhopalis," His Highness said it was his desire to make provision for the young men of Bhopal in the State services so far as possible, provided they had the necessary qualifications. Young Bhopalis must realise that experience was the *sine qua non* for promotion in any service, and this could not be obtained without making a start from small beginnings.

Are Jains Hindus?

The death announced elsewhere in this issue, of Rai Bahadur Jagminder Lal Jaini removes a leading figure in Jainism, to the study, exposition and promotion of which he devoted the greater part of his leisure. His "Outlines of Jainism," edited by Dr. F. W. Thomas, and published in 1916, was described at the time as the best handbook available "in the whole circle of Jaina history." A few weeks ago the *Times of India* raised again in its editorial columns the vexed question of whether Jains could properly be described as Hindus. Several Hindu papers, it appears, resented the disinterested inquiry as an insidious attempt to divide the Hindu community. "Now," adds the Bombay journal, "we have this authoritative reply from the organ of the Maharashtra Jains, the *Pragati And Jina Vijaya*, edited by two LL.B.'s, and we wonder what our critics will say to it: 'It is not wrong to say that the Jains are Hindus because they look upon Hindustan as their motherland. But it is extremely wrong and harmful to say that the Jains are Hindus because they follow the Vedic religion and are proud of it, or because they are of the (third) Vaishya caste in the Vedic-Hindu four-caste system. . . . Jainism claims to have existed from eternity, and the Jains do not admit the authority of the Vedas, and therefore Hindu Brahmins declare the Jains to be unbelievers. A true Jain is not at all prepared to admit that the glory of India has been preserved by the ascetic power of the Brahmins. Brahmins have won the honour of destroying Jain culture and literature and professing Jains.'

"'History tells us,' continues the Jain organ, 'that the ancestor of present-day Brahmins did, as a work of religion and merit, raze Jain temples to the dust and smash the idols therein with sledge-hammers or throw them into rivers. . . . The Jain culture that has survived the deadly hatred of the Brahmins, and of the Kshatriyas who acted at their incitement, will not continue to live if Jains pass themselves as Vaishyas in the four-caste system. It may appear desirable at times to include Jains among Vedist Hindus when political questions arise. But religion is a very much more important matter than politics. We must not forget our separate entity, led away by current politics. We do not at all approve of the action of the Poona Jains in insisting on being called Hindus. The few Jains should not mix with the many Hindus. Let Brahmins by all means preserve Brahminism. But bolstering up Brahminism will do no good to Jains. They may certainly live in amity with Brahmins while preserving their own individuality. But they should not make the false admission that Brahmins are the props of Hindu civilisation.'"

WILLS.

Mr. Langton Prendergast Walsh, C.I.E., of Plas Idwal, Gunnersbury Avenue, Ealing, W., Indian Political Service, first Administrator for Somaliland, who died on March 17, left estate of the gross value of £16,601, with net personality £10,965.

Lieutenant-Colonel William Reed Murphy, D.S.O., I.M.S., of Coventry House, Haymarket, S.W., and of East India United Service Club, St. James's Square, S.W., who died on August 7, left estate of the gross value of £5,547, with net personality £5,329.

Gour Chandra Das and Satis Chandra Dhang, Bengali youths, have each been sentenced to seven years' imprisonment by the Alipore Special Tribunal for being in possession of bombs and a mass of revolutionary literature. The prisoners were found to be members of a terrorist party.

NEWS IN BRIEF.

The King has awarded the Albert Medal to Lieutenant George Stewart Bain Smith, Royal Artillery, in recognition of his gallant conduct in attempting to save the life of Major H. D. Minchinton, on Mount Mon, above Dharmasala Cantonment, India, on June 3 last.

The steady advance made by the co-operative movement in India is exemplified in the latest annual progress report. The number of registered societies increased in 1925-26 to 80,182 as compared with an average of 57,707 for the preceding quinquennium. In 1925-26 there were 60,787 agricultural societies in British India, with a membership of over 2 millions, as compared with 56,000, with a membership of 1,849,000 in the previous year. Those operating in the native states bring the total for the whole of India up to 70,733, with a membership of 2,322,000, as against 63,873, with a membership of 2,025,000 in 1924-25.

King Amanulla of Afghanistan has informed the British Government, according to the Political Correspondent of the *Morning Post*, of his intention to visit Europe. He is leaving Kabul in the beginning of December and is expected to reach Europe early in the New Year. No details of his itinerary are available, but it is understood that London, Paris, Rome and Brussels will be included in the tour. King Amanulla, who will be the first ruler of his country to visit Great Britain, will be accorded an official welcome on his arrival in London.

OBITUARY.

ADMIRAL SIR HUGH TOTHILL.

THE NEAR EAST AND INDIA regrets to announce the death, on September 25, of Admiral Sir Hugh Tothill at the age of 62. During his long period of service on the active list, Sir Hugh filled many responsible posts with conspicuous success, but it is as Naval Commander-in-Chief in the East Indies Station that he will be especially remembered by a wide circle of friends. Employed as Naval Assistant to the Admiral Commanding Coastguard and Reserves on the outbreak of war he was given command in December, 1914, of the *Conqueror*, which was in the Second Division of the Battle Fleet at Jutland. For his services on that occasion he was appointed C.B. In April, 1917, Captain Tothill was promoted to Rear-Admiral and afterwards became Fourth Sea Lord and Chief of Supplies and Transport at the Admiralty, being created K.C.M.G. in January, 1918. In the summer of the following year Sir Hugh Tothill was appointed Commander-in-Chief in the East Indies, assuming command of the station in November. Two years later he was promoted to Vice-Admiral and made K.C.V.O. on the occasion of the Prince of Wales' tour, shortly before the expiry of his tenure of office in November, 1921. After serving for two years as Admiral Commanding Reserves, during which time he became K.C.B., Sir Hugh Tothill was promoted to the rank of Admiral on March 1, 1926. He married, in 1892, Hilda Montgomerie, daughter of Mr. John Beddoc, F.R.S., and leaves two sons and a daughter, the wife of Commander V. S. Butler, D.S.O., R.N.

MR. C. M. ROSS.

One of the best known figures in insurance circles in India, Mr. C. M. Ross, died at Bombay on September 3, after a short illness. Mr. Ross went out to India thirty-three years ago, and for some time was Secretary of the Royal Insurance Company's Bombay agency. Subsequently he founded the insurance firm of Mathradas and Company, the title of which was changed a few years ago to C. M. Ross and Company. Mr. Ross, himself an International player, did a very great deal to popularise both Rugby and Association football in Bombay.

MR. J. SHEEPSHANKS, M.C.

The death on September 9 of Mr. John Sheepshanks is reported from Calcutta. A son of the late Bishop of Norwich, Mr. Sheepshanks joined the Bombay firm of King, King and Co. in 1898, and was later transferred to Calcutta. Compelled to leave India owing to ill-health, he was fruit-farming in British Columbia on the outbreak of the Great War, in which he served with distinction, winning the Military Cross. After the War he returned to India and took a prominent part in the social life of Bombay. The first Honorary Secretary of the Ex-Services Association, he was also a member of the Committee of the European Association, and for a short time one of the Bombay representatives in the Legislative Assembly.

The death is announced, at the age of 46, of Rai Bahadur Jagminder Lal Jaini, Law Member and President of the Legislative Council, Indore, and late Chief Justice of the High Court of the State. He came to this country in 1906 to study for the Bar, and became a member of Exeter College, Oxford. With the assistance of Dr. F. W. Thomas and other Sanskritists, he founded the Jaina Literature Society of London. Returning to India, he practised at the Allahabad High Court, and later at Bankipur, and in 1914 he was appointed a Judge of the Indore High Court. In 1922 he was selected for the Chief Justiceship, and later became Law Member and President of the Legislative Council.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Yugoslav Finances.

When the Yugoslav Budget for 1926-27 came before the Finance Committee it balanced at 12,900,000,000 dinars, providing a surplus of revenue over expenditure of 100,000,000 dinars. Considerable changes were introduced by the Committee, who reduced the expenditure by 520,100,368 dinars, and the final estimates provided for a revenue of 12,504,392,616 dinars and an expenditure of 12,279,899,632 dinars, giving a surplus of revenue over expenditure of 244,492,984 dinars. The details of the year's working show that the expenditure totalled 10,335,369,422 dinars, there being thus a reduction on the estimates of 1,945,430,210 dinars, while the revenue at 10,905,990,330 dinars fell short of expectations by 1,598,402,283 dinars, the surplus being thus 580,620,811 dinars. On the revenue side the yield from direct taxes was 1,828,037,068 dinars as against the estimate of 1,848,438,765 dinars, while that from direct taxation amounted to 2,776,045,595 dinars as compared with 2,769,050,000 dinars. Monopolies showed a slight decrease at 2,533,362,770 dinars, but the Ministry of Transport showed a revenue of only 1,975,394, 135 dinars as against an estimate of 3,250,000,000 dinars. Other leading items of revenue were Posts and Telegraphs 476,432,202 dinars as against 500,000,000 dinars, and Forests and Mines 427,416,356 dinars as against 630,864,982 dinars. On the expenditure side the most noteworthy feature was the reduction of 842,674,335 dinars under the Ministry of Transport. The current year's Budget estimates total 11,477,570,000 dinars, or 1,026,430,000 dinars below the unrevised estimates for the previous year. In view of the pressing need for economy this total is held to be much too high, and it is hoped that the estimates for the following Budget—that of 1928-29—will not be more than ten milliard dinars.

Conditions in Roumania.

The general position in Roumania at the present time leaves a good deal to be desired. According to the present estimates the yield of the crop will be considerably below that of last year's. The yield of wheat is estimated at 26,787,253 quintals as against 30,177,613 quintals, while that of barley, despite a very considerable increase in the acreage, is put at 13,310,792 as against 16,849,469. The one industry in which steady and increasing progress is made is, of course, oil, and it is an ironical circumstance that owing to the prevailing conditions Roumania should not be in a position to profit adequately from her chief source of economic strength and that the increase in production should be becoming a positive source of embarrassment. For the first seven months of this year the production of petroleum amounted to 2,100,000 tons as against 1,810,000 tons for the same period of 1926, and when it is borne in mind that the production for the first half of 1913 was no more than 963,000 tons it will

be realised what strides have been made in the development of the industry. Unfortunately the increase in Roumania's oil production has coincided with a period of world over production which has brought about low prices for oil and its derivatives. The result has been the development of a state of things in the industry which can only justly be described as one of stagnation, and it is perfectly clear that it may be necessary to put a limit on production.

The Greek Loan.

Of the various Near Eastern loans that are on the tapis the only issues likely to be made before the end of the year are the long delayed loan for Palestine and the Greek loan. It is understood that negotiations with regard to the latter will be commenced in London shortly by the Greek Minister of Finance who will be accompanied by M. Diomede, Governor of the National Bank of Greece, and Governor-Designate of the Bank of Greece which is being established to take the functions of a bank issue under the Greek financial scheme which is an essential preliminary to the loan. The new bank, which will have a capital of 400,000,000 drachmæ, will have transferred to it the note circulation of the National Bank of Greece, and it will have control over currency and credit in the country, and must maintain a minimum reserve of 40 per cent., this reserve consisting of gold or of foreign exchange which is directly or indirectly convertible into that metal. A further important development under the scheme is that all administration receipts and payments will be transacted through the new bank. The Bank of Greece, incidentally, will receive £3,000,000 from the Government from the proceeds of the loan which represents the repayment of the debt of Greece to the National Bank, and constitutes an important part of the assets that the new bank will take over from the National Bank.

Egyptian Cotton Crop.

Details are now available of the areas under cotton in Egypt this year. The total area is 1,516,199 feddans as against 1,785,702 feddans for 1926, and the figures for the leading varieties are 795,740 feddans for Sakellaridis as compared with 981,783 feddans, 599,149 feddans for Ash-

CONSULATE or TRADE COMMISSIONER,**

or from the

**DEPARTMENT OF OVERSEAS TRADE,
35, OLD QUEEN ST., LONDON, ENGLAND,**

or

THE SECRETARY, CHAMBER OF COMMERCE, BIRMINGHAM.

mouni and Zagora as against 667,474 feddans, and 74,451 feddans for Pilion as against 102,394 feddans. The preliminary crop estimate forecasts a yield of 6,361,813 kantars of ginned cotton of which the yield of Sakellaridis is put at 2,598,576 kantars. As is well known, the cotton crop is particularly liable to change in the course of the season, but if this estimate is borne out (and it is thought quite likely that the yield may be larger) then it would seem evident that there will be ample cotton available to satisfy existing requirements.

Sudan Cotton Estimate.

The estimate of the Sudan cotton production in 1927-28 shows an advance, though not a very large one, on the yield of the past year. For 1926-27 the Sudan produced 143,745 bales of cotton of which 121,059 bales were of the Sakellaridis variety, the contribution of the Gezira being 100,057 bales. The forecast for 1927-28 is for a production of 148,562 bales, of which 127,250 bales will be of the Sakellaridis variety, the production in the Gezira being put at 106,000 bales. In view of the high yield per feddan so far maintained in the Sudan it is probable that the production may be somewhat in advance of the estimate. Unfortunately the production of the American variety is so far not increasing for which among other causes the fluctuations of the price must be held responsible, but with the gradual development of transport facilities the progress with this variety should be much more rapid.

The Sudan in 1926-27.

I have just received a copy of the annual report of the Central Economic Board of the Sudan Government for 1926-27, and while an extended notice of it cannot appear until next week, some brief reference may be made to it now. The period was one of some vicissitudes for the Sudan owing to the failure of the durra crop owing to the bad rainfall in 1926 for the second year in succession. The result has been that grain has been scarce, while the cost of living has increased. While the country was thus affected adversely cotton growing in the Gezira was progressing most favourably, and in the words of the report the scheme "has proved a profitable asset both directly and indirectly, and has stood the Sudan in good stead during a period of economic strain."

Increasing Rubber Stocks.

A further and very large increase in the rubber stocks in London brings the total to more than it was when the restriction scheme was initiated. That fact, I think, will serve to bring out the nature of the problem with which those concerned with the commodity are confronted. This is the closing quarter of the existing restriction scheme, and it is perfectly obvious that in the present circumstances it is not justifying the hopes based upon it. In some quarters the abolition of the scheme has been advocated, but beyond intensifying the depression it is difficult to see what effect that would have, and I imagine that the situation will be met by tightening up the scheme. Clearly, however, when demand overtakes supply it will take a very long time to reduce the existing stocks to reasonable dimensions. That is the crux of the position, and explains why rubber is now under 1s. 4d.

COMMENTATOR.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 4.

Business in the Stock Markets during the past week has shown a tendency to expand. Somewhat abnormal conditions have prevailed in the money market owing to the heavy credit displacements incidental to the Government's conversion operations, and money rates have consequently been firm. It is realised, however, that present conditions in Lombard Street are abnormal and that within the next week or two the money market will probably return to its former steady position. There has therefore, been no disposition to lower the prices of gilt-edged stocks. Indeed, the Consol market has been conspicuously firm on the ground that prices are likely to improve when the present conversion operations have been completed, and both $3\frac{1}{2}$ per cent. Conversion Loan and 5 per cent. War Loan have moved up. The feature of the industrial market has been the continuance of the boom in British Celanese, which at nearly £5—the nominal value is 10s. each—are at a figure which cannot fail to arouse uneasiness in the minds of those who look beyond the daily fluctuations of some popular gamble. While the company admittedly has a fine product it must be remembered that it has paid no dividend on its preference shares since 1923. There has been some buying of nitrate shares, without, however, any prominent advance in prices, but oil and rubber shares remain dull and neglected.

Australia's Good Budget.

Recent developments in Australian finance have created a favourable impression in this country. The latest of these is the Commonwealth Budget statement, made by the Commonwealth Treasurer last week. The Budget shows a surplus of £2,635,000. Individual income-tax is reduced by a further 10 per cent. and the land tax also by 10 per cent. The War debt was reduced during the past year by £7,640,000, leaving £296,903,000 due, but other debt has increased by £16,256,000, thus making the total public debt £461,067,000. The Government has provided £3,310,000 from revenue and £2,679,000 from reparation moneys and repayment of loans made by the Commonwealth—a total of £5,989,000—for the redemption of debt. This excellent Budget follows closely upon the reorganisation of the Commonwealth Loan Council. Under the new arrangement the borrowing of the States will be co-ordinated and a systematic attempt will be made to reduce the debt. It is earnestly to be hoped that the Loan Council will function according to plan. These favourable developments will doubtless stimulate the British investor's interest in Australian Stocks. The longest-dated Commonwealth stock is the five per cent. registered, redeemable 1945-75, the return being £5 2s. per cent. Turning to the State loans, the yields are rather more generous. Thus the Western Australia $3\frac{1}{2}$ per cent. inscribed, redeemable 1935-55, returns £5 4s. per cent. A yield of £5 5s. per cent. is obtainable on the Victoria 4 per cent. inscribed redeemable 1940-60.

The Argentine Land Companies.

The attention recently focussed upon the Argentine railways is likely to be transferred shortly, in part at least, to the Argentine pastoral companies, for a number of

reports are expected in the coming weeks. The past year has not been entirely favourable to these undertakings. The summer and autumn were very dry, while the wool market showed little recovery as compared with the previous year. It is expected that the reports of some of the companies will reflect the consequences of drought and low prices. Several reports have appeared this week, but these are not wholly representative. The Argentine Land and Investment Company, which divides its pastoral business in Argentine with that of an investment company is London, discloses a further growth in net revenue. A capital bonus was recently declared and the ordinary dividend is maintained at 10 per cent. The report of the Rio Negro (Argentine) Land Company is chiefly interesting for the directors' views regarding the current outlook for the companies. Though the results were not eminently favourable; a dividend of 10 per cent. was paid. Dealing with the future, the directors state that as further rain fell in July and August the prospects for the current spring can be considered fairly encouraging. But it should be remembered that an unfavourable year does not necessarily involve a reduction in a company's ordinary dividends, since the larger undertakings have generally conducted their finances with a view to equalising distributions.

Tin and Tin Shares.

Until recently the view has been generally entertained that the usual autumnal demand for tin on behalf of the United States would be experienced this year and would find reflection in the shares of producing companies. Having regard to the statistical position of the metal there seemed every reason to anticipate a resultant advance. On the present occasion, however, the usual programme of events has not transpired. There has been little if any expansion in production, increases from some sources being offset by declines elsewhere. The new factor is the rather unexpected one of a falling off in consumption. The tinplate industry in South Wales is in a worse condition than it has been for many years; and while the American mills are fairly busy, thanks in part to the contracts secured from this country during the labour trouble last year, their demands are smaller than a year ago. Thus it comes about that production is gradually overtaking consumption, and the price of the metal has fallen substantially. Holders of shares in good class dividend-paying companies would probably do well not to sell, even though they may see quotations temporarily lower. Those who have paid high prices for the shares of companies which have yet to reach the producing stage are in a different case.

The gross production of the Phoenix Oil and Transport group for September was 37,385 tons.

The production of Hamilton's Concessions (Roumania) for the week ended September 30 amounted to 1,440 tons (10,080 barrels).

Shipping Intelligence.

DIESEL ENGINES OR HIGH PRESSURE STEAM PLANT.

For some time the shipowning world has watched with interest the controversy which has been dividing marine engineers into two camps, the one favouring the employment of Diesel engines for ship propulsion, the other maintaining that the use of high pressure steam plant is more economical. An interesting development in this controversy is the launch of the Ellerman Line s.s. City of Canberra, which took place from Messrs Gray's yard at West Hartlepool on September 29. This vessel is an example of the latest development in the use of high pressure steam and quadruple expansion engines for the propulsion of high speed cargo liners. She is built to maintain a speed of $13\frac{1}{2}$ knots at sea, and her dead-weight capacity is 10,800 tons. Steam is supplied with pressure of 265 lb., preheaters and superheaters are provided.

The company is building two further vessels of this class one being provided with single reduction geared turbines and the other with Diesel engines. It is expected that valuable data as to the relative values of these three plants will be obtainable from these vessels. The City of Canberra will be employed in the Far East and Australian trades.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Britannia for Bombay (Birkenhead, October 7). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mahronda for Calcutta (Birkenhead, October 13); s.s. Mangalore for Calcutta (Birkenhead, October 22).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, October 19).

British India Line.—S.s. Gambada for Bombay and Karachi (London, October 15); s.s. Madura for Colombo, Madras, and Calcutta (London, October 22).

Cunard Line.—S.s. Cypria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool October 15, Swansea October 18); s.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool November 12, Glasgow and Swansea November 12).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 15); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the last steamer of the season for Galatz and Braila) (Liverpool, November 5).

P. and O. Line.—S.s. Ranchi for Bombay (London, October 14); s.s. Nagoya for Colombo, Madras, and Calcutta (London, October 15); s.s. Rajputana for Bombay (London, October 28); s.s. Padua for Colombo, Madras, and Calcutta (London, October 29).

Prince Line.—S.s. Lancastrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, October 8); s.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 14).

Ellerman and Papayanni Lines.—S.s. Malatian for Malta, Alexandria, Jaffa, and Haifa (Glasgow October 17, Liverpool October 20); s.s. Bavarian for Oran, Algiers, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 29). Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume, via Trieste.

The figures for the areas under cultivation in Roumania this year show that 3,101,153 hectares were devoted to wheat as against 3,327,487 in 1926, 281,255 to rye as against 295,623, 1,764,260 to barley as against 1,551,567, and 1,084,308 to oats as against 1,078,419. The estimated production (in quintals) is as follows:—Wheat, 26,787,253; rye, 2,477,275; barley, 13,310,792; and oats, 8,426,452.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THROUGH COMMUNICATION BETWEEN GREECE AND BULGARIA.

(By Our Sofia Correspondent.)

Any inquiry into the history of the linking up of the Greek and Bulgarian railways, which has been agreed to in principle by the respective Cabinets, will establish the fact that the project is as old as the Bulgarian State. Ever since the reappearance of Bulgaria as an independent political unit she has sought access to the Ægean Sea with a view to her economic development. When the construction of the Salonika-Adrianople line was decided upon, which was to connect the Orient Railway systems in Thrace and Macedonia, the Bulgarian Government of the time, under Stambouloff, did not hesitate to propose to Turkey, the suzerain of these countries, that the track should pass through South Bulgaria, and expressed its readiness to allow the passage of Turkish troops across Bulgarian territory and even to guarantee the non-interruption of the line in war. Despite the pressing representations of Stambouloff, the route Salonika-Gumuldjina-Kouleli-Bourgas (on the Constantinople line) was followed, on account of the strategic character of the Dedeagatch branch. In 1897 the Stoiloff Administration began the construction of the two railway lines branching from Radomir, south-west of Sofia, which run the one to Kustendil and the other to Dupnitza, and were to have been extended later, the first by Gueshevo to Kumanovo on the Uskub-Salonika line and the other by Barakovo to Demirhissar, on the Salonika-Constantinople line. In 1898 overtures were made to the Sublime Porte for linking up these lines with the frontier stations Gueshevo and Barakovo; the negotiations progressed rapidly, but the fall of Stoiloff in the same year brought them to an end. They were fortunately renewed later on, and in 1907 a Turko-Bulgarian conference, held at Constantinople under the presidency of Memduh Pasha, resulted in an agreement identical in principle with the one now concluded. The two Governments undertook to construct, the Bulgarian not later than the end of 1912 the short branch line Doupnitza-Barakovo, and the Turkish not later than the end of 1914 the line Barakovo-Demirhissar. The negotiations regarding the extension to Gueshevo, which the Sublime Porte would not agree to for fear of strengthening Bulgarian influence in Macedonia,

were continued in 1909, again in 1910, and right up to the outbreak of the Balkan War, which radically altered the general situation and resulted in the definite abandonment of the scheme.

The new order of things was complicated by the clash of political and economic considerations. For, while the political changes by which Greece, installed in the old Turkish territories of Eastern Macedonia and Western Thrace, became the neighbour of Bulgaria, made the two countries apparently irreconcilable adversaries, the economic changes on the other hand substituted Greece for Turkey as a customer for Bulgarian products. True there could not be any question of a railway connexion while the period of political disagreements and vicissitudes lasted, but economic needs, always more potent than political considerations, gained the day and it was not long before both peoples realised that in a *rapprochement* lay then their salvation. The *rapprochement* was slow in coming, but as soon as it was there it brought to the front again the question of the linking up of the two railway systems. That question arises the more naturally as it is impossible to develop an extensive trade between two countries—and Greco-Bulgarian trade is considerable—without the existence of adequate communications. The existing communications leave much to be desired, for to travel from Sofia to Salonika it is necessary to go either by Nish or by Dedeagatch, both routes taking almost as long as the journey from Sofia to Paris.

The matter was raised at the beginning of 1926, but at that time the understanding between the two countries was not sufficiently advanced, and the two Governments were not ready politically to reach a satisfactory solution. The definite discussion of the problem was brought about little by little after the conclusion of the Greco-Bulgarian commercial agreement which entails the development of trade between the two countries, and in particular after the establishment of an atmosphere of mutual trust which showed itself in the agreement of the two Governments over a series of minor matters, such as that of the recall of the Swedish officers charged with the surveillance of the frontier; more important still, there was the liquidation of the property of the Greek and Bulgarian emigrants, and the *rapprochement* was publicly cemented by the recent visit of a group of Greek journalists to Bulgaria, where they received a more than friendly welcome.

The practical solution of the problem was facilitated by the existence of a narrow gauge line, constructed during the War for military purposes, from Doupnitza along the Struma as far as Petritch, passing Barakovo, half-way between Doupnitza and Petritch, and terminating near the Greco-Bulgarian frontier. A railway from this point to Demirhissar linking up the Bulgarian and Greek systems would be only a matter of some twenty kilometres, say a dozen kilometres on each side of the frontier. That is what is going to be done apparently, but the problem is to receive only a provisional solution. The permanent and only really satisfactory settlement turns on the gauge of the new line linking the two railway systems, whether it shall be normal gauge, as the Greeks ask with good reason, or narrow gauge, as the Bulgarian at present wish it to be, in keeping with the Petritch line. The Greek proposal is quite justified, inasmuch as the new line will have to serve not only all the Bulgarian traffic, increasing by leaps and bounds to Greece, but also the important coal region of Bobov-Dol, which is more important, perhaps, than that of Pernik, although unfortunately it is inadequately developed at present because of the lack of railways. The existing line from Doupnitza to Petritch is 0.60 metre gauge; it was constructed hurriedly in order to ensure the supply of the troops on the Belashitza front during the War. The permanent way and the rolling stock are quite inadequate for an enlarged service; the locomotives weigh only eleven tons, and the trucks cannot take a load of more than 5 tons. Further, on account of the defective construction and the numerous curves of the route the speed of the trains is not more than 10 to 12 kilometres

per hour. Finally, the line is too long for a narrow gauge railway, 166½ kilometres to Petritch, and 176 kilometres if it is prolonged to the frontier to make the junction with the Demirhissar line in Greek territory. As the capacity of the line is so small, its working costs are heavy and it can be run only at a loss.

It will be necessary, then, even if a narrow gauge line is constructed for the time being in accordance with the Bulgarian proposal for the sake of linking up the two systems, to proceed as soon as possible to alter the line to broad gauge, a work which will call for considerable funds in view of the length of the line. The problem is to find those funds.

NEWS FROM ALL SOURCES.

The death is reported of M. Jonnart, the former Chairman of the Board of the Suez Canal Company.

The Bank of England are prepared to receive the coupons due October 15 on Egyptian Preference Bonds. The necessary lists can be procured on application at the dividend pay office.

As a protest against the heavy charges imposed by the Greek Government on the handling of goods in Piræus harbour, M. G. Stingo, President of the Piræus Chamber of Commerce and Industry, has resigned his position, and his action has been followed by the resignation of the whole Committee.

H.M.S. Frobisher will call at Aden on November 21; Suez and Port Said on November 26-27; Malta, December 1-4; and is due to arrive at Devonport on December 12. The present commission of the Frobisher began on September 29, 1924.

The Chamber of Shipping is advised that the Turkish authorities regard the conveyance of passengers by foreign vessels trading on the Turkish coast as a breach of the regulations governing the coasting trade. The masters of British vessels should therefore not accept passengers in any circumstances at one Turkish port for conveyance to another.

The registers of the capital stock of the Nizam's Guaranteed State Railways are closed until and including October 11.

The 1927 crop of locust beans in Cyprus is now estimated at about 50,000 tons, of which 1,475 tons were exported during August.

The traffic receipts of the South Indian Railway for the week ended September 3 amounted to Rs.10,67,054, making the total from April 1 Rs.2,57,75,976.

The traffic receipts of the Egyptian Delta Light Railways for the ten days ended September 10 amounted to £E7,847, making the total from April 1 £E118,015.

Messrs. Reynolds and Gibson, of Liverpool, announce that Mr. Austin Lightbound, who has been associated with the firm for the past twenty-four years, has been admitted into partnership as from October 1.

With a view to encouraging agriculture in Palestine a newly-published ordinance exempts from duty agricultural machinery, implements, tools, and spare parts, including milking machines and incubators and also tractors not used in non-agricultural work.

Borings in the neighbourhood of Kasanlyk have revealed the existence of an oil-bearing stratum at a certain depth beneath the soil which is said to contain a high proportion of petroleum and other mineral oils (says a Reuter message from Sofia). Research is being continued with a view to seeing whether it would pay to exploit the area in question.

The Roumanian Superior Customs Commission, in view of numerous requests for a revision of the articles of the tariff dealing with textiles, recently appointed a sub-commission to look into the matter and submit a report. The sub-commission has now examined the tariff relative to jute cloth, linen, flax, ramie and other unclassified textiles, unbleached, undyed, etc., in conjunction with the petitions submitted by importers and manufacturers, and has submitted a report advising a revision of the tariffs in question. Modifications will not be made known until the complete tariff, together with modifications, has been submitted to Parliament.

Motors and Motoring

By G. B. B.

The Grand Prix.

It was with a feeling of disappointment that we, who stood at Brooklands last Saturday, watching the race for the Grand Prix, saw the two British cars—the only two which started—drop out of the contest almost before it had started. Personally, I had some hope of seeing the mystery car, the front wheel drive Alvis, carry off the honours, but unfortunately during a practice run, oil pump trouble developed, and now we must wait for another day to see what this car can really do. It was a good race, however; the Delage cars did excellently and no one grudges them their victory. It was a pity that Conelli, in a Bugatti, had trouble with his carburetter and had to give up. The car had been going very well up to that time.

A Free Wheel Car.

The free wheel car is not a novelty, in that one was introduced, I believe, some years ago, but as an up-to-date, practical proposition the new Lea-Francis is the first car to be fitted with a free wheel clutch as a standard. The car has a six cylinder engine, with a four speed gear box and the De Luxe touring model sells at £425. The free wheel clutch renders it possible for the driver to change into any gear, at any speed, without using the normal clutch and without noise. This in itself should suffice, in my opinion, to make the car very popular with owner-drivers, but it has other advantages as well. Not the least of these is that the throttle can be closed and the car allowed to coast just as an ordinary cycle "free wheels." The saving in petrol consumption, owing to this facility is amazing, and tests in an ordinary run over give and take roads show that the proper use of the free wheel on this car increases the mileage per gallon of petrol to 37 from a normal of 26. In traffic the petrol saving must be enormous. Of course one has to let the engine die down when coasting, and just as regularly one has to bring it to life, but there is no trouble in this, and the fact that one can pick one's way through dense traffic without having to keep the car running in third gear compensates in itself for every fancied inconvenience. The one thing the novice, driving one of these cars for the first time, has to take special care over is the matter of braking. Obviously when one is free wheeling the engine cannot be used as a brake. But there is no real difficulty about this, and, curiously, the braking effect seems greater with a free wheel model than one would expect.

Markets and Publicity.

A considerable portion of last week-end was taken up with reading the preliminary report of the delegation which the Society of Motor Manufacturers and Traders sent on a seven months tour through Australia, New Zealand, Borneo, and Java. The report goes to show that the motor market in those countries is good and promising and that it was recognised by buyers that this country could make good quality cars. The most significant finding is that: "Our Dominions and Colonies are to some extent conversant with the difficulties of the Home Country but were inadequately informed as to the achievements which have been made by the home industry."

There is no need to quote further. "Inadequately informed" crystallises in two words all that I have said in the past in these columns; which is that the Near, Middle and Far Easts, vast potential markets as they are for British motor cars, omnibuses and lorries are "inadequately informed as to the achievements of British manufacturers."

The report goes further, and says, concerning the British commercial vehicle, that they give in the long run, a greater measure of service than do those manufactured in any other country, and it adds: "This fact is one of which we must take advantage by the fullest measure of propaganda."

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders market D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Bedsteads.—The Department of Public Health, Cairo, invites tenders for the supply of 343 iron bedsteads, with wire mattress. October 25. (D.O.T.)

Paper, Etc.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and binding materials required by the Government Press for the year 1927-1928. October 24.

Safes.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of iron safes required by the Direct Taxes Department. December 1.

Ironmongery, Etc.—The Financial Secretary, Egyptian Army, War Office, Cairo, invites tenders for the supply of ironmongery, rope steel wire, wire metal white, etc., to the Department of Ordnance Services, Egyptian Army, Citadel, Cairo. October 6.

Marine Units.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of two marine units for ferryboat for Beni Suef Provincial Council. November 1.

Envelope-making Machines, Etc.—The Ministry of Finance invites tenders for the supply of 2 envelope-making machines, automatic, to be equipped if possible with a special device for printing "O.H.E.M.S." simultaneously in Arabic and European characters. Output to be from 60 to 100 envelopes per minute, according to size; 2 direct current motors, 110 volts, to operate above machines; 2 sets of cutting knives for making envelopes (large size) by hand; 1 paper-cutting machine, large size, 70 x 100 cms., with 110 volts d.c. motor for operating same; 3 paper-ruling machines and accessories; printing machines. December 5. (D.O.T.)

Bristle Paper.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of bristle paper required by the Ministry of Finance. October 15.

Steam Salvage Tug.—The Director-General, Ports and Light-houses Administration, Arsenal, Alexandria, invites tenders for the supply of a steam salvage tug as per conditions of tender and specifications obtainable from Secretariat Department, Arsenal, against payment £E4 per set. October 24.

Bedsteads.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of bedsteads iron, required for the year 1927-1928. October 25.

Machinery.—The Controller of Technical Education, Ministry of Education, Sharia, Qasr el Aini, Cairo, invites tenders for the supply of machinery and machine tools for the Model Workshops and Trade Schools, Bulaq Technical School and the Intermediate School of Agriculture at Moushtuhur. October 17.

Diesel Alternator Groups.—The Egyptian Ministry of Public Works invites tenders for the supply at site of the Aft Power Station, of four diesel alternator, groups and accessories, including alternators, switchboard, transformers, power station auxiliaries, hand-operated travelling crane, workshop equipment (including machine tools, lathes, drills, etc.) mechanical and electrical testing instruments, station electric lighting. October 12 (D.O.T.).

Turbo Alternator Groups, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Belqas Power Station of three Turbo alternator groups, and accessories required for the Public Works Ministry (October 26); and for the supply and erection at site of Esna Barrage grounds of two Turbo alternator groups, and accessories, required for the Public Works Ministry. November 2.

It is estimated that Yugoslavia's export surplus of wheat amounts to 12,000 wagons and the export surplus of maize to 20,000 wagons.

Officers and men of the British Fleet who were recently lying at Beyrout were fêted everywhere by the British and French colonies, and banquets were given in honour of Rear-Admiral Norris by M. Ponsot, French High Commissioner for Syria, and by Mr. Satow, British Consul-General.

The net profit of the Prince Line for the year ended June 30, 1927, amount to £148,492, an increase of £32,723 compared with 1925-26, and adding £65,359 brought in, there is £213,851, against £225,508. The directors recommend transferring to depreciation account £100,000, paying a dividend of 2½ per cent., tax free, making 5 per cent. for year, as before, and carrying forward £53,701.

Near East Markets

THE SMYRNA DRIED FRUIT TRADE.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended September 24 :—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 21,500 tons, and the sales to date are put at 17,300 tons. Closing prices Smyrna, per cwt. c.i.f. : Type 12, 42s. ; type 13, 47s. ; type 14, 52s. ; type 15, 55s. ; type 16, 60s. ; type 6, 39s. ; type 19, 42s. ; type 20, 37s. type 21, 42s.

The market throughout the week has ruled firm for all grades. Rain-damaged and low descriptions have been in special demand, prices reflecting slight gains as supplies became more restricted. The close was easier for the finer qualities, of which more quantity than hitherto has been available. The position in general must be considered as weak. The bulk of September deliveries against forward engagements having now been covered, demand is likely to be less active. Supplies, per contra, are heavy, and are likely to weigh in the scales against diminishing inquiry. The outlook points to a lower level of values in the coming month.

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 14,870 tons, and the sales to date are put at 14,370 tons.

The market remains bullish, prices progressively advancing throughout the week. Figs are coming down freely and there has been no interference with the flow of arrivals from the interior. Nevertheless, supplies are not sufficient to meet requirements, which is the direct cause of the advance in prices. There has been no artificial inflation of values. The position appears to be sound and such as may lead to a further advance in prices.

TURKEY'S HAZEL NUT CROP.

The British Consul at Trebizond reports that this year's Turkish hazel nut crop, while less exceptional than the phenomenal yield of two years ago, is not only well above the average, but sufficiently abundant to make up to a great extent for the serious loss occasioned by last year's almost total failure. The total yield, over a district which extends from west of Ordu to the Russian frontier is reliably estimated at 850,000 kantars* as compared with about 1,050,000 kantars in 1925, a decrease of 200,000 kantars or 19 per cent. On the basis of approximate total value the figures for 1925 and 1927—£2,400,000 and £1,200,000 respectively—show a drop in sterling value of no less than 50 per cent., accounted for, apart from the lesser quantity, by two additional adverse factors, namely, the much lower prices now prevailing and the considerably lower level of the Turkish currency.

The average quality is reported to be excellent, and the nuts are of good size, on the whole, in spite of the heavy crop. Advance sales began to be effected in Europe three months before the crop was ready, at prices ranging from 180s. to 190s. per 100 kilogs., c.i.f. port of destination. At Trebizond at the same time prices varied between 140s. and 160s. f.o.ob. Then no more business was done for about six weeks, and as soon as the crop began to come in prices fell rapidly, from 83 piastres per oke (2.8 lbs.) on August 21 to 70 piastres on August 29. Within a few days, however, they began to rise in very marked fashion, owing to sudden demands from Europe, and, at the time of writing (September 4), are wavering between the 76 piastres offered by the local European exporting firms and the 80 piastres being asked by the Turkish merchants. Further rises are expected. (All the above prices are for the shelled nuts.)

Trebizond, and still more Kerassund, which may be said to be entirely dependent on its nuts, have been suffering

severely from scarcity of money for a considerable time past, consequent on last year's failure both in nuts and tobacco. This year's all-round successful harvest should mean that the local Turkish merchants will be able not only to pay off old debts but to embark on new orders with a better prospect of satisfactory settlement than is usually to be looked for in this district.

BULGARIA'S IMPORTS OF PLOUGHS.

Bulgaria presents a favourable opportunity for the introduction of modern ploughs (says an American Consular report). A market for ploughs exists in Bulgaria, but it must be developed, as the Bulgar agriculturist, in addition to his small purchasing power, dislikes changes and is generally content with the methods and implements used by his forefathers. More than half of 500,000 farmers working 5 acres or more possess no modern ploughs, clinging to the use of the "ralo," a wooden device which does little more than scratch the surface of the ground, according to Prof. Yanaki Molloff. At the end of 1926 it is reported that there were only 342,000 metal ploughs in the country. About 12,000 ploughs were imported by the Government in 1926 for sale to the peasants at cost, and a considerable number of these remain unsold. These ploughs were small two-wheeled implements, turning furrows from 6 to 10 inches, and cost the Government, laid down in Sofia, from 1,300 to 1,600 leva.

Imports of ploughs into Bulgaria during 1925 amounted to 30,860,812 leva, against 23,131,483 leva in 1924. Over half the ploughs imported in 1925 came from Germany, the remainder principally from Austria, Czechoslovakia, and Hungary. During 1926 the Bulgarian Customs for the first time made a distinction between walking ploughs and those for use with tractors, or with self-contained motors. Imports of walking ploughs during the first nine months of 1926 amounted to 21,956,836 leva, Germany again supplying over half of the imports. Hungary and Austria were the other principal sources of supply. During this period imports of ploughs for use with tractors amounted to 3,504,615 leva and the United States furnished about half of these, most of the remainder coming from England and Germany.

DRIED FRUIT MARKET.

Messrs. J. C. Houghton and Co., of Liverpool, report as follows under date September 30 :—

Currants.—A striking and very welcome development has been witnessed in the remarkable change which has

* Of 44 okes or 12½ lb.

come over our market of late. A better feeling was making itself evident in the early days of the month as a result of the continued firmness of the Greek market, and this tendency became more pronounced as time advanced, giving rise to improved buying and greater activity all round. The small remaining stocks were quickly absorbed, and a considerable business was put through on overland samples of both old and new fruit afloat, per Gerano, at advancing prices, the inquiry broadening with sellers more reserved. One outstanding feature of the trading since the beginning of the year has been the gradual and persistent decline in value of the better grades of Vostizza, the closing quotations of 1926 season registering only a few shillings between the higher and lower qualities. S.s. Gerano inaugurated the new season, and the bulk of the cargo having been disposed of on a forward basis, a very small portion remained for the market, but with the arrival of s.s. Pavia a few days later, a better selection was on offer. Quality and condition are good, although some of the grades so far seen are lacking last season's colour. Recent sales of old fruit at 46s. to 46s. 6d.; new fruit, Amalias 47s. to 47s. 6d., Patras 48s., Zante 47s. to 48s.; Gulf 49s. to 54s., and Vostizza 52s. to 66s., show an advance of many shillings since the opening, which is especially noticeable in best class shade dried Vostizza. S.s. Sea Victory and Mardinian are expected next week with further supplies. The Greek market keeps firm. Quotations:—Pyrgos, 46s.; Amalias and Patras, 47s. to 48s.; Zante, 48s. to 49s.; Gulf, 49s. to 52s.; Vostizza, 60s. to 66s.; Vostizza Smalls, 52s. to 58s.

Sultanas.—The latest estimates as regards the size of the crop vary from 45,000 to 48,000 tons, but unfortunately the quality has been seriously affected by the heavy rains. Recent reports are that the bulk of the crop will consist of medium qualities with a very small yield of attractive descriptions. The arrivals per s.s. Cypria and Lesbian are very disappointing, being small and lacking in colour. Sales were: Dark, 49s. to 50s.; Good, 60s. to 70s.

Greeks.—Old are selling slowly from 48s. to 52s., up to 65s. for best colour parcels. A few lots of new realised 58s. to 62s. Quality so far is not very attractive.

Australians.—Reports of the shortage of bright fruit and the scarcity of fine grades of the Smyrna crop, have given an extra stimulus to the demand for Colonial fruit, and it has been in active request, quite a big business resulting. Practically all stocks were cleared at 56s. to 58s., with a few colour lots 60s. to 63s. S.s. Ascanius is discharging, and when available her cargo should be well competed for. News is to hand of extensive frost damage to the vines, which are in flower, and some estimates are so serious that it is feared two-thirds of the 1927-8 crop will be destroyed.

Figs.—When prices were quoted earlier in the month for skeleton cases afloat at 54s. to 80s. for large boxes Layers, 67s. 6d. to 71s. small boxes, and 100s. to 120s. for Locoums, a fair amount of business was transacted. Subsequently, with news from Smyrna of damage to the crop, caused by heavy rains, prices showed a progressive improvement, and with the arrival of s.s. Cypria on the 19th inst., followed by s.s. Lesbian and s.s. Etrib, considerable trade was possible, especially for large boxes Layers, which are now practically cleared. Latest sales: large boxes Layers 60s. to 87s. 6d., small boxes 76s. to 81s., packets 62s. 6d. to 70s. Locoums 102s. 6d. to 130s., Pulled 50s. to 52s. 6d. Bags also benefited by the advance, latest sales of Genuines being at 36s. to 37s.

CHESS.

By "CARO-KANN."

The solution to last week's end game is as follows:—1, K—B3, K—Kt3; 2, K—K2, P—Q4; 3, K—Q2, K—B3; 4, K—B2, K—K4; 5, K—Q3, K—K3, and draws. The result is the same if White plays 5, K—Kt3, as both players queen in the same number of moves.

White to play and win.

The final of the Murton Cup handicap commenced last week at the City of London Chess Club. The first round was notable for the fact that both games were drawn. The second round takes place this week, while the final round (provided, of course, that there is not a tie) is on October 12.

In the World Championship match Capablanca has now taken the lead, and his play since the first game suggests that it is improbable in the extreme that he will now lose his advantage.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson, in their report for the week ended September 28, state:—

Egyptian Futures.—Sakel Contract.—Values in this market show comparatively little change since our last report, and the restraining influences to any permanent upward movement to which we recently drew attention are commencing to become more pronounced. Thus, during the earlier days' trading, when some advance was registered on fresh speculative purchases, probably encouraged by the firmer tendency of the American market, the higher level attracted both liquidation and hedging operations, the resultant reaction being more pronounced in Alexandria, where some weak sessions have been experienced. At the present, the market is undoubtedly suffering from lack of trade interest, and it is noticeable that spinners instead of launching out into their customary new crop activities are contenting themselves with moderate commitments out of the balance of last season's Sudan Sakel crop. The stock of the latter, it is true, is now very much reduced, but in the present state of trade, both here and on the Continent, it is evidently sufficient to curtail the ordinary Egyptian Sakel demand. For the time being, the result of this, of course, is that the new crop movement in Egypt continues to meet with an insufficient commercial demand to prevent its marketing being affected without disturbing the course of values. This, to our minds, is the most important feature at the moment, and were it not for the frequent alarms concerning the American crop, much more liquidation and pressure would certainly have been in evidence. As it is, it is to be recorded that the American Sakel straddle difference has tended to narrow, as the January-January positions in the respective markets now standing at slightly over 700 points as against 835 points just after the last Bureau report. We are prepared to see this tendency continue if only on a very gradual scale during the next few weeks. As mentioned previously, the Alexandria market has evidently been under more pressure than our contract, as, owing to the narrow difference ruling, they have attracted the major portion of the hedging operations in progress. We certainly do not consider the present moment opportune for "Bull" operations, and for those who are inclined that way we would recommend caution until signs of increasing trade activity become evident. For a short view, we would rather prefer to advise selling whenever the market shows a distinctly advancing tendency, provided, of course, that ruling conditions remain as at present.

Upper Contract.—Trade operations in the varieties covered by this contract continue to be moderate, but we hear in reports from Egypt that America has been operating more freely, and this, coupled with some good class speculative buying here, has helped to maintain a fairly satisfactory undertone. In addition to the above, of course, the recent firmer tendency of the American market has tended to create a greater amount of confidence. Statistically, the position of Uppers this season would appear to be sound, and on the basis of last season's production and consumption figures the additional demand anticipated as a result of the American staple position is going to have an appreciable effect on values, if not in the immediate future, at any rate, when the first weight of the crop movement has been expended. We still maintain our previous opinion that purchases effected on easing markets will later on prove profitable. Values on the week show an advance of 53 to 69 points for near and 60 points for distant positions.

Egyptian Spot.—Whilst "futures" have again been far from steady, the fluctuations during the past week have been within comparatively reasonable limits. Owing, however, to the uncertainty with which the next few weeks are charged, confidence is still lacking throughout the trade and spot business has been conducted on very re-

stricted lines. The only bright feature has been the improvement in the daily inquiry which has been evident during the past two or three days. Normally, this should prove the forerunner of a renewed buying movement, but we fear that until the question of the size and quantity of the American crop can be more definitely established it is hopeless to expect anything of a normal character to occur.

At the moment, there appears to be very little "kick" in the market, particularly where Sakel is in question, and Egyptian growths have been pressed for sale. Later in the season, it is probable that more attention will be paid to Sakel cotton (particularly if the new crop staple shows improvement over last year's crop), but this is not likely to occur until the Sudan Sakel cotton has been disposed of. This will take some time yet as, although only a comparatively small stock remains unsold here (about 12,000 bales), there is still much of this cotton in warehouse which has not yet gone forward to the mills. The bulk of the small business passing on the spot has again consisted of Good Fair to F.G.F. cotton, with attention chiefly focussed on Uppers, but the inquiry for low and inferior grades of all kinds still persists. The good and Fine qualities have remained neglected. A fair business has been done in Sudan Sakel at steady rates.

American Seed Sudan has been in fair request at prices ranging from 150 to 300 on. C.i.f. business has been rather lifeless. Forwardings to spinners for the week ending 23rd inst. were returned as 6,039 bales Egyptian and 2,441 bales Sudan. Estimated sales for the week 1,300 bales Egyptian and 2,650 bales Sudan. Quotations of Sakel show a decline on balance of 10 points; those of Upper have been advanced 40 points. F.G.F. Sakel to-day 19.20d. F.G.F. Upper to-day 15.25d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended September 22, state:—

Since our last report the futures market has been very nervous and after wide fluctuations closed heavily down. The week's summary of price movements is as follows:—Sakellaridis: November, 37.75 dollars, 2.32 dollars down; January, 37.67 dollars, 2.30 dollars down; March, 37.65 dollars, 2.05 dollars down. Ashmouni: October, 27.15 dollars, 2.42 dollars down; December, 27.49 dollars, 2.46 dollars down; February, 27.85 dollars, 2.50 dollars down; April, 28 dollars, 2.55 dollars down.

SAKEL.—The principal event of the week has been the publication last Monday of the Government's acreage figures and estimate of the Egyptian crop. On the publication of the crop estimate, there were heavy liquidations, and these have continued up to date, and have weighed so heavily on the market that they have caused a decline of about $2\frac{1}{2}$ dollars. The above operations have doubtless rendered the technical position of the market a little more healthy, but nevertheless we are of the opinion that a fair number of bull positions must still exist. The demand from abroad has not shown the desired activity; it continues rather restricted. If there is no improvement in the near future we shall probably see the decline accentuated, as the crop has started to come down and hedging on an increasing scale on the part of holders of cotton must be expected.

Uppers.—The reaction has been equally as sharp as for Sakel for the same reasons given above and owing to the weakness of New York. The demand from abroad has been moderate and certainly not sufficient to absorb the heavy arrivals coming down daily from the interior.

The week's receipts amount to 214,152 kantars against exports of 104,277 kantars; the stock in Alexandria stands at 2,078,650 kantars.

Spot : During the past week we have had fairly active markets at Minet el Bassal and sales for the week amount to about 18,500 bales, of which we estimate 6,300 bales Sakellaridis, 11,100 bales Ashmouni and Zagora, 1,000 bales Pilion, and 100 bales other varieties. The spot situation is about as last week, though the tendency is for parities for spot cotton to ease; if anything, under the impending weight of arrivals, as the present demand from spinners is by no means sufficient to sustain the amount of cotton that must shortly arrive in Alexandria. Very high and very low grades maintain their parities, as here alone there is sufficient offtake.

Sakellaridis : Has been in fairly good demand and all styles have been dealt in. Spot differences are generally unchanged, except for the lower qualities which are rather dearer, not having followed the decline in the contract market. Moderate quantities of new crop Sakel are arriving and are generally of very fair quality.

Ashmouni and Zagora : Have been in good demand and a very fair business has been done, covering all grades. Spot parities are generally unchanged but inclined to ease, with the exception of the low grades, which have not declined with contracts.

Pilion : A good business has been done in this variety in all grades. Spot differences are slightly easier than last week.

Other Varieties : Brown is neglected and no business is reported. Quotations are nominally without much change. A few bales of Nahda and Maarad have been done. In White a small business has taken place at about last week's differences.

Crop, 1927 : The temperature during the week under review has been very variable but, generally speaking, we would say that it has been fairly favourable to the crop. Picking is going on actively everywhere and will soon become general even in the Northern districts of the Delta. On the subject of the Government report we consider the figures given rather on the low side; basing ourselves on present data, we are of the opinion that the crop will be about 6½ to 7 million kantars, of which 2½ to 3 million kantars Sakel. The final figure naturally depends on the weather condition of the next few weeks, for it is the latter which controls the development of the pink boll worm attack.

Five foreign countries are represented at the second Salonika Fair, which was opened on September 18—Bulgaria, Roumania, Hungary, Poland and Switzerland. The Bulgarian section was particularly strong, and comprised in all 78 firms, grouped by Chambers of Commerce, Sofia being represented by 17, Rustchuk by 15, Bourgas by 14, and Varna by 9. The Roumanian Government erected a very fine pavilion.

Notes of the Week.

Macedonian Outrages.

With the recent extension of outrages the Macedonian movement has ceased to be a problem, and has become merely a sore on the body politic of Europe calling for the surgeon's knife. So long as the territorial situation in the Balkan Peninsula was in a state of flux, it was legitimate to hope and to work for a settlement that would meet the legitimate aspirations of the Macedonians. There was a time when the best solution of the difficulty seemed to many to lie in the grant of autonomy to a tract of country, which, with a carefully devised system of local government, might be left to find its feet under the auspices of the League of Nations, until such time as it could take its place in a Balkan federation. The Greek refugee settlement scheme, which entailed an exchange of the Bulgarian population of Greek Macedonia, undermined the case for autonomy, which was handicapped from the outset by the Macedonians themselves, in that they lacked so many of the elements that Europe is accustomed to associate with aspirants to self-government. The weakness of Bulgaria, the Macedonians' only convinced champion, still further prejudiced their cause. In all these adverse circumstances the only hope for Macedonia lay in the exercise of patience and much statesmanship, for neither of which these unhappy people have shown any aptitude. There was always room for hope, in view of the fact that so long as Bulgaria's access to the Aegean Sea has not been accorded under the terms of the Treaty of Neuilly, that in any adjustments in the Balkan Peninsula some recognition might be given to the nationalist spirit of the Macedonians. They could not, however, appreciate the virtue of biding their time. The neighbouring States or Europe had to be coerced into conceding to them what they wanted, in their own way and in their own time. The task they set themselves was beyond their powers. From *komitaji* warfare, which was effective against the Turks a hundred years ago, they have now descended to mere anarchist excesses, and have entirely alienated what sympathy there was in Europe for their cause.

Bulgaria's Responsibility.

An organised series of bomb outrages is now the Macedonian plan of campaign. Within the last two or three weeks a bomb has been exploded in a Ghëvgheli hotel, a train has been wrecked on the Serbian railway line between Nish and the Greek frontier, General Kovatchevitch, commanding the troops at Shtip, has been assassinated, and a determined attack, with hand grenades, has been carried out on the frontier village of Klissura. As the last two places are nearly eighty miles apart, Klissura being some thirty miles due west of Sofia, there is presumably some resolute organisation behind the campaign, and suspicion inevitably falls on the Macedonian Revolutionary Organisation, even if the report that this body had previously announced its intentions to launch such a campaign be not true. To label these outrages Bulgarian is to beg the question. If the perpetrators could be interrogated, they would, no doubt, call themselves Macedonians and say that they are the people whom the Yugoslav authorities insist on calling Serbs and on denying to them either Macedonian or Bulgarian nationality. That they use Bulgarian territory as a place of refuge, however, cannot be denied, and whatever serves the Macedonian Revolutionary Organisation as headquarters in the Balkans is to be found in Bulgaria. In these circumstances the Bulgarian Government cannot divest itself of all responsibility. That it encourages or connives in any way at these outrages is at best a stupid assertion; for by now Macedonian activities have become a graver menace to the State than Communism in its most aggressive form. Any embarrassment that Yugoslavia may have suffered from the White Hand or Serbia from the Black Hand is as nothing compared with the problem that the Macedonian Revolutionary Organisation presents to the Bulgarian Government. The time, however, has come when the latter can no longer escape from its responsibility.

A Balkan Problem.

References to the Macedonian Revolutionary Organisation too often suppose that this is a body of men with an office and telephone number in Sofia, with whom the Government is in daily consultation for the administering of pin-pricks to Yugoslavia. A clearer view of the position is obtained when it is remembered that there are a quarter of a million Bulgarians of Macedonian extraction, among them the present Prime Minister, who must be credited with a natural sympathy with those whom they regard as their fellow-countrymen and who have suffered cruel persecution. While many of these quarter of a million are now Bulgarians first and Macedonians in the second place, there may be as many with whom the position is reversed and who approach the subject with all the vehemence of which Balkan peoples are capable. An inner circle of the latter, with secret and wide-reaching ramifications, is committed to a life and death struggle on behalf of the Macedonian cause, in the course of which some of the members are resolved to stop at nothing in order to attain their end. Of their methods enough is known abroad—in Yugoslavia as well as elsewhere—to assist an understanding of the difficulties with which Bulgaria is confronted in attempting to deal with the Macedonian problem in her midst. The first step now, it would seem, must be to call upon the more intelligent of the Macedonians in the country to dissociate themselves from the campaign of murder and outrage, which can never attain the end in view, but can bring about the undoing of Bulgaria in the final destruction of Macedonian hopes. Thereafter, it is difficult to see how war to the knife against the inner ring of Macedonian irreconcilables can be avoided, if these latter refuse to temper their hot-headed savagery with common sense. In this policy there may well be a risk of Bulgaria's being torn by civil war; its prevention can best be secured by her neighbour's refraining from any action calculated to embarrass or weaken the Bulgarian Government. The latter's task would be materially facilitated if the Yugoslav Government could promise not only an amnesty to those Macedonians who accepted Yugoslav citizenship, but also greater consideration in the future in those matters of every-day life, which mean so much to all Balkan peoples—language, education and religious worship.

Yugoslav Representations.

Without very tactful handling, the present situation in the Balkans is clearly one that may be attended by serious developments. The Yugoslav Government has called upon the Bulgarian Government to suppress the Macedonian Revolutionary Organization, and the Yugoslav Minister in Sofia, who presented the request last Friday, asked for an immediate reply. At a Bulgarian Cabinet Council held the same evening the decision was taken to adopt energetic measures against the Macedonian Organization, and as a preliminary step martial law is to be proclaimed in the district comprising the south-western corner of Bulgaria, bordering on Yugoslavia and Greece. The necessary decree was issued as soon as possible and King Boris was asked to hasten his return to Bulgaria. In the meantime the Yugoslav authorities are very properly tightening up their watch on the frontier, and it is noticeable that the Opposition Press has pointed out that with a more efficient police force the murder of General Kovatchevitch might not have taken place. There is, fortunately, a tendency in the Yugoslav newspapers of all political complexions to lay less stress now on Bulgarian complicity, and they affect to see Italian complicity in the renewed activities of the Macedonians on a much more formidable scale than hitherto. It may be inferred that, following upon the feeling of isolation, the idea of a *rapprochement* with Bulgaria had appealed to Yugoslav public opinion, and it is not desired to play too much into the hands of those who may be opposed to an understanding between the two countries. This is as it should be. Bulgaria's task in grappling with

the Macedonian organization is not an enviable one. The life of probably every member of the Government is in danger; and there must be many Bulgarians who, while strongly opposed to Macedonian acts of terrorism, will not remain indifferent if it comes to the shooting down of their kinsmen, however misguided, virtually at the behest of Yugoslavia. Moreover, Macedonians at bay may find means of wreaking their vengeance on the Serbs before they finally go under. In these circumstances close co-operation between the Yugoslav and Bulgarian Governments offers the best solution, and it should be in the political as well as in the military sphere. Behind the terrorist acts lie the legitimate aspirations of the Macedonians, and it would entail no weakening of the Kingdom of the Serbs, Croats and Slovene if some of these were honourably conceded.

Egypt and Great Britain.

Only a very captious and prejudiced critic could take exception to any part of the formalities which have attended the declaration of the Wafd's future policy and the appointment of a leader in the place of the late Zaghloul Pasha. In his speech accepting his election as President of the Wafd Mustafa Nahas Pasha declared that real patriotism and sacred freedom should not be mingled with spite and hatred; and in a subsequent declaration he amplified this remark by saying that the Wafd's programme included an agreement between Egypt and Great Britain, and that it considered that Egyptian independence is wholly consistent with the idea of an agreement between the two peoples. Possibly the best augury for the future is the fact that the Prime Minister, having reported to the new leader of the Wafd the tenour of his conversations with Sir Austen Chamberlain, feels justified in returning at the earliest possible moment to renew the discussions. Sarwat Pasha knows that it would be useless to attempt to draw up a formal treaty before he is assured of the support of his whole Government, which entails the support of the Wafd. If, therefore, he is ready to carry the conversations with the British Government a stage further than was reached before the death of Zaghloul Pasha, it must be in the knowledge that the Wafd has modified its outlook on international affairs since 1922. In that year the terms of the British Declaration were regarded, before they were published, as a signal success for Egyptian diplomacy, and it was only after their publication that they were rejected with more or less contumely. To-day, no doubt, the leaders of the Wafd know as well as Sarwat Pasha that no British Government can expose itself to a second rebuff of that nature, and they have done well—if this is the meaning of the pains they are taking to familiarize the members with the idea of a treaty that can be satisfactory to both parties—to prepare the ground for the inevitable give-and-take which is the basis of all agreements between friends. It will be a proud day in the history of Egypt when the members of a Coalition Government, representative beyond challenge of the country as a whole, can take their courage in their hands and go to the people and declare that they have affixed their signatures to a Treaty which does not give them all that they had at one time hoped for, but is an honourable compromise, the whole-hearted acceptance of which is entirely in Egypt's interests. A Government that can do that will be free then to grapple with many administrative problems of urgent importance to Egypt without having to take its cue from shouting crowds in the streets of Cairo, conscious that in the Coalition, which was of Zaghloul Pasha's creation, it has the best instrument for the consolidation and development of an independent Egypt.

Lord Gladstone in Bulgaria.

Ingratitude towards their foreign benefactors does not figure among the shortcomings of the Balkan peoples, and it may be left to the cynic to suggest that the gratitude to which they lose no opportunity of testifying is linked with the hope of favours yet to come from the same or kindred quarters. Alone among the names of English-

men that of Gladstone enjoys an undying fame in the three countries of Yugoslavia, Greece and Bulgaria; but it is in the latter, as might be expected, that his reputation stands highest. For Greece he is the Englishman responsible for the handing back of the Ionian Islands, who on account of subsequent lapses from grace probably does not stand as high as Canning; but in Bulgaria he is associated with the most vital of all episodes in the country's history, its recovery of independence. There is no statue to Gladstone in Sofia, of dimensions which make that of the Tsar Liberator—his only rival in Bulgarian affections—a landmark in the capital; but there is a "William Gladstone" State School and a Gladstone Street. Two years ago the presentation to the School by Mr. H. N. Gladstone of a portrait of W. E. Gladstone was the occasion for the paying of fresh tributes to the latter's memory. Last week Sofia received a visit from Lord and Lady Gladstone, who are attending meetings of the General Council of the International Union of League of Nations Associations, and once more a public and official tribute was paid to the services which "the great defender" of Bulgaria had rendered to the Bulgarian people. It was the irony of fate that, while the President of the Council of the Union was testifying to "the spirit of Locarno that was stirring in the Balkans," and to the fact that the old quarrels were daily growing less, the Macedonian trouble should have burst out into flame afresh; but there can be little doubt that the Balkan States are benefiting, and are conscious of benefiting, from the existence of the League of Nations, and it is reasonable to hope that the League will exercise a salutary effect on the present troubles.

Yugoslav Politics.

If the first few days are any criterion, the new Skupstina in Yugoslavia has a stormy session ahead of it. Feeling, it is true, often runs high at first, when memories of broken heads and other election amenities are still fresh, and subsides as the session grows older; but on the present occasion the uncertainty of the political situation tends to fray the edge of the deputies' tempers. In the election of the President the Government secured a substantial victory by 208 votes in favour of Dr. Ninko Peritch, against ninety given to the next candidate; and it might be thought that the augury was favourable for the Government's position throughout the session. Its fate, however, rests with the political clubs rather than with the Skupstina. Outside Parliament negotiations are on foot to detach the Democratic Union from the coalition with the Radicals and Slovenes, and to form a *bloc* with M. Raditch's Croats, the Dissident Democrats and various smaller groups. Whether the principles at stake have more bearing on the future interests of Yugoslavia than is involved in the usual scramble for the loaves and fishes is not apparent. The present Coalition has come before the country with a programme; the new *bloc* would still have to formulate one which offered the chance of keeping the different groups together for the rest of the parliamentary period. In view of the present position in the Balkans a rally to the side of the present Government is to be expected, at least until the trouble over the Macedonian question has been laid to rest. The main hope of the Opposition in its attempt to detach the Democratic Union from its alliance with the Radicals lies in its alleged dissatisfaction with the distribution of Ministerial portfolios. In the circumstances it would be imagined that M. Voukitchevitch would experience little difficulty in coming to an understanding with his indispensable allies.

Turkey and Persia.

Slowly the origins of the present dispute between Turkey and Persia are being discovered, but it has taken weeks for the intelligence to penetrate to the West. According to the Turkish version, some months ago irregularities began to occur on the Turco-Persian frontier, where bands of "brigands" had been active in an anti-Turkish

sense. These irregularities reached their climax about two or three weeks ago when an armed attack was made by these Kurdish "brigands" (who are, according to Angora's version, Persian Kurds) on isolated Turkish outposts, notably against Kozlerkeuy. About forty Turkish soldiers are said to have been captured, and taken across the frontier into Persia. At this the Angora Government, on October 2, sharply protested, and declared that if the Persian Government would not immediately restore the captured soldiers and take steps to rectify the state of affairs on its frontiers, the Turkish Government might regard it as an unfriendly act. This Note appears to have had the effect of inducing the Teheran Government to send a conciliatory reply, which is stated to have pacified Angora.

Turkish or Persian Kurds?

Until the contents of the Persian reply are known, it is manifestly impossible to state definitely whether the "brigands" who have caused the trouble are Turkish or Persian Kurds. The Turks unanimously allot them to Persia; the Persian equally vigorously assign them to Turkey. If it is proved that they are Persian subjects, who have strayed beyond their boundary over towards Bayazid, then Turkey has an irrefutable case; if, on the other hand, it be proved that the "brigands" are Kurdish subjects of Turkey who have crossed into Persia to escape persecution in Turkey, the problem becomes considerably more difficult. As is well known, the Kurdish question has not been finally solved, and in Turkey, perhaps, such solution is farther off than anywhere else. The plea of pursuing unlawful subjects across a somewhat vague frontier may conceivably be made to cover pretexts other than the ostensible one, and indeed certain Persians have not hesitated to attribute to the Kemalist Government the design of extending eastwards the frontier which was drawn up by British and Russian officers in 1914. That this frontier is one the traversing or transgressing of which causes little visible shock, is, of course, well known; but respect of it should be quite possible if Turkey and Persia are the real friends which their Treaty of Amity would appear to imply. Latest reports indeed, indicate that the captured Turks have been released, and that the affair is well on the way to being settled.

Russia as Spectator?

No trouble between Governments and governed has broken out since the advent of Bolshevism but the Soviets have been ascribed the rôle of some one other than a

POLITICS AND POLICY IN PERSIA.

In Persia, as elsewhere in the Middle East, reaction and progress are fighting a long battle. Through the mists of ignorance which surround that country, now the hand of reaction can be seen to be holding itself aloft in triumph, and now the lance of progress penetrates successfully both the traditional veil of obscurantism in which Persia is steeped and the fog of obscurity with which she is enveloped. It has been well remarked, indeed, that the main and chronic cause of Persia's troubles are not the machinations of external foes but the deficiencies or vices of internal opponents of reform. At the present moment Persia is in a peculiarly interesting, because uncertain, condition. Externally she is, in the superficial view at any rate, on good terms with India, Afghanistan, and Russia, and on bad terms with Turkey and Iraq. But from the internal aspect one cannot so easily form an estimate of her direction. Dr. Millspaugh, the American Financial Administrator-General, "abode his hour," and went his way; nor is the general future of finance in Persia, despite the Bill recently introduced into the Majlis, by any means clear as yet. This Bill provides for the employment of German and Swiss financial experts, who are, however, to be strictly under, and not vaguely over, the control of the Persian Minister of Finance: a curious development, for most observers, including some very high Persian authorities, had counselled the appointment of a Persian to succeed Dr. Millspaugh. It remains to be seen, first, whether this Finance Bill is passed by the Majlis, and secondly, whether the German and Swiss experts will be allowed sufficient time, or will be possessed of sufficient patience, in Persia to complete the work of which the American Financial Mission laid such good foundations. Another curious development is the sudden dissolution of the new political party, the *Iran-i-Noh*: an organisation deriving from the brain and enthusiasm of Taymoor Tash, the Court Minister, and originally boasting—so it was commonly said—the blessing of the Shah himself. This new party, which had absorbed the group of young intelligentsia called *Jawani Iran*, held out considerable promise for the realisation of patriotic reforms, and, indeed, its inauguration appears to have been attended with a certain flourish of trumpets. In a second those trumpets are mute. Why? Two reasons are possible. Either a personal quarrel has ensued between Shah and Court Minister, or else, and more probably, the *ulama* of Persia, fearing that the *Iran-i-Noh* might become in Persia what the Popular Party has become in Turkey, have uttered their *caveat*. This rearing of the clerical hand—if such in fact it be—is a most disquieting symptom in

Persia. More than once since the founding of the Pahlavi Dynasty there have been signs that when the respective wills of the Shah and of the clergy clash, it is that of the Shiah priesthood which prevails. Nor is the influence of the *mujtahid* confined to internal affairs only. It is, in fact, by investigation along the lines of the relationship between the Persian Government and the Shiah clergy, that the most significant clues to the immediate future of Persia will probably be found.

The regeneration of Persia, however, cannot be brought about in a decade. For the present compromises are necessitated both within and without the Kingdom. An example of this fact, which derives, by the way, largely from geographical reasons, is to be found in the Pact which the Persian Foreign Minister signed with the Soviet Government in Moscow on October 1. Russia has, and must always have—at least until a trans-Persian railway from North to South has been completed, and possibly even after that—a certain hold over Persia. There is literally no other market than the northern one for the products of Khorassan, Mazanderan, Gilan, and Azerbaijan. The Persians were, therefore, more or less obliged to agree to whatever terms the Bolsheviks thought fit, and in this sense any treaty is better than none. While Persia holds no cards, or at least while Russia holds the joker—the power of economic boycott—it is apparently useless for the Teheran Government to bluff or protest: the only thing to do was to try to get as good terms as possible, and then to hope that they would be kept. The bare details of this Soviet-Persian Pact have already been given in *THE NEAR EAST AND INDIA*, but it has since been announced that affixed to the Treaty is a Persian Note which states that the Persian Government, fulfilling the obligations taken upon itself by the Guarantee and Neutrality Pact, will, at the same time, observe and fulfil all its obligations as a member of the League of Nations. This seems to be rather a courageous addition by the Persian Government, and is gratifying evidence that the future has not been bargained away for the sake of present requirements.

But enough has been said to show that both politics and policy in Persia are in a somewhat indeterminate state. It is not, of course, always the most important news which percolates to the rest of the world through the mountains and across the deserts which shut Persia off. Teheran is not Persia; nor is the voice of the tribes, who are the backbone of the land, often heard by the West except when tyranny is at work. The purely political and theoretical aspect of Persia is, therefore, not always the correct criterion. Yet it is sufficiently obvious that the one country in the Middle East whose relations with two of its neighbours are far from cordial harbours some elements which do not augur too well for the future. Persia's relations with Iraq are still extremely unsatisfactory; nor is her attitude towards her Sunni neighbour, Turkey, which is dealt with elsewhere in this issue, yet regulated. Rumours derive from the south, west, and north-west of Persia which suggest that national unity, which, if Riza Shah be given a free hand, may eventually be one of his greatest achievements, is still incomplete. The urban population may be easily persuaded to deference, compliance, and even admiration; but it is the unceasing loyalty of Persia's tribesmen which is really her capital bulwark. It is on the tribal foundation that the future greatness of Persia must be constructed.

The Near and Middle East*

From Our Own Correspondents.

Cairo, October 1.

The Political Situation.

The situation remains substantially unchanged, as the meeting of the Wafd members of Parliament confirmed the nomination of Mustapha Nahas Pasha as head of the Wafd and Chairman of the Parliamentary Committee and approved of the manifesto issued by the Wafd Committee a fortnight ago. The speeches delivered on the occasion of this meeting, and particularly that made by the new leader, followed by his interview with the Press, all maintained the note of moderation and conciliation which the manifesto had sounded, and in my conversation with Nahas Pasha yesterday morning he gave me a formal assurance that the Wafd was determined to do all in its power to preserve the Coalition, which it recognised was essential for the peaceful administration of the country, the safeguarding of the Constitution and the maintenance of the friendly relations with Great Britain which are so necessary to the future welfare of the country.

Visit of the Fleet.

A portion of the Mediterranean Fleet has been in Alexandria during the past week and as usual the community has done its best to give the officers and crews a good time. The Acting High Commissioner gave a dinner party at the Residency in honour of Admiral the Hon. Herbert Meade, at which the Premier and the Ministers for Education and War, and the Judicial Adviser and Lady Percival were among the guests. Sarwat Pasha entertained the Admiral and Mr. Neville Henderson to luncheon at San Stefano Casino, and Admiral Meade and his officers returned the hospitality on board H.M.S. Coventry, when, in addition to Sarwat Pasha and the Acting High Commissioner, leading members of the British community were invited. Over two hundred of the crew were also the guests of the British community at a dance at the Belvedere Casino.

The Alexandria-Ramleh Railway Concession.

The question of the concession for the Alexandria-Ramleh Railways is very much to the fore at present, and likely to loom still larger on the horizon in the near future. The concession is at present held by a company which pays no share of its profits to the Municipality. As far back as 1919 the Government came to the conclusion that it would be fairer to the Municipality and place it in a better position to deal with the transport requirements of its rapidly growing population, if the right of cancellation at any time with compensation to the concessionaire were exercised; and the Municipality decided to avail itself of the authority which the Government then conferred on it in this connexion.

Little or nothing was done in the matter until last winter, when the Municipal Commission was reconstituted and three offers for a new concession providing for a proper participation in the profits for the Municipality were received. These offers—one from the present Company, another from a British group of leading London financial houses represented by Col. St. John Cooke, and the third by a local Syrian group headed by Mr. Tarrab—were laid before a Special Committee set up by the Government and the Municipality to go into the question.

This Committee recently reported. It puts entirely out of court the offer from the Company and, after analysing the two other offers, it leaves the decision to a further Committee which on its suggestion has been created for the consideration of the best manner in which the present concession can be taken over. There the matter remains for the moment, and unless some impetus is given by public opinion, it looks as if we were again about to fall into one of these long-drawn-out controversies, which have so clearly marked the career of the Alexandria Municipal Commission during the last quarter of a century.

In qualified Egyptian and European business circles no doubt exists that the British offer is by far the better and that both the terms it offers and the guarantee of financial soundness and ability to exploit which it affords are far superior to anything the local Syrian group has put forward. Moreover, as one of the leading Egyptian papers has pointed out, here is an opportunity for starting that co-operation in economic and financial matters with Great Britain which can assist and supplement the political co-operation which Egyptians now recognise as being the sole solution for the settlement of their difficulties. Hence, both from the political as well as the business point of view there is every argument in favour of the acceptance of the British offer, and it is to be hoped in the interest of the population of the most important suburb of Alexandria that a final decision in this direction will be speedily arrived at.

Bourse Regulations.

After an investigation and discussions which have lasted nearly three years the Government has at last been able to complete a set of new regulations for the Alexandria Cotton Contract Bourse which are destined to prevent a repetition of the speculative abuses of which there has been so much complaint during the past years. The most important amongst the reforms are the institution of a guarantee fund which will enable assistance to be given to brokers who are in difficulties with fellow-members of the Bourse; more strict conditions in the matter of admission to the Bourse for brokers and jobbers as well as associate-members; and a general tightening up of the control which the Bourse Commission can exercise over operations and over individual members. These new regulations, which have been passed by the General Assembly of the Mixed Court of Appeal, are now before the Council of Ministers for submission to the King for signature, and the decree will be promulgated in December so as to give existing members time to make arrangements for the subscription to the guarantee fund which the new regulations require.

Belgrade, September 30.

Political Uncertainty.

The great need of Yugoslavia is a strong, stable Government able to deal with the mass of urgent legislation which has accumulated during the past years of party strife and impotent Governments. It was hoped that the recent elections would enable the formation of such a Government, but although the coalition of Radicals and Democrats secured a majority, 193 out of 315, of the seats in the Skupshtina, their position is not at all secure, partly on account of the fact that so many of the members of the new Parliament are unknown men, never before elected, whose attitude to their party leaders cannot be ascertained until after the meeting of their party clubs, and even more so because of the uncertainty of the attitude of Dr. Liuba Davidovitch, leader of the Democratic Union, towards M. Vukitchevitch, the Radical Premier.

The Croatian Peasant Party Club has already met and shown itself to be solidly behind M. Raditch, who is now in a very strong position. The Radical Club is to meet on October 3, and it is believed that with the exception of a small number of the "Pashitchvtzi," who will probably be excluded from membership of the party, the Club will give its support to M. Vukitchevitch and his Ministers—for the time being at least. The Democratic Union Club has not met, but it would seem that the Spaho group and very many of the members of the Democrat Party are solidly behind Dr. Davidovitch and that talk of differences between Dr. Davidovitch and M. Marinkovitch (leader of the Democrat Ministers) is not well founded. Instead of 33 members Dr. Davidovitch has now control over 81, and he is further strengthened by the apparently serious discussion of the possibility of his getting the support of M.

Pribitchevitch and his 23 Independent Democrats also. Despite their pact with the Slovenian Clericals, which was brought into force by the appointment of M. Gosar to the Ministry of Social Policy, the Radical section of the Coalition is proportionately much weaker than it was before the elections.

In the absence of certain knowledge of Dr. Davidovitch's attitude there was much discussion on the possibility of the formation of a Democrat-Peasant *bloc*—which M. Raditch, indeed, declared to be already agreed upon—composed of the Democratic Union, Independent Democrats, Croatian Peasant Party and the Serbian Peasant Party. This *bloc* would have 172 out of 315 members of the Skupshtina—a majority which would allow it to form a Government, although it is hard to believe in the longevity of a Government based on the agreement of so many groups and dependent on M. Raditch. If this combination becomes more definite, the only hope of the Radicals' retaining power will be for them to offer M. Raditch better terms than those offered to him by the *bloc*, and many Radical leaders secretly deplore the utter non-reliability of M. Raditch, which weakens them in their bargaining with the Democrats.

This situation has been to some extent cleared up by the speech of Dr. Davidovitch at Biyelyina, in which he made it clear that, despite the accusations he made of the unfair use by the Radicals of unscrupulous local officials during the elections, he is prepared temporarily to support the present Cabinet on condition that, in view of their greater strength, the Democratic influence is considerably increased. Unless the conditions imposed by M. Davidovitch are too onerous it is generally believed that, despite stormy and dangerous scenes in the verification committee of the Skupshtina, the Government will secure its majority and begin work. Doubts are expressed, however, of the possibility of its remaining long in its present form.

Greco-Yugoslav Negotiations.

There is a widespread belief in Belgrade that the Bulgarian *komitaji* plot to blow up certain Yugoslav buildings in Salonika, discovered and prevented by the Greek police, was intended to prevent the negotiations for a treaty between Greece and Yugoslavia, which are shortly to be renewed, from achieving their purpose. It is suggested that joint steps should be taken by the two Governments to force the Bulgarian Government to take measures to prevent the passage of well-armed, well-paid bands of *komitajis* over the frontier into Yugoslavia and Greece.

Belgrade, October 7.

Events in Southern Serbia.

Attention has been suddenly diverted from the comedy of internal politics, the bickerings of parties, the bargaining for power, the patching up of friendships, by the stark tragedy of events in Southern Serbia where a whole series of outrages has culminated in the murder of General Michael Kovatchevitch, a brave and extremely popular officer. This crime should draw the attention of the whole world to the danger to peace constituted by the increasing activities of the "Internal Revolutionary Macedonian Organisation," which has its headquarters in Sofia, and openly claims that the recent bomb outrages in Yugoslav Macedonia were the work of its members. It is common knowledge that this Macedonian Organisation has been the real power behind the Throne in Bulgaria for many years, and that Governments which tried to oppose it fell, e.g. Stambolisky. So long as its activities were confined to the terrorisation of the Bulgarian people no foreign people had the right to interfere—every people has the right to misgovern itself—but when it plans and carries out a campaign of terrorization of the citizens of a neighbouring State by murder and destruction, as a remedy for the alleged imprisonment of Macedonian students from certain Yugoslav Universities, then it is felt in Belgrade that the matter has become international and should be dealt with by the League of Nations or the Great Powers.

Yugoslav Macedonia.

It is not necessary to reopen the discussion of the whole Macedonian question, but it may be well to set out a few facts bearing on the matter. Personal observation and the reports of many travellers convince me that despite mistakes and abuses in administration inevitable in a newly created Balkan State, the people of Yugoslav Macedonia are now politically freer and economically more prosperous than they have ever been. The administration, while by no means perfect, is as good as that in any part of Yugoslavia and rather better than that in most of the other Balkan lands. Enormous energy has been shown in the building of roads and railways, and the King himself has always shown especial interest in these parts of the Kingdom and encouraged their development. The proof of the comparative satisfaction of the greater part of the people is to be seen in the fact that now when *komitaji* bands come over the frontier the peasants arm themselves and join the police in driving them back again. As was pointed out by the Sofia Correspondent of *The Times* of September 30, this has forced the *komitaji* to change their tactics, and instead of sending large bands they now send parties of three armed with bombs, of the latest Bulgarian Army pattern, to carry out some definite *attentat*. These small groups cross the frontier among the wild thickly forested mountains and often succeed in evading the frontier guards and reaching their objective. During the past year several such groups have been driven back over the frontier, but there is not one case of the Bulgarian frontier guards having been attracted by the noise of prolonged firing and having attempted to prevent the free passage of the *komitaji* into Bulgarian territory; nor is there one case of the Bulgarian authorities having tried to follow up such bands and bring them to justice.

Suppressing the I.M.R.O.

In an interview recently given by Professor Tzankoff, ex-Premier of Bulgaria, to a representative of the *Politika*, he is reported to have said that he himself fell from power because he tried to take steps to prevent the *komitaji* from crossing the frontier into Yugoslavia. If it is true, as has often been asserted, that the Bulgarian Government is incapable of preventing these criminal activities of the I.M.R.O., then in the interests of Balkan peace, which is intimately allied to world peace, international measures should be taken to help them to do so. If on the other hand they are able but unwilling to suppress the I.M.R.O. then they are guilty of aiding and abetting a criminal organisation and should be punished and checked.

Internal Politics.

In internal affairs too there have been sudden and exciting developments. The most striking of these has been the most unexpected renewal of friendship between M. Raditch and M. Pribitchevitch after nearly twenty years of the most bitter political enmity. This new friendship, not surprising when it is known that M. Raditch and M. Pribitchevitch were schoolfellows and intimate friends in youth, is of great political importance, as it shows that they have given up their all-absorbing interest in the constitutional question of federalism or centralisation and

turned their attention to questions of the economic and social development of the whole country—matters on which they are agreed and can collaborate. Dr. Koro-shetz's alliance with the Radicals shows the same tendency, a tendency which should later make for the more stable and better government of the country. Instead of nearly a dozen small parties, as there were in the last Skupshtina, three large groups are now developing—the Radical-Clerical group (133), the Democratic Union (81) and the Raditch-Pribitchevitch-Serb peasant group (91). These groups, however, are not yet consolidated, and there is a further tendency towards fusion which may eventually lead to the establishment of the two party system.

At present the Democratic Union is bound to the Radical-Clerical group and has shown its loyalty to the coalition by voting for the Radical candidate for the temporary presidency of the Skupshtina. Dr. Marinkovitch, with steadily growing support, is using all his influence to keep his party in the coalition; nevertheless Dr. Davidovitch and his friends seem to be tempted by the vision of a Democrat-Peasant *bloc* of which Dr. Davidovitch would be President. The Premier, M. Vukitchevitch, has now presented an ultimatum to the Democrats, demanding that they make clear their position, and although no definite reply has yet been given, it would seem that the Democratic Union is in favour of remaining in the coalition for the time being on certain conditions which would greatly increase their power, until it can be seen how far M. Raditch can be depended upon and how much more influence they might get by joining the Democrat-Peasant *bloc*.

The Verification Committee.

The Verification Committee of the Skupshtina, composed of 7 Radicals, 5 Democrats, 2 Clericals, 2 Independent Democrats and one Serbian Peasant elected from the members of the Skupshtina, is now at work verifying the mandates of the members of parliament and receiving complaints on the way in which the elections were carried out. If its stormy sittings are typical of what may be expected of the sittings of the new Skupshtina, it is to be feared that little serious work will be done.

ALBANIA.

Durazzo, September 29.

Parliament and the President's Speech.

Parliament, which comprises the Chamber of Deputies and the Senate, has been opened for its winter session with the customary ceremonial—military trappings, music, tall hats and white ties—which introduces a little variety into the life of Tirana.

Ahmed Bey Zogu, in conformity with custom, delivered his presidential speech. He referred to the Treaty of Tirana between Albania and Italy, which, he declared, was not directed against anyone. It consolidated the independence of Albania, established by the London Conference in 1913, and was in keeping with the provisions

The Indo-European Telegraph Co., Ltd.,

or the League of Nations, which Albania held in respect and to which she was grateful for the support that it had afforded her. "It is, therefore, not true," continued the President, "that the Treaty of Tirana encroaches on Albania's independence. On this occasion I should like to send greetings and thanks to the Royal Italian Government for its political co-operation and for the help that it has given us in the organisation of our army. I would convey also a cordial greeting to our great friend, Signor Mussolini, for the sincere friendship which he has shown us on every occasion. This genuinely sincere policy and this friendship subsisting between the two neighbouring States will inaugurate a new era of progress for our nation. . . . Our programme is to maintain friendly relations with all States and to conclude agreements and treaties with a view to consolidating not only our political relations, but also the development of our economic life. We are on the point of concluding a commercial treaty with Great Britain, towards whom the Albanian nation entertains very special gratitude on account of the effective support which she has given us in respect of our independence."

An Amnesty.

Fletorja Zyrtare (The Official Gazette) of September 21 published a list of 371 political prisoners under sentence, of whom the majority are at the moment in Albania, to whom the rights of amnesty have been extended. In this list appeared the names of M.M. Sotir Peci, Suleiman Delvina, Reschëb Mitrovitza and Dr. Michel Turtuli, all four ex-Ministers, the first two being former members of the Regency Council.

Some twenty prominent people, including Mgr. Fan Noli, Qazim Kotbuli, Ismail Haki Tatzati, and Shevqet Korcha, were not included in the amnesty on the ground that their policy is too hostile to the present régime.

It is rumoured that these political enemies of Ahmed Bey Zogu would be prepared to return to Albania after an agreement with the present Government based on a change of the Constitution, with a view to the establishment of a presidency of the Council of Ministers. As is known, the Council of Ministers at present meets under the presidency of the President of the Republic, and, according to the Constitution in force, the President of the Republic is "irresponsible." The demand of the Opposition, therefore, aims at investing the Government with a legal status and with responsibility.

Ahmed Bey Zogu, if report be true, is the more anxious to be reconciled with his political adversaries because the Italian Government is said to be giving energetic support to Hasan Prishtina, the well-known agitator and a sworn enemy of Ahmed Bey Zogu. Hasan Prishtina resides partly in Italy and partly at Vienna, engaged in adding to the number of his partisans. As he hails originally from Kossovo and is the head of an organisation of irredentists of that province, he is feared by the Serbs.

NEWS IN BRIEF.

A Czechoslovak Legation is to be established in Teheran.

Negotiations were last week opened at Rhodes between Italian and Turkish delegates for the delimitation of the maritime boundary of the Dodecanese Islands and the coast of Asia Minor.

The Trade Treaty between Germany and Yugoslavia, replacing the provisional trade agreement of 1921, was signed in Berlin on October 6. Its main feature is the "most-favoured-nation" clause.

In the Belgrade city cemetery on October 3 a monument to the memory of Jewish soldiers in the Serbian Army who fell in the wars between 1912 and 1918 was unveiled. King Alexander was represented at the ceremony.

The Athens Correspondent of the *Morning Post* reports that the Commission appointed to combat Communism recommends that the public services should be purged of Communists and that a special service should be created for the supervision of suspects and agents of foreign propaganda.

Sadik Pasha Wahba, Egyptian Minister in Athens, who was once Minister to Belgium, will be in attendance on the King of Egypt for the state visit to Brussels, which will begin on October 26 and last for three days. Afterwards His Majesty will remain privately in Belgium until November 3.

The Italian Government has conferred on H.E. Ismail Ramzi Pasha, Governor of Port Said, the decoration of the Crown of Italy, which was handed to His Excellency at the end of September by the acting Italian Minister.

The Secretary of the organising committee of the Navarino Exhibition, due to open next Thursday (October 20) wishes to express his high appreciation of the generous response already made to his appeal for exhibits for the Navarino Commemoration, and would be particularly indebted for any further contribution. His address is 51, Upper Brook Street, W.1.

General Sir Walter Norris Congreve, V.C., K.C.B., M.V.O., of Congreve and Charley Castle, Staffs, Governor and Commander-in-Chief of Malta, who won the V.C. (together with Lord Roberts's only son) in attempting to save the guns at Colenso, died on February 28, and has left unsettled estate of the value of £20,628, with net personalty £19,185.

General Gouraud, Military Governor of Paris, at the invitation of the Norweg-France Association, delivered a lecture in the hall of the University of Oslo on October 5, the King, the Crown Prince, and a distinguished audience being present. General Gouraud gave reminiscences of war in Africa and Syria, and paid a warm tribute to British gallantry in the Dardanelles campaign. Before the lecture the King of Norway received General Gouraud in audience.

The Kisumu-Khartoum air service has been resumed. On its first trip the Pelican carried Viscount Gage, Parliamentary Secretary to the Secretary of State for India, and M. Allard, aeronautical adviser to the Belgian Government. M. Allard intends to advise the Congo Government to extend the air line to Rejaf (Sudan) to connect with the Khartoum route. There is a prospect, says *The Times* Nairobi Correspondent, of the establishment of a service between Bulawayo (S. Rhodesia) and Mwanza (Tanganyika) by a private company, in which Sir Alan Cobham is interested, to connect with the E. African line.

H.M.S. Effingham, flagship on the East Indies Station, is ordered to leave Portsmouth on November 1 for the East, after her refit and recommissioning. The flag of Vice-Admiral W. M. Ellerton, C.B., is at present flying in the Emerald, at Colombo. This vessel will leave on November 7, for Trincomalee, remaining there until November 28, and returning to Colombo from November 28 to December 1. She is then to proceed to the Persian Gulf to relieve the Enterprise, which was last reported at Muscat. After being relieved, the Emerald will proceed to Trincomalee, and then cruise to ports in the Bay of Bengal.

THE CENTRAL ASIAN SOCIETY.

The following fixtures for the autumn session of the Central Asian Society have already been arranged:—November 2, at 5 p.m., at the Royal Society's Rooms, Burlington House, W., "Sinai," by Lt.-Col. A. C. Parker, late Resident, Arish; November 9, at 5 p.m., at the Royal Society, "The Two Sides of the Case in China," by Mr. G. E. Hubbard; November 23, at 5 p.m., at the Royal United Service Institution, Whitehall, "The Immigration and Invasion of the Tatars," by Sir Denison Ross; November 30, at 5 p.m., at the Royal United Service Institution, "The Yaman and the Red Sea," by Mr. Charles Crane; and November 14, at 5 p.m., at the Royal Society's Rooms, Burlington House, "The Motor Route from India," by Colonel T. Nisbet.

The Company transacts, either direct or through its Allied Companies, all classes of Insurance Business in all parts of the World.

CHIEF ADMINISTRATION
7, CHANCERY-LANE, LONDON, ENG.

THE PERSIAN ARMY.

During the past half-century the Persian Army has experienced many changes. It has never, however, been so prosperous and up-to-date as it is at the present time. Austrian, Russian and Swedish instructors formerly took charge and spent time and money in an attempt to organise the Army; but, either through incompetency or lack of knowledge, their work did not succeed. They were hampered by their ignorance of the Persian temperament and by particular idiosyncrasies characteristic of every nation, and they obviously never tried to obtain an insight into questions bearing upon Persian psychology. It was quite evident to keen observers that the Persian soldier, possessing national and religious traditions which have come down to him through the centuries from his remote Zoroastrian ancestors, could not be induced to adapt himself to the crude and uncouth régime of the Cossacks, or to Swedish methods of drill. The plan of foreign supervision failed, as it was bound to fail.

This unsatisfactory state of affairs continued till February, 1921, when the present Shah, Reza Shah Pahlavi, brought about his famous *coup d'état*. Even if all her national vicissitudes be taken into account, the *coup* was a unique event for Persia. Reza Shah Pahlavi, having risen from the masses and having travelled, since his youth, extensively through the length and breadth of his native land as a soldier, acquired an unprecedented knowledge of the national situation in all its diverse aspects. He placed himself at the head of a handful of soldiers, whom he led to Teheran, and began to shape it into what proved to be the nucleus of the present Persian Army. Scarcely had a month passed when he was appointed Minister for War, and when successive Prime Ministers stepped in and out of office for two years with remarkable rapidity—having been found in their turn to lack energy and that initiative necessary to bring about the much-needed Army, as well as social reforms—he took the reins into his own hand.

In the capacity of Prime Minister he continued to effect many reforms, and the nation, having at last seen in him "the man of the hour" destined to lead it to prosperity, invited him to occupy the Peacock Throne. The nominal and youthful King who had already been absent from the

with the crown that Nadir and Abbas the Great had been proud to wear. Being a soldier, Reza Shah Pahlavi immediately began to complete his work of organising the Army; in which task he succeeded admirably. Cossacks, gendarmes, and all heterogeneous elements were welded into one unified whole possessing all the attributes of a perfect homogeneity. The Army was thoroughly equipped

Officers of the "Amniyah" (road-guards) standing behind their Commander-in-Chief.

with all the modern accoutrements of war, and it was through the adoption of this sound policy that safety has ever since been established throughout the land. The American Financial Mission, with the active co-operation of the Army, succeeded in collecting the taxes, thus making the Budget balance.

NOTES OF THE WEEK

(Continued from page 451.)

mere spectator; nor is the affair between Turkey and Persia any different in this respect from the rest of its kind. It is being said—on what authority it is not clear—that the Soviet authorities, having become a little disgusted with the independence of Turkey and with the manifest resolve of Mustapha Kemal Pasha to study the interests of his country only, themselves stirred the Persian journals to bitter denunciation of the Ghazi's alleged return to the traditional policy of Turkey of expansion towards the East. In other words, it is declared by certain observers, the present policy of Russia is to disparage Turkey. Moreover, they impress this fact into the general line of reasoning that Russia's present intention is to weaken the "Triple Entente" of Muslim States in the Middle East,—Turkey, Persia, and Afghanistan—for the reason that she has found both Turkey and Afghanistan intractable to her designs. The obvious inference is that she is bestowing her favours upon Persia, and the recent Soviet-Persian Pact is held to fit in with this interpretation. Certain other things—such as articles in the Turkish Press exalting the friendship of both Persia and Afghanistan, are taken to indicate that the Soviet plan for forming a pliable and habile Mussulman bloc in the Middle East, has now become unstuck. Afghanistan sends back her Russian advisers, and allows her King to go on a mission to the "capitalist" West, Turkey observes good relations with a State, Iraq, which is but a tool of the "imperialist" British, and even Persia maintains her good faith towards the West, in the form of the League of Nations! No wonder, then, that Russia is, according to the school of thought, about to reconstruct her plans in the Middle East. For ourselves, however, we should say that Soviet activities are greatly exaggerated, and, in consequence, unduly feared, and that, in particular, the Kurdish problem along the borders of Turkey and Persia is in itself and quite unaided sufficient to give rise to misunderstanding and to charges of ill-faith as between the Kemalist Republic and the Land of the Shah.

Armoured Cars of the Persian Army.

country, over which he was supposed to rule, for more than a year and who, like his fathers before him, never considered himself of true Persian descent, having sprung from Turcoman stock, took no interest or active part in Persian affairs, was himself dethroned and his dynasty deposed by the national will, and the man who had served his country so zealously and whole-heartedly was rewarded

OUR PRINCELY SCAVENGERS.

BY MIRZA FIROOZ KHAN.

Tabriz, Persia, September 12.

I have referred in one of my former letters to the extensive military movements which took place early last spring. Amir-Loshgiar was in Serdesht and Suj-Bulak alternately. Now the Commander-in-Chief's presence in and around Kurdistan was not for pleasure. . . He knew the troublesome Kurdish Princes and the forces under their command; he knew their age, their complexion, their height and their disposition. The Commander-in-Chief was there to arrest and imprison, at any cost, those quarrelsome chiefs. But he had to have inexhaustible patience, and seven wearisome months elapsed before he could accomplish his purpose.

The Commander-in-Chief invited those Kurdish Princes to call on him. Some did call, some hesitated, and some refused point-blank to come, telling the Commander-in-Chief plainly and frankly that they were afraid of him. Those who did come received favours and presents—swords of honour, fine horses, rifles, military promotions and so forth. The hesitant ones also came. They, too, received honours and favours and presents. Those who were obstinate were persuaded by friends to come. Omar Agha, the Chief Captain of Simko (in the famous Simko fightings) and Sayyid Zamboul, the greatest and holiest Shaikh of Persian Kurdistan, guaranteed most solemnly themselves to be responsible for their personal safety and safe return to home. They came, accompanied by Omar Agha and a trusted follower of Shaikh Zamboul, who explained to the Commander-in-Chief on what terms the rebel chiefs had consented to come. The Commander-in-Chief gallantly honoured the promise of Omar Agha and the Shaikh Zamboul that was made regarding their safety. He honoured these rebel princes also with the same favours which he had poured upon the loyal and obedient princes—gold watches, gold belts, and rings with precious stones for the female members of their households, and so on. They went away, all of them went away, joyfully and heavily laden with heavy presents.

Some weeks passed, and Amir remembered these Princes, all of them, both those who had come early, when commanded, and those who had hesitated and delayed in calling upon his Excellency. Arrangements were made for a royal banquet to which were to be invited all the Kurdish Princes and Chieftains, major and minor. Invitations were sent out in due time to prepare and come. Even the Kand-Khooda (the chief) of each village was invited to accompany his Lord and Prince, each one escorted by a dozen, or a score (according to his dignity) mounted and armed *tofankchis*. They all came on the date set for the banquet and they all were made to feel at home.

The princely banquet was to take place at night, late, very late at night, at about midnight, according to the accepted custom of Persian high-class aristocracy. . . .

The night's banquet over, the guests, one by one, begged the Commander-in-Chief's leave to depart, which was granted most graciously. In the outer court-yard armed Cossacks were waiting with strict instructions. As each Prince or Chieftain entered the yard, he was noiselessly placed under arrest, and disappeared in an unknown direction. These Kurdish Princes, every one

of them, were imprisoned. And so the Commander-in-Chief arrested these leaders of Kurdish tribes without firing a gun and without having a single Cossack killed.

They number forty, some minor ones being given their liberty. Among the prisoners is Hasan Agha, nicknamed "Mam-Hasan" (uncle Hasan), the son of the famous Bayazid Agha, who in the autumn of 1907 and the spring of 1908 led Turkish troops, under Farig Pasha, into Persian territory and occupied the city of Suj-Bulak in the name of Sultan Abdul-Hamid, declaring it to be Turkish soil, simply because the population (Kurds) were Sunni Mussulmans. The damage, caused by the expedition of Bayazid Agha, both in life and money, was considerable. And the son was now to expiate for his father's sins! He is a huge fellow, six foot six, proportionately stout and healthy. It is said that it took eight men to over-power and place him under arrest.

The prisoners are in Tabriz now. His Imperial Majesty the Shah Pahlavi most graciously spared them their lives, but they must be life-prisoners, and now, armed with a broom and a spade, they are keeping the streets of Tabriz clean. Some Shahsevan Khans from Ardebil also have joined this gang of Kurdish aristocrats. It is said, and commonly believed, that our filthy streets for a thousand years in the past would not consent to be kept clean by hobos and other common folk, but only by Khans and Princes of powerful tribes.

LORD GLADSTONE IN BULGARIA.

Viscount and Viscountess Gladstone on October 7 visited the William Gladstone School in Sofia, where they were received by the Bulgarian Minister of Public Instruction, the Director of the School, professors, and scholars. A speech was delivered by the Director, who recalled the great services rendered by the late W. E. Gladstone, and also by Lord Gladstone, to the Bulgarian people. The guests afterwards visited Gladstone Street, where they were cheered by the inhabitants.

The following day the distinguished guests attended a reception at the Town Hall, when the Mayor presented the guests with an address from the Municipal Council proclaiming Lord Gladstone as a citizen of honour of the city of Sofia. A banquet was given on October 8 in honour of the guests by the Mayor of Sofia.

The Bulgarian newspapers have published articles praising the memory of William Gladstone, and declaring that the people of Bulgaria are happy to welcome the son of its great defender.

An aeroplane crashed near Buzeu (Roumania) on October 7. The pilot was killed, but the three passengers saved themselves by means of parachutes.

While a house at Nablus, Palestine, which had been damaged in the recent earthquake, was being pulled down the third storey collapsed, burying eight workmen, three of whom were killed and three badly hurt.

Sir Edward L. O'Malley, who last week resigned the chairmanship of the Oxfordshire Quarter Sessions on account of ill-health, was Chief Judge of the Supreme Consular Court of the Ottoman Empire from 1898 until 1903.

Mme. Pangalos, her son, General Tseroulis, Captain Kolialexis, and the majority of the other officers arrested on a charge of being concerned in a Pangalist plot, were released provisionally on October 6 for lack of evidence justifying preventive imprisonment.

Sir Harry Hamilton Johnston, of John's Priory, Poling, Arundel, one of the pioneers in the opening up of Equatorial Africa, who died at Woodsetts, near Worksop, Notts, on July 31, aged 69 years, left estate of the gross value of £8,047, with net personality £7,696.

Mrs. Edith Annie Douglas-Hamilton, of Wadhurst, Sussex, of Queen's Gate Gardens, S.W., and of Addison Road, W., who died on August 22, wife of Percy Seymour Douglas-Hamilton, and eldest daughter of Sir Frederick Wills, first baronet, left unsettled property in her own disposition of the gross value of £1,755,795, with net personality £1,669,173. Among the bequests she left £25,000 to Annie Besant (or other the president for the time being of the Theosophical Society), in furtherance of the work carried on by that society; and £10,000 to the society known as "The Order of the Star of the East," connected with the Theosophical Society.

THE PERSIA SOCIETY.

President: Lord Lamington, G.C.M.G., G.C.I.E.

Founded in 1911 to study all questions of common interest to Great Britain and Persia.

Subscription £1 per annum.

PRE-ISLAMIC ARABIA.

"**ARABIA BEFORE MUHAMMAD.**" By De Lacy O'Leary, D.D. (London: Kegan Paul. 10s. 6d. net.)

It is still by no means an uncommon error to suppose that the religion of Islam descended like a thunderbolt on the world, and that it derived from the inviolate deserts of Arabia, the unlikely of places. In part this has been due to ignorance, and in part to the assumption by certain Arabic authorities that the Arabian Peninsula has always lived a particular and quite proper life, unaffected by the rest of the world. Scholars, of course, have long known that this was a false setting for the rise of Islam, but whereas some have concentrated upon the debt which Islam owed to Judaism and others upon the debt owed to Christianity, no comprehensive and yet popular explanation of the fact that the religion of Islam was evolved in close contact with Western Asiatic civilisation has so far been forthcoming. This little work by Dr. O'Leary, which sets out to prove that "the religion of Islam, so far from taking its rise amongst secluded desert tribes, was a natural stage of development in the religious life of West Asia," is, therefore, to be cordially welcomed.

This book is a work of competent scholarship, and never falls into the pit of propaganda. Dr. O'Leary marshals a most imposing array of original authorities, and, we should say, clearly proves his case. One or two of his generalisations upon the character of the peoples inhabiting Arabia may be open to criticism, but his main conclusions are as convincing as they are learnedly and fascinatingly reached.

The channels by which culture penetrated into pre-Islamic Arabia, and up which Dr. O'Leary travels, were :—

(1) by the formation of colonies or outposts to cultivate the soil or to exploit mines, (2) by the opening up of regular trade routes across the desert and the formation of alliances with the Arabs through whose territory they passed, and who, in return for subsidies or blackmail, abstained from interference with the caravans and kept off other Arab raiders, and (3) by the formation of marts and settlements of Arabs along the frontier so that the culture learned there filtered back into the desert tribes.

First, he examines the Egyptian penetration of Arabia. Maritime enterprise on the Red Sea began, of course, very early, perhaps as early as on the Mediterranean. The land route by Sinai, again, brought Egyptians into contact with Arabia; and the use of incense by Egyptians is conclusive evidence of early trade with Arabia. The Mesopotamian penetration of Arabia is, perhaps, better known; it occurred chiefly in the east, north, and south of the Peninsula. The sea route to India, again, was well known at a very early date, though direct evidence is lacking until the later Babylonian Empire. The existence of various kingdoms of South Arabia, Saba, Minæa, Qataban, Hadramaut, the Himyarites, and their trade relations with the outer world, all help to prove that Islam sprang from no segregated deserts.

The author then examines the state of Arabian trade in the days of Justinian (A.D. 527-565): a very fascinating and useful chapter, this. He passes to the relations which the different Christian communities had with Arabia, but these are probably better known than the purely secular relations of Arabs with the outside world.

The Arabs of Hira and of the Syrian frontier exercised, of course, a very considerable influence upon the Arabs of the Hijaz; many became Christians, and almost all Arabs who had travelled at all were familiar with some aspects of the Christian religion. It must be remembered that these two sets of Arabs, though in close touch with Persia and Byzantine culture, were still part of the Arab community. Of the Jewish colonies in Arabia, and of their contact with Hellenism, a vast amount of work has been written, and Dr. O'Leary swiftly condenses it.

Coming to the Hijaz itself, the author shows that even

Mecca was a cosmopolitan city before the advent of the prophet. It was, of course, a great commercial centre. Dr. O'Leary says hereupon :—

It was in this extremely cosmopolitan centre, the city which had replaced the ancient Palmyra and the still more ancient Taima, that Islam had its cradle, and its cosmopolitan character very largely accounts for the mixed vocabulary of the Quran. It is very evident that Islam cannot be described correctly as evolved amongst the simple Arabs of the desert, and it is equally obvious that classical Arabic, based on the Quran, cannot be taken as the pure language from which all other dialects have been derived by corruption or by admixture of alien elements: in such a city as Mecca it must have been liable to outside influences in the pre-Islamic age.

We conclude by recommending this little volume heartily. Sound learning has gone to its composition, and it is quite free from the partisanship which so often mars histories of Islamic or pre-Islamic times. It is, in short, a most useful contribution to what is one of the most important tasks of modern times, the sympathetic understanding by Christendom of Islam.

REBUILDING BENGAL.

"**THE FOUNDATIONS OF NATIONAL PROGRESS.**" By J. N. Gupta C.I.E. (Calcutta: Mitra and Son).

Mr. Gupta, who has had a long and distinguished career in the Indian Civil Service, here brings the results of his experience to bear on the problems of the province in which he has served, and sets out to show what Bengal needs, and how she should set about getting it. As regards the needs, we may say at once that his doctrine is sound, and that is the same thing as saying it is not new; for all serious students are now in substantial agreement that not merely Bengal, but every part of India, needs social and economic reform to an extent which is tantamount to reconstruction, and that a vast amount of spadework has still to be done on the foundations before there can be any hope of stability for the imposing political façade of which idealists dream. To say that the doctrine is not new is not, however, to suggest that this portion of the book is unnecessary: India is slowly learning, but a great deal of preaching is wanted to drive the lesson home, and those who, like the reviewer, have been expounding it for years, will welcome the support offered by Mr. Gupta; and hope that he will gain the ear of his fellow-countrymen. As regards the specific proposals now

put forward, most of them are conditioned by the actual situation in Bengal, and their examination must be left to provincial specialists, but something can usefully be said on the two topics which most concern every part of the country, the cost of reconstruction, and the source of the necessary driving power.

As regards the cost, Mr. Gupta states the Bengal case fairly. The province has not done so well out of reformed finance as some other parts of India, and its needs are undoubtedly urgent; but we think he realises that the other provinces are not in the least disposed to finance Bengal. It would of course be pleasant if central revenues should continue to expand to a point where the Finance Member could offer doles all round in amounts adequate to meet the needs, but that is a distant prospect, and, in order to get to work at once, Bengal must start raising the money which she wants. At the moment, there are no signs that she means to do anything of the sort, and that brings us to the heart of the whole problem, the driving-power that shall set the wheels of change in motion, and carry them over the dead points successfully. Mr. Gupta's concrete proposals depend mainly on administrative drive; we get a vision of the forces contributed by all the specialist departments concentrated in a rehabilitated District Officer, and thence distributed among well-planned local units, which, in his view, are likely to give an adequate response to the stimulus. That idea is probably sound as far as it goes, though it represents a reversal of the policy which has developed during the last half-century; but much more than this is wanted. The administrative machine cannot in these days function by itself; behind it there must be the growing power of a public opinion, insisting on reform, and ready to raise the money which reform will cost. The great need now is for popular leadership, and, at the moment, Bengal is in a deplorable position in this respect, for, while the nucleus of opinion is already in existence, the politicians seem to be too busy dog-fighting to pay any attention to it. Such a position, however, is a call to action rather than a signal for despair. Those who, like Mr. Gupta, have realised the truth, have only to go on hammering it in; sound views will spread, and in due course we may expect the leader to appear. It is from this point of view that such books should be estimated, and it may be hoped that Mr. Gupta's contribution to the discussion will be widely read not only in Bengal, but also by all who are interested in the future of India.

THE LATE LORD KITCHENER.

An impressive service in memory of Earl Kitchener, organised by the Royal Engineers Old Comrades' Association, was held at the Guards' Chapel, Wellington Barracks, on October 9. Past and present soldiers, including a number of Chelsea pensioners, paraded on the Embankment between Scotland Yard and Horse Guards Avenue, and marched to Wellington Barracks, accompanied by the band of the 56th (1st London) Divisional Royal Engineers. Six generals, among whom was General Sir Bindon Blood, formerly of the Royal Engineers, joined in the service, which was conducted by the Rev. J. T. Hales, a former chaplain to the forces, and the Rev. W. B. Hughes, chaplain to the Brigade of Guards. The hymn, "Rock of Ages," was sung, and the lesson was read by Lieut.-Colonel Sir Aylmer Hunter-Weston, Colonel Commandant Royal Engineers, and President of the Royal Engineers Old Comrades' Association. Trumpeters sounded "Last Post" and "Réveillé."

After the service the troops marched to the Horse Guards Parade, where representatives of different branches of the Association laid wreaths at the foot of the Kitchener Statue. One was in the form of a pyramid in the colours of the Khedive's Medal, yellow and blue; another bore a card with the inscription, "In proud memory of the greatest soldier of our time." A large crowd watched this part of the ceremony, which concluded with one minute's silence, and the playing of the National Anthem by the regimental band.

EGYPT EXPLORATION SOCIETY.

A new series of lectures, on "Great Personalities in Egyptian History," is being arranged by the Committee of the Egypt Exploration Society for the session 1927-28. The lectures will be delivered in the Meeting-Room of the Royal Society, Burlington House, at 8.30 a.m. (by kind permission of the Council). It has not yet been possible to fix definite dates for all the lectures; the dates of the later ones will be announced when arranged.

The first lecture on "Tuthmosis III," was given by H. R. Hall, D.Litt., F.B.A., F.S.A., on October 12. Other lectures are entitled "Amenophis III," by S. R. K. Glanville, M.A., on November 9; "Akhenaten," by H. Frankfort, Ph.D., on December 7; and "St. Athanasius," by H. I. Bell, O.B.E., M.A.; "Ptolemy II," by W. W. Tarn, M.A.; and "Rameses III," by Walter B. Emery.

A ticket for each lecture will be sent to members of the Society. Non-members wishing to attend must make application to the Secretary of the Egypt Exploration Society (13, Tavistock Square, London, W.C.1) for tickets, either for single lectures or for the whole series. No charge will be made.

REVIEW OF MISSIONS.

Three articles in particular of the October number of the *International Review of Missions* will interest our readers: these are "Missionary Problems in Turkey," by J. L. Barton, "The Moslems of South-Eastern Europe," by S. M. Zwemer, and "Modern Jewish Missions," by A. E. Garvie. Dr. Barton thinks that, with the establishment of religious toleration in Kemalist Turkey, Protestantism, as opposed to "formal Christianity," stands a much better chance. Dr. Zwemer interestingly examines the conservative three and a half million Muslims in the Balkans. And Dr. Garvie states that, with the breaking down of the barrier of exclusiveness which the Jew, largely owing to persecution, set up against the rest of the world, Jews may be increasingly assimilated to the Christian Church.

A group of 27 Polish officers arrived last week in Constantinople on a private visit.

The Rev. A. F. Matthews, M.A., who arrived in Cairo recently, has joined the staff of St. Mary's Pro-Cathedral.

The Palestine earthquake relief fund has reached a total of £17,000 by the end of September. The latest list of donations includes £32 from delegates of the Christian Churches assembled at Lausanne.

At the national commemoration of Zaghloul Pasha held in Cairo on October 7 at the "House of the Nation," fully 3,000 persons were present, including Princes Omar Tussun and Mohamed Ali, members of the Cabinet, and delegates from all parts of the country. The leaders of all the parties constituting the coalition spoke reaffirming their determination to continue their union.

The Balkan Section of the World Alliance for Promoting International Friendship through the Churches opened its fourth annual conference on October 2 at the headquarters of the Holy Synod in Sofia. The conference, which was attended by Sir Willoughby Dickinson, the Secretary-General of the Union, and four delegates each from Bulgaria, Greece, Roumania, and Yugoslavia, lasted for four days. Previous meetings were at Novisad (Yugoslavia), Sinaia (Roumania) and in Athens.

PERSONAL AND GENERAL

TO-DAY

October 13, 1927 (New Style).

September 30, 1927 (Old Style).

Rabia II, 16, 1346 A.H. of the Muslim Calendar.

Tishri 17, 5688, of the Jewish Calendar.

Ali Khan left the Ritz Hotel last week for Lausanne.

King Faisal of Iraq is expected in London next week from Paris.

Sir Basil Zaharoff arrived at the Carlton Hotel from Paris on October 5.

Princess Lotfallah arrived at the Ritz Hotel on October 7 from the Continent.

Lord and Lady Grimthorpe have left London for India, and will be away six months.

Lady Birdwood and Miss Birdwood left London on October 7 for Bombay in the Mantua.

Sarwat Pasha, Egyptian Premier, will arrive in London on October 28 on the conclusion of King Fuad's visit to Brussels.

Sir Henry and Lady Barker arrived at the Stafford Hotel, St James's, last week from the country, making a brief stay in London before leaving for Egypt.

Major-General Lord Edward and Lady Edward Gleichen will return on October 20 to 35, Catherine Street from Court-in-Holmes, Forest Row.

Captain de Pass, of the British Naval Mission at Athens, on October 8 inaugurated the Greek Naval Academy, of which he is a director.

General Sir John Du Cane, Governor-General of Malta, and Lady Du Cane left Claridge's Hotel at the end of last week for Malta after a stay of two weeks.

Mr. John Maxse, Coldstream Guards, embarked for India on October 6, to take up the appointment of A.D.C. to Major-General K. Wigram, commanding the Waziristan District, North-West Frontier.

Mr. Ernest Barker, Litt.D., Oxford, at present principal of King's College, London, and the new Professor of Political Science at Cambridge, has been elected to a professorial fellowship at Peterhouse.

Sir Henry Wheeler (upon relinquishing his appointment as Governor of Bihar and Orissa, and upon his appointment as a Member of the Council of India) had the honour of being received by the King at Buckingham Palace on October 7.

Prince Riza Khan Arfa, First Persian Delegate to the League of Nations, who has resided for many years past at Monaco, is returning to Teheran. He has represented his country at Geneva for the last six years. His place in the Assembly has been taken by Muhammad Ali Khan Forouzi, a former Prime Minister.

Sir Alexander Muddiman (upon his appointment as Governor of the United Provinces of Agra and Oudh) and Sir Charles Innes (upon his appointment as Governor of Burma) had the honour of being received by His Majesty at Buckingham Palace on October 8.

APPOINTMENT VACANT.

TRAVELLER required for Near East by large Public Company. Essential qualifications: British-born subject, good education; knowledge of rubber goods; fluent in French, Italian and Arabic; first-hand knowledge of Mediterranean territories. Age not over 30. Salary £300.—Box No. 6, THE NEAR EAST AND INDIA, 170, Strand, London, W.C.2.

Mr. H. St. J. B. Philby will lecture to the Central Asian Society on October 19 on "The Administration of the Hijaz under the Wahhabis." The lecture, which will begin at 5 p.m., is to be given at the Royal United Service Institution, and the Chair will be taken by Field Marshal the Rt. Hon. Viscount Allenby, G.C.B., G.C.M.G.

Major-General Keith Stewart (General Officer Commanding, Aden) had the honour of being received by His Majesty at Buckingham Palace on October 7, when the King conferred upon him the honour of Knighthood and invested him with the Insignia of a Knight Commander of the Most Honourable Order of the Bath (Military Division).

The Marquess of Linlithgow, Sir James Mackenna, Mr. Frank Noyce (members of the Royal Commission on Agriculture in India), and Mr. F. W. H. Smith (joint secretary) accompanied by Lady Mackenna, left London on October 6 to embark at Marseilles in the Rawalpindi for Bombay. They will be joined at Suez by three colleagues—Sir Thomas Middleton, Mr. H. Calvert, and Professor N. Gangulee.

The Dowager Marchioness of Dufferin and Ava, C.I., D.B.E., will open a sale of work next Wednesday (October 19) in the Parish Hall of the Church of the Annunciation, Bryanston Street, in aid of the Churches' work in India. Colonel Sir Donald Robertson, K.C.S.I., will be in the Chair, and among the stallholders will be the Hon. Mrs. Shaw, the Hon. Mrs. C. C. Bruce, Lady Standen, Mrs. Eyre-Chatterton, wife of Bishop Eyre-Chatterton (recently of Nagpur), and Mrs. Cresswell.

The Institute of Hygiene, which has been built in Zagreb with funds from the Rockefeller Foundation, was inaugurated on October 3. A distinguished gathering was present at the ceremony, including General Ouzoun Mirkovitch, representing the King. The Institute comprises two huge buildings, one of which will be used as a school of hygiene. They cost thirty million dinars (about £110,000) to erect.

BRIDGE BUILDING IN BENGAL.

A most pertinent illustration of how heavily the East has to pay for its notorious unwillingness to be hustled is afforded by the history of the Howrah Bridge which, as our Calcutta Correspondent mentioned in a recent letter, is about to be repaired. This is the old floating bridge which was designed by the late Sir Bradford Leslie in the early seventies of the last century. The fact that Calcutta should have remained so long with only one bridge is of itself remarkable. For there is a population of nearly $1\frac{1}{4}$ millions on the east bank of the river and of approximately 200,000 on the west bank. Calcutta is, moreover, one of the largest commercial and industrial centres in the East; and the traffic which daily crosses its solitary bridge has been for years past on a colossal scale. And as the bridge has an opening span, to enable large steamers to pass up the river, it creates great traffic blocks in the streets during the daily openings. The enormous inconvenience and loss caused by this state of affairs might have been expected to lead to the prompt construction of a second bridge. But far from this being the case it has taken nearly twenty years for the various authorities concerned to make up their minds to reconstruct the existing bridge. It was in fact as far back as 1909 that the Calcutta Port Commissioners urged that the bridge should be replaced by a new one. They said that it was getting old; that it was too narrow for the increasing traffic; that it took too long to open and to close; and that serious traffic congestion consequently occurred on the approaches. As a result of the action of the Commissioners, Committees were appointed, and one of them—a Committee of Engineers—recommended in 1912-13, that the bridge should be replaced by a new structure, the cost of which they estimated at about a crore of rupees. The design which they favoured was for a floating bridge more commodious than the existing bridge and with a more rapidly working opening span.

Before this scheme could be fully entered upon, the War broke out. Delay was of course unavoidable, but at the invitation of the Government of Bengal an eminent English bridge-engineer visited Calcutta and reported on the question in 1916-17. The result was a recommendation that instead of a floating bridge a single span bridge should be built. The estimated cost was in the neighbourhood of a million sterling. It was not until 1920 that this scheme was thoroughly examined by the various authorities interested. All kinds of technical objections were raised to the single-span design and the merits of various other types of bridges were freely canvassed. After a prolonged discussion the Government of Bengal appointed, in November 1921, another Committee of Engineers "to advise regarding the type of the proposed new bridge." But meanwhile the question of whether an opening span was really necessary had been raised. To resolve this question another committee had to be appointed; and they came to the conclusion that an opening span might be dispensed with. The Committee of Engineers reported early in 1922. They recommended that

a type of bridge which had not been previously considered, namely, the cantilever type, should be constructed. Its cost they estimated at two millions sterling. Furthermore, they urged that no time should be lost in building it in view of the serious condition of the old floating bridge.

This scheme aroused much opposition on account of its great cost, and also because it would necessitate the acquisition of valuable sites on both banks of the river. Inevitably a further Committee had to be appointed to examine its financial aspects, and they reported in June 1923. They framed a scheme whereby the capital sum required would be raised by loan, and the interest charges would be provided for by taxation. The Government of Bengal then drafted a Bill designed to give effect to the Committee's financial proposals. This was in 1924, but the Bill was not passed by the Legislative Council until last year, and then in a modified form.

The Act set up a new Howrah Bridge Commission and gave it authority to make provision for replacing the bridge by means of sources of revenue set forth in the Act. The Commission held its first statutory meeting a few months ago, and took into consideration the sources of revenue at its disposal and the estimates of receipts expected to accrue. It was held that after making the necessary provision for the working expenditure of the new bridge the amount which would remain available to meet interest and sinking fund charges on the new structure would not admit of any type other than a floating bridge. The Commission has, therefore, addressed the Bengal Government accordingly and stated that in these circumstances it is proceeding with the arrangements necessary for the construction of a floating bridge. The Commission has also decided provisionally to adopt the proposal that the new bridge shall be located at a new site up-stream from the present structure at a distance of some 270 feet; that, if possible, there shall be one undivided roadway 80 feet in width with footpaths on each side and also provision for a double line of tramways if satisfactory terms can be arranged with the Calcutta Tramway Company; and that the abutments shall be constructed on a foundation of monoliths. Actually the yield for the scheduled taxation is understood to be only about half the revenue required for a cantilever bridge, but the Act itself does not prescribe the particular type of bridge to be built.

The conclusion of the whole matter would seem to be, therefore, that, as a result of about fifteen years of discussion, a bridge pretty much the same as that recommended by the Committee of Engineers of 1912-13 will be eventually built. In the meantime Calcutta has had to get along as best it can with the totally inadequate accommodation provided by the existing bridge; and it will have to continue to do so for some years to come. In addition it will have to pay several lakhs of rupees for repairing the bridge which, as our correspondent pointed out, will be partially closed for several months while the repairs are in progress. It would almost look as though the East might find it cheaper to consent to be hustled a little more.

CURRENT TOPICS.

India at Neuve Chapelle.

"I saw them—I can see them now—shivering in those early and primitive trenches; standing up to their knees in foul water—their features always composed on that mask of fatalism which gives an impression of pathos altogether poignant. Their bodies were often broken by the elements, but their souls were never conquered." Lord Birkenhead has made few more striking utterances than his address on Friday before the unveiling of the Indian War Memorial at Neuve Chapelle. "It would be an insincerity," he said, "to pretend that the objects with which this war was waged could have been known, or were known to the majority of the Indian Army. Many a humble soldier; one suspects, must have thought of his far-away village, sun-swept, unmenaced, and wondered what inscrutable purpose of whatever deity he worshipped had projected him into this sinister and bloody maelstrom. It is in all these circumstances the special soldierly virtue of these troops that they met with steadfast eyes the clash of a novel and horrible war, certainly without the clear, perhaps without the discernible, stimulus of a danger to their own homes or to their own wives and children. Whence then came this spirit of endurance and of high endeavour? It came from the twin sources of an inborn and simple loyalty; of an instructed and very perfect discipline. Like the Roman legionary, they were faithful unto death. They had accepted a duty. They discharged it. More cannot be said; more need not be said."

The ceremony, like the monument itself, was simple, restrained but impressive, and worthy of those whose sacrifice it commemorated. Designed by Sir Herbert Baker, one of the architects of the New Delhi, the monument is unique among British war memorials in France. It is not set upon any commanding eminence, nor is itself made imposing by any great mass of masonry, only a slender column, 50 ft. high, recalling the famous pillars of King Asoka, being visible for a long distance over the low-lying country at the foot of the Aubers ridge of unhallowed memory. The base of the column, which is nearest to the cross-roads, midway between La Bassée and Laventie, bears only on one side the simple inscription: "India, 1914-1918," and on the other, facing the Stone of Remembrance, the words: "God is one, His is the Victory," with below similar but not identical texts in Arabic, Hindi, and Gurmukhi. Finally, on the far side of the Memorial, let into the white enclosing walls, is the great stele, or panel, with the inscription: "To the honour of the Army of India which fought in France and Belgium, 1914-18, and in perpetual remembrance of those of their dead who are here recorded and who have no known grave."

The Water Hyacinth.

The Indian Council of State has been discussing that curious pest known as the Water Hyacinth. The ravages of this weed—which infests and blocks up water courses, ponds, rivers, etc.—are well known to all interested in Eastern Bengal. It is not really a hyacinth at all; but its blossom looks like that of a hyacinth, and hence its name. For years past the jute interests of Eastern Bengal—which is one of the big jute-growing areas—have been trying their best to eradicate the plant. So far, however, they have not succeeded in making much headway against it. The Local Government have instituted enquiries, have consulted eminent scientists, and have written reports. But the water hyacinth still prospers, and continues to spread with the extraordinary rapidity which is one of its characteristics.

Two or three years ago the Associated Chambers of Commerce of India and Ceylon urged the Government of Bengal to take vigorous and prompt remedial measures; and the Government replied that they realised the importance of the matter and that they

would do their best. Time showed, however, that this did not amount to anything very much so far as the destruction of the weed was concerned. The Associated Chambers accordingly passed another resolution at their Cawnpore meeting in December of last year. As they had failed to get effective help from the Local Government, the Chambers suggested that the Government of India should take a hand, seeing that the water hyacinth is making its unwelcome presence felt in other provinces besides Bengal. The Government of India declined, however, to do more than to bring the matter to the attention of the Local Governments. As the question is provincial and not central, they could not deal with it.

According to the newspapers received from India by a recent mail a Bengali member of the Council of State has lately moved in that House a resolution to the effect that 40 per cent. of the export duty which is levied on exported raw and manufactured jute should be utilised for the destruction of the water hyacinth. Jute is a monopoly of Bengal, and it is exported exclusively from the two Bengal ports, Calcutta and Chittagong. The export tax is a customs duty and it is levied and collected, as are all customs duties, whether export or import, by the Government of India and not by the Local Government. The proceeds of the export tax find their way, of course, into the central revenues. They are not ear-marked for the province of Bengal, from which they are derived, any more than the proceeds of the export duty on rice are ear-marked for the province of Burma from which they are chiefly derived. As must have been anticipated, therefore, the Government of India declined to entertain the proposal made in the resolution, which was negatived by the Council. Nevertheless, if the mover has succeeded, as presumably he has, in directing attention once more to the urgent need for the prompt destruction and eradication of the water hyacinth his efforts will not have been altogether in vain.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 22.

Bengal's New Ministry.

The prospects of the new Ministry in Bengal were doubtful until yesterday. Whilst Sir D. P. Sarbadhicari, as a friend of the reforms sees that the selected Ministers, with the support of Europeans, will have to show great skill and powers to overcome the opposition, the Swarajists are still hoping to break up any new combination. There is a new Union Party, and Sir P. C. Mitter and Mr. Ghuznavi are its staunchest supporters; but Sir Provash is at present in England, and he may not support as much as is anticipated the policy of the new party. What seems the first and best step is that the Hindu and Muhammadan Ministers, when selected, should sink their personal differences and only consider the national task that lies before them. The Governor of Bengal has done his best to reduce to a minimum the length of the period during which Bengal has been left without a Ministry, but there was an evident lack of good will and understanding, until Sir P. C. Mitter and Nawab Mussaraff Hossain accepted the burden of Ministerial office. The Muhammadans seem to hold the key of the situation, and their attitude will be the deciding factor. His Excellency and the Hon. Lady Jackson have left Darjeeling for Simla, via Calcutta. They will return on September 30, and the new Ministers will be sworn in at Darjeeling on October 12, Sir P. C. Mitter being due in Calcutta on the 10th.

Mr. Gandhi.

After a long rest Mr. Gandhi has resumed his activities. In the course of several speeches that he has delivered lately, and in some of his leaders in his paper, *Young*

India, he has made remarks to which the Pandits and others have taken exception. Whilst challenging the truth of many among Miss Mayo's statements, Mr. Gandhi very wisely recommends his countrymen "not to repudiate the substance underlying the many allegations," which ought to "spur" Indians into carrying out the long-thought reforms, especially as regards child-marriages and widow-remarriage. But there Mr. Gandhi is opposed by the Pandits, who contend that the Hindu *shastras* sanction untouchability and child marriages, and that the remarriage of widows is an abomination. Another instance of Mr. Gandhi's independence of thought is his remark, while inaugurating a hospital, that hospitals are not, in his eyes, a sign of increasing progress, and that they do not mean a higher civilization. Mr. Gandhi's latest advice to Englishmen is to take to spinning. It is certainly a more wholesome occupation than bridge, and more profitable too, but Englishmen will ever prefer bridge, I fear.

Dr. Rabindranath Tagore.

The angry waves raised in the Malayan Press by Dr. Tagore's alleged criticisms of Chinese affairs have subsided. The poet has left Java for Bali Islands, where the relics of Hindu civilization are said to be preserved better than in Java. There is also a question of a visit to the Philippine Islands, and on the return voyage, a tour in Siam and Cambodia. In spite of pressing invitations, the great wanderer has decided not to go to Canada. He will be back in India next December.

Prohibition in India.

At the annual meeting of the North Calcutta Temperance Union the President, Maharaja Sir Manindra Chandra Nandi of Cassimbazar, requested Government to introduce immediate legislation in the matter of prohibition. The suppression of the drink evil in India is a vital and urgent question. It is true that without public support a policy of total prohibition is a failure, but the education of public opinion must be undertaken with enthusiasm, in spite of the argument that the United States' example is sufficient proof of the inanity of prohibition propaganda and prohibition laws. Talk of prohibition will not do. Zeal for temperance and legislation will keep the people out of harm's way. The Hon'able Maharaja is quite right: preaching moderation alone is no use.

The Lady Engineer.

Calcutta journalists have been disappointed. Miss Victoria Drummond, the lady engineer on board the B.I. boat *Mulbera*, has not allowed any interviewer to see her. The Captain said she was too shy, and did not like to be made fun of. They say that the presence of a feminine element on board makes the crew more polite, and the officers less addicted to swearing. That no stronger expression than "bother!" is ever heard on board. The *Mulbera* is supposed to be the only ship, or at least the only deep-sea boat, on which a female engineer is employed.

Indianisation of the Army.

In spite of strenuous opposition from the official benches and from Europeans the Legislative Assembly has adopted Dr. Moonjee's motion that "immediate effect be given to the unanimous recommendations of the Skeen Committee." *Forward* is of opinion that the Indianisation of the Army cannot be treated as an isolated problem, and it agrees with Mr. Mackworth Young, who emphasized in his preface to the Skeen Committee's report the helplessness of the Government of India to meet the legitimate demands of the people for the Indianization of the Army. The *Englishman* thinks that the acceptance, *in toto*, of the Skeen recommendations, means "the end of the Indian Army as the magnificent fighting machine it is to-day." It is easy to criticise the scheme, but difficult to make constructive suggestions. The system of education prevailing at present in India seems to favour the training of men for the commissioned ranks of an Army. There is

a proposal to raise the status of the Viceroy's commissioned officers to that of King's (Indian) commissioned officers. If, as one presumes, the additional pay enables them to give their sons better education, possibly a Sandhurst one, they might make of those boys efficient Army officers.

The Calcutta Police.

Commenting on the Report issued by the Police Administration of Bengal, the Governor-in-Council said that the health of the force was bad on account of unsatisfactory housing and insufficient leave. The absence of protective measures against malaria and other fevers has led to the disease taking a severe toll. It is averred that the Indian members of the Bengal Legislative Council are the first to fight tooth and nail against any suggestion of comforts for the Police. There is no sympathy on the part of the public for the constable, who is regarded by the people as an oppressor of the poor, and a servant of the tyrants, i.e., the sergeants and head constables, who extort bribes in most cases of conflict. Nowadays, it is said in the report, that state of affairs has almost entirely disappeared. But the Bengal Police is still underpaid, understaffed and badly housed.

The Report further states that "the value of the powers conferred on Government by the Bengal Criminal Law Amendment Act is demonstrated by the contrast between the years 1923 and 1924, with their long tale of outrages, and the period of 1924-26." The strain on the police during the riots was great, but they did their duty on all occasions, and they were fitly eulogized by the Governor of Bengal, on the occasion of a recent Police Parade in Dacca. Another interesting remark made by His Excellency, the Governor of Bengal, was that "whilst the cost of policing 40 million people in England and Wales cost £20 million sterling, Bengal only spent £1 million sterling for a much larger population." In such matters economy cannot be consistent with efficiency. Yet there is a constant cry for economy and retrenchments, though in almost every Province the numbers of the district police are always inadequate to the duties that have to be performed.

Attempts at circulating Bolshevik literature in large quantities are still being persistently made, but, says the Report, thanks to the vigilance of the Customs and Postal Authorities, they have met with little or no success. In spite of rumours, there is no such thing as an Indian Communist party. In fact there are very few Communists in India, and the genuine ones are not allowed to get in touch with their "comrades," so that the Communist menace is, after all, a very negligible quantity. Plenty of Bolshevik literature circulates in the papers, but it does not seem to convince anyone. The so-called danger is not imminent.

The Cinema in India.

A member of the Legislative Assembly the other day moved that the Governor-General in Council be pleased to appoint a committee to examine and report upon the censorship of films in India, to suggest legislation to prevent or penalize the exhibition of demoralizing films. The speaker made an addition to these demands; he suggested that the European community should sympathize with the general Indian protest against Miss Mayo's book. The Hon'ble Member is giving a hint to the cinema-vultures: there is a lot that could be filmed (alas!) to support many of Miss Mayo's views. It is to be hoped that only the beauties of India will be seen on the screen.

Here and There.

The creation of a new race course for Chandernagore, an already old project, is a cause of strife in Pondichery, where a constitutional crisis is going on since the resignation of M. Gaebele, President of the Legislative Assembly in Pondichery. On account of his resignation, six members of his party have followed suit, and eight seats are vacant. The passing of the Chandernagore project in the Assembly depends, they say, upon the strength of the

opposition party after the elections, and it is believed that the party of the Mayor of Chandernagore is not in favour of the contemplated race course.

The Simla Fine Arts Exhibition was opened by His Excellency the Viceroy on September 15. The Viceroy's prize for the best picture went to Mr. Ranade Ukil, for his "Goddess Durga." Miss Margaret Marshall received the Governor's prize for her "Sa Sippi Fair." The Commander-in-Chief's prize for the best picture painted by an officer went to Captain R. C. Sinker, for his "Baltic Fort."

A Mr. Spratt, an alleged English Communist, has been arrested in Bombay, in the office of the Workers and Peasants' party. Mr. Spratt is the author of a proscribed book "India and China," and his rooms in the Y.M.C.A. were raided by the police, after which the authorities of the Association asked him to quit. He left and went to Watson's Hotel. Mr. Spratt applied for bail, but the Deputy Commissioner of Police said that it would constitute a public menace, if bail was allowed. The charges against Mr. Spratt are sedition and conspiracy.

The delay in the extension by Imperial Airways of the route from Basra to Karachi is due to the non-ratification by the Persian Government of the agreement permitting flights along the coast of Persia. It is prejudicing the financial success of the new air route from Egypt to India.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, September 23.

The Director of Agriculture.

Something in the nature of a sensation has been caused by the announcement that Dr. Harold Mann, our Director of Agriculture, is to sever his connexion with the Department at the end of his period of service instead of carrying on further with his work at Sakrand Farm, an off-shoot of the Barrage scheme in Sind. The whole trouble appears to be that Dr. Mann offered to carry on with the scheme for a period of three years, but only on his own terms—with a minimum of red tape. Unfortunately, Government has been unable to agree, so Dr. Mann sails for England next month to take up a lucrative position with a business firm. It strikes one as being all wrong that officialdom should be stretched to such limits. The Sukkur Barrage scheme ought to be viewed from the point of view of a business proposition; and Dr. Mann's services in this respect were worth taking some trouble to retain. It is pointed out that there are no differences existing between the Minister for Agriculture, Mr. Pradhan, and the Director, as was indicated in certain quarters, and it seems quite unlikely that such could have been the case, for Dr. Mann is an officer of long service who would certainly never have questioned his instructions even if they did not ride side by side with his own views of things. But we have not heard the last of the matter, for it is bound to come up before the Council next week and arouse the just wrath of the Sind members.

The Council Session.

The Legislative Council meets again on September 29, and will continue in session until October 18—longer than which it cannot sit, for the Hon. Sir Chunilal Mehta has to leave by that date for Karachi to attend the sittings of the Royal Commission on Agriculture. Of the seventeen days for which the Council is to sit, five have been given over for non-official business, with a possibility of a few extra days if official business is disposed of without too much delay. The last session was productive of many lengthy and pointless speeches by non-official members on official Bills, and though one hopes a similar proceeding will not be adopted on this occasion, one's hopes do not

appear likely to be achieved when it is realised that two such controversial subjects as the University and Fragmentation Bills are coming up for discussion and form the principal items on the agenda.

Advance Maharashtra!

So far it has been generally considered that Maharashtra's interests were principally political, while Gujarat's were mainly commercial. Such, however, appears not to be the case, for the latest move by the Maharashtrians is the formation of their own Chamber of Commerce, with headquarters in Bombay, to make the best use of its indigenous and adopted industries. The question was raised four years ago, and after a great deal of discussion it was allowed to lapse; but this time the proposers have got down to brass tacks and have formed the body, and have entrusted it with the task of securing some assistance to save the declining glass industry. It is a step in the right direction and deserves every support from all industrialists in the Deccan.

High Court Improvements.

I have, I think, already chronicled the advance that has been instituted in the insolvency courts in Bombay; and it is all the more pleasing to record that in addition to that Sir Amberson Marten, a Chief Justice whose name will long be remembered both in Bombay and indeed all over India, has set up a number of committees of judges to inquire into and report on the various offices and establishments connected with the Bombay High Court and as to whether any changes can advantageously be made therein. The sub-committees are given power to call for any papers they may think necessary, and to examine any officers whom they think might assist them, and, what is even more important, need not sit in open Court at such time as the inquiry is in progress. This certainly does not seem to indicate that our judges are over-worked; but perhaps Sir Amberson's idea is that the inquiry will be more than justified in the shorter time that it will in all probability take to dispose of business after the suggestions made have been put into operation.

Broadcasting.

The deadly sameness of the local broadcasting programmes have been the subject of some adverse criticism lately—as it was bound to do once the novelty of the new venture had worn off. Fortunately, the Indian Broadcasting Company have also realised the danger of giving us too much of the same old performers, for they recently experimented with a relay of P.C.J.J., the Philips Experimental Shortwave Station at Eindhoven—and with very good results. Eindhoven was "held" and relayed for somewhere in the neighbourhood of an hour, and provided local enthusiasts with a welcome change. The experiment having proved a success, it is to be trusted that the I.B.C. will continue to relay Continental stations for the benefit of listeners-in.

Globe Trotting.

Globe trotters are becoming something of a nuisance these days, more particularly as they all start out with some such silly idea as that of making their own by either by selling postcards—usually bad—of themselves, or by giving the Press an extremely hackneyed version of the political and other conditions of the various countries through which they have passed. When this practice becomes an everyday matter the problem takes a serious turn. Finns, Germans, Czechoslovakians, Americans, even Britons have all got the craze. And somehow Bombay never fails to provide them with a happy hunting ground for a week or two.

Sporting Sidelights.

We have just concluded a busy Rugger week, which means that we have been visited by several Rugger teams from all over India to compete for the All-India Rugby

Football Trophy. The Bombay Gymkhana were considered to have an excellent chance to secure the trophy this year, but were unfortunate to come up against one better in the Prince of Wales' Volunteers from Calcutta, a pretty "hot" side, who somehow managed to pull out just sufficient to win in each of their three matches. The Volunteers' defence was their strong point, and they made their opponents play just the game that suited them on every occasion. Talking of Rugger turns one's thoughts to a sad loss that we have sustained in the death of L. C. Herne, a Rugger player and manager of the shipping department of Messrs. Killick Nixon. Herne was best remembered, however, for his love of pig-sticking, and he was secretary of the last Gujarat Meeting. There is only one day's racing to record at Poona, and it was marred by a heavy downpour of rain in the middle of the proceedings. The Governor's Cup for Arabs was the principal event, and was carried off for the third year in succession by the Maharaja of Kolhapur. Criticism has been levelled at the handicapping in this race, but one cannot see how the winner could, with any fairness, have been given anything other than the light weight which it was asked to carry. The Western India States for thoroughbreds was carried off by a rank outsider in Mr. G. E. D. Langley's Candle Hill, who won comfortably from the Aga Khan's Darial II and Sir Victor Sassoon's Fordney.

Commercial Markets.

Easy money conditions have prevailed during the week, owing to the demand from Calcutta for financing the jute crop not coming up to expectations, and this easiness has resulted in gilt-edged securities remaining steady despite the issuance of Treasury Bills. Exchange has been slightly easier with a quiet tone prevailing, and this has resulted in gold showing a slight improvement. Silver has been controlled by the forthcoming settlement and slight fluctuations have occurred. The cotton quotation has eased in view of the good crop prospects and mills are coming in as small buyers. In piece-goods there has been little doing.

DYARCHY—IN THEORY AND PRACTICE.*

(Continued from page 435.)

"No sensible Indian can justly withhold his appreciation of the great work done by the British services in India in evolving a stable system of administration in that country (out of the disruption which prevailed therein in the eighteenth and the earlier part of the nineteenth centuries), in establishing law and order on a footing which may compare favourably with the conditions in many Western countries, in introducing means of communication like railways, telegraphs, and those other paraphernalia of modern civilization which we naturally associate with an efficient and advanced system of administration. All this may and must be freely and frankly conceded. But when we come to consider in these days the results achieved by any Government, we cannot confine our attention merely to the blessings of peace and order or the benefits brought in their train by courts or communications. We have naturally to look to other things as well for forming a just estimate, and these are the economic condition of the people, their resources, their fighting strength against famines and the ravages caused by epidemics, as also their position in the sphere of education, the educational facilities open to them, and above all the share they enjoy in moulding and directing the policy of their Government. It is the universal opinion of educated Indians that highly efficient as the British Government in India has been as an administrative

machinery, it has not been sufficiently responsive in these higher spheres of activities, which are of even more vital interest to the well-being of the people than the mere maintenance of law and order or the administration of justice by courts manned by competent officers. What Lord Sinha has said of Bengal is, in the opinion of educated Indians, generally applicable to the conditions of the other provinces as well. Now, if this view of the material progress of India under British rule be accepted as fairly correct, it is easy to understand the anxiety of British statesmen to so modify the old system as to make it more mindful of the pressing needs and requirements of the people, and more responsive to their material welfare and moral progress. Hence—I take it—the memorable declaration made by the then Secretary of State (the late Rt. Hon. E. S. Montagu) in August 1917, as representing the view of the Coalition Government (or, in other words, of all the great political parties in the United Kingdom) which is now, in more carefully worded language, embodied in the Preamble to the Government of India Amendment Act of 1919."

After describing some of the outstanding and salient features, both in theory and practice, of the principle of Dyarchy, the application of which to the nine major provincial administrations constituted the principal effort made to remedy the defects of the old system, Mr. Sinha said that the new system has been found both in its principles and practice to be full of grave defects and serious limitations, and it was not surprising that it had not appealed to Indian imagination. "A Government like that established in all the major provinces of the Indian Empire, composed of an elected Legislative and a divided Executive, with a Governor at its head armed with extensive powers and working one half of the Government with the aid of an Executive Council appointed by the Crown and not responsible to the Legislature, and the other half with the aid of Ministers appointed by himself and responsible to the Legislature, is a system not only too complex and complicated, but one which being unknown to constitutional history, is naturally unwarranted by political experience as a satisfactory solution of the problem of an efficient Executive, sufficiently amenable to the control of popular representatives. As for its being able to command the "faith" of the Indian people, it is unfortunately but too true that in the opinion of all those who have worked the system, whether officials or non-officials, Indians or Europeans, Dyarchy has completely forfeited any claim to allegiance." The object laid down in the preamble to the Government of India Act of 1919—namely, "the gradual development of self-governing institutions with a view to the progressive realisation of responsible government in British India" had not only not been achieved, but was not likely to be achieved at any time through the medium of dyarchy.

"At one time, with a shorter experience of the working of Dyarchy," Mr. Sinha proceeded, "I thought that the best course would be to transfer from time to time, additional departments to the charge of Ministers." But after discussions with his two colleagues in the Government on the reserved side—Sir William Marris, the Governor, and Sir Henry Wheeler—the lecturer said he had been satisfied that the remedy in that case would be worse than the disease itself. He had, therefore, been led to accept the conclusion suggested by those authorities—namely, that provincial autonomy could be the only solution of the problem. "The inevitable conclusion logically forced upon us," he concluded, "is that whenever the present system is to be superseded it can only be by the adoption of provincial autonomy—i.e., by a system in which the Executive is composed of a constitutional Governor and a Ministry responsible to the Legislature."

A full account of the interesting discussion, initiated by the Maharajah of Burdwan, which ensued, and was subsequently adjourned for a fortnight, will appear in next week's issue of the "Near East and India."

* Extracts from a paper read by Mr. Sachchidananda Sinha at the opening meeting of the East India Association on October 3, with Sir Louis Dane in the chair.

AN INDIAN WAR MEMORIAL.

On Friday, in the presence of M. Léon Perrier, the French Minister for the Colonies, and Maréchal Foch, the war memorial erected by the Imperial War Graves Commission at Neuve Chapelle to commemorate the services of the Indian troops in France and Belgium, was unveiled by Lord Birkenhead. In addition to the Secretary of State for India and the detachment of Indian troops, who formed the Guard of Honour, the Empire was represented by Lord Hardinge, the Maharaja of Kapurthala, Field-Marshal Sir Claud Jacob, Lieutenant-General Sir Charles Anderson, and Major-General Sir Fabian Ware, Vice-Chairman of the Imperial War Graves Commission. Among the many other distinguished soldiers and civilians present were the Prefect of the Pas de Calais, Lord Winterton, Lord Lloyd, and Mr. Rudyard Kipling.

Opening the brief but impressive ceremony which preceded the actual unveiling of the memorial panel, Lieutenant-General Sir Charles Anderson, who took over the command of the Indian Corps from Sir James Wilcocks, gave a short account of the part played by the Indian troops on the Western front and was followed by the Maharaja of Kapurthala, who referred to the pride of his countrymen in the record Sir Charles Anderson had unfolded. Marshal Foch and M. Léon Perrier both paid striking tribute to Indian endurance and gallantry, the former closing with a promise that France would always guard religiously the bodies of the dead entrusted to her soil. At the invitation of Field-Marshal Sir Claud Jacob, Lord Birkenhead then delivered the brilliant speech, extracts of which will be found on another page of this issue, and at the conclusion of his address performed the simple unveiling ceremony. The Last Post was sounded by the buglers furnished by British regiments who served with the Indian troops in France, namely, the Seaforth Highlanders, the Highland Light Infantry, the Leicestershire Regiment, and the Black Watch. There followed one minute's silence, and then the Reveille. The ceremony concluded with the playing of "La Marseillaise" and the National Anthem by the band of the 43rd Regiment, after which Lord Birkenhead laid two wreaths of bay leaves and palm at the foot of the memorial panel, the first in the name of the King-Emperor, the second on behalf of the India Office; he was followed by the bearers of various official and other wreaths.

CORRESPONDENCE

THE MUSLIM CASE.

To the Editor of THE NEAR EAST AND INDIA.

Sir,—In his letter in *THE NEAR EAST AND INDIA* of September 29 under the above heading, Mr. Zafrulla Khan really supports the main argument of the article that he criticises. It was argued in the article, which appeared in your issue of September 15, that every advance which the British Government have made in the direction of democracy has been received with bitterness and antagonism; that the last and greatest effort in that direction has created more bitterness and antagonism than any previous advance; and that it has also promoted and intensified communal and religious animosities. Mr. Khan deals only with the question of communal and religious animosity. He says that it is not the introduction of democratic principles that is at fault: it is "the result of the omission of the different communities to arrive at a settlement among themselves with regard to their rights and obligations under the altered form of constitution which was ushered in by the Montagu-Chelmsford scheme of reforms." Precisely: the scheme of reforms ushered in a further instalment of Western democratic principles. And to these principles the various communities cannot adjust themselves. They were in 1919, and they still are, unable to come to a settlement on such principles. They are no nearer to a settlement now than they were eight or nine

years ago. On the contrary, the essentially vital character of their differences is now more than ever clear.

That the leaders of the great communities are making praiseworthy efforts to unite their followers may be readily admitted. But with what result? To go no farther back, let us take the latest information which has come to hand. According to the Indian newspapers certain of the Hindu and Muhammadan leaders met at Simla, at the end of August, in a "Unity Conference." They issued a solemn appeal to their fellow-countrymen to put an end to communal animosities and to live together in peace and amity. In the newspapers which arrived by the same mail it was reported that almost immediately afterwards there were serious Hindu and Muhammadan riots at so important a place as Nagpur. And it has been since reported that there have been similar disturbances at Dehra Dun and elsewhere.

And so it has been going on for a long time now; and he is indeed a sanguine man who believes, in the face of such evidence, that all will be well if Western principles are applied still more liberally and indiscriminately. It was agreed in the article which Mr. Khan criticises that the people of India should be given more and more freedom in the management of their local and provincial affairs. What was urged was that the time has come when a check must be put on the downward course of our present policy, which is rapidly tending to widen the divisions between the various communities, and to substitute chaos for orderly progress. It will be for the Statutory Commission—and not so much for the Government of India as Mr. Khan seems to think—to consider the nature of the remedy to be prescribed for the existing disorders. But the remedy which was suggested in the article does not appear to be unworthy of serious consideration.—I am, etc.,

London, W.C.

"THIRTY YEARS' IN INDIA."

NEWS IN BRIEF.

Sir William Marris's five years' term as Governor of the United Provinces of Agra and Oudh has been extended by three weeks, until January 14, when Sir Alexander Muddiman, his successor, returns from leave. Sir Sam O'Donnell on the same day will hand over his duties as Finance Member of the United Provinces Executive Council to Mr. George Lambert.

The Textile Tariff's Board's recommendation that a mission should be sent abroad for the expansion of the export trade of Indian cotton mills, according to *The Times'* Bombay Correspondent, will shortly be made effective. The Director-General of Commercial Intelligence, accompanied by the secretary of the Bombay Millowners' Association, is expected to leave India during the next few weeks on a tour of Burma, the Straits Settlements, the Dutch East Indies, Ceylon, Persia, Mesopotamia, the Levant, Egypt, Abyssinia, and East Africa to investigate the potentialities of foreign markets.

The Executive Committee of the India Branch of the Empire Parliamentary Association met on September 12 in the Assembly building to consider the proposal to invite the delegation of members of the United Kingdom Branch of the Association to visit India during the next cold weather of 1927-28 and also to consider the invitation which has been received from the Canadian Branch of the Association to send a delegation of members of the India Branch to visit Canada during the months of September and October, 1928.

The appointment of Rear-Admiral Bertram S. Thesiger, C.B., C.M.G., to be Commander-in-Chief, East Indies Station, dates from October 4, when his flag was hoisted on board the President, R.N.V.R. drillship at Blackfriars, and struck at sunset. Rear-Admiral Thesiger is regarded as on leave of absence until he takes up his command, about November 30. Paymaster Commander J. L. Syson, O.B.E., who has been in the Trade Division of the Naval Staff at the Admiralty for the past two years, will be secretary to Rear-Admiral Thesiger in his new command. In 1924-25 he was secretary to Vice-Admiral the Hon. Sir Hubert Brand, then Second Sea Lord, and in 1923-24 he was with the late Sir Michael Culme-Seymour, Commander-in-Chief on the America and West Indies Station.

Major-General Hugh E. Herdon, C.B., C.I.E., has been selected to succeed Lieutenant-General Sir Herbert C. Holman in command of the Central Provinces District, with effect from November 16. The new G.O.C. has had a long experience of frontier warfare, and was specially brought to notice in the last Waziristan dispatch. He was formerly in the Wiltshire Regiment; he is a graduate of the Staff College, and possesses a wide knowledge of Indian languages. He has held appointments on both administrative and operations staffs, including Assistant Quartermaster-General and Brigade Commander, the later from 1922 to 1926.

Tuesday Morning.

Motor Transport in Abyssinia.

A development of special interest is the registration at Addis Ababa of the Ethiopian Motor Transport Company which has been given a concession for the exploration of roads in Abyssinia. The promoters of the company, which will have its head office at Addis Ababa, are Messrs. A. Danalis and T. Zervos. The company is to commence the transportation of merchandise from Gambeila to Rocca in the new year, and will use for the purpose Morris six-wheel lorries of two tons capacity. This attempt to develop transportation in Western Abyssinia will be followed with close attention, for its importance for the development of trade between Abyssinia and the Sudan is obvious. The trade between the two regions by way of Gambeila, which, of course, is only one of the stations for this trade, is considerable. The value of the Sudan's imports from Abyssinia by this route in 1925 was £212,048, while for last year the trade totalled £E173,738. The value of the Sudan's exports for 1925 was £E8,427, the figures for 1926 being £E10,311, but to these small totals have to be added the considerable volume of re-exports, representing in 1925 £E49,870 and in 1926 £E67,188. Given the certainty of rapid delivery this trade will no doubt be developed to a marked extent.

Developing the Sudan.

While on the subject of motor transport, a word must be said with regard to the work of developing roads and establishing services which is steadily proceeding in the Sudan. This question of communications and the expansion of rain-grown cotton are inseparably linked. The natives will only grow the crop on an adequate scale if things are made as easy for them as possible by the authorities in the way of getting the crop to market. With American at a low price last year there was a marked fall in production, an eventuality which had been regarded as inevitable, but now that prices have again taken an upward trend owing to the small crop in America it may be expected that there will be a further development of the rain-grown crop as it will once more be a remunerative undertaking. The development of communications is particularly vital to the growing of cotton because it will help to reduce costs and will thus counteract to some extent the fluctuations of price that are an inevitable feature of the crop from time to time. In the report of the Central Economic Board of the Sudan Government, a review of which will be found elsewhere in this issue, encouraging details are given with regard to the progress made with roads and transport in the various provinces. As an instance of the development it is stated that in Bahr-el-Ghazal Province hundreds of miles of new roads have been cleared. In this province there are about 4,000 miles of roads of which 1,700 are well suited for motor lorries. Then in Mongalla Province last year developments included a new road from Rejaf to Ngangala to

connect the Latuka roads with Rejaf, and thirty-eight miles of motor road in the Opari country to link up various centres. In Nuba Mountains Province some half a dozen new dry weather motor roads were constructed, while the programme for the present year includes two all-weather motor roads. New motor roads were also made in Berber Province and in Kassala Province. These examples I have given will serve as indications of the work that is being done unceasingly to open up the Sudan, the results of which will not be apparent for some years, but ultimately will have abiding effects on the prosperity of the country. It is rather surprising in view of the work that is going on that the figures for motor vehicles in the country are not more impressive. On January 1 last 1,279 motor cars were registered in the Sudan and 247 motor cycles, and these totals in the near future should undergo a considerable increase.

The Turkish Exchange.

The marked improvement in the Turkish exchange in the last fortnight will doubtless not have escaped notice. At one time indeed the rate was just under 900, and at the time of writing it stands at 907½ which represents a pronounced difference from the rate at which it has stood in recent weeks. There have been no developments in the economic position of the country to account for the change, which it is only reasonable to attribute to favourable news of the Paris negotiations in regard to the details of the debt settlement. While the movement may thus be a reflection of the Turkish belief that the foreign money market will shortly be accessible to the country it cannot be too strongly emphasised that there is not likely to be any possibility of the desired loan in the immediate future. The debt settlement will pave the way for it, of course, but it has still to be seen how Turkey will carry out her obligations under it, and until her good faith is self-evident any overtures for a loan would be futile. One point which has an all-important influence on the situation, and applies to other countries as well as to Turkey, must be borne in mind. A settlement which is satisfactory merely because it is the best arrangement that can be

made in the interests of the bondholders but which falls short of equity must be prejudicial to the interests of the borrowing country. Its effects will show themselves in the higher rate of interest that will be required for further accommodation as in a sense a guarantee against the risk that in the future the full conditions of the loan may not be complied with. Can it be maintained in the circumstances that this is unreasonable?

Sir George Schuster's New Post.

The interesting announcement was forthcoming last week that the Secretary for the Colonies has decided to appoint provisionally an Economic and Financial Adviser to advise him on matters concerning the economic development and financial problems of the regions whose administration is subject to his control. Sir George Schuster, K.C.M.G. C.B.E., M.C., who is shortly retiring from his appointment as Financial Secretary to the Government of the Sudan, has been appointed to the post. It is understood that the duties of the post will not occupy Sir George's whole time, and that he will continue to act as a consultant to the Sudan Government on matters of financial policy. Sir George Schuster, who was educated at Charterhouse and New College Oxford, served throughout the Great War, and in 1919 was with the Murmansk Force, gaining the M.C.. He was appointed in 1921 Chief Assistant to the 'Organiser of International Credits under the League of Nations. In the following year he became Financial Secretary to the Sudan Govern-

ment in which capacity his excellent work has gained for him a well-deserved reputation as a financial expert. He acted as Chairman of the Advisory Committee appointed by the Colonial Secretary to consider the application of the East African loan, and his new appointment may be taken as a further indication of the Government's intention to explore every avenue that holds out promise for the development of the Empire.

Yugoslavia's Harvest.

In this year of particularly inclement weather conditions the harvests of the various countries assume an unusual importance. A comprehensive statement on the position in Yugoslavia by the Minister of Agriculture there is deserving of attention therefore, because it probably gives an approximate indication of the crop yields in the Near East where the weather has displayed much the same vagaries as elsewhere. The statement based on figures from all parts of Yugoslavia except the Skoplye district and two districts in the Banat show that the total yield of cereals is 16,845,411 quintals of wheat, 3,162,833 quintals of barley, 1,534,484 quintals of rye, 3,062,709 quintals of oats, and 441,640 quintals of wheat and rye. Compared with the average yield for the period 1920-26 these totals show an increase of more than 6 per cent. for wheat, of over 1 per cent. for barley, and of over 30 per cent. for wheat and rye, while there is a decrease of 3 per cent. for rye and of 23 per cent. for oats. The real test is, however, a comparison with the previous year's figures,

The result of Experience

THE expert technicians of The Dunlop Rubber Company have a great inheritance—thirty-nine years of tyre building experience! All the accumulated wisdom and knowledge of tyres, their characteristics and their manufacture, is behind every Dunlop Tyre you buy. Experience counts! Without the background of that thirty-nine years you could not expect the service you get in the present Dunlop Tyres. When you next buy tyres, therefore, remember this thirty-nine years of unrivalled experience and

Insist on

Branches throughout the World

THERE IS A DUNLOP TYRE FOR EVERY STANDARD RIM

C.F.H. 644

and these show decreases of 13 per cent. for wheat, of over 16 per cent. for barley, of 19 per cent. for rye, and of over 16 per cent. for oats, while there is an increase for wheat and rye of one per cent. Allowing for the yield in the districts not included the decreases will be considerably less but even so it is evident that Yugoslavia's cereal harvest has been seriously affected. According to the statement the quality of the wheat is better, and there will be a surplus for export of about two million quintals. The maize crop will be relatively a failure according to the figures given for twelve districts, the yield for which is put at 9,354,044 quintals as compared with 16,450,750 quintals for the previous year, a difference which if it is borne out for the whole country will mean a decrease of 43 per cent. The Minister of Agriculture estimates that the total yield will be approximately 19,500,000 quintals as compared with 34,000,000 quintals in 1926, so that the yield will be about 5,500,000 quintals below the amount needed to meet the country's requirements. It is stated, however, that owing to the large stocks in Yugoslavia it will not be necessary to import maize, and it is not proposed to prohibit the export of this commodity. Finally, the yield of plums, a very important item in Yugoslavia's export trade, also promises to be poor. The estimates for nine districts give a yield of 1,682,056 quintals as compared with one of 3,485,016 quintals from the same districts last year, or a decrease of 51.74 per cent.

The Rubber Position.

A further large increase in the London stocks of rubber brings their total to over 70,000 tons, figures which are a measure of the failure of the existing restriction scheme and also of the prospects of any substantial increase in the price in the near future. I have referred on previous occasions to some of the reasons which are advanced for the existing situation which has taken the majority of people interested—whether experts or otherwise—entirely by surprise. Of these reasons, and there are many, it seems to me that there is only one which really matters, and that is the failure of demand to keep pace with supply. No doubt the restriction scheme will be tightened up and thus there will presently be an improvement in the position but it will only be a superficial improvement pending the development of demand and the discovery of new uses for the commodity.

COMMENTATOR.

The production of the Anglo-Egyptian Oilfields for the week ended October 7 amounted to 3,611 tons.

The production of Hamilton's Concessions (Roumania) for the week ended October 7 was about 1,410 tons (9,870 barrels).

Messrs. Dorman, Long and Co. are opening a constructional and bridge-building establishment in India.

A Reuter message from Jerusalem states that the Government has made available £30,000 with the object of granting easy loans for nomadic tribes in the Beersheba and Gaza districts, and for relieving distress in consequence of the drought of last winter.

Motors and Motoring

By G. B. B.

Trade Improving.

That the "British motor car industry is showing signs of improvement" is the recently expressed view of Mr. W. R. Morris, of Morris Motors, Ltd., who, opening a new motor depot, said that signs of great expansion are visible and that in his view this country is going to lead the world. Well, this country's motor trade would be already leading the world and doing so well that improvement would be almost impossible had British motor manufacturers acted with more foresight a few years ago and told the world exactly what they were prepared to supply. It is a curious thing, that one can hardly pick up a daily paper to-day without reading a speech by some leading business man in which British producers are urged to advertise more scientifically and more extensively. None of them do it; the most daring content themselves with a modest "splash" which is practically lost in the flood poured out from the offices of American publicity experts.

Features of Olympia.

Some of the things that should be seen at the Olympia Show have been already dealt with here. Amongst others may be mentioned the Wilson gear-box which is claimed to present many advantages. The inventors of new gear-boxes have been legion; the really improved designs that have come on the market may be counted on the fingers. Sometimes it has been the cast that has prevented their adoption, and sometimes there has been some inherent defect that the designer has overlooked. I referred to the Lea-Francis free wheel car recently, and find I omitted to say that an additional lever allows the driver to lock the free wheel at will. This is centrally mounted, the change speed and brake levers being on its right hand. The whole thing seems to me to be sound and fool-proof, and I look forward to its complete success.

A feature of the engines fitted to the majority of new models shown at Olympia is increased rigidity which has been gained by the fairly general use of a combined cylinder and crank case casting. It might be thought that this innovation in design impaired accessibility, but this is certainly not the case with regard to those models I have been able to inspect. In fact such accessories as water pump and magneto are really more easily got at than in previous designs. With regard to transmission, the single plate type of clutch is still largely in evidence; in fact it seems to have increased in favour, owing principally to its sweetness in operation. Brake operating gears have been made more simple, the modern tendency being to use rods rather than cables. That I regard as a step in the right direction. The most popular system of braking is that of using internal expanding shoes on drums on all four wheels. The servo-operated systems, however, are still as popular as ever.

The general custom appears now to be to carry the

petrol tank between the rear dumb-irons instead of under the scuttle. Luggage grids are a standard feature in most designs and the spare wheel is now generally mounted at the rear instead of at the side of the car.

Superchargers, in spite of their many advantages on paper, are not yet in general favour for touring work although they are fitted fairly generally on sports models. Personally, I think the day is not far distant when superchargers will be a standard fitting on every high grade car. The $\frac{1}{2}$ litre Lea-Francis Hyper-Sports models are fitted with superchargers, and these cars have, as every user knows, a marked power of acceleration, a maximum speed of about 90 m.p.h., and a sweet and tractable disposition that makes them as easily controlled in dense traffic as an ordinary touring car. The supercharging device eliminates what is called the "viciousness" of this type of car, and also saves a good deal of gear changing.

An exhibit that should not be missed is that of Crossley Motors, Ltd. In particular, the 20.9 h.p. Crossley Six is a fine production, and is claimed to be the smoothest and most flexible car of its type yet built, vibrationless at all speeds and capable of from 3 to 70 m.p.h. on top gear. I have always liked the Crossley productions and I am sure that the new models will enhance still further the reputation of this Manchester firm.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Surgical and Medical Instruments.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of surgical and medical instruments. December 20.

Light Railways Material.—The Director-General, Main Drainage Department, 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply of light railways materials. December 1.

Bedsteads.—The Department of Public Health, Cairo, invites tenders for the supply of 343 iron bedsteads, with wire mattress. October 25. (D.O.T.)

Paper, Etc.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and binding materials required by the Government Press for the year 1927-1928. October 24.

Safes.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of iron safes required by the Direct Taxes Department. December 1.

Marine Units.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of two marine units for ferryboat for Beni Suef Provincial Council. November 1.

Envelope-making Machines, Etc.—The Ministry of Finance invites tenders for the supply of 2 envelope-making machines, automatic, to be equipped if possible with a special device for printing "O.H.E.M.S." simultaneously in Arabic and European characters. Output to be from 60 to 100 envelopes per minute, according to size; 2 direct current motors, 110 volts, to operate above machines; 2 sets of cutting knives for making envelopes (large size) by hand; 1 paper-

cutting machine, large size, 70 x 100 cms., with 110 volts d.c. motor for operating same; 3 paper-ruling machines and accessories; printing machines. December 5. (D.O.T.)

Bristle Paper.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of bristle paper required by the Ministry of Finance. October 15.

Steam Salvage Tug.—The Director-General, Ports and Light-houses Administration, Arsenal, Alexandria, invites tenders for the supply of a steam salvage tug as per conditions of tender and specifications obtainable from Secretariat Department, Arsenal, against payment £E4 per set. October 24.

Bedsteads.—The Director of Stores, Department of Public Health, Cairo, invites tenders for the supply of bedsteads iron, required for the year 1927-1928. October 25.

Machinery.—The Controller of Technical Education, Ministry of Education, Sharia, Qasr el Aini, Cairo, invites tenders for the supply of machinery and machine tools for the Model Workshops and Trade Schools, Bulaq Technical School and the Intermediate School of Agriculture at Moushtuhor. October 17.

Turbo Alternator Groups, Etc.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply and erection at site of Belqas Power Station of three Turbo alternator groups, and accessories required for the Public Works Ministry (October 26); and for the supply and erection at site of Esna Barrage grounds of two Turbo alternator groups, and accessories, required for the Public Works Ministry. November 2.

GREECE.

Electric Travelling Cranes.—Tenders are invited for electric travelling cranes for the Administrative Committee of the Port of Piræus, and must be submitted to the Commercial Department, Greek Legation, 51, Upper Brook Street, London, by November 14.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Birkenhead, October 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, October 22); s.s. Maimyo for Calcutta (Birkenhead, October 29).

Bibby Line.—S.s. Oxfordshire for Port Said, Colombo, and Rangoon (Birkenhead, October 19).

British India Line.—S.s. Gambada for Bombay and Karachi (London, October 15); s.s. Madura for Colombo, Madras, and Calcutta (London, October 22).

Cunard Line.—S.s. Cypria for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool October 15, Swansea October 18); s.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool November 12, Glasgow and Swansea November 12).

Johnston Line.—S.s. Dromore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (Liverpool, October 15); s.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the last steamer of the season for Galatz and Braila) (Liverpool, November 5).

P. and O. Line.—S.s. Ranchi for Bombay (London, October 14); s.s. Nagoya for Colombo, Madras, and Calcutta (London, October 15); s.s. Rajputana for Bombay (London, October 28); s.s. Padua for Colombo, Madras, and Calcutta (London, October 29).

Prince Line.—S.s. Syrian Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (Manchester, October 14); s.s. Stuart Prince for Tunis, Malta, Alexandria, Jaffa, Haifa, Beyrout, and Cyprus (London, October 29).

Ellerman and Papayanni Lines.—S.s. Malatian for Malta, Alexandria, Jaffa, and Haifa (Glasgow October 17, Liverpool October 20); s.s. Bavarian for Oran, Algiers, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 29). Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume, via Trieste.

Steaua Romana (British), Limited, are advised that the production of the Steaua Romana Company, Bucharest, for September was 44,510 tons.

The Calcutta Electric Supply Corporation has declared an interim dividend of 5 per cent. (actual) on the ordinary shares, less tax at 2s. in the £, payable November 15.

The Transylvanische Creditbank, A.G., is to increase its capital from 20,000,000 lei to 50,000,000 lei.

THE PROGRESS OF THE SUDAN.

The dramatic economic advance made by the Sudan since the War has given a special interest in the last few years to the annual report of the Central Economic Board of the Sudan Government—a report which, it is almost unnecessary to remark, covers the whole range of the country's activities. It is an unfortunate fact that in the case of countries such as the Sudan there are bound to be from time to time setbacks. Progress, in short, cannot be continuous, though it naturally follows that the more promising the region the less will be the effect of the period of depression. The report which has now been issued covers such a period in the Sudan's history, the cause of which is to be found in the poor rainfall for two years in succession which made grain scarce and dear, rendered necessary the importation of large quantities of dura, and has had a marked effect on the purchasing power of the country. As the development of cotton growing has gone rapidly ahead we have the paradox of prosperity in one direction and depression in another, for while in the northern and central parts of the country, to use the words of the report, "the people have been struggling against the hardships consequent on the poor rainfall and low Nile of 1925, accentuated by a second failure of the rains in 1926," in the Gezira region the inhabitants benefited by the cotton crop which meant in 1926 to the tenants on the irrigation scheme a cash return of nearly £E1,000,000. Without the assistance of the Gezira Scheme which was last year in operation for the first time on a large scale, it is obvious that the incidence of the economic depression would have been a much more serious matter for the country. It is only necessary to glance at the trade figures to realise this aspect. The statistics have been fully dealt with in these columns and need not, therefore, be recapitulated now, and it will suffice to point out that but for the increase of 43 per cent. in the value of the exports of cotton and cotton seed—an increase which represented £E1,346,568—the Sudan would have had an adverse trade balance of £E300,000, instead of a favourable one of roughly £E1,050,000. It may be noted that the import figures for 1926 include a large payment for dura. In 1925 the Sudan exported dura to the value of £E220,636, and the fact that last year it was necessary

to import this grain to the amount of £E212,053 is in a measure an index of what the depression has meant to the country, and, it might be added, is meaning for, as already recorded in these columns, the importation of dura on a large scale has continued this year. The two commodities mentioned—cotton and dura—are, it is emphasised, the basic factors in the economic situation. The report continues:—

Financially, the future of the country is bound up with the success of the Gezira Irrigation Scheme, which has cost over £E11,000,000, while the welfare of the population at large depends on an adequate and regular food supply, but it is not to be assumed that there is as yet any essential opposition between cotton and grain interests, either in the Gezira or elsewhere. On balance, increased cotton cultivation has resulted, so far, in increased dura production, at any rate in the Gezira area, and it is probable that on an average, over a period of years, the Gezira, hitherto the granary of the Northern Sudan, will continue with the aid of an assured water supply to produce as much dura as it has done in the past. Experience only can show whether the quantity produced in that area will suffice not only for its own needs, but also for those other parts of the Sudan which have depended on it for grain in the past.

Cotton growing will impinge on grain production whenever the need for providing supplies of grain to meet the extra demand for food grains in the Gezira becomes urgent. As cotton cultivation extends, and the wealth of the Gezira population increases, the rise in the standard of living, combined with the large seasonal influx of labour from outside the scheme for hoeing and picking, may mean that in course of time the Gezira will become an importer of dura instead of an exporter as in the past. A hint as to the possible course of future events may be gleaned from the fact that dura from Egypt is being imported by merchants for sale in some of the chief grain markets in Blue Nile Province.

One aspect of the food problem of the Sudan is that it is inevitable that the prosperity accruing from cotton cultivation will lead to an increased demand for dura, owing to the larger population that will be attracted to the cotton areas, coupled with the higher standard of living. Obviously, therefore, it is going to be no easy matter in the future to see that sufficient supplies of grain are grown, especially as experience has shown that every five or six years the Sudan is afflicted by a serious drought. This was the case in 1913-14, in 1919-20, and in 1925-26. Apart from the question of drought the dura harvests have been most unstable, the production of the rain crop of the four chief grain provinces having ranged between 25,000 tons in 1925 (the lowest total since 1914) and 511,000 tons in 1920, since which year it has only on one occasion touched 200,000 tons. While the present depression has been pronounced it is pointed out in the report that its effects have not been so severe as was to be expected from experiences of previous shortages. Various factors are responsible for this, notably the demand for labour in the Gezira, the record gum crop in the Western Sudan, while nomads in the Red Sea and Kassala Provinces have done a considerable trade in dom palm nuts. To safeguard the Sudan from further crises it is estimated that an average of at least 50,000 tons more dura per annum will be required, and in this connection it is pointed out that until there is reasonable security with regard to the food position substantial progress is not to be looked for with what are known as money crops.

If the dura crop had not failed, the year, as the details given in the report show, would have been a fairly successful period. The quantity of cotton exported rose from 42,706 bales in 1925 to 122,130 bales in 1926, as a result of the development of the Gezira Irrigation Scheme, and the further large extension of the project in the next few years assures a large increase in the production of cotton, even if the development of rain grown cotton should continue to be retarded on account of the price of the American variety. Then the exports of gum arabic (which ranks next to cotton as a staple product of the Sudan) totalled 22,744 tons of the value of £E844,198 as against 18,956 tons of the value of £E791,931 in 1925. There were also increases in the exports of sesame which totalled 12,367 tons as against 9,776 tons, and in dom palm nuts which amounted to 6,018 tons of the value of

£E50,959 as against 5,024 tons of the value of £E41,180. On the other hand there were declines more or less marked in the trade in animals, ground nuts, ivory, and dates. The shipping statistics particularly illustrate the improvement in the general position of the Sudan. From 1920 onwards there has been a steady and rapid increase in the tonnage of the shipping calling at Port Sudan. It was 737,202 tons in 1920, and in 1926 it was no less than 3,578,367 tons or five times more than it was in the last pre-War year. It is eminently satisfactory to know that the vast bulk of the shipping carries the British flag, the figures for 1926 being 2,763,902, while our nearest rivals, Italy, are responsible for no more than 204,672 tons, but all the leading countries are represented, and it is now very clear, as the report says, that "with the inception of the Gezira Scheme and other large capital works, the Sudan has stepped out of its economic seclusion."

The directors of the Burma Railways Company recommend a final dividend of £4 5s. per cent., together with a bonus of £1 10s. per cent., both subject to tax, making with the guaranteed interest, payable on January 1, a return of 11 per cent. for the year 1926-27, as against 12 per cent. for the preceding year.

The Permanent Court of International Justice has pronounced judgment on the preliminary plea by the British Government against the competence of the Court in regard to the suit brought by the Greek Government, which asked for £217,000 damages and costs for alleged violation of international obligations by the British Government as Mandatory Power in Palestine, in respect of M. Mavromatis, who, it was alleged, was rendered unable to fulfil his contracts under a concession to supply water and electricity to Jerusalem (says a Reuter message from The Hague dated October 10). By seven votes to four the Court recognised the plea of incompetence, and that it had no fundamental right to pronounce on the matter. Judge Nyholm, Judge Altamira, and Judge Laboyanni, the Chief Justice of Greece, annexed dissenting opinions. Judge Dessoir, who also dissented, had to leave The Hague before the final drawing up of the pronouncement.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise

Copies will be issued on application to the Secretary at Head Office

WESTMINSTER BANK

NEWS FROM ALL SOURCES.

There were 710 exhibitors at the Seventh Trade Fair at Zagreb.

The Alexandria Water Company announces an interim dividend of 4s. per share, payable October 15.

Simon-Carves, Ltd., Manchester, have received an order for coke ovens from the Indian Iron and Steel Company, Hirapur.

The East Indian Railway have given an order to Mather and Platt, Manchester, for pumping plant.

The Caledon Shipbuilding and Engineering Co., Ltd., Dundee, has received a contract for a crane barge for the Suez Canal Company.

It is understood that negotiations for a new commercial treaty between Yugoslavia and Czechoslovakia will begin this month.

The production of crude oil by the British Burmah Petroleum Company and the Rangoon Oil Co., Ltd., for September amounted to 43,471 barrels.

The production of the Attock Oil Company for September was 23,223 barrels. Two wells, giving steady production, were drilled into the 2,100 ft. sand during the month.

It was expected that this year's Turkish tobacco crop would produce between 40 and 45 million okas, but owing to drought it is reported that the yield will not exceed some 22 millions.

The Roumanian Treasury receipts for the first six months of the current year amounted to 15,160,133,969 lei as compared with 12,436,060,029 lei for the first half of 1926

The production of the Dacia Romano Petroleum Syndicate for September was 4,928 tons; 13 wells were in production, five are in drilling and three are being fitted up.

The Eastern Bengal Railway have given a contract to Braithwaite and Co. (Engineers), Ltd., London, for a pressed steel tank of 24,000 gallons capacity, on a 40 ft. high staging.

The Sentinel Wagon Works, Ltd., Shrewsbury, have received contracts for steam rail coaches for the East Indian Railway, and for a 16-ton locomotive for the Madras and Southern Mahratta Railway.

According to the *Courrier International des Halles et Marchés* the crop of apples and pears in Bulgaria is abundant, and substantial quantities have been purchased on behalf of firms in South Germany. The plum crop, however, is light, and exports, if any, will be inconsiderable.

The condition of the Egyptian cotton crop for September is as follows:—Lower Egypt, 98; Middle Egypt, 98; Upper Egypt, 100; Egypt, 99. The crop is ten days in advance of last year; the extent of attack by boll worm is about the same as last year (says a Reuter message from Cairo).

The net profit of the Danube Navigation Company for the year ended July 31 last amounted to £34,411. Adding the balance brought in, there is available £41,128. The directors have transferred £35,000 to the depreciation account, leaving £6,128 to be carried forward.

Messrs. Vickers, Ltd., announce that Mr. Alfred Cartwright has resigned his seat on the Board and that at a meeting of the Board held on October 6 General Sir Noel Birch, K.C.B., K.C.M.G., and Mr. G. G. Sim, C.S.I., C.I.E., the secretary of the company, were appointed directors.

A contract has been received by the Westinghouse Brake and Saxby Signal Co., Ltd., London, for twenty-five sets of brake apparatus for motor cars, and twenty-three sets of brake equipment for trailer cars on the Athens City Tramways under a sub-contract from the English Electric Co., Ltd.

Roumania's imports for the first eight months of this year amounted in value to 22,336,044,473 lei, the value of the exports being 25,079,966,276 lei, so that there is a favourable trade balance of over 2,644 million lei as compared with one of 977 millions for the corresponding period of 1926.

The coupons due October 15 next on the bonds of the Ottoman Three and a-Half per Cent. Loan of 1894 (secured on the Egyptian Tribute) will be paid by Messrs. N. M. Rothschild and Sons on the following Monday and on each succeeding business day (Saturdays excepted) between the hours of 11 and 2.

Goods which may be imported into Bulgaria duty free in accordance with the Law for the Encouragement of National Industry include the following articles for use in any industry. viz.:—Vaseline; rubber tubes, sheets, valves and rings; transmission belts of leather or cord; belts of iron wire of any size; rubber press cloths; mastic for soldering tubes; cotton waste for cleaning machinery; colophony; rubber gloves; oils for coating rope; "naouton"; xylol; and calcium carbide. In addition, the duty-free régime applies to specified articles used in various branches of manufacture (including the textile, metal, leather, etc., industries).

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 11.

There has again been a steady investment demand for British Government stocks, with the result that the available supply is becoming distinctly smaller, and this has been responsible for an all round hardening in prices. A similar position exists in the markets for many other high-class investment stocks. In industrial sections also activity has been resumed after a short period of irregularity. The outstanding feature of the week has been the continued spectacular activity in British Celanese shares, following the announcement of the new issue, to which reference is made below.

The national accounts for the first half of the financial year 1927-28, though by no means brilliant, do at least give ground for hoping that at March 31st next the Chancellor of the Exchequer's estimate of a small surplus may be realised. Revenue to date shows an increase of over £6 millions in comparison with the corresponding period of last year—a fairly satisfactory showing, for although Mr. Churchill budgeted for a revenue increase of £29 millions in the full year, the greater part of the new revenue which is expected to produce this increase cannot be collected until the final three months of the year. Expenditure to date is a trifle higher than at this time last year, and a saving of £10 millions will have to be made during the current half year if the budget is to balance. But the figures show that Supply Expenditure is being kept within bounds, and there seems to be no reason why at March 31st next there should not be the slight surplus anticipated by the Chancellor, though it is, of course, too early yet to judge the prospects from the present figures with any hope of accuracy.

The Gamble in British Celanese.

The ordinary shares of the British Celanese Company continue to be the "star-turn" of the Stock Exchange. The price continues to advance in truly dramatic fashion. At the beginning of last week the shares were quoted at £4³/₄. To-day they stand at £5⁵/₈, and in the meantime they have been above £6. The latest burst of activity is chiefly due to the profit estimates contained in the offer for sale of the £2,500,000 mortgage bonds. This offer for sale, incidentally, leaves much to be desired, since information absolutely necessary to form a judgment of the merits of the bonds is omitted. "Recent profits," says Dr. Dreyfus, "have ranged between £70,000 and £87,000 per month," and the profits for September are "estimated at £96,000." He estimates that "production in the early part of next year will be doubled and profits considerably more than doubled." But this does not exhaust the possibilities. It "has been decided to treble the production" and the necessary plant "should be in operation by the middle of next year," when profits are estimated to be "well over £400,000 per month." But it should be remembered that these are no more than estimates and that there is a certain force in the old adage, "There is many a slip twixt cup and lip." It is the fact that the present price of the ordinary shares is so largely based upon estimates that disturbs the more cautious market observers. The slightest rumour of an unfavourable character might result in a sudden heavy fall in the

price of the shares, thus involving speculators in substantial losses. The ordinary investor should on no account take a hand in this gamble.

Australian Banking Reform.

A week ago we referred to certain favourable developments in Australian finance. In the interval a further praiseworthy reform has been announced. Sir Ernest Harvey, Comptroller of the Bank of England, recently visited Australia and submitted recommendations for the reform of the Australian banking system. The first important move has been made to give effect to these recommendations. The Commonwealth Treasurer has introduced a Bill which will separate the Savings Bank Department from the general business of the Commonwealth Bank, the retention of the Savings Bank business being regarded as inconsistent with the modern functions of a central bank. Doubtless this is the forerunner of other reforms and it is reasonable to assume that these will improve the stability and increase the efficiency of Australia's banking system. Some years ago the system gave rise to much uneasiness, but to-day the majority of the Australian banks occupy positions of great financial strength. Though earnings may fluctuate from year to year, it is probable that only a prolonged period of grave misfortune would cause a reduction of recent dividends. The ordinary shares of the National Bank of Australasia—£8, with £5 paid—return £5 17s. od. per cent. A yield of £4 18s. od. per cent. free of income tax is obtainable on the ordinary shares—£5 fully paid—of the Bank of Australasia.

The Gas Industry's Progress.

This week the British Commercial Gas Association is holding its annual meeting. Occasionally what seems very like a funeral oration is preached over the gas industry. Attention is drawn to the increasing popularity of electricity and this, it is said, must eventually sound the death-knell of the industry. But this week's meetings of the Gas Association do not suggest that preparations are being made for the interment. In fact, the presidential speech referred to the "steadily increased popularity and sales of our commodity." The future is viewed with confidence.

The majority of the competent authorities believe that there is ample scope for gas along-side electricity; in some respects the services are complementary rather than competitive. In estimating the future of the industry one of the most important facts to be borne in mind is that the scientific treatment of coal for its by-products, which will doubtless become of great importance, will very largely be carried out by the gas industry. In these circumstances the investor who seeks a fairly steady yield can turn to the ordinary stocks of the good gas companies without unreasonable fears for the future. The ordinary stock of the Gas, Light and Coke Company yields £5 12s. 3d. per cent. A return of £5 17s. od. per cent. is obtainable on the ordinary stock of the South Metropolitan Gas Company. The ordinary stock of the Liverpool Gas Company returns £5 10s. od. per cent.

Near East Markets

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 1:—

The arrivals of sultanas on the Smyrna market since the opening of the season are estimated at 25,400 tons, and the sales to date are put at 20,600 tons. Closing prices Smyrna (per cwt. cif.)— Type 12, 41s.; Type 13, 46s.; Type 14, 50s.; Type 15, 54s.; Type 16, 58s.; Type 17, 65s.; Type 6, 38s.; Type 19, 41s.; Type 20, 36s.; Type 21, 41s.

Prices have weakened all round to the extent of 1s. to 2s. on last week's closing level. The decline in prices in local currency, although more pronounced, has not been realised to the same point in foreign currencies, owing to adverse rates of exchange. The sterling rate on September 24 was 947 as against 925 to-day, increasing costs by about 1s. per cwt. or fl.1 per 100 Kilos. Quotations in foreign equivalents at present are more affected by exchange rates than by the market fluctuations, thus rendering business more difficult and uncertain and reacting on its activity. Although the market tone must be regarded as weakening, an advance in foreign currency quotations may comprehensively result should the exchanges continue on their downward course.

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 17,815 tons, and the sales to date are put at 17,289 tons. The market throughout the week has been very active, prices continuing to advance. Arrivals from the interior show a gradual falling off in volume which is significant in view of the high level of prices ruling. It denotes a marked reduction in interior stocks and diminishing supplies henceforward. The advance in prices over the week represents about 3s. per cwt. for good quality Natural figs and 5s. per cwt. for figs suitable for packing purposes. In U.S.A. currency the advance represents respectively about $\frac{3}{4}$ cent. and slightly over 1 cent. per lb. The position generally continues very sound with prospects of a further advance next week.

NEAR EAST MARKET REPORTS.

The current issue of the Monthly Review of Barclays Bank, Ltd., contains the following reports:—

Egypt.

Alexandria.—Cotton has been subject to violent fluctuations, in sympathy with the American markets, but the undertone has remained healthy. An optimistic feeling still exists and, thanks to the early marketing of a large portion of the cotton crop, other branches of trade have assumed a more cheerful aspect. The Manchester goods market, which has been stagnant for so long a period, is now reviving and stocks are diminishing daily, while prices of many articles register a sharp rise. Colonial goods markets are steady, with the exception of flour, which, owing to low offers from abroad and to the surplus stocks of local wheat and flour in the country, has shown decided weakness. The stock markets have been steady with a strong undertone, all gilt-edged securities being quoted higher on the month.

The Sudan.

Heavy rains have assured plentiful crops of dura and sesame. This has induced optimism in the country, especially as the past two seasons have been disastrous and have compelled the Government to import large quantities of dura and cereals for domestic consumption. If local production proves sufficient for all needs, the embargo on the export of cereals will probably be raised. There are indications that the crop of rain-grown cotton

will be successful, and such a result should add to local purchasing power and react favourably on imports of all descriptions. The Government estimate for the growing crop of Gezira and Tokar is 127,250 bales Sakellarides, and for rain-grown cotton, 21,312 bales. There has been delay in the completion of the White Nile Bridge, as owing to the coal stoppage in Britain in 1926, difficulty was experienced in procuring materials, but it is expected that the bridge will be completed by the end of November next. Messrs. Dorman Long and Co. have commenced work on the bridge over the Atbara river, for the Kassala-Gedaref line.

Palestine.

A more hopeful outlook is reported, owing to good crops and also to a recrudescence of building, financed by the relief funds raised after the earthquake. The orange crop is estimated at about 25 per cent. below last year's crop, but prices depend so much upon outside markets that it is difficult to foretell the final value. Other crops are abundant and there is likely to be an exportable surplus, which will provide further funds for circulation.

PALESTINE CROPS.

The latest report on crop prospects in Palestine by the Director of Agriculture and Forests contains the following:—

Abnormally hot weather prevailed during the middle of July in the southern circle, and dew fall was deficient; atmospheric humidity was high and there were frequent mists and numerous cloudy days. Conditions were generally favourable in the north, where there was abundant dew and a noticeable absence of "sharkieh" winds. The earthquake had little effect on the agricultural situation except to delay activities in the affected areas, and to necessitate felling of a considerable number of olive-trees on land required for reconstruction.

Oranges.—The condition of the groves is normal. Cultivation and irrigation are in progress.

Grapes.—Jericho, Rishon, Rehovoth, and Barbara were included in a trial consignment dispatched to England. Grapes sent to Egypt have realised very poor prices.

Tobacco.—Picking and drying are being carried out. Yields in general should be above normal, but cultivators are pessimistic as to prospects of ready sales at satisfactory prices. The area cultivated is smaller than usual except in the Acre Sub-District, where it exceeds that of previous years.

FOREIGN EXCHANGES.

Country.	Method of Quoting	Parity of Exchange.	Latest Quotations

Warsaw	Zloty to £	25.22½	43—44

Olives.—The crop is developing under normal conditions and should be generally good except in the Acre district, where the ravages of the olive fruit fly have caused premature dropping of the fruits.

Cotton.—An average yield of this crop, which is grown on a limited scale in the Huleh district, is expected. The crop is free of boll-worm attack to date.

Ground-nuts.—In the Huleh district the crop is almost ripe and promises a high yield.

SUDAN GUM ARABIC.

Messrs. Boxall and Co., of Khartoum, report as follows for the month ended September 20:—

The arrivals of Kordofan Hashab from August 20 to September 20 showed a decrease of about 80 per cent. as against the same period last year, the total arrivals at El Obeid being 82 tons and at Nahud 97 tons, or a total daily average of about 6 tons a day. During the above period the percentage of rain damaged gum was 26.5 per cent. of the total arrivals whilst the percentages for El Obeid and Nahud taken alone were 50 per cent. and 6.5 per cent. respectively. The shortage from August 21 to September 20 was 740 tons compared with the same period last year,

which brings the total shortage of Kordofan Hashab Gum from the beginning of the year to date to 2,355 tons and if we add the estimated shortage of 2,000 tons on the inferior qualities of Hashab, the total shortage of Hashab Gum would be this year as against last about 4,355 tons.

Taking El Obeid as the standard the market opened on August 21 at about 3d. less than at which it closed on the previous day and gradually rose until the end of the month when the total increase was 9d. During September prices fluctuated within the range of 1s. and closed on the 20th at about 1s. dearer than on August 21. The demand during the whole period was generally quiet.

The traffic receipts of the South Indian Railway for the week ended September 10 amounted to Rs.11,59,132, making the total from April 1 Rs.2,69,35,108. The figures for the corresponding periods of the previous year were Rs.11,11,737 and Rs.2,62,71,506.

The Acting British Consul at Damascus would be glad to receive copies of catalogues and trade literature relating to all classes of British manufactures. The following are suggested as being of particular interest:—Heavy chemicals and pharmaceutical products; electric lamps and other accessories; agricultural machinery, oil-engines, pumps; iron pipes and bars; leather and footwear; paper; woollen and cotton yarns and piece-goods, artificial silk yarn, knitted hosiery; commercial motor vehicles. Catalogues should be addressed to—The British Consul, Damascus.

Cotton and Cotton Goods.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended September 29 state:—

Since our last report we have had a series of excited markets, but the tone has been heavy, especially for Sakel. The week's summary of price movements is as follows:—Sakellaridis: November, 37.20 dollars, 0.55 dollars down; January, 37.28 dollars, 0.39 dollars down; March, 37.38 dollars, 0.27 dollars down. Ashmouni: October, 27.72 dollars, 0.57 dollars up; December, 28.20 dollars, 0.71 dollars up; February, 28.63 dollars, 0.78 dollars up; April, 28.75 dollars, 0.75 dollars up.

Sakel.—The characteristic feature of the week has been the heavy hedging against the fresh arrivals, and if it had not been for the firmness of New York, we should certainly have seen lower prices on this market. The demand from abroad for Sakel has been poor, and unless we have a revival of spinners' demand in the near future we are afraid prices will decline still further. Certain of our local professional speculators now favour the short side, and, with arrivals from the interior increasing in volume every day, the general sentiment seems to be turning bearish.

Uppers.—The market for this variety has been better than that for Sakel, being more influenced by the firmness of American. Also for this variety has there been heavy hedging on the part of merchants and banks. The demand from abroad has been better than that for Sakel, but, nevertheless, it has been only moderate.

The week's receipts amount to 249,170 krs. against exports 90,063 krs.; the stock in Alexandria stands at 2,237,757 krs.

The official figures of arrivals and exports for the period September 1 to September 21 are as follows:—Arrivals: Sakellaridis, 90,584 krs.; Ashmouni and Zagora, 351,575 krs.; Pilion, 21,395 krs.; Various, 4,926 krs.; Scarto, 5,972 krs.; total, 474,452 krs. Exports: Sakel, 92,556 krs.; Ashmouni, 95,858 krs.; Pilion, 4,959 krs.; Various, 7,240 krs.; total, 200,613 krs.

Spot.—During the week under review there has been a moderate movement at Minet-el-Bassal, with a mediocre demand from spinners, who seem far from eager to buy at present. Sales for the five business days amount to about 17,000 bales, of which we estimate 5,600 bales Sakellaridis, 10,300 bales Ashmouni and Zagora, 975 bales Pilion and 125 bales other varieties. The spot situation in Sakel is being eased each week the season advances by new crop arrivals, and it is now possible to buy fairly decent cotton in the medium and good qualities though we shall have to wait for the lower grades some time longer. In Ashmouni it is about the same as last week for the better qualities but below Fully Good Fair cotton is as yet scarce and hard to buy.

Sakellaridis: A fair business has been done covering all grades and a certain amount of demand has appeared for the best cottons. Spot differences are inclined to ease for the better grades and are about unchanged for the medium styles, whilst low cottons are firm on account of their scarcity. Holders are uneasy, however, on account of the insufficiency of spinners' demand as compared with stocks now in warehouse and arrivals in the immediate future, and the tendency is rather for spot parities to weaken, except for specialities such as the highest and lowest grades.

Ashmouni and Zagora: Continue in good favour and a good business has been done in all grades. Spot differences are steady and generally unchanged from last week.

Pilion: A good business has been done in all grades at about last week's differences.

Other Varieties: Brown is neglected and no business is reported. Spot differences are nominally unchanged. A small business has been done in White at last week's

differences. A few lots of Maarad and Nahda have changed hands.

Crop 1927: During the week under review the weather, in general, has been favourable to the crop and all reports received from the interior are optimistic about the final results. If the fine weather continues, a very good yield is expected as there are still many bolls on the plants. Picking is progressing actively and is now general everywhere. Pink boll worm attack is almost stationary.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 5:—

Egyptian Futures.—Sakel Contract.—Only unimportant alterations in the level have again to be reported since we last wrote. Towards the end of the week prices weakened materially under the pressure of long liquidation and poor Alexandria reports. At this period also trade support continued to be a negligible factor, and altogether sentiment had become more pronouncedly "bearish" than hitherto. A complete change of outlook, however, took place on Monday when rumours in Alexandria that the Government had sold 100,000 kantars of their stock to the Russians were responsible for a sharp reaction. Our market duly responded to this and has since shown a somewhat improved undertone, which has steadied prices at round last week's level. Without being too optimistic, we incline to the opinion that the trade demand generally has shown an improvement during the past two or three days; certainly the inquiry has been on much broader lines and more cotton has been sold; however, it must be borne in mind that the crop movement

THE LIVERPOOL COTTON EXCHANGE.

GROWERS AND SHIPPERS SHOULD
SEND THEIR COTTON TO LIVERPOOL.

All information may be obtained from the Secretary.

is becoming heavier, and to have to neutralise this pressure an even more decided improvement in the offtake than that witnessed will have to take place. As regards the future course of values a great deal depends on the American Bureau report to be published next Saturday; should this be of even a moderately "bullish" character we consider that spinners will be encouraged to operate in a more definite fashion; on the other hand, any decline in values in the other market will have a pronounced effect on this contract. After considering all the known factors, we remain of the opinion that operations on the long side should be deferred for the time being; if, however, any decided advance from the present level takes place, unless it be under the stimulus of trade support, it would rather appear as if short sales for a quick turn are to be advised.

Upper Contract.—Apart from a minor reaction towards the end of last week, this market has shown a very firm undertone and has lately tended to advance in premium over American values. On the first tender day in Alexandria, over 51,000 kantars were placed against a contract and the prompt acceptance of this cotton by a prominent exporter has evidently eased the position over there. It is also reported that Russia has been a buyer. Local spinners, whilst still operating on moderate lines, have been disposed to show more interest, and provided values stabilise we consider that a broadening demand will be experienced. We cannot perceive any reason to change our recent opinion regarding this contract and consider that any recession in values should be utilised to take up contracts.

Egyptian Spot.—The inquiry for spot Egyptian has been of an uneven character and prices have been far from settled. Nevertheless on balance there is little change to report and confidence amongst buyers shows signs of returning. An uneventful Bureau Report next Saturday would be of great assistance to the trade at the present juncture.

In Sakellariidis cotton only a moderate spot business has been transacted, but a few welcome purchases have been made amongst the finer parcels—a somewhat unusual occurrence these days. A steady demand has continued

for "inferior" cotton at from 11.00d. to 12½d. Prices for this quality are very irregular and buyers are difficult to tempt with anything which is not obviously "right." The style of cotton required is genuine low Sakel with staple. There is always an outlet here for this cotton (at a price), but the mixed lots, i.e., cotton either wholly, or in part, composed of "machinette" or "bucklied" cotton, are difficult to dispose of at any price. The demand for Uppers has shown no change. The grades of Good Fair to Fully Good Fair have continued in favour at from 14½d. to 15.00d and "Fair" cotton at from 13½d. to 14½d., has generally formed part of the daily inquiry. The revised Upper standards are now operative. Briefly, the result is that Upper cotton which, prior to 1st inst., had been classed as Barely Fully Good Fair would now, in all probability, pass the Fully Good Fair box. Pilon standards have also been brought into operation for the first time, and their advent appears to have stimulated interest in this growth to a certain extent.

An improved business has been done in Sudan Sakel at slightly easier rates. The qualities represented by SSS,SSSS and SSSSS are now practically exhausted so far as this season's supply is concerned. American seed cotton has been in fair request, and up to 60 "on" has been paid for staple cotton. C.i.f. business has been slightly more active since the commencement of the month. Forwardings to spinners for the week ending 30th ult. were returned as 6,039 bales Egyptian and 2,441 bales Sudan. Estimated sales for the past week, 1,100 bales Egyptian and 3,650 bales Sudan. Quotations of Sakel show a net advance of 5 points. Uppers unchanged. F.G.F. Sakel to-day 29.25d. F.G.F. Upper to-day 15.10d.

CHESS.

By "CARO-KANN."

White to play and win.

The solution to last week's end-game is as follows:—
1, P—Kt4, PxP; 2, KxP Kt—B5; 3, B—B3, K—K3; 4, P—B5 (ch), K—Q3; 5, B—Kt3 (ch), K—B3; 6, K—R5, Kt—Q3; 7, K—Kt6, Kt—K5; 8, BxKt, PxB; 9, P—B6 and wins.

This week sees the Masters' Tournament at the British Empire Club in full swing. The competitions include E. D. Bogoljuboff, Dr. M. Vidmar, A. Niemzowitsch, Dr. S. Tartakower, F. J. Marshall, R. Reti, Sir G. A. Thomas and F. D. Yates, so that a very interesting contest is assured. In such an even tournament anyone may win, but going on probabilities one of the first three players named should be successful.

Notes of the Week.

The Navarino Centenary

The value of centenary celebrations lies far more in the opportunity afforded of contrasting the Then and the Now than in any attempt to revive the sentiments of a hundred years ago. At the Battle of Navarino on October 20, 1827, a combined British, French and Russian fleet destroyed a joint Turkish and Egyptian fleet and paved the way for the establishment and recognition of the independence of Greece. Of the six countries concerned with the battle Russia has cut herself adrift for the time being and does not enter the picture to-day. There is little need to emphasise the close ties that still bind Greece to Great Britain and France, although it is of interest to note that it has taken the whole century to complete the work begun by the Greek War of Independence. Only within the last few years has Greece been rounded off into a homogeneous whole by the concentration of her Asia Minor nationals in the mother country; and only when the second Refugee Loan has been concluded, and with it drastic reforms of Greek finance introduced, will the country be in a position to derive full benefit from its new conditions. In these matters Great Britain and France have played again a dominant rôle in the rehabilitation of Greece. For the Greek people, however, it would seem to be of more importance at this time to lay stress on the improved relations that exist between themselves and the Turks—the more significant because the improvement has not been of steady growth, but almost instantaneous. The hostility between the two countries reflected in the Battle of Navarino has subsisted, unhappily, throughout the century until the last year or so. For this reason we should have liked to see Greeks and Turks putting their joint seal on the new relationship by co-operating in the Navarino celebrations—at least in those that are taking place on British soil. The Turkish Republic of to-day—if it cares to confine itself to realities as distinct from imperial trappings—can use the year 1827 as a point of comparison with present conditions and dwell with just as much pride as the Greeks on the progress achieved in the interval. Both countries have shed many disillusiones, and both seem to have settled down to have done with vain regrets and to make the best of what they now possess.

A Balkan Assassination.

Assassination as a means of airing grievances in the Balkans is, unfortunately, too common an occurrence to cause the latest instance to be invested with any particular significance. The murder in Prague of Tzena Beg Kryeziu by a fellow Albanian of the student class is the kind of crime that goes hand in hand with the fire-eating of unbaked youth in those parts. Tzena Beg was the representative of Albania in Belgrade; he was credited with strong pro-Yugoslav leanings—not altogether a disadvantage in the world of diplomacy; but from the fact that, after the recent break of diplomatic relations between Yugoslavia and Albania he was selected to return to Belgrade, it has to be inferred that the Albanian Government did not find his Yugoslav sympathies any special embarrassment. His offence in the eyes of his assassin was, presumably, that he allowed his admiration for Yugoslavia to weaken his zeal for his own country's interests; that his attitude ever deserved to be stigmatised as treachery may be doubted in view of his reappointment to Belgrade, for it would have been easy enough for the Albanian President to nominate another representative in his place. The murder probably reflects a widespread suspicion in Albania of Yugoslavia, the existence of which must be regarded as regrettable in the interests of the Balkans as a whole, and of Yugoslavia in particular. If the latter fears outside interference in the Peninsula, the best way to counteract it must surely be to promote a good understanding among all the Balkan States. Albania admittedly offers a gateway by which the Balkan position can be most easily turned. For this reason, if for no other, Yugoslav statesmanship should have been, from the outset, directed towards a close friendship with the Albanians; not by intrigue with one or more rival parties, but by means of helpful concern for the real interests of Albania. It is still not too late to retrieve the situation; but it will not be done by petty spying or senseless pin-pricks. The advantage of a better understanding between Yugoslavia and Bulgaria has been at last recognized in Belgrade, and it may be that when a Government has been long enough in the saddle to take fuller stock of the international situation the necessity for improving Yugoslav-Albanian relations will begin to be appreciated.

Ars Longa, Vita Brevis.

In these days of "records" Turkey bids fair to establish one for a chairman's speech. A congress of the Popular Party is being held at Angora, and Ghazi Mustapha Kemal Pasha, President of the Party and President of the Republic, has been addressing it. The occasion is an important one; the Congress is for all practical purposes the Grand National Assembly, and as a result of the recent election, at which only candidates selected by the President were allowed to stand, a considerable proportion of new and younger blood has been introduced into Parliament. In the Popular Party's Congress both the old and the new members will put in a preliminary course of training for the duties of the session. For some of them at least a good deal of ground will have to be covered, and estimates of the length of the President's speech varied from ten to four days. On the first he spoke for seven hours and had hardly covered the first two years of the eight that he is passing under review. The whole speech should constitute a valuable contribution to the reading of contemporary Turkish history. To understand the position in Turkey to-day it is necessary to turn to the references in the Turkish Press to the Ghazi. After an absence of three months in Constantinople he has returned to Angora; the *Djumhuriyet*, whose editor and proprietor is a Member of the National Assembly, thus records the event:—

"For several days the town of Angora has been feverishly preparing to receive and embrace the great Liberator of the Fatherland whose absence has been so keenly felt. The thought of the wild enthusiasm which will prevail to-day at Angora causes our heart here to beat with a lively emotion. The torrents of joy and love which gush from the heart of our people everywhere on every occasion when they welcome the Ghazi will cause the mountains and the plains of Angora to re-echo. Angora to-day comes to life again with its Ghazi. Everyone in every corner of the country loves and venerates the Ghazi sincerely and with all the depth of his soul, and the only distinction is that the hero enjoys at Angora a special prestige and a particular value which have grafted themselves on to the general affection and love that the great man inspires everywhere else."

In such circumstances no speech can be too long.

The Macedonian Situation.

Thanks to the good sense of the Yugoslav and Bulgarian Governments, the situation created by the recent outrages of the Macedonian Revolutionary Organisation is developing on much more satisfactory lines than could have been anticipated a few months or years ago. The Bulgarian authorities have proclaimed martial law in the frontier districts of Kustentil and Petritch, and the Yugoslav Government is holding its hand until the effect of this measure has been seen. It is unlikely that the Yugoslav

public will be content with negative results; it will look rather for some spectacular display of force, calculated to strike terror into the hearts of the Macedonians. Whether conditions on the frontier lend themselves to these developments may be doubted; in their absence the Bulgarian Government will have to maintain for a very long period far more effective control in these frontier districts than it has succeeded in doing in the past. According to a Belgrade report the murderer, or an accomplice in the murder, of General Kovatchevitch who has been captured had migrated from Southern Serbia to Bulgaria, but had returned to settle down in Shtip. In his case, therefore, no great play can be made of his Bulgarian antecedents; the instruments of Macedonian terrorism regard themselves as Macedonians or are merely tools pressed into service under one form of compulsion or another. Under such conditions the remedy for Macedonian unrest seems to lie in joint Yugoslav-Bulgarian action, political for the most part on Yugoslavia's side, in the introduction of a better régime in that portion of Macedonia which has been incorporated in Serbia; military on Bulgaria's side, in exercising closer control on the movement of the frontier population.

Yugoslav Politics.

The expectation of an immediate disruption of M. Voukitchevitch's Coalition Government has not been realised. This is due to no lack of effort on the part of the chief leader of the Democrats, but the Party Club, while according Dr. Davidovitch a vote of complete confidence, does not seem to have encouraged him in a trial of strength with the Government. Accordingly the coalition between the Radicals and the Democratic Union stands, and it is not likely to be disturbed before the Skupshtina settles down to the real business of the session. In the circumstances the position of the Prime Minister cannot be very satisfactory. However loyal personally the Democrat Members of the Cabinet may be, they will be obliged to conform with the decision of their Party Club. Under these conditions M. Voukitchevitch may well hesitate to admit any more Democrats into his Ministry, in case no concessions on his part avail to overcome the rather aggressive opposition of Dr. Davidovitch. In the meantime M. Pribitchevitch, the leader of the Dissident Democrats, appears to have recalled that he and M. Stepan Raditch were great friends in their youth, however violently antagonistic to one another they may have been since, and a temporary working agreement has been arranged between the two parties. In so far as this move tends to lessen the number of parties acting independently of one another in the Skupshtina it is to be welcomed. The protagonists have great hopes that they will attract the whole Democratic Union to themselves, and thus bring about the downfall of the present Government. Such schemes, however, ignore the fact that the country wants political peace in order that it may deal intelligently with the big legislative programme awaiting it.

(Continued from page 483.)

with advantages. In addition to this fact may be added the personal aspirations of King Faisal. It is, perhaps, sufficient here to suggest that all the Western machinery of Parliaments, constitutional "checks," and so on, may be apt to cause impatience in the heart of one brought up in the autocratic school. But there is this fact, which no observer of the situation in Iraq can forget, that King Faisal, unlike Riza Shah Pahlavi or Mustapha Kemal Pasha, was brought by a foreign people to the country over which he now rules, and that without that people's support it is doubtful whether he would long sustain his claim. On that matter, however, it will be of infinite value during the negotiations to hear the rival points of view. The cardinal and fundamental factor of the situation is that Great Britain, having resolutely put her hand to the Iraq plough, will not relinquish her task until the harvest can safely be gathered in.

THURSDAY, OCTOBER 20, 1927.

THE ANGLO-IRAQI NEGOTIATIONS.

With the definite delimitation of the northern frontier of Iraq it had been confidently hoped that the country would settle down quietly and concentratedly in the task of economic reconstruction and consolidation. The prompt acceptance of the new term of twenty-five years as the period during which Great Britain should continue to administer advice to Iraq, unless the Arab State were in the meantime admitted into the League of Nations—and, later, the ratification of the Angora Treaty with Turkey, gave rise to the highest hopes that the immediate future of Iraq lay wholly in the administrative and economic sphere. The political issue, it was thought, was now solved; Iraqis could henceforward breathe and work freely. In such concentrated labour, moreover, lay considerable hopes of the formation of a national sentiment, which, until the issue of the northern vilayat had been settled, could crystallise only with difficulty. Nor was the prognostication wholly incorrect. It is true that Iraq in 1926 had, from the economic and commercial point of view, more than its fair share of bad luck. There were, for instance, the floods of the Tigris in the spring; there was the burden of the Assyrians from Turkish territory upon Iraq's shoulders; there was the complication in the entrepôt trade with Persia, due to various factors outside Iraq's control. In spite of these and other drawbacks, however, there were sufficient signs to indicate that Iraqis were putting their backs into the work of national reconstruction. But towards the end of 1926 the politicians of Iraq, who lack nothing in the essential characteristics of their kind, began to stir the calm waters of their country; a "crisis" developed; and Jaafar Pasha, then Iraq Diplomatic Agent in London, was recalled by King Faisal to form a Cabinet. The problem of conscription thereupon became an urgent one; and all through 1927 the atmosphere has been clouded with reports of resignation, differences, threats. A mild climax was reached when, in the middle of this year, General Daly, who had been sent out by the British Government to report upon the military problem in Iraq, was moved to resign. This emissary had, apparently, completely accepted the opinions in this regard of King Faisal, Nouri Pasha, and others; his resignation, therefore, could have been interpreted as a check to the hopes of the Arab "Nationalists." But whether this seeming rebuff to the military desires of the Baghdad Government was received with indignation in the country at large is something more than doubtful. However that may be, the political aspect of Iraq, from the purely domestic point of view, has once more overshadowed, in the public and superficial regard, the hum-drum yet essential aspect of the progress of the young State. Yet it is well to remember that this new aspect is not the most important aspect, exciting and momentous though it may seem, for it is mainly through economic means that Iraq can be welded into a unified and prosperous State.

The present agitation for a modification of the relations existing between Great Britain and Iraq, is, of course, justified by the Anglo-Iraq Treaty itself, and its outcome is, to the politically-minded, of supreme importance. Whether the waves of emotion that some weeks ago were set up in Baghdad have been of sufficient force to send anxious ripples to the innermost and remotest parts of Iraq is, perhaps, problematical, but it

is certainly on their crest that King Faisal has come to Europe in order to explain his views to the British Government. There are several tendencies distinctly visible on this occasion. One is to treat the whole matter as a storm in a teacup, as concerning but the prestige and status of a few Arab leaders and leaving the essential mass of Iraqis unaffected; another is, to regard the whole body of requests now being made by Iraqi authorities as completely justified and therefore their satisfaction as desirable; and yet another is, to treat seriously rather the consequences of the negotiations between Iraqi and British representatives than the negotiations themselves. In accordance with the adoption of one or other of these particular views will concentration be made upon the necessity of hitting upon such workable compromises as will fit the convenience alike of the Iraq Government and of the British Government, or upon the advantage of relaxing formal British control over Iraq, especially in the military and financial spheres, or upon the direction of the activities of Arab "Nationalists" consequent upon either acceptance or rejection of their demands. However viewed, the problem is not an easy one; but we have no doubt, in consideration of the character of the negotiators, that an adequate solution will during the next few weeks be found. There is on both British and Arab sides an abundance of good-will, and if the occasion is equally taken for the telling of a few home-truths, little harm will be done. Plain speaking is what both Baghdad and London require; it is always best for men of honourable intentions to make straight for their points, if they exist, of difference.

Now it is undeniably unfortunate, from the point of view of the present Arab authorities in Baghdad, that the proposed Conscription Bill should have had the apparent effect of sharply dividing Sunni from Shiah in Iraq. Part of the Shiah opposition to conscription may, indeed, be artificial, in the sense that it may be personal antipathy to the authors of the scheme, but that the mass of Shiah tribesmen in Iraq are implacably opposed to it seems indisputable. The conviction is forced upon the impartial observer, therefore, that owing to its dichotomizing quality, conscription is impracticable at present for Iraq. But the point to be made here is, that this renewed division of the people of Iraq would surely be, in the eyes of the League of Nations, an insuperable hindrance to the immediate admission of the Arab Kingdom into the Assembly of Geneva. There remain the problems of the Subsidiary Agreements to the Anglo-Iraqi Treaty. How the question of the defence of Iraq is to be solved is one of the things to be thrashed out when King Faisal confers with the British Government, as is the question of the financial obligation of Iraq to Great Britain. The first question is patently vital, equally from the aspect of the League of Nations, of Iraq, and of Great Britain. The second question is of chief importance to Iraq, and it is in this connexion that the greatest opportunity appears to be available at once for demonstrating that Great Britain is actuated by generous motives towards the people of Iraq and for giving King Faisal the chance to return to his country with some considerable achievement to his credit. Certain definite modifications of the Agreements to the Treaty may reasonably be expected, but conceivably an even more important outcome of the Anglo-Iraqi negotiations will be a true and unmistakable indication of the respective attitudes of the British and Arab authorities towards the problems of Iraq. In particular it might be a wise thing if some enlightenment could be thrown upon the exact nature of future governance in Iraq. There is a disposition in Baghdad, a very natural disposition, too, to look to modern Persia and Turkey and, in fact, to the whole history of rule in the Middle East, and to observe how dissonant constitutional monarchy is with the traditions of Oriental peoples. Even from the theoretical aspect, therefore, the form of government which the British imposed upon Iraq would appear not to be one replete

Cairo, October 8.

The Wafd and the Coalition.

The great ceremony in memory of the late Saad Zaghloul Pasha, organised by the Wafd, was a conspicuous success, and the speeches delivered on the occasion by leading members of the three parties constituting the Coalition were all conceived in a lofty spirit admirably responding to the solemnity of the event and recording once more their determination to maintain the unity of parties which the great Nationalist leader had brought about and to persevere in the principles which he had laid down. I understand that in the two interviews which have taken place between them during the past week Nahas Pasha has been at great pains to assure Sarwat Pasha of the confidence which the Wafd repose in him and of their intention to afford him every possible support in his task, and that Sarwat Pasha expressed his pleasure at the attitude of the Wafd and of its new leader. Thus the first and most delicate fence has been satisfactorily negotiated, and there is every reason to anticipate a peaceful period, at any rate until Parliament reassembles on the third Saturday in November. It is understood that already, by agreement between the parties, it has been decided that Nahas Pasha shall be elected Speaker in succession to Zaghloul Pasha.

Agricultural Visitors from India.

Three members of the Royal Commission on Agriculture in India, Sir Thomas Middleton, K.B.E., Mr. H. Calvert, C.I.E., I.C.S., and Professor Najendranath Gangulee, of Calcutta University, have just arrived on a visit to Egypt. Their object is to investigate agricultural and veterinary matters and the manner in which the various products are marketed and financed. Special arrangements have been made by the Residency with the Egyptian Government for their reception, and the programme will include visits to the Alexandria cotton market and pressing factories, the botanical research bureaux of the Government at Giza, the various agricultural and veterinary schools, the Domains estates, the experimental farms at Bahtim and one or more of the large private estates. Altogether they will spend about ten days in this country and are being accompanied during their tour by Dr. W. Lawrence Balls, Chief Botanist, and Alphonse Greiss Bey, head of the Agronomic Service in the Ministry of Agriculture.

Greyhound Racing.

Efforts are being made to introduce greyhound racing into Egypt. Mr. C. A. Munn, who was responsible for its introduction into Great Britain, is now in Alexandria discussing with the Egyptian Government the question of a concession and the financial interest which the State should derive from the meetings. It is hoped to be able to start early in the coming season, and as the winter months

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

are the "close season" in England it is expected that some of the big owners will send their dogs out to Cairo.

The Mail Service Grievance.

The mail service with Europe still leaves a great deal to be desired and the culminating point was reached this week when we were left for seven days without any inward mail. The commercial community has every justification for its complaints. There is, indeed, not only no valid reason why we should be so badly served, but there is also every good reason why we should have a very regular, even a daily, service with Europe. It is a notorious fact that scarcely a day passes but large steamers enter or leave Egyptian ports from or to the Continental ports, and it is difficult to see why some of these steamers should not be used to carry mails to and from Egypt and so give us a more frequent and regular service. Before the War we had four regular inward and a similar number of outward mails every week, with an additional fortnightly service, and it should surely not be impossible for those who are responsible for the postal service to adopt a similar scheme of mail-carrying to-day. At any rate, something considerably better than what we have had to put up with the past month or so must be given us without any further delay. Incidentally, there would appear to be something radically wrong to-day with the internal Egyptian service. Particularly is there cause for complaint in regard to the deliveries. No house-to-house delivery is nowadays made before 9.30 a.m., whereas two or three years ago the first delivery always took place at the latest at 8.30 a.m., while there are considerable complaints about delays in transmission. During the first post-War years one could understand some decline in efficiency, but it seems, as far as the Post Office is concerned, that the further we get from the War and the more we approach the normal in other directions the worse does the service become.

Proposed Insurance Legislation.

The Government has at present under consideration the question of legislation in regard to insurance business in Egypt. Up to the present there has been no control whatsoever over the operations of Insurance Companies. A vast amount of insurance business of every description is carried out every year in this country, but the Companies and their agents are entirely free of all restrictions except in so far as their books have to be kept in accordance with the requirements of the Mixed Courts, to which the vast majority are amenable.

The Egyptian Government now proposes to introduce regulations compelling all companies carrying on insurance business in Egypt to publish periodically particulars of the amount of business they have transacted in the country and make a deposit either in the form of gold securities or title deeds of property as a guarantee. The attitude of the Egyptian Government in this respect is by no means unreasonable. An increasingly large proportion of the enormous volume of insurance business annually transacted in Egypt is done with Egyptian policy holders, and while no reflection is intended on the honesty and solvability of the various Companies now working in the country, the Egyptian Government is fully justified in asking that such Companies should give at least the same guarantees as are exacted from them in their own and other countries.

Baghdad, October 7.

Political Questions.

With the King and the Prime Minister away in Europe, and Parliament in recess, outward calm broods over the political world of Baghdad. Yasin Pasha, the acting Prime Minister, has returned from a short holiday in Syria, where the Minister of Defence (Nouri Pasha) has also been on leave. In the meantime the Opposition is reported to have been employed in strengthening its ranks by the inclusion of several ex-Ministers. A *rapprochement* between the Opposition and the reformed Al-Nadha party is rumoured.

The worthy representation of Iraq with foreign Powers is the subject of some discussion. Subih Beg, the popular ex-Minister of Finance, is to go to Angora as Diplomatic Agent, and the Egyptian Government has been asked to approve the appointment of Rashid Beg al Khoja (formerly Mutasarrif of Baghdad) as Iraqi Consul-General at Cairo.

The Turkish Government is sending a Consul-General to Iraq shortly, and intends later to create a Legation in Baghdad.

Aerial Development.

Imperial Airways is introducing a new time-table for the Cairo-Baghdad air liner service. On and after October 15, the flight from Baghdad to Cairo will be made in one day; the mail which hitherto has been posted here on Saturday morning, to be distributed in England on the following Monday week, will not be posted until Sunday, thus saving yet another day on the ever-shortening journey home.

The German aviator Koennecke, who with two companions is flying to Japan, reached Baghdad on September 28. Much misgiving had been caused by the absence of any news of the airmen after they left Angora four days earlier, and their loss in the Turkmendagh ranges was feared. The delay was explained by a halt of two days at Aleppo for adjustments to the aeroplane; it is not clear why their presence at Aleppo was not announced when "missing" reports were being circulated. The Germans left on September 29 for Bundar Abbas, flying by night to avoid the heat, which they found extremely trying.

General News.

A loyal friend to British co-operation has been lost in Abdul Majid at Shawi, who died last month at Beyrout. An experienced official of the old régime under the Arab administration he was Rais Baladiyah of Baghdad, was

elected Deputy for Dulaim, and had recently been made a Senator.

Much sorrow, both public and personal, is felt in Iraq at the presumed loss of Mr. F. B. Riley, *The Times* correspondent reported missing in China. From 1919 until he left the country in 1925, Mr. Riley was a member of the Ministry of Education, where his usual and charming personality, his breadth of view and consistent idealism made an indelible mark. His real affection and friendship for many Iraqis with whom he worked will not easily be forgotten, and his work in broadening and giving new inspiration to Iraq's educational system was unsparing at a time when sympathy and comprehension were sorely needed.

October sees the end of a summer that to many has seemed unusually trying. No spectacular high temperatures have been recorded here, though Basra tells another tale; rather the charts record a long five months of uniformly monotonous heat ranging between 112 and 116 in the shade. Nights on the whole have been good, but a hot weather which set in for good early in May and did not relent until late September has made the leave-refreshed officials (now returning by every convoy) never more welcome to the jaded occupants of their empty chairs.

CYPRUS.

Nicosia, October 8.

The Legislative Council.

The Council is to resume its session on October 10. Among the first draft Bills to be introduced is one to make provision for the Cyprus annual contribution of £10,000 towards Imperial Defence: to come into operation on January 1, 1928. How the £32,000, from which the island will henceforth benefit annually, can best be utilised in the near future is occupying much speculation, and various suggestions are already being submitted to the Governor.

Sir Robert Storrs.

Our Governor continues to make himself acquainted with all parts of the island. He has lately visited many villages in the north-west of Cyprus, including Pedonea, where there are well-known sulphur springs, and the large village of Lefka, near the outlet of a copious torrent. In all districts he advocates strongly the cultivation of tobacco and the development of co-operative credit societies.

Agriculture and Industrial Progress.

It is probable that the Imperial Institute will be requested to send out an expert in sericulture, and also that Cypriot students may be sent to London. The Governor contemplates inviting an expert to advise respecting the development of the island sponge fishery, which might be advantageously promoted. Hitherto it has been carried on, not by Cypriots, but by Greeks from other islands.

Tobacco culture is making good progress. On a proposal to the Governor by Mr. Luke Pierides, the Member

for Larnaca, it is probable that an experienced authority may be invited to study island conditions and advise. An English Company has been established in the Famagusta district.

Dr. N. K. Laniti, one of the foremost advocates of closer intercourse between Cyprus and Greece, has been recently speaking in Athens; and, as an outcome of meetings there, it has been decided that the Presidents of the Chambers of Commerce of Athens and Piræus, and a representative of the National Bank of Athens will visit Cyprus in October, to study industrial and commercial conditions in the island.

The Forests.

The Committee which is inquiring into forest conditions and policy is approaching the end of its duties. Whether any advantage can be derived from its investigations remains to be seen. Forest administration is of the greatest importance to Cyprus. The Forest Department has now the advantage, for the first time, be it said, of a permanent chief who has been trained in forestry. It is to be sincerely hoped that there will be no relaxation of the regulations which exclude animals from grazing in the State forests. The Greek Press has for years been advocating changes, and giving much amateur advice to the Principal Forest Officer. It contends that goats do no damage where large trees grow, and only what is insignificant in young plantations: and that infinitely more harm is caused by forest fires, kindled, in retaliation, by goatherds, or flock owners, than by any trespass of animals.

General News.

It is expected that more vessels of the Mediterranean Squadron will visit Cyprus in October.

About 260 British tourists visited the island on September 22. They proceeded to Nicosia and inspected the principal places of interest.

A movement is being made by the Greek community to help, in a manner worthy of the island, the fund which is being raised in Greece, for the repair of parts of the Holy Sepulchre and places of pilgrimage damaged by the recent earthquakes.

Next summer will mark the completion of fifty years of British occupation, which is to be duly celebrated; and there is already speculation on what form the celebrations will take.

Sofia, October 13.

Minorities Commission.

The General Council of the International Union of Association for the League of Nations held a meeting in Sofia on October 7-9. On October 10 the Minorities Commission assembled. Sixteen countries were represented: Germany, Austria, Bulgaria, Spain, Estonia, France, Great Britain, Greece, Hungary, Italy, the Netherlands, Japan, Poland, Roumania, Czechoslovakia, and Yugoslavia, represented in all by sixty delegates. The Commission was presided over by Sir Willoughby Dickinson.

First were considered the important questions of minorities in Italy, Germans in the Tyrol and Slovenes in the region of Trieste and Goritz. The case of the Slovene minority in Italy, which the Commission had not previously studied, was explained in an important brochure presented by the Yugoslav Association for the

League of Nations. Dr. Wilfan, of Trieste, confirmed the facts set out in the brochure, facts which appear to establish the arrested wish of the Italian Government wholly to denationalise the Slovene minority, notably by the wholesale suppression of public schools in which the Slovene tongue was taught before the advent of the present Government.

M. Ibrovatz, in the name of the Yugoslav Association, explained the reasons for the drawing up of this new brochure. He recalled the liberal affirmations which, on the eve of annexation, had been officially made in respect of the language and culture of the Slovene minority. He further deprecated any aggressive thoughts in regard to Italy, and pleaded that the question should be examined in a spirit of trust between the two countries.

Signor Giannini, head of the Italian delegation, explained the Italian point of view. The first intention of the Italian delegation was to oppose all discussion. Italy not being juridically bound in respect of its minorities, has the right to consider this question as a purely internal affair, which concerns Italy alone and which can be usefully discussed only between the majority and minority associations of the country. Foreign intervention could only complicate, instead of improving, the situation. Moreover, Italy could reproach Yugoslavia for failing to regard the rights of the Italian minority in Dalmatia.

M. Argyropoulos, ex-Minister of Greece, brought forward a motion which was acceptable to the Italians. It stated that the Commission, after having heard the explanations of either side, was persuaded that the Italian associations, majority and minority, animated with a common desire to regulate the problems which occupied them, would make a common effort to arrive at a settlement. This resolution was unanimously adopted.

On the second day an important matter was brought forward by the Greek Delegation on the situation of the non-Muslim minorities of Constantinople. This question had been for some time before the Commission and had been adjourned because of the absence of the Turkish delegation. The Greek memorandum explained the violations of Art. 33 to 44 of the Treaty of Lausanne: the prevention of minorities from going outside certain limits, the suppression of the language of minorities in tribunals and administrations, obstacles put in the way of their access to public functions, the suppression of personal status, and so on. A resolution was adopted drawing the attention of the Council of the League of Nations to the facts alleged which would appear to be of such a nature as to trouble the relations of Turkey with her neighbours. In the course of discussion, a Jewish delegate, member of the Bulgarian delegation, drew the Commission's attention to the particular difficulties with which the Jewish minority in Turkey has to contend.

At the moment of departure the whole Commission rose and gave an ovation to its President for the impartiality with which he directed its efforts.

The Anglican and Eastern Churches Association observed its 63rd anniversary on October 12. The Metropolitan of Thyatira celebrated the Divine Liturgy at the Greek Cathedral of St. Sophia in Moscow Road, Bayswater, in the morning. The Bishop of London presided over a public meeting in Sion College in the afternoon, at which the Bishop of Guildford and Dr. Waggett spoke, and Greek and Russian prelates were present. The meeting was preceded by tea and a small sale of ikons and other articles from Orthodox countries.

ARMENIANS IN SYRIA.

BY MAJOR E. W. POLSON NEWMAN.

Since the collapse of the Syrian revolt and the restoration of more peaceful conditions in the mandated area, the French authorities have turned their attention to the problem of the large number of Armenian refugees, who, after the French evacuation of Cilicia in 1921, descended on the coasts of Syria, where they have long threatened to become a source of considerable embarrassment to the Mandatory Power.

It is evident that, if one may judge from the efforts now being made by M. Ponsot, French High Commissioner for Syria, and the financial assistance which he has actually given, and is prepared to give, towards the solution of this question, the French regard it as one of considerable political importance, apart altogether from the humanitarian standpoint. They feel that it is in the interests of France that the Armenians should not be compelled to throw in their lot with Soviet Russia, the only Power which has hitherto welcomed Armenians or given them any opportunity of living even nominally in self-governing communities (in the Soviet Republic of Armenia or Erivan). Further, the French realise that the deplorable conditions under which great numbers of these Armenians have been living in Syria in recent years not only constitute a grave danger to public health in the towns, but also involve a serious waste of valuable labour and provide a source of natural discontent in a country where French rule is anything but popular. M. Ponsot's aim is to encourage economic prosperity in Syria and to discourage anything that may hinder what he considers to be the surest means of maintaining peace. He evidently regards the Armenian question as one which may either hamper or promote prosperity, according to the measures taken, and he has, therefore, authorised a scheme involving the expenditure of £25,000 from the revenue of the Lebanon, and is prepared to press for a similar contribution from the Syrian Government. Out of an economic debit he hopes to realise an economic asset.

Although the French spent 50 million francs in 1923 towards the help of the Armenian refugees and did everything possible, in the circumstances, to assist them in other ways, the fact remains that large numbers of these unfortunate people are still living under conditions which may be described as almost desperate. There are altogether about 80,000 Armenians in Syria, and many of them are doing well in various towns and villages scattered throughout the country, but those herded together in the camps of Beyrout, Aleppo and Alexandretta provide a problem of some difficulty. In Beyrout, where there are about 21,000 refugees (including many who fled from Damascus after the bombardment of 1925), the Armenian camp is on the sea beach. It is a nightmare slum, with buildings constructed of brown paper, newspapers, odd pieces of wood and tin cans. It represents the desperate ingenuity of human beings driven to house themselves in what is nothing more nor less than a garbage heap. This camp is cold and rain-swept in winter, while in summer it is burning hot, feverish and unhealthy. In Alexandretta, where there are about 6,000 refugees, similar conditions prevail, but the camp also has the disadvantage of being situated on a malarial swamp, so that the Armenians, who have almost become amphibious, endure great suffering from fever and disease. In Aleppo, where there are about 28,000 Armenians, conditions are more favourable, as the refugees have built themselves mud or brick houses and are for the most part self-supporting, but there is vast room for improvement in sanitary and general conditions of health.

The chief problem, which has to be faced, in disposing of the 40,000 Armenians who need assistance, is the settlement on the land of some 28,000 agriculturists and the removal to better quarters of the remaining 12,000 artisans, all of whom have been accommodated in the

miserable camps of Beyrout, Alexandretta, and Aleppo. As a large proportion of the Armenians in Syria are cultivators of the soil and as the suitability of Syria for Armenian settlement has been fully and conclusively proved (numerous colonies already exist and have from the very outset been self-supporting), there is reason to anticipate a successful solution, especially in view of the whole-hearted support, financial and otherwise, which has evidently been authorised by the Quai d'Orsay.

The French High Commissioner, in collaboration with the International Red Cross Committee and the International Labour Office, has approved the following scheme:—1. The construction at Beyrout of a new quarter, with good simple housing, built by the Engineer Corps of the French Army, to replace the present camp. The High Commissioner's contribution of £25,000 from the funds of the Lebanon State will be chiefly devoted to this object, the land has already been purchased, the plans have been approved, and work has begun. 2. Constructional and sanitary improvements in the camp at Aleppo. 3. Drainage of the swamps at Alexandretta, an undertaking involving the expenditure of some ten million francs and work spread over several years, which will be put in hand at once. The French Delegate is prepared to co-operate for the establishment of a proper Armenian quarter in the town, as far as possible on the same lines as that at Beyrout. 4. Settlement in agricultural areas of agricultural families now living in the camps, in order to effect the definite settlement of Armenians as *metayers* (tenant partners) or colonists on available land in the coastal region of Northern Syria and south of Sidon, and in order thereby to evacuate the camps as far as possible.

A central committee has been formed in Beyrout, with local sub-committees at Beyrout, Aleppo, and Alexandretta, and a substantial beginning has already been made. Twenty families have been placed as *metayers* at Ras-el-Ain in the Lebanon; 100 families are being placed as colonists on two farms in the Jebel Moussa (near Antioch); 15 families on a farm on the borders of the Alexandretta sanjak and the Alaouite State; and 600 families are being evacuated from the Beyrout camp to new quarters outside the city. This work is covered by the funds now at the disposal of the committee, viz., £33,500, comprising £25,000 from the Lebanon State, £3,000 from the League of Nations, and £5,500 from charitable societies. This, together with a further £25,000, which may be reasonably hoped for from the Syrian Government, makes up nearly half the total sum required to carry out the scheme in its entirety, viz., £125,000. As large tracts of land are available at small cost, and as there seems no doubt that, once these Armenian cultivators are settled, they will become a self-supporting community, efforts are now being made at Geneva to induce the various Governments to make up the balance. Whethese these efforts will succeed, it is not yet possible to say.

Provided that the necessary funds are forthcoming, it is further intended to place 1,000 families on three Syrian State properties to be purchased on the Aleppo-Alexandretta road, 250 families on another State property near the River Orontes, on the Damascus-Aleppo road, and an unstated number on recovered marshland outside Alexandretta. The refugees already placed in the region south of Sidon have made such good progress that they will be in a position to repay this year at least the major portion of the advances made to them, and it is estimated by competent authorities that the Armenians as a whole will have no difficulty in paying off the loans by ten yearly instalments, after which the lands and houses will become their own property.

Apart altogether from political considerations, the French Government realise the value of Armenian agriculturists, who have proved themselves good husbandmen in north-west Persia, north-east Turkey, in Mesopotamia and elsewhere; and for this reason they are anxious to see them settled on the land in Syria, large areas of which are

as yet uncultivated. The lands chosen for settlement are ensured abundant water, healthy climate, good communications and adequate security, the latter qualification being always a matter of some difficulty in a country mostly inhabited by Muslims, many of whom are of Turkish descent. The French, however, are taking every precaution in the choice of these lands in Northern Syria, where the settlements will be at least 20 miles from the Turkish frontier, in a region where the population is mixed (Kurdish, Syrian, Armenian, etc.), where the proportion of Christians is considerable and where the Turks form a small minority. The region is fertile, near the coast, and is well equipped with roads. Moreover, it is a country where Armenians have been settled for hundreds of years, notably in the Jebel Moussa and the Jebel Akra. In Soueydiyeh the French Government has appointed an Armenian Mudir (local governor), who will take a leading part in establishing the refugees on the Jebel Moussa, and the French local authorities are seeing that the settlements are provided with suitable police and gendarmerie. In the Lebanon, where the inhabitants are for the most part Christians, the question of security presents little difficulty.

Hitherto, the individual Armenian has been unpopular in Syria owing to his readiness to work for lower wages than the average Syrian. There is, therefore, a danger that the new settlements may incur some measure of united resentment, if the Armenians, by their greater industry, cut out the local Syrian farmers and thereby touch their point of greatest susceptibility, namely, their pockets. On the other hand, should the Armenian farmers employ Syrian labour and pay fair wages, there seems no reason why the two nationalities should not work well together.

IRAQ IN 1926.

The Report of the British Government to the League of Nations on the administration of Iraq for 1926 has just been published by the Stationery Office (Colonial Office, No. 29, price 5s. 3d.). In the survey of the period it is pointed out that, first of all, the grave anxiety arising from the disputed frontier between Turkey and Iraq was removed. A new Treaty with Great Britain was drawn up (of which Article III. was inserted to satisfy the Iraqi critics who opposed a prolongation, equal to that of the general tutelage, of the subsidiary agreements of the 1922 Treaty). The last League Commission, who left Iraq in March, reported extremely favourably on the reception by Iraqis of the League's award in respect of the northern frontier. In April, 1926, three things occurred: the inundation by the waters of the Tigris, the visit by King Faisal to Basra (by which he is stated in this Report greatly to have enhanced his popularity), and the return of the High Commissioner to Baghdad after five months' absence in connexion with the League decision, the consideration of a revised Anglo-Iraq Treaty, and the Turkish negotiations. There followed in June the tripartite Treaty of Angora. King Faisal was away in Europe from June to October, and the High Commissioner was away, in London and Geneva, from October to December. The main domestic feature of the year, apart from the change of Cabinet in November, was inter-tribal raiding between the Shammar and the Anizah and the Anizah and the Dhafir tribes of the desert of Western Iraq.

In the Kurdish areas the Iraq Government found that they had little to do to bring the administration into complete harmony with the stipulations of the Council of the League. Administration of the Sulaimaniya province, which had been re-established in 1924, was consolidated, although a final agreement with Shaikh Mahmud was not reached in 1926. The Kurds of the northern area caused certain complications. Naif Beg, of the Miran Kurds, with 1,200 tents of his tribe, was allowed to settle on the right bank of the Tigris, south of a line between

Rumailan and the junction of the Khabur with the Tigris. In April the Goyan tribe opened hostilities with the Turks; and were defeated. But apart from the influx of fugitive tribesmen, control was progressively consolidated in the northern districts.

For the Assyrians no special enclave within Iraq, capable of settling 20,000 Assyrians, was found. Various schemes have been set into motion on their behalf, but, says the Report, "it appears probable that the Assyrians will, in the course of a few years, settle themselves with a fair measure of comfort in groups and villages scattered about the northern hills and valleys of the Mosal and Arbil provinces. There is no reason, however, why they should thereby lose their national characteristics or religious independence."

In the section devoted to foreign relations it is stated that during 1926 the German and Greek Governments applied for permission to appoint Consuls in Iraq and made formal applications for King Faisal's exequatur. Other States which had previously recognised Iraq are: Great Britain, France, Italy, Turkey, Norway and Sweden. The Angora Treaty with Turkey, of course, brought about a swift improvement in the frontier situation. In regard to the relations with Arabia, which were complicated through the activities against Najd of the Shammar sections who took refuge in Iraq when King Ibn Saoud overthrew Hail in 1921, there is a section worth quoting:—

These Shammar are pure nomads and rely principally on raiding for a livelihood. To prevent mischief, the Iraq Government has tried to concentrate them in the northern Jazira, but their mobility is so great and their knowledge of the desert so intimate and extensive that even this remote banishment does not in itself prevent them from raiding as far south as Kuwait, or even to Tabuk on the Hijaz railway. Nor can they be kept within the boundaries of Iraq. The whole desert to them is an open sea, their havens the grassy wadis. Their sections are scattered like ships. For a time some may lie at rest in the open country close to the Sinjar mountains, but soon they may be off, away over the Syrian frontier, not to be heard of again until the reappear with looted camels from Najd, the Hijaz, or Transjordan. The Iraq Government has therefore to contend with a variety of natural and political difficulties, in dealing with these refugee Shammar, which do not occur to embarrass the Najd authorities in the control of their tribes.

The Syrian frontier question was troubled by the squabbles of Diham and Ajil, rival Shaikhs of the Shammar tribe, the raids and counter-raids of the Tai and the Yazidis and the feud between the Dulaim and the Aqaidat.

Persia still refused to recognise Iraq, being the only member of the League of Nations having close relations with Iraq and keeping consular officers in that country which has failed to accord formal recognition. Moreover, according to this Report, the Persian Government appeared during 1926 to consider that their refusal to recognise Iraq prohibited them from co-operating in certain measure which would be beneficial to both countries, such as the establishment of direct telegraphic communication and of a combined customs post at the frontier, on the main trade route between the two countries.

In the section on the Ministry of Interior it is noted that the control of Government in the districts has continued to increase, but that there are still several areas, such as Penjwin, Qala Diza, Barzan, Mazuri and Shirwan, where Government control is either non-existent or ineffective.

Financially, the Iraq Government had at the end of March, 1926, a real accumulated surplus of Rs. 145 lakhs.

In the Ministry of Defence section it is remarked that "the work of the year 1926 has brought the Iraq Army appreciably nearer to the goal to which it is advancing; complete fitness to undertake unaided the defence of the country from external dangers and the maintenance of good order within."

Other interesting sections deal with Communications and Works, Education, Auqaf, and an Appendix contains the text of certain laws and a list of the laws and regulations passed in 1922, 1923, 1924, and 1925.

THE ZIONISTS AND PALESTINE.

It is a particularly fitting moment, with the approach of the tenth anniversary of the Balfour Declaration, and the recent publication by the Zionist Executive of a "Statement," to review the whole position of the experiment now being made under the mandate of Great Britain to found in the Holy Land a National Home for the Jews. As is well known, things have not been running smoothly in Palestine for the Jews for many months, and not even yet can the corner be said to have been turned. The wood in Palestine is still thick, and while some cannot see it for the trees, it is quite manifest that Zionists as a whole are not yet out of it.

Yet before such a temporary phenomenon it is not to be expected that such a philosopher as Lord Balfour will forgo his detached and remote gaze in order to look at the condition of his creation a little more closely. The author of the "Declaration" has consistently shown the highest belief in the future of the Jewish race in Palestine, although it is true that his ill-advised visit to the Holy Land a few years ago might, had his faith been less Olympian, have brought him down from the clouds. It would be no bad thing, however, to attempt, upon this forthcoming celebration of the "Declaration," to inform him of the fact that the success of the Jewish National Home cannot be brought about by the indulgence of pious aspirations only. Nor is Lord Balfour the only non-Jewish Zionist who fails adequately to realise the seriousness of the present Zionist situation in Palestine.

Now what hope does the new Executive hold out for the remedying of this situation in Palestine? Its chief counsel is patience. Consolidation is the first thing; it must take precedence over all other matters. In other words, the existing Zionist enterprises must first of all be made to run on business lines. The Executive does not shrink from the statement that Palestine must be called upon for further self-abnegation. The recent unemployment must be ended; and, indeed, it is reported that the system of the "dole" has already been got rid of in some Zionist centres.

But the pace of the new Executive is not fast enough for all Zionists. Its "Statement" has already encountered considerable criticism, as giving no concrete grounds for the establishment of a better state of things. With such critics it is possible to have considerable superficial sympathy, but on deeper examination one perceives that all this girding at the Weizmann policy is more than

unjust. After all, that policy was confirmed at the Fifteenth Zionist Congress, and if there is any man who knows better the mind and intentions of the British Government in regard to Palestine, it is the fault of the Zionist Movement, not of Dr. Weizmann, that he has not yet been forthcoming.

As a matter of fact, the present "crisis" of the Zionists in Palestine has not been wholly disadvantageous. "It's an ill-wind that blows nobody good"; and the plight of the Jewish immigrants, the exodus from Palestine of those who presumably hoped to spend the remainder of their lives there, and the subsequent action of the Palestine Government in sharply restricting immigrants, so that the depression of the new immigrants should not adversely affect the rest of Palestine, have produced a notable impression upon the Arab population of the Holy Land.

One of the unlooked-for results of this Zionist emergency may well be a greater disposition on the part of the Arabs to co-operate with the Government, and consequently with the Jews. For it is now obvious, for all the world to see, that whatever the rival schools of Jews think about it, the Arabs of the Holy Land will never tolerate an attempt to realise the Herzlian conception of a Jewish State, although they may well be brought in time to see the advantages of allowing their country to be linked up with the outside world as a "spiritual centre" of Jewish thought. After all, Ahad Ha'am did know more than Herzl about the actual conditions in Palestine.

Fethi Bey, former Prime Minister, and now Turkish Ambassador to France, arrived in Angora on October 13.

At Teheran on October 16 the Shah cut the first sod of a new railway which is to cross Persia from the Caspian to the Persian Gulf.

The annual European Railway Conference, which determines the time-table for the international express trains, opened in Prague yesterday. Two hundred and twenty delegates attended.

According to a Beyrout message, Colonel Clément Grandcourt has been appointed Governor of the Jabal Druze and has taken command of the troops there and in the Hauran.

In the southern outskirts of Nablus (Shechem) nine stone benches have recently been discovered arranged to form a semi-circle and bearing inscriptions giving Roman proper names in Greek letters. It is supposed that they may have been part of a shrine, or public forum or Senate House.

Tsena Beg Kryeziu, Albanian Minister in Belgrade, who had been newly appointed as Minister also to Czechoslovakia, was shot dead in Belgrade on October 14 by a young man who fired at him in the café of the hotel where His Excellency was living. The Minister died while being taken to hospital. The assailant, who is an Albanian student named Agiviadh Bedi, gives as the reason for his action that the Minister had desired to hand over Albania to Yugoslavia.

The first ordinary Session of the new Roumanian Parliament was opened in Bucharest on October 15, when Prince Nicholas, a member of the Regency Council, read the Speech from the Throne. The Speech indicated that Parliament would be required to deal mainly with administrative and economic legislation, and that particular attention would be given to the question of increasing agricultural production. The National Peasant Party did not attend the opening ceremony.

According to *The Times* Riga Correspondent, the Soviet Government is starting a second cargo steamer line between Odessa, Alexandria and the Arabian ports, particularly those in the Hijaz, with which a recent expedition is described as having established "close ties by underselling Indian goods and purchasing what is usually received *via* Hamburg and London." It is announced that the *Yam Tomp*, the first steamer of the new line, will leave for Jidda soon with a cargo of 800 tons of sugar and tea.

Orders have been issued that H.M.S. *Rosemary*, which has been fitted out for duty on tropical stations, is to be commissioned, on being passed out of dockyard hands at Portsmouth about the end of October, for service on the East Indies Station. She will be joined by a navigating party comprising 50 per cent. upper-deck ratings and full engine-room complement. The *Rosemary* will sail for her station as soon as possible after completing her trials, and is expected at Aden during the first or second week of December. On arrival, she will commission with the present crew of the *Crocus*, Commander J. Graham Bower, D.S.O., and the latter ship will return home with the navigating party of the *Rosemary*.

 Tishri 24, 5688, of the Jewish Calendar.

Lady Sassoon returned last week to 46, Grosvenor Place from the Continent.

The Aga Khan arrived last week at the Ritz Hotel from the Continent.

Sir Thomas Strangman left London to join the Razmak at Marseilles for Bombay.

Sir Reginald Patterson has resigned his appointment as Financial Adviser to the Government of Egypt.

The Hon. Anne Tufton, Lord and Lady Hothfield's younger daughter, is leaving for India on October 29.

Sir Victor and Lady Warrender returned to 18, Upper Grosvenor Street from Lairg (Scotland), on October 14.

Sir George and Lady Mills McKay have left Rothay Manor, Ambleside, for Athens and Constantinople, and will be away for some time.

Lord Ebury and his daughter, the Hon. Betty Grosvenor, are leaving early in November for India, where they will stay some months.

Lord and Lady Congleton, Lord Airedale, and the Hon. Angela Kitson left London on October 13 by the P. and O. Bombay express to join the s.s. Razmak at Marseilles.

Sir William Erskine, British Minister in Bulgaria, who has returned to Sofia from leave, visited M. Bourroff, Bulgarian Minister for Foreign Affairs on October 10.

General Sir Alexander Cobbe, who has been home on leave, embarked in the Razmak at Marseilles on October 14, to resume command of the Northern Army, India.

Viscount and Viscountess Gladstone returned on October 12 for a short stay to 4, Cleveland Square, St. James's from Aix-les-Bains, before leaving for Dane End, their Hertfordshire seat.

M. Neshitch, Yugoslav Minister in Sofia, visited M. Bourroff on October 10 and expressed the appreciation of the Government of Belgrade for the action of Bulgaria in regard to recent Macedonian disturbances.

Under the auspices of the Near and Middle East Association, Mr. St. John Philby is lecturing upon "Arabia of To-day," on October 26, at 8.45 p.m., at 64, Queen's Gate S.W., (by kind permission of the Dowager Lady Boyle). Sir E. Denison Ross will preside.

A dinner will be held on November 10 under the auspices of the Anglo-Palestinian Club, in celebration of the Tenth Anniversary of the Balfour Declaration. Lord Balfour has consented to attend and Mr. James de Rothschild, President of the Club, will be in the Chair.

The betrothal is announced of Prince Christian, eldest son of Prince Frederick of Schaumburg-Lippe, to Princess Irene of Greece. The Prince is nephew of the Kings of Denmark and Norway and of the former Queen of Wurttemberg. The Princess is daughter of the late King Constantine, niece of the ex-Kaiser and aunt of the little King of Roumania.

NEWS IN BRIEF.

Thirteen persons have been drowned in the floods caused by the recent torrential rains in the district of Bourgas (Bulgaria).

Maitre M. Tatarachi, Vice-President of the Egyptian Mixed Bar Association, left Alexandria at the beginning of this month for Athens.

Mr. Walter Berry, ex-President of the International Tribunals in Egypt, died on October 12 at his home in the Rue de Varenne, Paris.

Abdel Khalek Pasha Sarwat, Egyptian Prime Minister, arrived in France at the end of last week to attend the King of Egypt during the State visits to France and Belgium.

The Egyptian Government is contemplating, says the *Sphinx*, the foundation of three new Egyptian Consulates, in Addis Ababa, New Orleans, and Manchester respectively.

The Director-General of the Municipality of Alexandria, Ahmed Sadik Beyfi and Mme. Sadik, returned to Egypt from their leave in this country by the Lloyd Triestino line at the beginning of October.

Sir Herbert Samuel was chosen on October 11 by the Glasgow University Liberal Club as candidate for the next Rectorial election, which takes place in October, 1928, when Sir Austen Chamberlain's term of office ends.

Three slight earthquake shocks were felt at Belgrade at 7.30 on October 12. The epicentre was calculated to have been 30 miles south-east of the capital, at the foot of Mount Bukulja.

In the absence of King Boris, who is on holiday abroad, M. Liaptcheff, Bulgarian Prime Minister, opened the Bulgarian Sobranie in Sofia on October 15.

Dr. Austin Byrne, Expert Adviser on Public Health, of the Department of Public Health of the Ministry of the Interior, left Cairo on October 5 by an Imperial Airways aeroplane for Iraq. Dr. Byrne is representing the Egyptian Government on a Cholera Commission.

The Near East Relief Office in Paris has been informed by Mr. J. W. Beach, director of relief at Leninakan, Armenia, that there is no truth in the report that a number of American workers attached to the staff of Near East Relief at Leninakan have been arrested by the Bolsheviks.

Sir Reginald Louis Oakes, Bt., whose death took place on October 11 at the Hotel Windsor, Paris, served as General Manager of the Cairo Electric Railways and Heliopolis Oasis Company. In 1882 he married Florence, daughter of Mr. Charles de Bels Brounlic, formerly His Majesty's Vice-Consul at Turin.

The Turkish Popular Party Congress opened at Angora on October 15, when Mustapha Kemal Pasha delivered the first part of the four days' speech. All the foreign Ambassadors and diplomatic representatives were present at the Congress to hear this speech, which will be adopted as Turkey's official history.

The closing meeting of the General Council of League of Nations Associations at Sofia on October 9 was addressed by Lady Gladstone. M. Dembinski (Poland) was elected President for the next session. In the afternoon a great demonstration took place in honour of Lord Gladstone. Veterans of the war of 1878 took part, and the Macedonian National Committee expressed their gratitude for the support given by his father to the cause of Macedonia.

The Parliamentary Commission to which all the decrees issued during the Pangalist dictatorship in Greece are being submitted has approved the one in virtue of which a pension was granted to the morganatic wife and daughter of the late King Alexander from April 1, 1926, equal to the pay of a lieutenant-general on the active list.

As from October 15 air mails between Baghdad and London are taking 24 hours less in transit, as the time schedule of D.H. Bristol Empire air liners flying on the Imperial Airways route between Cairo and the Persian Gulf has been rearranged. In future the air liners will cover the entire distance between Baghdad and Cairo in one day, the overnight stop at Gaza being omitted.

The Navarino Centenary

The centenary of the Battle of Navarino is a landmark for other countries as well as for Greece. A hundred years ago the principle of national independence was very imperfectly understood in Europe. The justice of the struggles of the Serbs and Greeks for emancipation was conceded, in recognition of the misgovernment of the Turks rather than in virtue of an inherent right. The torch of liberty had to be lighted by the peoples themselves and kept burning for some time before the Great Powers recognised their own responsibility in the matter. The Battle of Navarino may in some respects be regarded as having forced their hands, and from that date it became more invidious to oppose the cause of national independence than to support it, in spite of some notable lapses.

In 1827 the Greek revolution, which had begun six years previously, was not faring well. The support of the Egyptian fleet and army had given Turkey the mastery of the Peloponnese, and the outlook for the Greeks bordered on complete despair. At the beginning of the struggle the British Government had been opposed to the revolution; but the sympathy of the British nation had been stirred, and the glamour with which the assistance of individual Britons to the Greek cause was being invested reacted on the official attitude. Of the three Powers, Great Britain, France and Russia, Great Britain was the first to take her stand boldly on the side of constitutional liberty as opposed to despotism. Russia had shown the measure of her interest in Greece by proposing that the Greeks should be divided into three separate governments, and it was only when she had realized the possibility of losing her hold upon the country, if its independence should be obtained in her despite, that she prepared to apply a more literal interpretation to the rôle of protector. France was already committed to the task of suppressing constitutional liberty in Spain, and could not, therefore, hope to carry conviction in posing as a warm supporter of it in the East. In these circumstances it was natural that the Greeks should turn in their difficulties to Great Britain. In August 1824 they appealed to the British Government to defend the independence of Greece and to frustrate the schemes of Russia. Canning's reply may not have appeared to the Greeks in their troubles a very heartening response; but it did constitute a recognition of their right to be independent and to form a new State. The British Prime Minister expressed the opinion that, in view of the conflicting claims of Turkey and Greece, mediation was for the moment impossible; if, however, at a future date Greece should ask for mediation and the Sultan be prepared to accept it, the British Government would willingly co-operate with the other Powers of Europe to facilitate a treaty of peace and to guarantee its duration. The British "pointer" to the ultimate solution of the struggle was a marked improvement on the attitude of Russia and France, who remained hostile to the Greek revolutionary movement. A year later the Greek legislative body in secret sitting declared that the Greek nation placed the sacred deposit of its liberty, independence and political existence under the absolute protection of Great Britain; and, as the historian George Finlay records, an act was publicly signed by a large majority of the clergy, deputies, primates and naval and military chiefs of the Greek nation placing Greece under the protection of the British Government. On the strength of these documents Canning proceeded to take definite steps for the pacification of Greece. Russia was won over to the principle in 1826; but it was not until July 1827 that France associated herself with Great Britain and Russia, and the three Powers entered into a treaty for the enforcement by armed intervention of an armistice between the Greeks and the Turks. The armistice notified to both belligerents was not accepted by the Sultan, and the Allied fleets prepared to enforce it on the Turkish commanders in Greek waters.

The first engagement took place on September 29, when Captain Hastings with a Greek force attacked a Turkish Squadron in the Bay of Salona (Itea), drawn up under the protection of shore batteries, and destroyed practically all the Turkish vessels. The main Turkish fleet, reinforced by Egyptian ships, had made the Bay of Navarino, on the south-west side of the western promontory of the Southern Peloponnese, its headquarters in September, and when the Egyptian Commander-in-Chief, Ibrahim Pasha, showed that he was not prepared to accept the armistice, the Allied fleets under Admiral Sir Edward Codrington entered the Bay on October 20 with a view to preventing any of the Turkish vessels from carrying out hostile movements against the Greeks. The combined Turkish and Egyptian fleets numbered eighty-two ships, mounting nearly two thousand guns; of these three were line-of-battle ships, five were double-baulked frigates and twenty-two frigates. Some twenty thousand troops lined

Admiral Sir Edward Codrington
b. April 27, 1770, d. April 28, 1851.

the heights commanding the harbour. Admiral Codrington had under him twenty-seven ships, twelve in his own division, eight in the Russian and seven in the French. Ten of the ships were line-of-battle ships, ten were frigates (one double-baulked), and seven sloops, the total number of guns being 1270.

As soon as the Allies appeared the Turks made ready for battle, but did not fire the first shot until the English and French ships had taken up their positions. Admiral Codrington attempted to parley with the Turkish flagship, but his messenger was shot, and at the same time fire was opened on a French frigate. The action at once became general, and four hours later the bulk of the Turkish and Egyptian fleets had been destroyed. On the following morning only twenty-nine out of the eighty-two remained afloat, and of these seventeen only were seaworthy. The loss of the Allies amounted to 172 killed and 470 wounded, as compared with the Turkish loss of nearly seven thousand.

In spite of the completeness of the victory, the immediate effect of the Battle of Navarino was singularly disappointing. The Allied fleets returned to their respective bases in Malta and Toulon; Ibrahim Pasha made no

attempt to abandon his position in the Peloponnese, but used the ships still left to him to transport his wounded, a number of Turkish families and two thousand Greek slaves that he had captured, to Alexandria. On Sultan Mahmud the defeat in Greek waters made no impression, and he refused once more to entertain an Allied offer of mediation. In Great Britain the destruction of the Turkish fleet was officially regarded as an "untoward event," as there had been no declaration of war against Turkey; but when Admiral Codrington urged the same reason in justification of his not having searched Turkish men-of-war, and so prevented the transfer of Greek slaves to Egypt, it did not prevent his recall, and he was left to derive what satisfaction he could from honours and decorations as compensation for the charge of having exceeded his instructions at Navarino. Before handing over his command, Admiral Codrington concluded a convention with Ibrahim Pasha by which the latter undertook to evacuate the Peloponnese; but, in the absence of any further pressure—both Great Britain and Russia immediately withdrew from the Greek war—the agreement remained a dead letter, and it was not until the French had landed an army in the Peloponnese in August 1828 that Ibrahim Pasha found it politic to return to Egypt. In the meantime Russia maintained her quarrel with the Sultan, and fighting took place in European Turkey. It was here that the effects of the Battle of Navarino made themselves more apparent. The Sultan with the loss of his fleet had lost command of the Black Sea, and as the Russians advanced by land to Adrianople, he realized the danger to which Constantinople was exposed. On September 14, 1829, the Treaty of Adrianople terminating the war between Russia and Turkey was signed, and Russia, profiting by the irresolution of the British and French Governments, contrived to make it embody Turkey's recognition of Greek independence. As the Sultan had, a few days previously, notified Great Britain and France that he was prepared to accord this recognition, the two

Powers were unwilling that the independence of Greece should rest formally on a Russo-Turkish Treaty. Accordingly on February 3, 1830, a protocol was signed abolishing the suzerainty of the Sultan and declaring Greece an independent State.

Although the full effects of it were, thus, not felt until more than two years later, the Battle of Navarino marked the climax of the Greek struggle for independence, and is, therefore, an appropriate date from which Greece can review a century of national freedom. The battle took place at a time when Greek fortunes were at a low ebb, and it was at least probable, if not certain, that without the active intervention of the Allies the Turks would have regained the mastery of the Peloponnese and have succeeded in suppressing the Greek revolution. It is a matter for regret that the Protecting Powers were not more generous to their ward. Greece has had to wage a long struggle to secure the national boundaries that might with better grace have been given her when she won her independence. Thessaly and part of Epirus were not ceded to Greece until 1881; Crete was the scene of more than half a dozen revolutions, before it was formally and finally incorporated in 1912. The history of Greece, accordingly, has been a record of constant effort to obtain national unity and the cost of military budgets and frequent mobilisations has contributed largely to the financial undoing of the country.

The centenary of the struggle for independence, however, finds Greece to-day a unified homogeneous country. It is true that the goal has only recently been reached, and that the worst of the country's troubles were reserved for the last. Into the last ten years the Greeks have crowded a peculiarly severe martyrdom, in that they have been carried to the topmost pinnacle of their hopes, to be dashed down again into the abyss of desperation. Maps of Greater Greece showing a large enclave in Asia Minor as Greek territory are still cherished; but it is a far greater Greece which has its frontier to-day on the Maritza, and

its nationals from Asia Minor settled in Macedonia and other parts of the country. As a tardy act of justice the Great Powers, now acting through the League of Nations, after a policy which has in curious manner blown hot and cold throughout the hundred years, have accepted responsibility for the rehabilitation of Greece. Without the two Refugee Loans—the second shortly to be floated—the Greeks could not have hoped to take advantage of the new potentialities which have been opened up for the country by the concentration of refugees from Asia Minor and by the new spirit which has risen from the ashes of their past troubles and mistakes. Even when due allowance had been made for the handicaps imposed on Greece by the territorial restrictions to which she was condemned by the Powers who helped her to win independence, it has to be admitted that her more vital interests were deliberately neglected by reckless politicians, urgent reforms were indefinitely postponed, and the country remained content with an administrative system that left much to be desired. To-day, however, much of, if not all, this has been changed, and there is no need to inquire whether the improvements are years, months or only

ance, in order to cater for the requirements of the ubiquitous car and motor omnibus.

Commerce, for which the Greek has a natural aptitude, has made rapid advances; agriculture and industry, which progressed but slowly, are now beginning to come into their own as a result of the stimulus given by the refugee agriculturists and craftsmen from Asia Minor, to the marked benefit of Greek finance. In regard to education—the touchstone of the national will to progress—Greece has nothing to be ashamed of, when the handicaps of empty exchequers and the broken nature of the country are taken into consideration. She can on the other hand be justly proud of the benefactions by which Greek education and culture have benefited from the intense patriotism of rich Greeks who, whether domiciled in Greece or abroad, have selected this practical way of advancing the true interests of Greece.

The reverse of the shield is to be found in the fact that, writ large across the history of the country during the last hundred years, has been the curse of politics, which is far from having been exorcised. More recently the long suffering public has contrived to impose its will on the

weeks old. In the first place Greece now belongs to Europe. Through communication, established in 1916 by the construction of the link between the Thessalian and Macedonian railway systems, remained of a deliberate and half-hearted order for the first few years after the War, but has now been accelerated so as to bring Athens within four days of London. There are still many gaps to be filled before the railway system can be regarded as adequate to the needs of the country; but it has to be remembered that owing to the configuration of Greece shipping plays a more important part in Greek communications than it can in the majority of countries. Hardly any centre of trade and population is more than from sixty to a hundred miles from the coast. Now, at the time when a comprehensive scheme of railway construction enters the realm of possibilities, the motor has arrived on the scene as an easier solution of the problem. When Greece acquired independence there was no carriage road in the country. Since then roads have been built at the rate of one mile a week, and, although few of them were in good condition two or three years ago, more serious attention is now being paid to their repair and mainten-

politicians to the extent of calling into existence and maintaining against fissiparous tendencies two coalition Governments, in which party leaders have been, as it were, shamed into co-operation for the good of the country and the neglect of personal or party interests. Yet this satisfactory state of affairs has been reached only after the almost suicidal division of the nation into two bitterly hostile camps favouring respectively a monarchy and a republican system of government. A truce has been called, but no real fusion has been attempted, and it remains to be seen how long the shrewd instinct of a people anxious for political peace for the sake of business will be able to keep a curb on its fire-eating politicians.

On the hundredth anniversary of the Battle of Navarino Greece has good reason to be heartened in her stock-taking. Internally she has turned the corner more confidently than at any other period in a chequered century. In the domain of foreign affairs she has often had to complain of the lack of sympathy, or at least of the lack of understanding as displayed in their policy by the protecting Powers; but her own resilience has stood her in

(Continued on page 499.)

British Enterprise in Greece

Recent British enterprise in Greece may be classified under three headings—

1. Commercial, Industrial, etc.
2. Educational, Philanthropic, etc.
3. Archæological, Literary, etc.

Since it is not possible, in the compass of a short article, to do more than touch briefly on the activities comprised under these headings, a short *résumé* in each case must suffice.

1. *Commercial, Industrial, etc.* The roads constructed during the British occupation of the Ionian Islands cannot, it is true, be described either as commercial undertakings or as recent. But they deserve to be mentioned, because they remain to the present day as eloquent proofs of British enterprise and workmanship at that time. Since then, roads have been constructed from time to time in various parts of Greece by British engineers, but unfortunately owing to political troubles, they have not always been completed. Such is the road which is to connect Agrinion and Karpenisi, and of which only the two ends and some of the bridges had been finished when a change of régime necessitated its abandonment. There is, however, the road between Brapo and Itēa, along which all travellers to Delphi pass, and which is, perhaps, better known to foreigners than any road in Greece. One half of this was made by British engineers during the War, the other half by the French.

In the Greek world of finance the Ionian Bank is notable not only as a British institution, but also for having been founded two years before the National Bank of Greece. It forms the subject of a separate article in this issue.

The oldest British engineering concern in Greece is the Lake Copais Company. Taken over in 1887 from a French Company, this great drainage scheme has since been completed and is constantly being improved. An area of 220,000 stremmata has been reclaimed, and the benefits to the neighbourhood are incalculable. It is satisfactory to know that a dispute which had been going on between the Company and successive Greek Governments for nearly 40 years, was amicably settled two years ago.

Another great drainage scheme is also being carried out by British engineers, although the Foundation Company which they represent is partly American. The scheme comprises the drainage of the Yenidje Lake or Swamp, which is situated in the centre of the area known as the Salonika Plains, and the training of the Rivers Vardar and Aliakmon, as well as smaller streams, by side embankments and other means. By these works the following results will be obtained: upwards of 500 square kilometres will be reclaimed, and 800 will be protected from flood; also, if it is finally determined to irrigate this area, 800 or 900 square kilometres will be irrigated by the perennial waters of the rivers named.

Incidentally the scheme provides for the regulation of the mouth of the River Vardar by a new channel, thus diverting the deposit of silt which is at present taking place, and which, in future years, unless diverted, would be a danger to the important harbour of Salonika.

The works of drainage of Lakes Amatovo and Ardzan and the Vardar River defence work in its upper region near Karasouli were begun in the autumn of last year and are now well advanced.

Those who knew this district during the War will remember that it was one of the worst malarial spots in Macedonia and that whole battalions of the 22nd Division were decimated by fever at the time of the attack on Macukovo in September 1916. As the whole of this area, then a wilderness, is now densely populated by refugees, it is evident that the undertaking is one of first importance, and its completion literally a matter of life or death to thousands.

Another Company which has been long established in Greece is the Anglo-Hellenic Magnesite Company which works mines at Limne in Euboea and at Ormylia in Chalcidice.

The Anglo-Hellenic Marble Company, now the Grecian Marble (Marmor) Company, Ltd., is another old-established concern. It works the marble quarries on the islands of Tenos, Naxos and Skyros and the famous Dionysio quarries on Mt. Pentelikon.

The Eastern Telegraph Company owns all cables between the islands and the mainland and those connecting Greece with foreign countries. Last year the Greek Government extended the concession for fifty years, conferring upon the Company a monopoly of all telegraphic communications between Greece and foreign countries, whether by cable or by wireless, with exceptions in regard to ships of war and the mercantile marine.

A stranger visiting Athens at the present day is at once impressed by the handsome buses which are beginning to appear in the streets. These also are tokens of British enterprise. The Power and Traction Company, a British concern, has undertaken the re-organisation of the Electric Power Supply for the whole of Athens and the Piræus, of the tram system and of the motor buses, also the electrification of the Athens-Kephissia Railway, and the construction of an underground station below Homónia Square.

One of the most successful of British activities in Greece to-day is that of the Blackburn Aeroplane Company, which is instructing Greeks in the manufacture of aeroplanes.

2. *Educational, Philanthropic, etc.* Among British educational activities in Greece, the training of the City Police takes the first place. The idea of a police force, whose function is to serve, not a particular Government, but the public, is new to the Greek mind, and it has been almost as hard to educate the public to that idea, as to train the police. However, the British Mission, under Sir Frederick Halliday, has, in spite of considerable opposition, especially from the rival organisation of the Gendarmerie, succeeded in turning out from the Training School at Corfu, a body of men whose efficient handling of the traffic and smart appearance reflect great credit on their training and on the Greek capital. That these results are appreciated in Greece is clear from the fact that Mr. Sloman, who has been head of the Training School in Corfu, has been selected by the Committee as first headmaster of the new public school (on the English model) which has just been opened on the island of Spetsai. This school, though an example of Greek rather

than of British enterprise, may be mentioned here as showing that British character and ideals are appreciated. It is also gratifying to learn that a British officer has been selected to train the Gendarmerie.

The traditional sympathy which has united Greek and British seamen since the War of Independence is maintained by the present Naval Mission, the third of its kind, now at work in Greece.

British philanthropy responded to the call made upon it at the time of the Smyrna disaster. In addition to many individuals who gave their services, the Save the Children Fund did most admirable work, which will not be forgotten.

The British School of Archæology in Athens deserves to be regarded as the outstanding embodiment of British interest in Greece. Opened in 1885, it has been in existence for over forty years and, though hampered by want of funds, has maintained the high standard set by its early directors and students. Such names as C. Penrose, Ernest Gardner, Arthur Evans, Frazer, Hogarth, Wace, Myres—to mention only a few—are inseparably associated with the School, and the excavation of sites like Knossos, Mycenæ, Sparta and Phylakopi indicate the range and importance of its archæological activities. On the literary side, the memory of George Finlay, the great Philhellene, is enshrined in the Library that bears his name, while his profound knowledge of and interest in everything Greek has found a worthy representative in the historian William Miller, an Associate of the School.

The above resumé, incomplete as it is, will serve to give some idea of British activities in Greece. The fact that some of the most important undertakings in the country have been entrusted to British hands, shows that in spite of differences of character and temperament (or perhaps because of them) a mutual sympathy between the two nations exists, of which the foundations were laid in many an incident of the War of Independence, and not least, at the Battle of Navarino.

NAVARINO EXHIBITS.

In connexion with the commemoration of the centenary of the Battle of Navarino an exhibition of pictures and other objects associated with the Greek struggle for independence is being held at the Greek Legation (51, Upper Brook Street, W.1). It will be opened by Lord Burnham to-day (October 20) and will remain open to the public from October 21 to November 11.

A most interesting collection of souvenirs has been assembled. There is the flag flown by Admiral Sir Edward Codrington on the flagship Asia at the Battle of Navarino, and among the ceremonies connected with the Centenary celebrations will be that of the attachment of the Greek Cross to the flag by the Greek Minister, Monsieur D. Caclamano, on the instructions of the President of the Greek Republic. A block of wood of the original Asia is shown, as well as a set of pocket Shakespeares which survived the battle on board the flagship, and there is a card table made of the wood of the Turkish flagship. Even the uniform that Admiral Codrington wore is to be seen.

Among the pictures are many representing the Battle of Navarino. Two of these are reproduced in this Supplement. Although of a type common to pictures of naval engagements in old days, there is some reason to suppose that in the narrow harbour of Navarino shut in by the island of Sphacteria, the actual battle must have been fought under the cramped conditions indicated. A large oil painting in one of the Legation rooms (three in all are given up to the Exhibition) represents the Russian fleet, which was the last to enter the harbour, coming into action. There are several portraits of Admiral Codrington and other Allied leaders, both at sea and on land, and quite a small gallery of the heroes of the Greek struggle for independence. Lord Byron is there in a Greek helmet;

also Admiral Kanaris drawn from life by an English artist, and the picture bears the Admiral's signature. It has been lent by Dr. Cavvadias. Madame Alexander Benakis has lent a valuable collection of small pictures of Greeks who were prominent in the War of Independence. One cabinet contains a number of Byron souvenirs—manuscripts, a copy of a first edition of his works, the sword that he took with him to Greece, and several locks of his hair. Another cabinet contains some seventeen plates with scenes depicting incidents in the Greek struggle.

The co-operation of Great Britain, France and Russia at Navarino was rendered possible by the Treaty of London signed on July 6, 1827. The Exhibition shows the first and last pages of the original document.

THE NAVARINO CELEBRATIONS.

The celebrations in London in connexion with the centenary of the Battle of Navarino include a Commemoration Dinner this evening at the Savoy Hotel. The chair will be taken by Earl Beauchamp, Chairman of the Anglo-Hellenic League.

THE NAVARINO CENTENARY.

(Concluded from page 497.)

good stead, and she has no reason to be other than grateful to-day when misunderstandings have been cleared away and a new era of helpfulness has been inaugurated. With her immediate neighbours in the Balkans the situation is still in a state of flux; any settlement, however, is the more likely to acquire stability, if it is reached slowly, based on a gradual return of mutual confidence and respect.

Every description of banking business transacted on the most favourable conditions.

IONIAN BANK, LIMITED.

As far as British trade in Greece is concerned, the most important link is provided by the Ionian Bank, which has been intimately connected with the financial history of Greece for the last 88 years. In the list of existing British Banks created by Royal Charter it ranks third in seniority after the Bank of England.

The formation of the Bank was projected in 1838 by the Lord High Commissioner of the Ionian Islands, Lieut.-General Sir Howard Douglas, who was desirous of seeing a British Bank functioning in the Ionian Islands, then under British protection, as a means for remedying the extortions of local moneylenders. Overtures were made by him through the medium of Sir Alexander Wood, Agent in London for the Ionian States, to certain capitalists in England, which resulted in the Ionian Bank being formed with a capital of £100,000, and a convention was granted to the Bank by the United States of the Ionian Islands on October 23, 1839. In the meantime the Bank had opened for business in the three principal Ionian Islands—at Corfu on March 2, 1839, at Zante on May 18, and at Cephalonia on August 10; and in 1844 it obtained its Royal Charter.

Up to the close, in 1864, of the British Protectorate over the Ionian Islands, the Bank's operations were mainly confined to the three Islands, but with the Treaty of London in 1864, the Ionian Islands were joined to Greece, and the Bank then opened a series of branches on the mainland, of which that at the capital—Athens—soon became the most important office of the Bank, and its headquarters in Greece. The rights and privileges of the Ionian Bank as far as they were comprised in the original convention, and in the renewals of that convention, were protected and guaranteed under the Treaty of London, and it still retains these rights and privileges, with the

exception of its power to issue notes, which finally expired in 1920 owing to the Greek Government's policy of unifying the note issue of the country.

On March 5, 1883, the Bank was registered under the English Companies Acts as a Limited Company, and the next 25 years in its history represented a period of quiet development on the mainland of Greece. In 1907 the Bank started on its broader career by the opening of a Branch in Egypt at Alexandria, where the Bank quickly became one of the most important dealing with the financing of the staple industry of Egypt, cotton growing, and it maintains its own agencies in all the principal cotton centres. Further extensions have subsequently taken place, to Constantinople in 1922, and to Cyprus in 1926.

Of late years special attention has been paid by the Bank to fostering and developing the close financial contact which exists between the United States of America and Greece. There is now a permanent representative of the Bank for the United States at New York.

The capital of the Bank, which has always been kept down to moderate figures, has been from time to time increased by new issues and by capitalisation of reserves, and it now stands at £1,000,000 of which £600,000 has been issued and fully paid up, and a substantial Reserve Fund, which now stands at £235,000, has been created. This figure is all the more important in view of the fact that the paid-up capital of the Bank in the year 1910 was only £315,510, and that for practically the whole of the intervening years Greece has been at war.

The unbroken prosperity which the Bank has enjoyed is further reflected in the fact that in the whole of its 88 years' history, it has never passed a dividend. For the 20 years to 1916, the dividends averaged over 5 per cent., between 1917 and 1923 they have been at the rate of 7 per cent. per annum, and between 1924-26, 8 per cent. free of British Income Tax.

These are the reasons why

Currants *are very nourishing*

IT has been proved scientifically that in one pound of currants there is the same food value as in 3½ lbs. of fresh grapes or 1½ lbs. of best lean beef—this quite apart from the common knowledge that currants are appetising.

SIR ARBUTHNOT LANE, the famous physician, says:—

"Currants should have an important and even essential part in the food—they have such a number of excellent properties. Because of a large amount of fruit sugar, they serve as a very fine fuel for creating energy. They combine well with other foods. In currants the sugar is supplemented by valuable mineral salts of potash and lime—these prevent acid conditions from arising in the blood and body tissues. It is vital to good health that the body should have these valuable salts such as are found in currants."

REPRESENTATION OF EUROPEAN COMMERCE IN THE INDIAN LEGISLATURE.

The recent Simla session has again shown that an important question that will need to be closely investigated by the Statutory Commission is that of the representation of European commercial and industrial interests in the Central Legislature. For a right understanding of this question it is advisable to go back to the year 1861, when the Indian Councils Act was passed. By that statute it was provided that the Governor-General's Council should be enlarged by the addition of not less than six nor more than twelve members. Of these additional members half were to be non-officials. At that time—and for fifty years afterwards—the cold weather sittings of the Council were held in Calcutta; and it seems to have been the practice to allot one of the non-official seats to the Calcutta European mercantile community. The Act was revised in 1892, during the Viceroyalty of the late Lord Lansdowne, when the number of additional members was increased to sixteen. Ten of these were to be non-official, of whom one was to be nominated on the recommendation of the Bengal Chamber of Commerce. This was the position until 1909-10, when the constitutional changes framed by Lord Morley and Lord Minto were introduced. The principle of election in respect of European commercial interests was then conceded. The number of additional members was raised to sixty, of whom twenty-seven were elected, and thirty-three were nominated by the Governor-General. The European commercial constituencies were two, namely, the Bengal and the Bombay Chambers of Commerce. Under the Montagu-Chelmsford scheme the Central Legislature became in 1919 bicameral, the two Chambers being styled respectively the Council of State and the Legislative Assembly. The Council of State consists of sixty members, twenty-seven of whom may be nominated by the Governor-General. Of these twenty-seven nominated members, twenty may be officials. That is to say, there are forty free voters—thirty-three of whom are elected and seven nominated. Of the thirty-three, seventeen represent non-Muhammadan constituencies, ten represent Muhammadan constituencies, three represent European commercial constituencies, two represent general constituencies in the Central Provinces and Burma, and one member is elected by a Sikh constituency. The three European commercial constituencies are the Bengal, the Bombay and the Burma Chambers of Commerce. It will be seen from the foregoing that Indian commerce, as such, has no direct representation in the Council of State.

The Legislative Assembly consists of one hundred and forty-four members, of whom forty-one are nominated by the Governor-General, and one hundred and three are elected by various constituencies. Of the forty-one nominated members, twenty-six must be officials, leaving fifteen non-officials. In other words, the number of independent, or free, voters in the Assembly is one hundred and eighteen. Of the hundred and three elected members, non-Muhammadan constituencies return forty-seven,

Muhammadan constituencies thirty, European constituencies nine, landholders seven, Indian commerce four, Sikhs two, non-European constituencies three, and Delhi general constituency one. The four Indian commercial members are elected, one by Indian commercial interests in Madras, one by the Bombay Indian Merchants' Chamber, one by the Bombay and Ahmedabad Mill-owners' Associations and one by the Bengal National Chamber of Commerce, the Marwari Association, and the Bangal Mahajan Sabha: the three last-named Associations are all located in Calcutta. The nine European members represent six general European provincial constituencies. The Bengal constituency two, and Madras, the United Provinces, Assam and Burma return one member each. The position as regards the representation of commercial interests in the Central Legislature is, therefore, that in the Council of State European commerce is represented by three seats, while Indian commerce is not represented at all. On the other hand, in the Legislative Assembly Indian commerce is represented by four seats and European commerce is not represented at all. The absurdity of this arrangement is apparent, and it obviously must be modified. The question of the representation of Indian commercial interests may be left, of course, to the Indian mercantile community. But ever since the inauguration of the new Central Legislature European commercial interests in India have deplored the want of representation in the Assembly. And three years ago the Governor-General recognised the importance of these interests by consenting to nominate a member of the Assembly on the recommendation of the Associated Chambers of Commerce. This was, of course, a step in the right direction, and it was highly appreciated. It was not, however, and could not be, a solution of the difficulty. For one Mercantile Member is obviously insufficient in view of the extent of the interests involved; and a nominated seat has not, moreover, that security of tenure which necessarily attaches to an elective seat. Seeing that the Bengal and the Bombay Chambers were represented for so many years in the old Legislative Council, it is, to say the least of it, remarkable that all European commercial constituencies should have been overlooked when the Assembly was constituted. Representation in the Council of State is both desirable and necessary, and its value is fully admitted. But it is the generally received opinion of those who have experience of the new Central Legislature that, from a commercial point of view, the Assembly will be, for a good many years to come, the more important of the two Chambers.

The Council of State will no doubt become a Chamber of great influence and importance in the future. But in the meantime it is in the Assembly that the Budget is mainly discussed, and it is there also that Bills affecting taxation—income-tax, super-tax, import and export duties and the like—are introduced. Similarly it is in the Assembly that questions concerning currency and banking policy are prominent, and where the great quasi-commercial departments of the State, such as the posts and

telegraphs, the railways, etc., are chiefly criticised. European commerce is most seriously concerned with these matters, as it is also with all industrial legislation, which is likewise introduced in the Assembly. By industrial legislation is meant Acts such as those affecting the working and management of factories, mines, and trade unions, and also Workmen's Compensation Acts, Trade Disputes Acts, and so on. And legislation concerning shipping must also not be overlooked in this connexion.

It may be urged that the interests of the European mercantile community can be sufficiently looked after in the Assembly by the nine representatives of the six European general constituencies which are named above. But this is not so; and the fact that the Governor-General has nominated a member to represent the Associated Chambers of Commerce shows that the Government of India consider additional representation to be desirable. It is true that many of the voters in the European general constituencies are partners or assistants in commercial firms. But they do not vote as such. The constituencies are not commercial constituencies. Nor are the elected representatives necessarily commercial men. In point of fact, at the present moment one only of the three members representing the Bengal European constituency in the Assembly has had mercantile experience. Obviously, therefore, something more than these constituencies is necessary. The example of the Council of State and of the Provincial Legislative Councils should be followed, and definite commercial constituencies created. These might be either the principal European Chambers of Commerce individually, or the Associated Chambers might be treated as a constituency empowered to elect so many members. It is only by the adoption of one of these methods that the justice of the case can be met.

CURRENT TOPICS.

Mr. Patel's Confession.

It is over two years since Mr. V. J. Patel returned thanks for his election to the Presidential Chair of the Legislative Assembly in a speech which made political history in India. "From this moment," he said, "I cease to be a Party man. I belong to no Party. I belong to all Parties. I belong to all of you and I hope and trust my honourable friend, the Leader of the Swaraj Party, will take immediate steps to absolve me from all the obligations of a Swarajist member of the House if, indeed, it has not been done by implication in consequence of my election to this Chair." The extremist of yesterday had become the constructive worker of to-day and it is inevitable that speculation should continue rife as to the extent, if any, to which experience and responsibility have influenced his own personal opinions. Hitherto Mr. Patel has consistently refused, both inside and outside the House, to satisfy the curiosity of all except, presumably, the leaders of his late party. During his visit to this country last summer, and particularly in the course of his Irish tour, he made it none the less clear that his sympathies at least were unchanged. At a luncheon given by the British Indian Union in his honour he went indeed somewhat further and confessed to considerable misgivings as to the wisdom of his self-imposed restraint in the light of subsequent events. In his reply last week to an address at Poona, at the conclusion of his recent tour of the flooded regions of Gujarat he appears to have been even more frank. Reviewing the results of the non-co-operation movement he is reported to have expressed the opinion that it had done great good for Gujarat, the home of its birth, and to have suggested that other Provinces might profitably benefit by that experience. The principle of non-co-operation either within or without the Legislative Council, is, he maintains, the only way to save India. It is interesting, though not unexpected, to find, in view of Mr. Patel's confession of political faith, that although Dr. Ansari's election as President of the Madras

Session of the Congress which meets in December has been ratified, the controversy regarding his fitness or otherwise for that office still persists. His crime in the eyes of many extremists, among whom may presumably again be reckoned Mr. Patel himself, consists, of course, in thinking aloud and in exposing the non-co-operation cant of the Swarajist.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, September 29, 1927.

Bengal's New Ministry.

While His Excellency the Governor of Bengal has been discussing the affairs of the Province with the Viceroy in private, Nawab Musharruf Hossain, the Muhammadan minister-designate, has been discussing the prospects of the new ministry in public. Meanwhile, if there is little ground for the report current in certain political circles that a ministry of four members for Bengal has been definitely decided upon, the opinion is steadily gaining ground that only with such a ministry could stability be secured. It is thought further that only a stronger ministry than one composed of Sir P. C. Mitter and Nawab Musharruf Hossain alone could make absolutely certain that the ministry shall have really a fair chance of showing what the Reforms, properly worked, could accomplish in Bengal. Nawab Musharruf Hossain strongly supports a ministry of four members, and it is believed that Sir P. C. Mitter will endorse the view of his Muhammadan colleague. Every political group in Bengal, it is said, is shaping its course on the assumption that there will soon be a ministry of four. The Political Correspondent of "The Englishman" understands that Nawab Musharruf Hossain and Sir Abdur Rahim have already selected the second Muhammadan minister, and that they have even formed quite definite ideas as to the Hindu colleague likely to work best in harness with Sir P. C. Mitter and themselves. We shall see. It is very easy, in the halcyon days of a ministry's birth, for the new ministers and their friends to overlook the strength of their opponents, and no man can be expected to foresee what burning, rank-dividing questions lie hid in the womb of time. The new ministry, whether one of two or of four members, may easily prove as short-lived as its predecessor, the defeat of which some will be slow to forgive and forget.

Bengal and Indian Public Life.

Meanwhile the lone voice of Mr. Bipin Chandra Pal can be heard giving utterance to such lamentations as the following:—"Bengal has completely lost her old position in the leadership of Indian public life. From 1875 to 1920 Bengal was universally recognised as the leader of modern Indian thought almost in every department of life. The last nationalist upheaval following upon the Partition of Bengal, which soon captured the imagination of practically the whole of India, inspiring the youth of every Province with new and larger ideals of patriotism and consecrated service in the cause of national emancipation, was pre-eminently a Bengal movement. All that, however, has become mere ancient history and tradition to-day. Not very many years ago Mr. Gopal Krishna Gokhale publicly said that what Bengal thought to-day the rest of India thought the day after. That statement has absolutely no truth now. One has only to glance over the records of the Central Legislature to see how little Bengal counts for to-day in current legislative work. During the session of the Assembly that has just closed more than one important measure has been passed. But can it be said that in any of these educated Bengal opinion or, indeed, even the popular interests of Bengal have secured any recognition?

Take, for instance, the new Tariff Act. It may be safely said that Bengal is not in favour of this new fiscal measure. One need not possess expert knowledge to recognise the correct inwardness of this new duty. It will hardly touch Manchester. It will, of course, benefit to some extent the Bombay mill industry. But at whose cost? All protective duties inevitably fall on the general body of consumers of the commodity taxed. And this new import duty on cotton yarn of the lower counts will directly hurt our handloom industry. The object of it is to prevent Japanese competition in the Indian market in regard to this class of yarn. Manchester, no less than Bombay and Ahmedabad, look upon this Japanese invasion of the Indian market with natural nervousness. Both are interested in shutting out Japan. The new tariff has, therefore, been frankly described as indirectly a measure of Imperial Preference."

Reserve Bank.

Sir R. N. Mookerjee, a member of the Royal Currency Commission and a signatory to the Commission's majority report, said in an interview at the end of last week:—

"Beyond the brief reports of the proceedings of the Legislative Assembly, I have no knowledge of the details of Sir Basil Blackett's scheme of a Stockholders' Reserve Bank. I must confess that even after a careful perusal of the debates in the Assembly I still remain an uncompromising advocate of the Shareholders' Bank as formulated by the Currency Commission. I consider that to be the ideal for which we should work, but it appears that for various reasons Indian public opinion, as expressed in the Assembly, is against a pure Shareholders' Bank.

"I see that my friend and colleague on the Commission, Sir Alexander Murray, has declared that in deference to the wishes of 'political India' he is prepared to accept a State Bank scheme with proper safeguards. Although I remain unconvinced by the arguments advanced in the Assembly debates in favour of a State Bank, I am most anxious that a central banking institution should be established with as little delay as possible, and for this reason I consider Sir Basil Blackett's scheme of a Stockholders' Reserve Bank as the most suitable compromise between the ideal as formulated by the Currency Commission and the demands made by the Indian representatives in the Legislative Assembly."

Sir R. N. Mookerjee's argument is too long to give in full. It concluded with: The chief object of a central banking institution is to diffuse all over the country the knowledge and value of banking habits. The rotation of directors as suggested by me would enable an increasing number of people to know about the Bank, and help in spreading banking habits all over the country." One may harbour a doubt if Sir R. N. Mookerjee has been correctly reported. Surely no man could owe his knowledge of banking and its value to his appointment as a director of a Central Reserve Bank? A man to be worth appointing a director must know already pretty much all he is capable of learning of banking. And is not the multiplication of branch banks, a thing a Central Reserve Bank is necessarily shut out from, what diffuses the knowledge of the value of banking habits? It is still strongly held in some quarters that to-day is a day fifteen or twenty years too soon for any great change in India's banking system.

Mr. James Donald, Finance Member of the Bengal Executive Council, left Calcutta last week on two years' leave, preparatory to his retirement. He was conspicuous during the later stages of his career for his opposition to the Meston settlement. His successor, Mr. Alexander Marr, who is chairman of the Calcutta Improvement Trust, assumed office on October 7.

The ceremony of immersion in connexion with the Hindu Durga Puja festival passed off in Bengal with few incidents owing to the precautions taken by the police. Calcutta was thronged with holiday-makers, and one of their processions was stopped by Muhammadans outside a mosque, but the arrival of the police prevented an affray. Four Hindus were arrested.

THE STATUTORY COMMISSION.

By HON. SIR PHIROZE SETHNA, Kt., O.B.E.

The question of the appointment of a Commission to inquire into, and report on, the working and further development of the system of Government introduced by the Montagu-Chelmsford Reforms is every day growing into urgency, and, as time runs its ceaseless course, it cannot fail to attract an increasing measure of public attention. And when once the Commission is appointed, and enters on its task, its actual day-to-day work, the varied interest it will arouse among different sections of the people and among the different political parties, and the general attitude which the Indian National Congress may adopt towards it will overshadow every other public question.

The next few years thus promise to constitute an important period in the national life of India. Whether India is to advance on the path of constitutional reform, if so, what will be the nature and extent of the advance, whether her onward march towards the goal of democratic responsible Government, such as exists in England and other European countries, in Australia, Canada and South Africa, and as is sought to be established and developed in such countries of the Orient as Japan, China and Turkey, is to be assured and accelerated or whether it is to be arrested, and fresh ground prepared for some other system of Government supposed to be better suited to what is believed to be her national genius, whether she will be content with moving slowly from stage to stage of constitutional development, or, again, choose to adopt some method or methods of direct action, insisting on immediate and full satisfaction of her political aspirations, all these highly interesting and important question will crop up, and press for solution.

India is thus on the eve of a momentous happening which may carry within it the seeds of far-reaching consequences upon her future destiny. It is, indeed, possible that the immediate actual results of the Commission may not be great, that it may not recommend any radical, far-reaching or important changes and that any sanguine or optimistic expectations about its deliberations or work may ultimately be found to be misconceived and unjustified. It is not at all outside the bounds of possibility that it may tinker with the problem of *Swaraj*, that its recommendations, while they may remove some of the inherent defects of dyarchy and make the machine of administration less creaky and more workable, may essentially not go much farther than the tame and humdrum recommendations of the majority report of the Muddiman Committee. On the other hand, if the personnel of the Commission is inspired by at least a modicum of the spirit of idealism, and rises to an adequate realisation of the greatness and true significance of its mission, it is not improbable that it may make proposals which may be conceived in such a spirit of justice, liberalism and finality that they may once for all solve the Indian problem and clear away the tangle of doubts, suspicions and fears in which, unfortunately it is, at present, enveloped.

Under the Government of India Act, the Statutory Commission must be appointed at the expiry of 1929; but now it seems certain that the appointment will be made in 1928. Earl Winterton, the Under-Secretary of State for India, recently said in the House of Commons that "the interval remaining before the time when, under the Act, the Commission must be appointed is now so rapidly diminishing that the question of the precise date of assembling of the Commission is fast becoming one in which matters of practical convenience bulk almost as largely as questions of policy."

In this connexion the fact may be borne in mind that in due course Parliament will be dissolved and fresh elections held in 1929. There is, therefore, every possibility that the present Conservative Government would themselves

like to appoint the Commission, leaving it to the next Government, whether Conservative or Labour, to decide on its finding and recommendations, and give effect to them by legislation. There is no gainsaying that much will depend upon the personnel of the Commission. The English members must be drawn from all the three parties and the Indians selected must be such as will command public confidence, which unfortunately has not always been the case in the matter of such appointments. The task before the Commission must be approached without any bias or prejudice; it must be faced in a spirit of noble statesmanship free from any influence or trace of self-seeking Imperialism, or from the excessive, sinister or subtle influence of vested interests; and it must be tackled with no other object than that of promoting the quickest attainment by India of national self-government and of consequent equality with the other members of the British Commonwealth. And in the performance of this glorious task Great Britain must give of her best of all parties. Any attempt to exclude members of the Labour Party from the Commission will detract from its weight and prestige as much as would the exclusion of Indians themselves.

Let us consider the exact nature of the inquiry which the Commission will be called upon to make. The provisions of the Government of India Act regarding the Statutory Commission and the comments thereon of the Joint Parliamentary Committee were reproduced in a recent issue of *THE NEAR EAST AND INDIA*.

Do these provisions admit of the Commission reporting that full responsible government should be established both in the Government of India and the Government of the Provinces? They clearly do.

There is one recommendation, however, which the Commission will be precluded from making by the provisions of the Act. They cannot recommend that the principles of responsible government should be scrapped or abandoned altogether and another system, not based on the principle of responsible government, be established. Such a reactionary, radical or revolutionary change in the existing system they cannot, consistently with the terms of the Act, propose. They cannot, for instance, say that the Government should be a pure autocracy or bureaucracy as before. They cannot say that there should be no Ministers and that they should not be responsible to the Legislative Council and, through it, to the electorate. They may, indeed, propose the modification or restriction of the degree of responsible government existing at present, and the modification or restriction proposed may be such as to make one doubt whether the principle of responsible government has not been practically destroyed, but they cannot openly and avowedly declare, except as an expression of opinion outside their terms of reference, that the principle of responsible government should be given up altogether and some other system of government devised which will not be based on that principle. Any proposal in favour of the total abandonment of the principle of responsible government will be entirely against the provisions of the Act governing the inquiry to be entrusted to the Commission.

The bearing of this point upon the question we often hear raised both in England and in India, by retired consuls and pro-consuls, as also by some Indian politicians and publicists, that India should possess a system of Government suited to her genius and traditions, is obvious. Any system of government which is not based on the principle of responsible government and which is not designed towards its complete realisation in the ripeness of time and circumstance, is precluded by the terms of the famous announcement made in and on behalf of Parliament on August 20, 1917, a date which constitutes a landmark in the modern history of India, and by the spirit and policy of the Government of India Act. But I do not wish to give a *quietus* to this question on this narrow "technical" ground. The question in itself is of con-

siderable importance, and may be raised now and again before the arrival of the Commission and during its deliberations. A close and careful analysis and consideration of that question are therefore desirable.

(To be continued.)

CORRESPONDENCE

To the Editor of *THE NEAR EAST AND INDIA*.

Sir,—Your arguments against the proposal to establish a Supreme Court of Appeal in India, are supported, I notice, by Lord Hewart's remarks in *The Times* of the 30th September. Throughout his recent tour in Canada he observed, he says, "a high respect for the Judicial Committee of the Privy Council and its important jurisdiction." And he mentions that Chief Justice Sir William Mulock made the following reference to this tribunal in one of his speeches. "I like to think," said Sir William Mulock, "that there is an appeal from my judgment to the Judicial Committee, because I know that if my judgment is wrong it can be set right and injustice will be averted." This endorses the view which you take and which is, I know, shared by many leading lawyers in India. Very great value is attached to the decisions of the Judicial Committee, alike in Canada and in India and elsewhere. And, as you point out, it is most improbable that any Supreme Court in India would command an equal measure of confidence. It would seem, therefore, to be a mistake to establish such a Court, even with the safeguard suggested by Sir Sankaran Nair.—I am, etc.,

X. Y. X.

NEWS IN BRIEF.

The Hon. Mrs. Rupert Beckett was at home at 34, Grosvenor Street on October 17 to members of the Delhi Church *matinée* performance committee. The Countess of Pembroke, the Marchioness of Titchfield, the Marchioness of Salisbury, and the Countess of Birkenhead spoke during the afternoon.

The death was reported at Hyderabad (Deccan) last week of Syed Habib Aledroos, a Muslim said to have been 129 years old, who was born in Arabia and emigrated to India more than 80 years ago. The Nizam and leading officials of Hyderabad attended his funeral.

At the annual meeting of the 1/4th Battalion, Dorset Regiment Overseas Association at Poole, it was decided to subscribe for the purchase and presentation to the 4th Battalion, for annual competition, of a piece of plate to bear the same inscription as the tablet which has been erected in Uniballa Church to commemorate the regiment's service in India.

A telegram from the Viceroy, Education, Health and Lands Department, to Secretary of State for India, states:—Rainfall, week ending October 12.—Fair: Bengal, Kashmir, and Madras Deccan. Normal: Bay Islands, Assam, Punjab (South—West), North-West Frontier Province, Baluchistan, Sind, Rajputana (West), and Gujarat. Scanty: Orissa, Bihar, Rajputana (East), Central India (West), Berar, Bombay Deccan, Hyderabad (North), Mysore Malabar, Madras (South-East), and Madras Coast (North). Excess elsewhere. Monsoon normal.

OBITUARY.

COLONEL A. J. WAKE.

Colonel Alfred James Wake, late R.A., a Mutiny veteran, has died suddenly at Blackheath, at the age of 93. Born on June 21, 1834, he landed in India as a cadet in the Bengal Artillery at the age of 20. Alfred Wake served in the Mutiny campaign in Rohilkund under Sir John James, and was present at the taking of Bareilly, Moradabad, and Shahjehanpur. He was at the battle of the latter station under Lord Clyde, and escorted him to Futeghar. In October, 1858, he joined the column under Sir John Troop for operations in North Oudh, and was in command of three guns of No. 7 Light Field Battery, being present at the taking of the Fort at Mutowli. He was mentioned in dispatches and was appointed to the Horse Artillery. After the Mutiny Alfred Wake served for a time as Adjutant of the 19th Brigade. In 1867 he joined the Staff of Sir Seymour Fitzgerald, Governor of Bombay, as A.D.C., and for 14 years from 1869 he was commandant of the Small Arms Factory at Kirkee, near Poona. He became a Colonel at the close of 1885, and retired in April, 1885. He married in 1868 the second daughter of the late Sir Philip Rose, Bt., of Rayners, Penn, Bucks.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Oil in Iraq.

A development with regard to oil of the first importance is reported from Iraq where it is announced that the Turkish Petroleum Company has struck oil at one of its drillings near Kirkuk. The flow from the well, which was only 1,521 feet deep, was at the rate of about 7,000 tons per day, which is a very considerable figure, while not comparing with some of the leading wells in other centres. The importance of this development is that it goes far to prove that the petroliferous indications in Iraq are an accurate pointer to the existence there of a vast oilfield capable of commercial exploitation. It is scarcely necessary to emphasise the future value of this to Iraq. Before the oilfields can be utilised, however, the construction of the pipe line to the Mediterranean will be necessary, and as this is a most costly undertaking no steps had been taken pending the proof that the nature of the oilfields would make the expenditure worth while. Now that the initial drillings have met with such success it may be expected that the question of the construction of the line will come up for serious examination. With it is linked the building of a trans-desert railway, in connexion with which, it is of interest to note, preliminary negotiations have recently been set on foot.

Sudan Trade Improving.

The figures for the trade of the Sudan for the first seven months of this year make a distinctly improved showing. There is an increase in the value of the total trade as compared with the same period of 1926 of £E96,177, the total being £E7,964,870 as compared with £E7,868,693. The imports at £E3,322,649 show a small increase of £8,878, Government imports having increased by £E47,460 while public imports show a decline of £E38,582. As might be expected exports show a considerable improvement, which is, of course, due to cotton, the figures being £E4,410,961 as against £E4,261,197. Judging by the figures for the first half year it seemed as if the volume of trade would fall below the figures for 1926 but in view of developments such as the rise in cotton prices and the good harvest outlook in the Sudan which will ultimately give a stimulus to the import trade it looks as if last year's good total will be easily exceeded. In Government imports there are significant increases in respect of metals and metalware which have increased by £E93,580, timber and railway sleepers which show a rise of £E35,530, machinery, and motor cars, cycles, and accessories, while the principal decrease is one of £E66,649 for refined sugar. In public imports dura figures for 22,699 tons of the value of £E194,883 as against 14,078 tons for £E141,816 which shows very plainly the effect on the trade figures of the failure of the last dura crop.

Two Oil Dividends.

Last week the final dividend of the Anglo-Persian Oil Company and the interim distribution of the Burmah Oil Company were announced. The directors of the Anglo-Persian propose to pay a final dividend of 7½ per cent., which, with the interim payment, will make the distribution for the year 12½ per cent., as compared with 17½

per cent. for the previous twelve months. But the present year's distribution is on a capital increased by a share bonus of 50 per cent., and is therefore equivalent to 18½ per cent. on the old capital. Actually the distribution will absorb £1,678,125 as compared with £1,566,250. Other allocations at £1,750,000 are below the previous year's level, but this is more than compensated for by an increase of £300,000 in the carry forward. At the meeting we shall, no doubt, be told how the Company has fared in these recent months of low oil prices, but the fact that the distribution has actually been more than maintained suggests that no very great anxiety is felt as to the outlook for the industry. The Burmah Oil interim was, as was expected would be the case, the same as last year. The Company is, it is scarcely necessary to recall, a considerable holder of shares in the Anglo-Persian Oil Company, but directly, that is as regards its own production, it is in a position in which it can scarcely be affected by the vicissitudes in world oil prices.

Assam Railways Increased Profit.

A very satisfactory report is forthcoming from the Assam Railways and Trading Company for the year ended March 31 last. The gross earnings of the railways at Rs28,80,089 show an increase of Rs.3,24,742, while the expenditure at Rs.14,53,306 is only Rs.86,293 higher. On the general revenue account there is a profit of £173,609 as against one of £156,358. The proposed final dividend of 7 per cent. on the B stock makes 12 per cent. for the year as against 10 per cent. for the previous twelve months, and the carry forward is £13,571.

A Bank Affiliation.

The interesting news is forthcoming that an offer is to be made by the Chartered Bank of India, Australia and China to purchase the holdings of shareholders in the P. and O. Banking Corporation at £10 10s. per £10 share together with 5 per cent. interest for the nine months ended December 31 next. This offer, which is conditional on the Chartered Bank obtaining 51 per cent. of the shares, does not, it must be emphasised, imply either the amalgamation or the absorption of the younger bank. The acceptance of the offer will simply mean that the P. and O. Banking Corporation will become an affiliated institution of the Chartered Bank, an arrangement by which both institutions will benefit by the pursuit together of a common aim.

COMMENTATOR.

BANK OF ROUMANIA LIMITED

(FOUNDED 1866).

Head Office: 123, OLD BROAD STREET,
LONDON, E.C.2.

Branch — 11, CALEA VICTORIEI, BUCAREST.

Directors :

E. W. H. BARRY, Esq.
C. De CERJAT, Esq.
SIR JOHN P. HEWETT, G.C.S.I., K.B.E., C.I.E.
General The Hon. SIR H. A. LAWRENCE, G.C.B.
Lieut-Col. SIR ALBERT STERN, K.B.E., C.M.G.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.
A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

PRESENTATION TO SIR BASIL ZAHAROFF.

An interesting event took place on the eve of Sir Basil Zaharoff's departure for Paris after his recent visit to London, when the Chairman of Vickers Limited, on behalf of all the directors, presented him with a handsome cup on the completion of fifty years' connexion with the company. The plinth on which the cup rests bears the following inscription:—"Presented to Sir Basil Zaharoff, G.C.B., G.B.E., by the Chairman and Directors of Vickers Limited, on the completion of fifty years' connexion with the Company and as a mark of their great appreciation of the valuable work which he has done for them and of their sincere gratitude and high esteem."

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. California for Bombay (Birkenhead, October 24). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Mangalore for Calcutta (Birkenhead, October 22); s.s. Maimyo for Calcutta (Birkenhead, October 29).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, November 2).

British India Line.—S.s. Manela for Bombay and Karachi (London, October 29); s.s. Margha for Colombo, Madras, and Calcutta (London, November 5).

Cunard Line.—S.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also Corfu, Gruz, and Ancona if inducement (Liverpool November 12, and Swansea November 15); s.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool November 12, also Glasgow and Swansea November 12).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the last steamer of the season for Galatz and Braila (Liverpool, November 5).

and O. Line.—S.s. Rajputana for Bombay (London, October 28); s.s. Padua for Colombo, Madras, and Calcutta (London, October 29).

Prince Line.—S.s. Stuart Prince for Tunis, Malta, Alexandria, Haifa, Beyrout, and Cyprus (London, October 29).

Ellerman and Papayanni Lines.—S.s. Bavarian for Oran, Algiers, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 29). Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

An estimate of the amount of goods available for export from Yugoslavia during the period September 1, 1927, to September 1, 1928, is as follows:—Wheat and flour (truck loads), 12,000; maize, 20,000; prunes, 2,700; wine, 2,000; eggs, 3,000; hemp (kilos), 12,500,000; sliced sugar beet, 9,000,000; tobacco, 4,000,000.

TRADE OF CYPRUS IMPROVING.

The Trade Commissioner for Cyprus in London has issued the following report for August:—

The import trade generally has been good and slightly in excess of that for the corresponding month of 1926. Fertilisers are becoming more and more extensively used by the farmers, and production and importation are increasing.

In spite of the good harvest this year flour continues to be imported. The people have become accustomed to using bread made from Australian flour in preference to the local product.

Crude petroleum is being extensively used for agricultural and other machinery and is gradually taking the place of coal and wood fuel.

The export trade of the Colony has recovered from the effects of last year's general strike in England. Prices, too, were higher than last year. For example, carobs fetched 18s. to 20s. per kantar, as against 12s. to 14s. in 1926. The price of raisins and potatoes was also much better.

Following on the excellent harvest, quantities of barley were exported during June, July, and August. Several consignments were shipped to England for malting purposes.

The crop of silk cocoons was well up to average, but, owing to previous contracts, a large portion was exported to France, thus obliging the Cyprus Silk Filature to import cocoons from Syria in order that it should be able to continue operations throughout the year. In view of the fact that mulberry tree plantations are increasing it is hoped that the local production of cocoons will in future be sufficient to meet the demands of the filature.

The following are the detailed statistics of the imports and exports for the month:—

IMPORTS		EXPORTS	
Coffee, raw ...	£2,236	Animals, living—	
Cotton yarn and goods ...	20,647	Mules ...	£2,005
Fertilisers ...	6,705	Oxen ...	3,430
Flour, wheat ...	19,736	Corn, grain, etc.	
Leather, sole ...	3,477	Barley ...	12,918
Machinery ...	11,188	Oats ...	1,388
Motor cars ...	1,007	Carobs ...	6,732
Petrol and Benzine ...	4,883	Cheese ...	1,493
Petroleum ...	2,255	Cotton, raw, ..	5,962
Petroleum, crude ...	1,734	Cuminseed ...	4,640
Rice ...	1,890	Grapes ..	3,381
Sacks ...	5,847	Hides and skins ...	1,259
Silk goods ...	1,876	Linseed ...	915
Soap ...	2,433	Minerals—	
Sugar ...	3,184	Asbestos ...	22,001
Timber ...	1,756	Gypsum ...	1,362
Tobacco, leaf ...	2,640	Pyrites ...	14,187
Woollen goods... ..	3,770	Terra Umbra ...	1,410
Total Principal Articles	97,264	Silk, raw, or wound silk	3,450
Other Articles ...	35,574	Sponges... ..	2,128
		Vegetables—	
		Onions ...	2,172
		Potatoes ...	7,582
		Wine ...	5,410

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 18.

Last week's Stock Exchange settlement was one of the heaviest experienced in recent years, there having been a very large volume of business during the preceding fortnight, and there is every indication that at the end of the present account, a week hence, the settlement will be found to be equally heavy, for the past week's business which belongs to the new account, has shown no signs of slackening. The bulk of the business has, of course been concentrated in the miscellaneous market where British Celanese shares have again held the centre of the stage amid much excitement, with violent fluctuations in the price both in the preference and the ordinary while the new debentures have moved erratically. Many other industrials have been active and strong, home rails have rallied and the gilt-edged market has been steady. The new Brazilian Government loan for £7 millions was heavily oversubscribed on Thursday; and many other issues have been favourably received; a loan of £2 millions for Poland has been issued in London this week.

Some Good Industrial Dividends.

A number of interesting dividend announcements have recently been made which, though not justifying unrestrained optimism, are welcome indications of prosperity in certain directions. The ordinary shares of the Gramophone Company have been one of the leaders in the boomlet in industrial securities, but the market was agreeably surprised by the dividend announcement, the total distribution being raised from 20 per cent. to 40 per cent. Despite the troubles of the iron and steel industries, Babcock and Wilcox—always a strong company—has increased its interim dividend from 5 per cent. free of income-tax to 7 per cent. free of income-tax. Furness, Withy and Company, a shipping undertaking which has been able to make distributions to its ordinary shareholders during the recent difficult years has announced an interim dividend of 5 per cent. less tax, against 2½ per cent. free of tax, which was equal to 3½ per cent. less tax. Though it would appear that this is largely due to a

change in the company's method of making its distributions, it is unlikely that the increase would have been made if the directors were pessimistic regarding the future. Obviously some of these companies are engaged in industries which are believed to be far from generally prosperous, but it should not be assumed that all the undertakings operating in these industries have now turned the corner. There is a belief among competent judges that our trade is improving but the investor who contemplates a purchase of industrial securities should pursue a "selective" policy both as regards industries and individual companies.

Savings Certificates: An Important Offer.

The Treasury has this week made an important offer of conversion to certain holders of Savings Certificates. All who hold not less than £20 worth of certificates of the first issue—namely, those issued at 15s. 6d. before April 1922—should give the offer most careful attention. The investor has the choice of three main courses. In the first place, he may hold his certificates until March 1932, the interest, after the tenth year from the date of purchase, being 1d. per month. This is equivalent to an annual return of a little more than £3 15s. per cent., and is, of course free of income-tax. In the second place the holder may convert—and this is the offer which, we think, deserves especially close attention—into 4½ per cent. Conversion Loan 1940-44 at 10s. below the current market price of the loan on the day on which conversion is effected. Assuming that conversion were effected this week, the return would be approximately £4 16s. per cent. Income-tax is not deducted at source, but those who are assessable must include the interest in their income-tax returns. This offer has a special appeal for the investor who will not, so far as he can foresee, have any need to realise his savings in the near future. By converting he receives, assuming that he pays income-tax, a net gain in his annual return of roughly 6s. per cent. If he does not pay income-tax the terms of the offer are correspondingly more attractive, the net gain being nearer £1 per cent. The third course that is open to the investor enables him to convert into 4 per cent. ten-year National Savings Bonds at par. A leaflet containing full particulars can be obtained at any post office. This latest offer of conversion enables the investor to confer a two fold benefit: upon the Treasury, by converting short-dated securities into longer-dated securities and upon himself, by increasing his annual return.

Home Corporation Stocks.

The first of the home corporation loans to be raised this autumn has been offered for subscription this week. Other home corporations are expected to appeal to the investor in the near future. This week's borrower was Smethwick Corporation, £450,000 5 per cent. stock, redeemable 1950-60 being offered at £101 per cent. The terms of the offer are in part an index of the popularity of home corporation stocks among investors, though to some extent the somewhat high price of the loan is attributed to the competition among issuing houses. These loans certainly have much to commend them. The credit of most home corporations is unexceptionable. Their stocks provide an excellent opportunity for the exercise of the virtue of local patriotism in investment matters. We say "virtue" deliberately, for well-directed local patriotism in investment matters is undoubtedly a valuable asset to a community. Local patriotism, indeed, must be set down as an important factor accounting for the popularity of home corporation loans. Again, the prices of the loans are in normal times fairly steady, while corporation stocks are readily saleable in cases of emergency. In these circumstances, investors may welcome a list of existing home corporation stocks. A return of £5 3s. per cent. is obtainable on the Cardiff 3 per cent. stock, redeemable 1941-1954. The Liverpool 5 per cent. stock, redeemable 1941-1961, yields £5 per cent. A return of £5 per cent. is also given by the Wolverhampton 5 per cent. loan, redeemable 1946-1956.

Motors and Motoring

By G. B. B.

Road Sense.

In the flood of remarks concerning, and comments upon, the Olympia Motor Show which have appeared in the Press during the past few days the observations upon roads and road sense made by the Home Secretary in the *Light Car* have not attracted that degree of attention which their importance merits. He said: "There are many contributory causes in road accidents, but there is one sovereign remedy—a higher level of road sense on the part of all road users."

Every motorist will, of course, agree with Sir William Joynson-Hicks, but as a road user of many years' standing I would point out that such a remark is in the nature of a platitude, and gets us no further. The question at once arises as to how that road sense is to be acquired except through lengthy experience. Until that experience has been gained road sense is non-existent, and it is during that period of acquirement that accidents occur. When a motorist meets another in, say, just such a position as would turn an error of judgment on the part of the other into a more or less serious accident, how is that motorist to know whether or no the other possesses "road sense"? In an emergency the novice is prone to lose his head or to do the wrong thing, and it is no use for us to say he should have possessed road sense; obviously he has had no opportunity of acquiring it. But to continue: Sir William Joynson-Hicks said that "it will be many years before our roads can be brought up to the standard necessary for the modern volume of traffic which they have to bear. Meantime accident prevention must depend mainly upon the correction of human failures." It is not easy to see here exactly what the Home Secretary means. If by bringing our roads up to a required standard he means the widening of roads, I would say, and I think all my readers will agree, that neither the widening of roads nor the improving of surfaces will do anything to minimise road accidents. Modern glass-like surfaces have played no unimportant part in the increasing of the number of accidents, and as for wide roads, more accident occur on the modern arterial highways than on the narrow roads which they are supplanting. Here again we come back to the human element: a well-surfaced, wide road seems to tempt at once a certain class of motorist to higher speeds, and it is just at these speeds that so much depends on the judgment of the driver, on his possession of that road sense which he has not had time to acquire. With about 3,000 new and inexperienced drivers coming on the road every week, it is of no use our saying that if they all possessed road sense accidents would be fewer. They do not possess road sense, and some, possibly the majority of them, do not even know there is such a thing. Sir William should realise that unless some method of car marking is introduced which should show other road users at a glance whether a driver is or is not an experienced motorist, accidents will happen.

Driving an Art.

Another writer in the same journal says that there is one way and one way only to become a perfect driver, and that is to regard driving as an art and to study it as such. Even then, however, aspirants to perfection will need lessons in the hardest of all schools, the school of experience. This is incontrovertible. All of us may not be able to acquire personal experience of the intricacies of controlling vehicles other than our own, but we can study them. When on a bus, for instance, we can interest ourselves in the driver's methods; when on the road we can give a thought to other wayfarers whom we meet, and even in our beds, as this writer says, we can visualise

emergencies and plan ways and means for countering them.

Rolls-Royce Exhibits at Olympia.

All the characteristic features of Rolls-Royce design in the chassis exhibited at Olympia this year remain unchanged. A number of minor alterations have been made, the chief of which are as follows:—In the 40/50 h.p. "Phantom" chassis wellbase wheels and balloon tyres have been introduced, together with certain steering modifications arising therefrom and giving a light, sensitive steering which is steady at all speeds. A red warning light has been added to the dashboard equipment for use in conjunction with the cooling water thermometer. Also Rolls-Royce hydraulic shock dampers have been fitted to the front axle. In the 20 h.p. chassis wellbase wheels and medium pressure tyres have been introduced. A red warning light has been placed on the dashboard for use in conjunction with the cooling water thermometer, and Rolls-Royce hydraulic shock dampers have been fitted to the front axle. Further, in the owner-driver type of chassis with raked column the pedal positions have been rearranged to give increased body space.

Some Dunlop Exhibits.

A new Magnum cycle cover made of a natural rubber is one of the chief interests at the Dunlop stand. It is amber in colour, is of specially great strength and toughness, and the tread design is the well-known "triple stud" pattern. Another prominent feature is the new tubular spring racing tyres, of which there is a range of five different types, covering all the requirements of grass and cement track racing. The old favourites, like the Warwick, Cambridge and Dunlop Roadster covers are, as usual, on view, as well as a complete range of Dunlop Juvenile covers, Kempshall Cyclette covers and the full-sized Kempshall cycle cover, which was introduced to meet the cheaper quality foreign tyres. Handle-bar grips and brake lever rubbers are now included beside the repair outfits, inflators and so on in the accessory range, and examples of the various wheels and rims complete the display. The Dunlop waterproof saddle is an interesting new-comer. After standing in a downpour of rain for several hours, the saddle can be wiped bone dry with a duster. All types and sizes are made, and all are non-sagging.

The Bulgarian Government is to undertake the extension and improvement of the Danubian ports of that country.

Banknotes of 5,000 lei denominations are to be issued by the National Bank of Roumania.

Bulgaria's foreign trade for August was as follows (in million leva):—Imports, 548; exports, 783.

A Decree has been issued creating, according to the Geneva Loan arrangements, a new Greek bank having the exclusive privilege of emitting bank notes, which hitherto has been the monopoly of the National Bank of Greece.

Some time ago the S.P.G. received a legacy by the will of Archdeacon Pritt, of Australia, who expressed the wish that the money should be used either towards the formation of a Colonial or missionary bishopric or of a college, preferably for the training of native clergy. The committee has decided to allocate the money—over £12,000—to the division of the diocese of Bombay, by the formation of a diocese of Ahmednagar and Aurungabad.

Company Meetings.

SOUTH INDIAN RAILWAY.

Increased Net Earnings.

The ordinary general meeting of the South Indian Railway Company, Limited, was held on October 12 at 91, Petty France, S.W.

Mr. Alex. Muirhead, C.I.E. (the chairman), in moving the adoption of the report, said that the position of the company generally was satisfactory. It was a matter for congratulation that the surplus profits for the year were in rupees the highest realised under the present contract of 1910. Compared with the previous year there was an increase of Rs.2,40,746 in revenue earnings. The working expenses decreased by Rs.21,29,778. The net result of their operations was an increase of Rs.23,70,524 in net earnings, which amounted to Rs.243,14,298; the amount brought home realised £54,949, compared with £46,709 last year. There was justification for recommending a final distribution for the year of 2½ per cent. from the surplus profits, making, with 1½ per cent. guaranteed interest, 4½ per cent. for the half-year, or a total distribution for the year of 8 per cent., less tax.

As regards the prospect of electrification of portions of the railway, as the result of the development of hydro-electric schemes in the Madras Presidency, they were preparing reports and estimates of the cost of electrification for six sections of the railway, which, it was hoped, would show it to be financially sound to make a change. In the meantime no decision had yet been reached as to the electrification of the Madras suburban area, where a certain portion of the line was being provided with a double road. The prospects of traffic in 1927-28 were at the moment fairly promising, but there was a large programme of new construction. No less than 390 miles of new lines were expected to be opened for traffic before the end of the current year, and the cost, some Rs.529 lakhs, would then rank for participation in the net revenue earnings. While there was no reason to doubt that these new lines would ultimately contribute their full share to the success of the railway, for some little time they would probably not be quite pulling their full weight, and might thus lower somewhat the average net return on the total capital employed, though, the board hoped, not seriously enough to disturb the regular maintenance of the modest dividend declared during the last eight years.

Mr. A. J. Yorke seconded the motion, which was carried unanimously.

H.E.H. THE NIZAM'S GUARANTEED STATE RAILWAYS.

Record Earnings.

The seventy-fourth general meeting of H.E.H. the Nizam's Guaranteed State Railways Company, Limited, was held on October 11 at Winchester House, Old Broad Street, E.C. Lieutenant-Colonel George Huddleston, C.I.E., V.D. (chairman of the company), presided.

The Chairman, in moving the adoption of the report, said:—You cannot have failed to be impressed by the gratifying figures disclosed in the report, and it is hardly necessary for me to review them in detail. I will, therefore, make my remarks as general as possible.

On the broad gauge both gross and net rupee earnings were higher than they have ever been before, and the percentage of working expenses to gross receipts was lower than it has been in any year during the last ten years. You will have seen from the statement in paragraph 5, page 4, of the report that, while there was an

increase of Rs.3 lakhs in earnings, there was a reduction of nearly Rs.5 lakhs in expenditure. The chief explanation is that in 1925-26 there were fairly extensive renewals of locomotive boilers and repairs to track, to which I referred last year.

You will also have noticed the great improvement during the second half of the ten years over the first half. Taking the net earnings only, the average for the first quinquennial period was round about 40½ lakhs of rupees, and for the second nearly 63 lakhs. This, I am sure you will agree, indicates great expansion of traffic. It is in fact not only a big rise but a healthy rise, for it occurred in both merchandise and coaching traffic, and was not only in rupees earned, but was also apparent in tons lifted and passengers carried.

This satisfactory expansion of traffic has been carried with considerable economy in the cost of working. As you know, the main line from Wadi to Bezwada has been relaid throughout with a heavier rail, and this has enabled us to use more powerful engines, which haul longer trains than formerly possible. The result has been that during the last ten years, although goods traffic increased from 147 to 162 million ton miles, the train mileage has decreased from 755,000 to 579,000. These more powerful engines and better train loads have also resulted in an appreciable saving in coal consumption per 100 gross ton miles by the increased mileage run by the modern type of engines and improved methods.

As you are well aware, the main line, broad gauge, is the most important part of our system. The 354 miles between Wadi and Bezwada, which include, of course, the short section of 20 miles from the frontier to Bezwada junction, bring in a far larger revenue than 385 miles of metre gauge and all the Government lines put together. Put briefly, the 354 miles of broad gauge earned last year over 111½ lakhs of rupees, while the 637 miles representing the Hyderabad Godavery Valley Railway and all other branches and lines opened earned under 90½ lakhs. I have omitted the Karepalli Kothagudum Railway, which earns comparatively nothing. I have given you these figures, not merely because I want you to appreciate the importance of the broad gauge, but because I desire more particularly to invite your attention to the map published with the report.

In that map you will see, partly constructed and partly under construction, a new broad gauge railway running from Kazipet to Belharshah. This railway is just under 150 miles in length, but it forms an important link between Madras and other places in the South of India and Delhi and numerous other places in the North of India. We expect it will be opened early next year, and we are to work it for H.E.H.'s Government, for whom it has been constructed. What its effect will be on our traffic I am not going to prophesy; but I will say this—so far as I can foresee the new link is certain to change the direction of a good deal of traffic between the North and South of India at present carried by longer routes, and it is equally certain that it will open up large and important districts of H.E.H.'s dominions ripe for, and awaiting an opportunity for development.

Turning to the metre gauge, there is also ample evidence of growing prosperity. Although the year was not quite a record one, it was far ahead in every respect of the year preceding it, and, again, if you look at the statement in paragraph 9, page 5, you will see that the traffic of the last five years is far beyond that of the first five. Taking once more the net earnings of the year, we find that, coupled with those of the broad gauge, they were together higher than in any preceding year.

In regard to prospects for the current year, the approximate traffic returns from April 1, received up to date, have not been altogether pleasant reading, as you may have noticed. These returns show a considerable shrinkage of gross earnings. Our agent has cabled on the 8th inst. that there are excellent crop reports and that the cotton crop is expected to be a heavy one. If we are fortunate in escaping unseasonable conditions later on, it may be that some of the leeway will be made good.

I am pleased to say that our relations with H.E.H.'s Government continue to be of a most cordial and friendly nature. At the end of this year our colleague, the managing director, Sir Robert Highet, is going to India to visit and inspect the company's lines, and to discuss with the agent various subjects connected with the company's affairs.

Sir Robert S. Highet, C.B.E. (managing director), seconded the resolution, and it was carried unanimously.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended October 5, state:—

Since our last report the futures market has been fairly active, and on the whole the tone has not been bad. The week's summary of price movements is as follows:—Sakellaridis: November 37.27 dollars, 0.07 dollars up; January, 37.56 dollars, 0.28 dollars up; March, 37.75 dollars 0.37 dollars up. Ashmouni: October, 28.09 dollars, 0.37 dollars up; December, 28.49 dollars, 0.29 dollars up; February 28.87 dollars, 0.24 dollars up; April, 29.09 dollars, 0.34 dollars up.

Sakel.—The heavy tone mentioned in our last report was still in evidence during the early part of the week and the hedge selling against arrivals continued to weigh on the market. On Monday, however, a rumour got abroad that the Soviet representatives at present in Alexandria had arranged with the Government to purchase 100,000 kantars of the stock held by the latter and on this rumour, the drooping spirits revived and some speculative covering and buying pushed prices up again well over 37 dollars for November. No confirmation of the rumour is to hand as yet and with the approach of the American Bureau Report, a feeling of nervousness seems again to be creeping in.

The demand from abroad has been very poor during the week and spinners seem to take no interest whatever in the article for the time being. Arrivals are daily getting heavier and should the American Bureau report prove to be bearish our market will not offer much resistance to lower prices.

Uppers.—The Uppers market has been rather better than Sakel. The same heavy tone which was evident in the Sakel market was also noticeable in this market during the first two days of the week; the first October tender day was approaching and with the demand not sufficient to absorb the weight of arrivals it was fully expected that the tender would be heavy. Expectations proved true and a tender of 51,250 kantars was issued, but the immediate stopping of the whole of the tender by a local speculative operator relieved the market and prices instantly soared upwards again. As has persistently been the case recently, spinners have taken more interest in Uppers than Sakel but even so the demand has only been moderate.

The week's receipts amount to 240,300 krs. against exports 65,193 krs; the stock in Alexandria stands at 2,412,864 krs.

The official figures of arrivals and export for the period September 1 to September 28 are as follows:—Sakellaridis 171,296 krs., Ashmouni and Zagora 501,315 krs., Pilion 35,328 krs., Various 13,156 krs., Scarto 9,369 krs., total 730,464 krs. Exports: Sakel 127,568 krs., Ashmouni 142,776 krs., Pilion 9,892 krs., Various 8,003 krs., total 288,239 krs.

Spot.—Once more we have had a quiet market at Minet el Bassal and no signs of a revival in spinners' demand, which continues distinctly moderate. Sales for the five business days amount to about 17,600 bales, of which we estimate 6,000 bales Sakellaridis, 10,800 bales Ashmouni and Zagora, 800 bales Pilion and a few bales of Nahda. There is little change in the spot situation from last week in either Sakel or Uppers.

Sakellaridis.—A fair business has been done covering all grades. Spot differences are without much change from last week but are inclined to ease. High premiums have been paid for Extra class cotton.

Ashmouni and Zagora continue in good favour and a good business has been done in all grades. Spot differences are without much change, but several holders are withholding their cotton temporarily, preferring to wait for the December premium.

Pilion.—A fairly good business has been done in all grades at about last week's differences.

Other Varieties.—Brown and White are neglected and no business has been reported. A small business has taken place in Nahda.

Crop 1927.—Reports received from our interior agencies indicate, in general, a continuation of conditions favourable to the crop. Some morning fogs have occurred in the Northern districts but without causing any appreciable damage. Temperature has been fairly high. Pink boll worm attack is perhaps slightly heavier than last week, but, so much of the cotton having been picked, its ravages cannot now attain very serious proportions. The factories are in full swing and full of cotton.

The report of the Ministry of Agriculture for September reads: High temperature has had a good effect on the maturing and opening of bolls and in consequence picking has been ten days earlier than last year. The attack of the pink boll worm and the boll worm is general and is almost equal to that of last year. Picking is practically over in basin lands and will shortly come to an end in the perennially irrigated areas in Upper Egypt. In Lower Egypt picking has started. In Upper Egypt uprooting of cotton sticks has greatly progressed and it has already started in Lower Egypt.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 12:—

Egyptian Futures.—Sakel Contract.—The underlying factors governing values in this contract continue to be identical with those of recent weeks; thus it has again to be recorded that any advances have immediately attracted both hedge selling and liquidation, with the result that only occasionally could the undertone be termed moderately steady. The crux of the whole position is the fact that arrivals from the interior are not being absorbed by exporters, and thus the contract markets have to face far more than their customary weight of cotton for this period of the season. Also, we understand that present prices are considered moderately attractive by the grower, so that until a good portion of their cotton has been marketed, we cannot look for any relief in the pressure, unless, of course, a distinct improvement in the trade demand becomes evident, or the later pickings turn out more disappointing than anticipated. The rather improved trade offtake to which we referred in our last circular was well maintained until the publication of the American Bureau report at the week-end, while the initial result of this was to cause some advance in the level; the sub-

Warsaw	Zloty to £	25.22½	43—44

sequent downward tendency in the American market has been fully reflected in our contract and this has exercised a decided restraining influence on spinners' operations. There is no doubt that at the present juncture a period of steady or gradual advancing values would do much to help trade interests and bring in its train support from a quarter that has been generally lacking so far during the movement of the present crop. The unsold stock of Sudan Sakel cotton has now been reduced to such a small figure that this cotton ceases to operate for the time being as a market factor; the covering of fresh business in fine counts, therefore, from now onwards, will have to be effected in the Egyptian variety. We cannot see that we have any reason to change our recent views regarding the course of values, an advance in the American departments would probably help to hold prices somewhere in the neighbourhood of the present level; on the other hand, any further falling away in the other market would have a pronounced effect on our contract. For the time being, therefore, we think it best to adopt a waiting policy, but should prices advance through any cause other than a distinct improvement in the trade offtake or a threatened curtailment in the estimated crop figure, we advise conservative short sales for a quick turn.

Upper Contract.—There has been quite a fair business transacted in this option during the past week and in the early days the market showed quite a good undertone. The high level of the week was reached just after the Bureau report; since this, under the influence of weaker Alexandria reports and long liquidation, prices have reacted, closing at 2 to 4 points decline for near and 3 to 4 points advance for distant options. Trade support especially since the downward movement commenced, has been distinctly moderate; however, Alexandria report a good export inquiry for a grades, so evidently Continental and American buyers are operating more freely than local spinners. We adhere to our previous opinion regarding the course of values in this market and consider that purchases whenever the market shows an easing tendency will ultimately prove profitable.

Egyptian Spot.—The three days prior to the issue of the latest Bureau report witnessed rather more activity, both in the spot and c.i.f. departments, and had the published figures been of a slightly more "bullish" character, or even if the modest advance in prices it caused had been maintained, there is little doubt that a very satisfactory week's business would have resulted. The market failed to hold the advance, however, and interest to a certain extent evaporated. The local inquiry during the week has shown little change. Uppers have attracted some attention at from 14½d. to 15.00d. and rather more interest has been shown in the better grades. Interest in Sakel cotton has also been shown on a slightly improved scale, but the top grades in this growth have moved off very slowly. Samples of new crop Sakel which have come to hand give promise of an improvement in this season's cotton as compared with last.

Sakel at from 13.00d. to 15.00d. has been in fair request, but the demand for the very low cotton (e.g. 4d. to 7d.) appears to have died down for the time being. Sudan Sakel has again moved off very consistently. C.i.f. business has shown some improvement, but sales for shipment other than prompt have been effected on a moderate scale only. Forwardings to spinners for the week ending 7th inst were returned as 2,828 bales Egyptian and 3,255 bales Sudan. Estimated sales for the week, 2,000 bales Egyptian and 4,100 bales Sudan. Quotations of Sakel 5 to 50 points lower, Upper 35 points lower, and Pilon 35 to 40 lower since our last report. F.G.F. Sakel to-day 18.85d. F.G.F. Upper to-day 14.75d. F.G.F. Pilon to-day 15.05d.

Lord Irwin, the Viceroy of India, accompanied by Lady Irwin and their party, left Simla on October 10 for an autumn motoring tour. Lord and Lady Irwin have proceeded to Pathankot (Punjab), whence they will go to Ferozepore, where the Viceroy will open a weir.

CHESS.

White to play. What result?

The solution to last week's problem is as follows:—1, P—R6, B—Kt; 2, K—B2, K—B2; 3, K—K3, K—Kt3; 4, Kt—K7 (ch), K—Kt4; 5, Kt—B6, PxKt; 6, PxP, B—R2 (ch); 7, K—Q3, P—Kt6; 8, P—B7, P—Kt7; 9, P—B8 (=Q), P—Kt8 (=Q); 10, Q—Kt8 (ch), K—B4; 11, QxQ, BxQ; 12, P—R7 and wins.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Surgical and Medical Instruments.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of surgical and medical instruments. December 20.

Light Railways Material.—The Director-General, Main Drainage Department, 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply of light railways materials. December 1.

Safes.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of iron safes required by the Direct Taxes Department. December 1.

Marine Units.—The Director-General, Mechanical Department, P.W.M., Cairo, invites tenders for the supply of two marine units for ferryboat for Beni Suef Provincial Council. November 1.

Bedsteads.—The Department of Public Health, Cairo, invites tenders for the supply of 343 iron bedsteads, with wire mattress. October 25. (D.O.T.)

Paper, Etc.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of paper and binding materials required by the Government Press for the year 1927-1928. October 24.

TURKEY.

Cast Iron Pipes.—The Anatolian Railway Administration invites tenders for the supply of 120 tons of cast iron pipes. November 6. (D.O.T.)

THE SUDAN.

Steamers' Stores.—The Inspector-General of Irrigation Service in the Sudan, Khartoum, invites tenders for the supply of steamers' stores to the Egyptian Irrigation Service in the Sudan, of the following general description: oils, greases, cleaning materials, packing and jointing, hemp, and wire rope and yarn, lamps small tools, wrought iron, steel, copper, paints, and enamels brushes and brooms, bolts nuts and pins, life-buoys, oars, piping, minor electric light spares. November 3. (D.O.T.)

Mr. Sandeman Allen, M.P., Chairman of the Liverpool Chamber of Commerce, has been staying in Bucharest, where, as Chairman of the Traffic Committee of the International Chamber of Commerce, he has been studying the question of navigation on the Danube. Mr. Allen had previously studied this question in Roumania. He left on October 14 for Bratislava (Pressburg).

Notes of the Week.

Anglo-Iraqi Negotiations.

The Anglo-Iraqi negotiations, in preparation for which King Faisal of Iraq, who had been preceded by his Prime Minister, Jaafar Pasha, arrived in London last week, actually begin on the day upon which we go to Press, and little good, therefore, can be done by speculation upon their result. Already wild rumours have been flying about concerning the actual purpose of the negotiations, both in their general and personal aspect. Suffice it here to say that such conversations were clearly foreseen in the Anglo-Iraqi Treaty, and that there is extravagance in the idea that an intrigue is afoot either for complete severance on the part of Iraq from Great Britain or for renewed and tightened control by Britain of the Arab country. There will, we imagine, be considerable opportunity for direct speaking on both those points. One fortuitous event, however, lends increased interest to these negotiations: we refer to the oil "gusher" at Baba Gurgar. While it is foolish to entertain the fantastic notions which this find near Kirkuk appears to have excited in some breasts, the discovery is decidedly opportune in that it may serve, at a critical time in the history of Iraq, to dispel the ignorant idea that the country contains nothing but "swamps and deserts." No gift of prophecy is needed to foretell that Iraq will be eventually one of the most profitable fields of investment, and it is all the more necessary, therefore, even from this narrow and "sordid" point of view, that so rich a land should be kept free of political complications. A country whose future is assured need be in no hurry to have at once what in time will certainly come to it.

Egypt and Britain.

With the conclusion of King Fuad's visit to Paris and Brussels the ground has been prepared for the resumption of the conversations between the Egyptian Prime Minister, Sarwat Pasha, and Sir Austen Chamberlain on the subject of the future relations of the two countries. The conversations were adjourned after King Fuad's visit to England to enable Sarwat Pasha to find out the extent to which he could rely, after the death of Zaghloul Pasha,

on the support of the Wafd and consequently of the Egyptian Parliament for an agreement which set out to bridge the respective standpoints of the Egyptian and British Governments. He is understood to be returning to London well content with the measure of the support assured him, and it is to be hoped that this has been promised him with full appreciation of the fact that in a compromise neither party can obtain all that it may have wished. Of Sarwat Pasha's own desire for the conclusion of a treaty there is no room for doubt. His difficulty consists largely in being able to satisfy himself that, having negotiated well within what may be regarded as his "terms of reference," he will not be repudiated when he presents the text of the treaty to Parliament. Egypt should now have an opportunity of refuting the critics who maintain that she will never accept an agreement which is not imposed upon her. The self-discipline to which the Wafd has recently subjected itself is of the best augury.

Fishing in Troubled Waters.

With the approach of winter, when, it is to be hoped, the world will be spared for a season attempts to fly the Atlantic and to swim the Channel, the European press will, unfortunately, have more space to devote to the tiresome affairs of Prince Carol of Roumania. Within a week of explicit assurance from Roumania that a Carolist movement is non-existent a French journal discovers a very definite movement on foot. So long as the National Peasant Party maintains an equivocal pose towards the Regency there will be plenty of opportunity for keeping the pretendership of Prince Carol alive. In fairness to the Prince, however, it must be pointed out that he disclaims the rôle of pretender on the ground that he does not intend to intrigue on his own behalf. The situation turns largely on the attitude of the Roumanian people towards the present Government. The Bratianu Ministry is out to secure the financial rehabilitation of the country, and the process, by the methods which it has laid down, entails hardships, or at least restrictions, on the people. It cannot hope, therefore, to be popular, but it may

consider itself entitled to respect for its courage in grappling with a real problem. Neither in its actions during the elections, however, nor in its general demeanour is it held to show sufficient consideration for public susceptibilities. In these circumstances the political opponents of the Liberals appear to have convinced themselves that their only chance of unseating the Bratianu Government is to use the dynastic lever. The banishment of Prince Carol is represented as entirely the work of M. Bratianu—as if the Prince's own record had not been sufficient to cause him to forfeit the succession and much more—and any lingering affection for the Prince, who was popular at a time when his father out of deference to King Charles was at pains to efface himself in affairs of State, is exploited for purely party ends. If Roumania is to be spared a troubled Regency, government, whatever party is in power, should be more broadly based upon the people's will than is the case when elections are "made" with the application of varying degrees of pressure. It would also help the Roumanian people to consider the position which their Sovereign, and consequently their country, would occupy in the world's esteem, if they called Prince Carol to the throne, after having been rid of him by his own act of renunciation.

The Six-Days Speech.

Mustapha Kemal Pasha's great oratorical effort was made last week. For six days he held his audience by the comprehensiveness and outspokenness of his review of the last nine years of Turkish history. The speech was almost entirely for domestic consumption. It painted in lurid colours the dangers that threatened Turkey after the Armistice, it emphasised the magnitude of the struggle for Turkish liberty and independence, and it allowed to none but the President himself credit for the conception and the carrying out of the plan that was to save the Turks by their own strength alone. If its aim was to inculcate among the Ghazi's hearers an enthusiastic belief in a Turkey *über Alles* and in a President enthroned higher still, it will surely have achieved its object. It is not a matter for surprise that the gathering of the People's Party was profoundly moved by the recital, and in particular touched by the final appeal to the youth of the Republic to guard what has been so gloriously won. When the delegates re-assemble, it will be as the Grand National Assembly, and then they will be required to come to earth again for the discussion of ways and means, in order to provide Turkey with all that she wants to enable her to qualify as an up-to-date State. While the Ghazi was talking, a reminder was being given to the delegates that achievement may fall short of intention even in a country governed by a Super-man. To Constantinople's long list of anomalies has been added yet another in connexion with the Yildiz Kiosk Casino. Inaugurated less than a year ago under the highest official auspices, this institution was a few weeks back summarily suppressed and denounced as an intolerable menace to Turkey, such as had been specifically prohibited by law. Its proprietor and his guests were arrested, and seals were affixed to the doors. Honour and consistency having thus been vindicated, the Casino is now to be re-opened. To the Turkish mind there may be nothing incongruous in these proceedings; but on the foreigner their cumulative effect is not conducive to a robust faith in the permanency of Turkish institutions, nor will he be encouraged to invest his money in a country where executive action is dictated by caprice.

Scares.

The Great War had not been in progress very long before the prophets arose to remind an ignorant world with what accuracy they had foretold the event. Encouraged by a success which no-one had the hardness of heart to challenge, they passed on to point out that the approaching "end" of Turkey was also a clear fulfilment

of prophecy. While a decision as to when an "end" is not an end has still to be left to the Turks and the prophets, a very confident prediction has been launched regarding the next "great world war," which is start on May 28, 1928, and to continue until September 16, 1936. It would seem to devolve upon Russia not to disappoint the seers this time, as the opening gambit is to be staged in the Middle East. A more pressing scare, however, emanates from Paris, where it is claimed that news has been received of the discovery of a Macedonian plot against both Yugoslavia and Bulgaria. Except in so far as the person of King Alexander has been brought into the report, there is nothing to distinguish the announcement from any shrewd guess based on recent happenings in Macedonia. The *komitajis* are still active, but, with increased precautions along the frontiers concerned, their successes are less pronounced. It is so unusual for the Belgrade press to be anticipated in the matter of scare reports, that the industry of Paris in this respect becomes the more suspect. If it has any conscious aim behind it, we may hope that it is to bring the Yugoslavs and Bulgarians into co-operation against a common menace, rather than in some subtle way to promote the cause of France *vis-à-vis* Italy.

Bulgaria and The Macedonians.

A session of the Sobranye that is likely to be fraught with much good or much ill for Bulgaria was opened last week in Sofia. The first debate, which dealt with the decree imposing martial law in the frontier districts of Petritch and Kustendil, was notable for the vigour of the Prime Minister's speech. M. Liapcheff pointed out that the detachment from Bulgaria of part of her territory had created a painful situation, and made the population of the frontier districts particularly sensitive to events taking place on the other side of the frontier. At the same time, outrages provided no remedy; on the contrary, nothing could be more disastrous or more dangerous for the Bulgarian State and the entire Bulgarian nation than these actions, which he stigmatised as the actions of madmen. It was inevitable that some of the speakers should connect the revolutionary outrages with the grievances of Macedonians in Yugoslavia; but all were agreed in condemning the outrages, while adopting a party attitude towards the declaration of martial law. The firm stand taken by the Prime Minister should have made a good impression in Yugoslavia, where the personal risk involved by any Bulgarian politician in denouncing the Macedonian Revolutionary Organisation can be appreciated. It would materially strengthen both Governments' hands, if the Yugoslav Government could announce a more liberal policy in Southern Serbia in regard to schools and churches for the use of Macedonians.

Athens Excavations.

Archæologists in general, and the British School of Archæology in Athens in particular, will be less than human if the news of their American colleagues' good fortune does not make their mouths water. A single American philanthropist has assumed the whole cost—estimated at £500,000—of uncovering the site of the ancient Agora at Athens, which is to be carried out under the auspices of the American School. There seemed to be no doubt that the funds required for the great work would be forthcoming, but it must be a considerable relief to those who have assumed responsibility for the enterprise to have the money assured at the outset. The site in question is the very centre of ancient Athens. In view of the discoveries that have been made in neighbouring ground when extra deep foundations have been laid for new buildings, the new excavations should yield a rich harvest and materially add to our knowledge of ancient Athens and to the world's collection of antiquities. Some old landmarks of the present city will disappear, among

the first being Shoe Lane, one of the favourite haunts of tourists and others bent on bargains, but often content with fakes.

Conscription in Persia.

It says much for the personal prestige of the Shah of Persia that conscription should have been introduced without serious complications. Compulsory military service has nowhere in the Islamic East—with the possible exception of Kemalist Turkey—been regarded in the light of a widening and strengthening experience; and Persia, a country of individualists, is no exception to that rule. It is by no means surprising, therefore, to learn that the bazaars at Teheran, Ispahan, and Shiraz were closed on October 16, as a protest against conscription. To this protest, which is perhaps the more notable in that it comes from the towns which are, of course, more easily conscripted than the country, should probably be added the unheard protest of the tribes. It is known that the tribes of Persia have suffered severely at the hands of the centralising authority, and that their indignities have been poured on them chiefly through military agents. Certainly the course of conscription in Persia is worth watching, not only for its own sake, but also for its illustrative value in taking into account the chances of the introduction of compulsory military service in the neighbouring territory of Iraq, a country divided into Sunni and Shiah, as Persia is not, and one also lacking a practically absolute soldier at its head.

Persia and the Soviets.

The prompt ratification by the Teheran Majlis of the Treaty signed at Moscow on October 1 would appear to indicate that the Shah is well pleased with the bargain made by his Foreign Minister. We ourselves had already suggested that, if the clauses could be taken at their face value, the Persians had gained considerable advantages, even if on the principle that "half a loaf is better than no bread." The Persians, at any rate, have made up their minds that on this occasion the Bolsheviks are to be trusted, and it would be unwarrantable suspicion on the part of any outside country to affirm that the Persians are wrong in thus clinching matters. Western observers who deplore this close linking-up of Persia with the Soviets are apt to overlook the lamentable economic state in which Northern Persia has lain ever since the beginning of 1926, when the Bolsheviks imposed the embargo on Persian goods; it was an intolerable situation, which caused to suffer not only the inhabitants of Azerbaijan, Gilan, Mazanderan, Khorassan, and so on, but also the national Exchequer. From both the local and the national point of view, therefore, some settlement was desirable. Whether it is a mere coincidence that the Treaty was signed after, and not before the departure of the American Administrator-General of Finance, and what Dr. Millspaugh would have counselled in regard to its signing, are matters of interesting conjecture.

Education in Palestine.

Two items of news have just come from Palestine which indicate the pass to which the Zionist movement has come in the Holy Land. The first relates to the immigration and emigration figures for August—190 Jews entered the country, and 571 Jews left it; and the second, more striking because concerned with a new subject, is the statement that many Hebrew classes and some Hebrew schools will have inevitably to be closed. This reduction is a direct result of the curtailed budget passed by the Fifteenth Zionist Congress. Now the unique, if not anomalous, position of Jewish colonists in wanting so many things besides mere success in colonising the land, has long been recognised—notably by Sir Alfred Mond in a recent interview. Whereas colonists of other nationalities and in other places think of nothing but their work, the Jewish colonists want

education, music, and a hundred other very laudable but not absolutely essential things. It is perhaps one of the saddest aspects of the present pass of Zionism that the educative work conducted under the auspices of the Zionist Organisation should have, so to be cut. The path of Hebrew teachers in Palestine has seldom been smooth, and now for many of them it is to be completely torn up. Admittedly there is another side to the picture. The children of Jewish immigrants will now, presumably, have increasingly to be taught in Government schools, and the collaboration of Arab and Jewish youth must thereby be fostered. It may be argued, indeed, that if there is ever to be a real Palestinian nation, consisting of Arab and Jew, common education would be one of the most potent factors in its realisation. In this connexion it is of interest to note that a draft Education Ordinance has just been published in Palestine which would greatly increase the control of the Jerusalem Administration over all schools in Palestine. This Ordinance, which has not yet been adopted, gives to the Government Department of Education absolute rights of entry, inspection, approval, and suppression of private schools of all communities; and it also empowers every municipal council and certain local councils to act as the local education authority, with power to impose a local education rate. This is certainly a step in the unification of the peoples of the Holy Land, and although certain communities hitherto privileged may be inclined to resent Government inspection (a tendency by no means confined to Palestine), the Ordinance has doubtless been devised in the best interests of the country as a whole.

Local Self-Government in Palestine.

Although the elected municipal councils, which the Government of Palestine has introduced in place of the nominated councils, have failed to satisfy the demands of many Arabs for self-government, there is evidence to show that this interesting experiment is meeting with a degree of success. The elected councils have been in existence since last spring, and it is hardly to be expected that they will yet show the wisdom of older and sager bodies. Particular interests are apt to intrude upon larger interests; the religious factor is by no means absent; and the cynics, indeed, say that there as many parties on the Council as there are members. An instructive example is just reported from Jerusalem. In a debate on municipal roads contracts the Vice-Mayor complained that nothing, out of £E12,000 for municipal works, had been allotted to Jewish labour; this, he said,

(Continued on page 518.)

A TURKISH MILESTONE.

A six-days' speech recapitulating the history of Turkey during the last nine years is a sufficiently notable episode to mark a definite stage in the life of the Republic. That Mustapha Kemal Pasha should have considered that the occasion called for this *tour de force* is an indication that he is conscious of having reached a point at which it may be profitable to take stock of what has gone before, in preparation for what the future may hold. The congress of the People's Party that provided the setting of the speech was significant only inasmuch as it followed immediately upon a general election, which had brought many new men into the Grand National Assembly, and the main purpose of the President may have been nothing more than to provide his followers with a ready-made appreciation of his own achievements in the establishing of the Republic and in bringing it to its present state of development. The tenour of his long speech, however, supplies the characteristic of the stage which he passes in review, and suggests that, whether he himself may realize it or not, it is one which will be found to have reached its close. Mustapha Kemal Pasha's great lecture was essentially a fighting speech; it was the fighting man who spoke, who dwelt with pride on his almost single-handed struggle against obstacles which would have overwhelmed a lesser man; who distributed his criticisms and strictures fearlessly, and showed plainly that he could find no room for any one else in the picture that he was presenting to the nation. The time comes, however, when fighting is over, and has to yield place to the far less exhilarating, but often the more important and always in the long run the more exacting, work of administration under peace conditions. No one will challenge in its broad outline the significance of the part which Mustapha Kemal Pasha has played in the striking changes that have been wrought in Turkey. "Ghazi," "Hero," "Liberator"—the titles are appropriate enough to the period the close of which the President has seemed to emphasize. What of the future, when the Turkish people have no longer to make common cause against actual or hypothetical foes without, but are concerned exclusively with their own estimate of what constitutes good government and material prosperity?

For the world at large, and, unless we are mistaken, for the Turks themselves the real interest at the moment centres in the future. No one will grudge the Ghazi the stupendous record of his magnificent achievement. Not everyone—even among his own countrymen—will agree in every particular with his reading of history. In Turkey itself there will be no open criticism—it is not indulged in under the present régime—but already one of those whom Mustapha Kemal Pasha classes among his enemies but who prefer to regard themselves as his political opponents, has from the security of an English domicile challenged

the President on a statement of fact. The point is more illuminating than important. The President was inclined to emphasize a movement in favour of what he termed an American protectorate or mandate, as if to imply that Turkey was to be called upon to surrender her nationality and independence. Nothing of any such movement was known abroad, although the advantages to be gained from American, British or other foreign advisers have repeatedly been pressed upon the Turkish authorities, on the analogy of Japan, who surrendered nothing but gained much, when she sent herself to school under foreign helpers, in order to raise herself in an incredibly short time from a mediæval State to a first-class Power. Halide Edib Khanum points out that there was never any question of an American protectorate or mandate; that the plan to which the President refers involved at the most American protection, by means of financial reconstruction under American leadership. History, it is possible, will also decide, while in no way underrating the achievements of Mustapha Kemal Pasha on Turkey's behalf, that the picture of a world leagued in active hostility against Turkey in those post-Armistice years has been a little overdone. As between Turkey and Greece the Greek invasion of Asia Minor deserves all the strictures that the Ghazi passes upon it; as a world effort designed for the elimination of Turkey from the map it appears a very lame-dog proceeding, when contemplated with any sense of proportion. Be that as it may, that particular chapter is definitively closed, and not all the rhetoric of all the Turkish orators and the whole of the Turkish Press can pretend with any show of reason that the integrity or independence of Turkey is endangered to-day, or that there exists among Western nations any attitude towards the Turks that does not conform to the principle of "Live and let live."

Mustapha Kemal Pasha has done more for Turkey than merely defeat her enemies and counteract their designs; he has welded the country together and has instilled into the people a desire for better things. In the long speech that he has recently delivered at Angora he has reached his apotheosis as a military leader, an organiser of victory, the founder of the Republic. His reputation in these respects will remain unchallenged; it rests with the future entirely to show whether he will be able to fulfil for the Turkish people the desire for better things that he has kindled in them. The event has not always justified the lead that he has given the country. For many years he waved an anti-foreign standard very vigorously; today it has been lowered, if not actually furled; the impecuniousness of Turkey provided an early corrective. A more dangerous doctrine—because more gradual in its effects and provocative of evil that cannot easily be undone—is the President's campaign against religion. Obsessed by certain features of Islam that he regards as handicaps to a modern State, he would seem to be intent on uprooting the Muslim religion from Turkish everyday life. In so doing he runs the risk of abolishing a salutary discipline from the young republic. In other countries many centuries of Christianity have produced a civilisation which can be carried on by its own momentum without consciously renewing its vitality from religious forces. If Turkey were to become as deliberately free-thinking as the Ghazi schemes for her to be, it would be difficult to see on what her future rulers would hope to build up a strong State. The Muslim religion has been responsible for the military prowess which first made the Turks a world factor; they lack, for instance, every one of the characteristics which have helped the Japanese into their present position. As a soldier, no doubt, the Ghazi looks to impose a discipline which will be more physical than moral; but in so doing he will inevitably furnish his critics with a wider range for their attacks. In these days a country needs all the intellect that it can muster among its citizens, not necessarily for Government posts, but to be used and developed in its midst. By requiring that every Turk see eye to eye with him or go into exile, Mustapha Kemal Pasha imposes a heavy handicap on the country's development.

The Near and Middle East*

From Our Own Correspondents.

Cairo, October 15.

Sarwat Pasha's Visit.

Sarwat Pasha, who left last Sunday, must indeed feel very satisfied with his flying visit to Egypt. It synchronised with the deliberations of the Wafd in regard to its future policy and the selection of successors to the posts left vacant by the death of Zaghloul Pasha; and covered a period which was generally regarded as pregnant with serious possibilities for Egypt in general and the Coalition in particular. But not only have the feared eventualities not materialised, but, if one may judge by the various statements issued by the parties and in general the attitude of their members towards each other and particularly towards Sarwat Pasha himself and the question of conversations in London, the Coalition also would appear to have become further cemented. Certainly among the section of the Wafd which has come to be termed the Extreme Left there have so far been distinct signs of a more rational outlook and of greater restraint.

Both Sarwat Pasha and Nahas Pasha are to be congratulated on the result. The only fly in the ointment is the growing impression that an anti-Palace campaign is being worked up, if not by the Coalition as a whole, at any rate by the Wafd side thereof. This would be in the highest degree regrettable. It may be that at times the Palace may take action to which the Wafd thinks it is entitled to object on constitutional grounds. But public criticism in this direction should be reserved for really important matters and every little incident should not be seized upon for complaint, since, apart from the attack losing thereby its force, the impression of a persistent policy of pinpricks is unfortunately given.

At the present juncture this tendency is more than ever undesirable. There is indeed so much internal and external business to be done—business that is of vital importance to the country socially, economically and politically—that complete unity between the various elements that make up the nation is essential—unity between Palace and people and unity between parties, and anything that conduces to friction or tension is dead against the interests of the country, since it means that the national energies are being used up on what one may call unproductive objects instead of in directions promoting the national welfare. One can only hope that the impression very recent developments have given will prove to have been erroneous.

Accession Day Celebrations.

King Fuád's Accession Day was celebrated in Cairo by a tea-party given in the Ezbekieh Gardens by the Governor, Mahmoud Pasha Sidky, and by a tea-party at the Antoniadis Gardens in Alexandria at which Gaafar Wali Pasha represented Sarwat Pasha, followed by a banquet in the evening at the San Stefano Casino given by Hussein Pasha Sabri, Governor of Alexandria. The

*Under this heading appear weekly or at regular intervals communications from correspondents in Egypt, the Sudan, Roumania, Yugoslavia, Greece, Bulgaria, Albania, Turkey, Cyprus, Palestine, Iraq, and Persia.

display of fireworks, with which the banquet ended at the Casino was particularly brilliant, far superior in quality to those of previous years, which themselves were good. All three entertainments went off without a hitch in spite of the great campaign of opposition waged by the Wafd on the ground that the country was in mourning, and the awkward situation, which might have arisen out of the threat of the Wafdist Deputies and Senators to decline to attend, was skilfully avoided by no invitations being issued to any of the members of either House.

The Fleet in Alexandria.

Another section of the Mediterranean Fleet is at present paying a visit to Alexandria. This time it is the battleship Valiant, and the submarine-depot ship Cyclops and six submarines. As usual the British community has done its utmost to make the stay of the officers and men enjoyable, and on Tuesday evening a dinner and dance were given at the San Stefano Casino, which proved more than usually successful. Capt. Carrington and his senior officers were also the guests of the Cabinet at the Accession Day tea-party at Alexandria.

Two thoughts struck one, as one drove to and from the Accession Day tea-party. The first was in regard to the wonderful fertility of the Egyptian soil. For some distance the road to the Antoniadis Gardens has always been bounded on either side, by water, to the left the Mahmudia Canal and to the right the Hadra Lake. To-day there is water only on the left. On the right is a wide extent of cultivation partly market gardens, partly banana plantations, here waving maize, there lusciously green clover—the whole a remarkable transformation, which only two years' work of draining the lake has achieved. The scheme at its inception aroused a certain amount of opposition and adverse criticism, but the result has fully justified the undertaking and afforded yet another illustration of what a useful addition to Egypt's cultivable area could be made by the draining of the lake areas around Alexandria.

The other thought was conjured up by the picture presented by the Antoniadis Garden, a delightful park with mansion presented to the Municipality by a Greek millionaire some few years ago and now used for official functions such as the one held there last Sunday afternoon. Here in all privacy the head of the Government was entertaining an official party of guests. How different from what would happen on a similar occasion in Cairo, where every official entertainment of any importance has to be given either in the Ezbekieh Gardens or one of the hotels, where the guests have to run the gauntlet of crowds of spectators and their every movement is watched and commented upon by curious onlookers, many of whom behave as if they were at some wild beast show!

Egypt has spent so much on her representation abroad, that she can surely afford to devote a sum of money to provide the head of her Government with an official residence, where he can not only transact State business but also give the entertainments which have become inseparable from the Premiership. Egypt owes it to herself that the touch of "public show" hitherto characterising all such functions should disappear completely and that the official entertainments organised by her Government should take place amid something of the same privacy and dignified surroundings as frame those given by her King.

Belgrade, October 21.

The Government and the Prophets.

Despite the general conviction that the present Government could not possibly hold together much longer, it is still in existence even after the first meetings of the Skupstina, at which indeed it secured a very considerable measure of success, notwithstanding the fierce attacks of the Opposition. It is true that new difficulties are arising and that, while less is heard of the differences between the Premier, M. Voukitchevitch, and the Radicals, attention is now centred on the difficulties of the Democrat Ministers with the leader of their party, Dr. Davidovitch.

During the debates on the report of the Verification Committee, M. Nastas Petrovitch, who was recently expelled from the Radical Club because of his uncompromising attacks on the Government, M. S. Pribitchevitch, and M. S. Raditch—three of the finest speakers in the country—made very powerful attacks on the Government's method of conducting the elections. They maintained that there had been many abuses of power by the local authorities, who had helped the Government candidates and hindered those of the Opposition at every point. Nevertheless, the report of the Committee verifying 299 mandates, referring others to a Commission of Inquiry, and annulling that of M. M. Voukitchevitch, the son of the Premier, on the grounds that he was not 30 years old as the law demands, was accepted.

During the first normal sitting the permanent officers of the Skupstina were elected. The Government candidate for the Presidency was Dr. Ninko Peritch. The Opposition very cunningly put up M. P. Markovitch, a well-known Democrat, hoping thereby to split the Coalition. It was, therefore, a real and almost unexpected success for the Government when Dr. Peritch was elected by 188 votes to 100—eleven papers being unmarked. Nevertheless, the figures show that a few Democrats voted against the Government candidate, and this indication of a readiness to split in the Democrat ranks was further emphasised by the sudden opening of a breach between Dr. Davidovitch and the Democrat Ministers at a meeting of the Democrat Club when the former declared that he could no longer accept responsibility for his party's supporting the Coalition Government and, therefore, resigned from all his positions in the Club and in the party. These resignations have not been accepted. Instead, a resolution of full confidence in Dr. Davidovitch was passed unanimously, and so the struggle between the Democrat Ministers and Dr. Davidovitch remains undecided. It seems possible that the Democrat Party will split, and it is now believed that in that case the Muslim party will remain with the Radicals. This would mean that, if the Democrat Ministers could win over only twenty members, the Coalition would still have a majority even if Dr. Davidovitch and his friends left it.

Bulgaria and Yugoslavia.

While the Belgrade Government accepts the promises of the Bulgarian Government as satisfactory and is awaiting their fulfilment, the Press here is paying great attention to the debates in the Sobranie and to the discordance between the Government's professions and events in Sofia and on the frontier. The debates in the Sobranie brought out the fact that, while willing to support the Government in all steps making for peace with Yugoslavia, the Agrarian Party believed that the declaration of martial

law in the frontier districts would only be used by the Government further to repress their political opponents in those districts. Recent reports from Zayetchar, where an attack was made last week on the military arsenal, state that peasant refugees from Bulgaria maintain that the *komitajis* are in full control in the frontier provinces and exercise an unbearable pressure on the peasants, whom they rob, beat and imprison as they wish. Two days ago three employees of the Yugoslav Legation in Sofia and two Yugoslav journalists were attacked in a café in Central Sofia and their King and country were publicly insulted without any intervention by the police, whose help had been solicited. These are ugly signs and there are rumours that the Sofia Government is by no means safe, and that there is grave discontent throughout the whole country; this, together with the internal crisis in Yugoslavia and suggestions of joint action between the Bulgarian *komitajis* and the Albanian *katchaks*, does not make the outlook any brighter.

NOTES OF THE WEEK

(Continued from page 515.)

was particularly unjust in that Jews were the chief contributors to the revenues of the Municipality. In the end the Moslems and Christians combined against the Jews. Now it is obvious, from this small instance, what would happen if Palestine were granted full self-government. Nevertheless, the granting of local self-government was a wise step. It is difficult to conceive of two more effective ways of teaching Arab and Jew to understand and respect each other than by the implied step of co-education and by local elected councils.

Afghanistan and Angola.

No two countries in the Middle East have such an identity of interests as Afghanistan and Turkey. The *rapprochement* between these two Sunni lands has every appearance of sincerity and longevity; for very largely their external and internal problems are the same. It is easy to believe, indeed, that the progressive section of Afghanistan looks up to Kemalist Turkey with feelings of something like worship, and it is the most natural event, therefore, that the Amir Amanullah should announce his intention of visiting Angola, the font of inspiration for Westernising Islam, after his forthcoming visit to London and Paris. Both in his intention of gaining at once the confidence and respect of the West and of unifying his country on modern lines, the Amir is at one with the Ghazi; and, it may be added, he is at one with him in regard to the proximity of and feelings towards Russia. It may be that a Triple Entente, or Muslim bloc, of Turkey, Persia, and Afghanistan, is something of a myth, but it certainly will not be the fault of the first and last countries if the conception is not realised. Between the progress of Turkey and that of Afghanistan there is, of course, no comparison; yet slowly and surely the Amir's country is being drawn, or, perhaps, pushed by him, into the general stream of Westernisation. And if in these strange waters Turkey be not drowned, shall Afghanistan fear to follow?

"THE MOSLEM WORLD."

The October issue of this excellent quarterly is devoted mainly to missionary problems in the Near East. First comes an informative article by Dr. Zwemer upon "Islam in South Eastern Europe," then a translation of one of the chapters of Professor Louis Massignou's indispensable "Annuaire du Monde Musulman," on "Islam in the United Soviet Socialist Republics." Other articles which will be found of particular interest are on "Recent Tendencies in Turkish Education," "Among the Turks in Cyprus," and "German Missions in the Balkans." The permanent features—the book reviews, the extracts from other journals, and the survey of periodicals, are done with their usual discrimination and ability.

BORDER BRIGANDS.*

By F. S. C.

Like my forefathers, I live on a Border, a Border among mountains. Beautiful Mountains. And I wish I had the gift of the old Ballad Makers; for I would sing the Tales of our Border—grim tales, glad tales, and tales which begin in one vein and end in another. As it is, I have to make shift with prose, for which I crave the kind indulgence of an eventual reader.

Whatever the ethics of a frontier—and nowadays there are many quite respectable people who will have nothing to say to frontiers of any sort—its great essential is that it should be guarded. And this is useful for the purposes of romance, for the guards of the other side come in handy as villains of the piece in ours. The present tale, however, keeps strictly to our side of the tangle of rust-blackened barbed wire—a “left-over” from the War—which indicates our new frontier. Likewise, as some would say, a “left-over” from the War.

To begin, then, a party of young people—two girls and a boy, to be precise—set out on a summer's day to go mountaineering among the peaks of our Border. They left the village station in the valley about sundown and then followed the derelict War transport road that winds upward through the forest to the head of a wind-swept pass, which is a favourite starting-point for the real heights. There are two Alpine Huts beside this Road; but because the night was warm and funds were low, the party decided to patronise neither, but to bivouac in the wood instead. Wise to the wilderness, they soon had a discreet camp fire going, ate their bit of supper, and then lay down beside the glowing branches, talking quietly among themselves about the news of the hills—mountaineering exploits, vicissitudes, accidents.

The forest was dark and warm and still.

Two shadowy forms loomed up between the trees. No greeting. No warning. Two strange men stepped into the little circle of light. Big men. *Brigands*—what else? (Every decent soul gives you “hail” or “God lives,” or passes you the time of day as soon as he is aware of you.) The girls were scared into immobility, but the boy sprang forward, with ice-pick on guard. The next thing his horror-stricken companions saw was two gleaming bayonets levelled at his body and behind the bayonets two huge and swarthy ruffians in ill-fitting, but recognisable uniforms. “What are you doing here? What are you?” came the questions in the uncouth speech of the wild and far-off South. No brigands, after all, but recruits from the South on outpost duty. Well, there is not overmuch difference between a South countryman and a brigand, anyhow—at least that is what we think in the North. “We are tourists,” replied the lad. The strangers looked at one another. “Tourists? What are tourists?” “People who go up the mountains.” “Go up the mountains? Why?” “For pleasure.” “For pleasure? Ever heard of such a thing? No, my boys. Smugglers, that's what you are, common smugglers. What have you got in those big packs of yours?” “Our food and wraps. You can look if you like,” explained the taller of the two girls. If the boy's answer had puzzled the soldiers, it was now their turn to be genuinely startled. This willowy youth with the blue eyes and wavy yellow hair was not a youth, but a maiden; and so was, apparently—for all his short and scout shirt—the third member of the party.

“Where we come from decent folk don't go rambling about the mountains for fun. And our women don't wear breeches—not much. You come down to the village with us, and we'll soon settle what you are.”

Now the village was a long way down, and the journey back there would mean the loss of a day. The girls solemnly protested that they were too tired to walk so far, and the boy continued to protest their harmlessness.

Certainly there was nothing suspicious in their packs. Only wraps and a lot of weird oddments.

The soldiers hesitated. In spite of their fierce looks and southern speech they were not brutes. But they were badly bewildered. That morning they had arrived from their own wild Borderland in this part of the country, which, Heaven knows, looks wild enough for anything. The first job they had been told off to do was to “patrol this Road and let no suspicious characters pass.” These people whom they had come upon in the wood were certainly most uncommon. . . . Going up the mountains for fun, forsooth. . . . No respectable people frequented the mountains. They were the refuge, nay, the regular address of robbers and raiding bands. The latter, of course, always hailed from “the other side.”

“Don't take us down to the village,” pleaded the lad again. “Take us up to the Alpine Hut instead, if you like. There is sure to be somebody there who will know us and explain.”

A Hut in this dark and lonely forest along this derelict Road? A likely story! “What sort of Hut?” asked the soldiers, suspiciously.

“Why, the Alpine Hut at the head of the Pass!” What unconverted savages were these, never to have heard of Alpine Huts, and apparently quite unacquainted with the locality they were set to guard. . . . Supposing. . . . supposing they were not really soldiers, but brigands after all, with stolen uniforms and arms? What a nightmare!

Meantime the strangers had conferred. “Where is your Hut?” Straight up the Road. And it is not far.” The boy made as if to start.

“Easy there, brother,” called out one of the men, and a bayonet barred the way. “There's nothing up there but the frontier, and you're not going to take us across. We're not so green as all that.” (*Green?* Was it possible to be greener?) “I know. But the Hut is on our side. You'll see. We are really too tired to go back to the village. Do take us up to the Hut. We ought to reach it in little more than a quarter of an hour. A nice house with food and drink.”

The men pondered. “Sort of an inn?” they asked. The young folk nodded. Perhaps they were speaking the truth. Certainly the boy who was a girl and had blue eyes did not look evil, and they did look very young and very tired. They themselves would not dream of looking for houses in the forest, but everything was possible in a land where people went up the mountains for pleasure and girls wore men's clothes. They had their orders, of course; but their orders did not forbid them to investigate mysteries on their beat. “We'll give it a chance,” they decided. “Lead the way.”

They set off, the mountaineers first. Behind them the two armed men. And if the young people did not feel the actual prick of the bayonets, they knew nevertheless that the points were not far off. A nasty feeling, especially

* The North-West frontier, of Yugoslavia.

when you partly guess that the man behind the bayonet is badly scared himself and may get out of hand at any moment.

On and on through misty darkness. No sound about them but their own steps and the scrunching of pebbles under hob-nailed boots. A cold breath came from over the Pass. The trees grew sparse and stunted. A few ruinous huts and earthworks hove in sight, but never the sign of a house. And still the road wound on and on. . . .

"You have lied," said the soldiers grimly. "There is no house here, and you are leading us astray. You will be shot." (They would have to be firm with those weird youngsters.) "Right about and back!"

"Shoot me, by all means," said the boy (the great thing was to keep calm), "if there is no House within five minutes, or, at the most, ten." He sat down by the roadside; so did the girls, exhibiting all the most heart-wringing symptoms of weariness they could think of.

(Little hussies! There's many a boy mountaineer on these hills whom they can outpace and outstay.)

But the men were getting worried. Even if there was a house up there, what sort of house would it be? A hovel in the wilderness, a haunt of smugglers and broken men from both sides of the Border. In that case . . . the boy was probably their scout, and the pretty girl—yes, Blue Eyes was a girl, right enough—perhaps a decoy, and the other one looked as if she might, at a pinch, be handy enough with knife or pistol. (As a matter of fact, she is a Girl Guide, and handy with most tools.) Truly, adventures were not slow in coming to them in these great mountains of the North. But they were brave men. They would also be unafraid. A thousand years of keeping Turks at bay puts the fighting tradition in a man's blood. Even against odds. Heroes of the South, were they scared by a nest of north-country Brigands?

"Well then. Five minutes, or ten. And then we shall see."

Another hairpin bend. (Never knew the road had so many.) And another. Another . . . another . . . and lo, a light twinkling between the last lone trees, and the bulk of a building looming upon a knoll straight ahead. Beyond, like a ghostly sheet, a wide snowfield swept down to the edge of the moorland. Beyond that, the great crags leaned towards each other like the wings of a folding door.

"There's the House."

The soldiers took council.

"You three sit here," they commanded. One of them stayed by the road with the youngsters, evidently regarding them as a kind of hostage. And by the way he held his rifle it was clear that he was prepared to use it at a moment's notice. His comrade moved cautiously and stealthily towards the Hut, as if stalking big game! Whatever he found in that house, he would at least have the element of surprise on his side. And he could bluff a bit. He crept up to the door. Softly he pushed it open. . . .

A clean and cosy kitchen, crowded with people. Two sonsie wenches bustled about the range, and a fine mixed smell of red pepper stew, pickled cabbage, coffee and mulled wine proclaimed that they were bustling to some purpose. Round the table sat rough-looking individuals in disreputable clothes. Curiously small steel picks (by the way, his prisoners had them too) hung on the wall, and great knapsacks were piled on the bench against the wall and overflowed on to the floor. In the midst of this group, and evidently on the best of good terms with them, were a couple of unmistakable policemen, spruce and well-groomed, fair-complexioned sons of the North, carbines and all! When they caught sight of the soldier they simply bade him welcome, as if all this topsy-turvydom were the properest thing in the world. . . .

They understood his speech and grasped the situation. The other soldier and the mountaineers were collected and there was a great comparing of notes. "Tourists? Of course they are. And you'll have to get used to them, if you mean to stay here; because on week-ends and holidays the countryside crawls with them." Truly, it was a strange world and a new.

That night there was homeric jollity in the Hut. The newcomers to the country were stood drinks. The smoked sausages and pickled cabbage of those parts were delicious! Completely reassured, and mollified under the influence of good mulled wine (oh, rare mulled wine that our hutkeepers know how to prepare) they became confidential and explained to their late captives that on *their* frontier in the wild and far-off South, when you met a stranger it was a case of "shoot, or you will get shot," and a man went about with his life in his hand on a lone hillside.

Next day they parted, the best of friends.

They were fated to meet once more. Months had passed; the Pass was deep in snow, and the derelict Road with its even gradient a delight to the ski-running community. The two soldiers from the South had been enrolled in the Alpine ski corps. They knew all about tourists and mountaineers now. Mad perhaps, but decent, and liberal with sugar and cigarettes in return for a little hospitality at the guardhouse (it was really a shepherd's cot, assigned to them for the time being). They had hobnobbed with crack climbers, and with soldiers from beyond the frontier; they were vastly superior to the two innocent savages set to patrol the Road one summer's day so long ago.

Down that same Road they careered on their skis—legs wide apart, in what they believed to be a graceful and effective "ploughing" manoeuvre. Round the bend and up the Road towards them plugged a young ski-runner in the usual blue uniform. A smile of recognition flitted over his face, and then, oh, there was no mistaking those Blue Eyes and the wave of fair hair escaping from under the peaked cap. How jolly she looked in that get-up, and how could anyone take her for a smuggler or a bandit? Not they, at any rate. They waved their sticks in greeting and replied to her smile with the broadest of grins. But the slope is pretty steep just there. In a moment they had lurched past and each lost the other from view.

This tale was told me by Blue Eyes, as we bivouacked one dark night under a leaning rock beside a tiny fire of dwarf pine, while the rain pattered on the stones outside and the mists rolled up from the valley.

KING FAISAL IN LONDON.

King Faisal of Iraq arrived in London on October 20 from Paris. He travelled from Dover in company with Jaafar Pasha, Prime Minister, Raouf Beg Chadarchi, Minister of Justice, Muzahim Bey Pachachi, Iraq Diplomatic Agent in London, Rustam Bey Haidar (Private Secretary) and Major Tahsin Bey al Qadri.

His Majesty was met at Victoria Station by Major-General Sir John Hanbury-Williams, Marshal of the Diplomatic Corps, representing the King, and there were also present Mr. J. B. Monck, representing the Secretary of State for Foreign Affairs, Lieutenant-Colonel de Satgé, representing the Secretary of State for the Colonies, Sir John Higgins, late Commanding the Imperial Forces in Iraq, representing the Air Ministry, Sir John Shuckburgh (Colonial Office), Sir Henry Dobbs, High Commissioner for Iraq, Sir Elly Kadoorie, and Mr. L. Kadoorie.

King Faisal, who is the guest of the British Government, proceeded in a Royal carriage to the Hyde Park Hotel, where he is staying during his sojourn in London.

It is of interest to note that during his stay in Paris, King Faisal received a visit from King Fuad of Egypt.

On the morning of October 21 King Faisal had a conference of nearly an hour with Sir Henry Dobbs, High Commissioner for Iraq. His Majesty also received Sir Hugh Bell, who presented King Faisal with a specially prepared edition, in green and gold, of the "Letters" of his daughter, Gertrude Bell. The two volumes are bound in the skin of an antelope shot by Miss Bell during her memorable visit to Hayil in 1914. Mr. Bourdillon, Councillor for the High Commissioner at Baghdad, also called upon the King; and among other callers were Sir Austen Chamberlain, Mr. Ormsby-Gore, Lord Allenby, Sir Henry MacMahon, and Sir Herbert Samuel.

The Amir Ghazi, King Faisal's eldest son, came up from Harrow on October 21 to greet his father.

On October 23 the King and his Prime Minister, Jaafar Pasha, were entertained at Luncheon by Mr. Ormsby-Gore. Preliminary conversations began on October 24, and the actual negotiations started on October 25.

It is expected that an opportunity, which has not occurred previously owing to the King's absence from London during former visits by King Faisal, will shortly be provided for the King of Iraq to be received by King George, who is due to return to London at the end of this week.

ANGLICAN AND EASTERN CHURCHES ASSOCIATION.

At a meeting of the Anglican and Eastern Churches Association, presided over by the Bishop of London, at Sion College, on October 12, the following resolution was moved from the Chair and carried unanimously:—

"That the Anglican and Eastern Churches Association desires to draw public attention to the persistent oppression of religion in Russia by the Soviet Government as evidenced by the retention of Article 121 of its Criminal Code whereby the religious instruction of minors under 18 years of age is penalised as a criminal offence worthy of six months' hard labour; and by the continued imprisonment or internment in Siberia or elsewhere of Bishops and Clergy of the Russian Church.

"The Association further expresses its warm admiration for the fidelity of the Russian clergy and laity to their Faith under cruel persecution and harsh repression and urges all English Christians to render them every moral and material support in their power."

THE ANGLO-ROUMANIAN SOCIETY.

An urgent appeal is made to the English public for funds and books to promote the aims of this Society for the development of Anglo-Roumanian intellectual and social relations.

It is proposed to continue lectures (in English Literature and History), to publish Roumanian handbooks on these subjects, and to form an English circulating library, which is greatly needed in view of the increasing number of English-speaking Roumanians.

Funds and books sent to Messrs. Watson and Youell (London: 1, Leadenhall Street, E.C.3) will be gratefully acknowledged and forwarded to Bucharest.

THE INDIA SOCIETY.

The India Society, which was founded in 1910 to promote the study and appreciation of Indian Art, first became known through its fine publication on the Ajanta Caves in 1915. It has since continued to publish annually a volume on some subject connected with Indian art or literature, and has sought to excel also in the style of production of the books issued with its imprint. Further, the Society has been issuing during the past few years an illustrated journal, which now appears in an enlarged form and is entitled "Indian Art and Letters."

The Society is now publishing what appears to be its most ambitious undertaking: "The Bagh Caves of Gwalior." Copies from these beautiful frescoes were exhibited at the British Museum last year, and were greatly admired. This new volume will include reproductions in colour, together with plates illustrating the architecture, and an authoritative Letter Press by Sir John Marshall, Dr. Ph. Vogel, Mr. E. B. Havell and others. Mr. Laurence Binyon has written a preface.

Owing to heavy rain, part of Scutari, in Albania, has been 3 ft. under water.

According to news from the Balkan frontier a Roumanian frontier guard last week shot a young Hungarian locksmith on Hungarian territory.

The Caspian fisheries treaty between Persia and the Soviet Government has been ratified by the Persian Majlis, which has also passed the new Customs tariff.

As a measure of economy the Greek cruisers Averoff, Kilkis, and Lemnos will be formed into a reserve squadron. Four Greek destroyers will be constituted into a training squadron for exercise in enclosed waters.

The Transjordan Government is arranging to lend £20,000 in all to assist victims of the recent earthquake. No one loan will exceed £200, on which interest will be seven per cent., and the capital is repayable after ten years.

The death occurred in London on October 21, at the age of 58, of Lieutenant-Colonel Ronald Macdonald Laurie, D.S.O., late Commander of the 2nd East Anglian Brigade, R.F.A. (T.). Educated at Eton and Christ Church, Oxford, he served throughout the War in France, Egypt, and Palestine, and was awarded, in addition to the D.S.O., the Order of the Nile.

The death occurred last week at his residence at Auchenfrore, Nairn, of Major-General the Hon. Sir Frederick Gordon, K.C.B. He served in the Egyptian Expedition of 1882 and was present at the Battle of Tel-el-Kebir. Appointed adjutant in 1883, he took part in the Sudan Campaign of 1884 and fought at Teb and Tamai, as well as in the South African War. Twice mentioned in dispatches for services in France and Belgium, and twice while G.O.C. on the Macedonian front, he was created C.B. in 1914 and K.C.B. in 1917. He also received the Order of the Crown of Roumania and the Serbian Order of the White Eagle.

Prince Mehmed Seyf-Eddin, a son of Sultan Abdul-Aziz, of Turkey, died on October 19 at Nice. Prince Seyf-Eddin, a brother of Youssuf-Izzedin, the Heir-Apparent who committed suicide in 1916, and of Abdul-Mejid, the last Caliph of Turkey, who was deported by the Kemalist Government, was fourth in the order of succession to the throne of Turkey. He was expelled from Turkish dominions along with other scions of the House of Osman by order of the National Assembly in 1924. He had since been living in retirement in Nice. Prince Seyf-Eddin was born in 1874, and is survived by three sons and a daughter.

In connexion with the Navarino Centenary the Greek President handed to General Sir Alfred Codrington, for King George's acceptance, a gold medal bearing the portrait of the three Admirals who commanded the victorious Allied fleet at the battle of Navarino. The Athenian commemoration of the centenary began on October 23 with a meeting at the University at which Professor Volonakes delivered an oration on the battle of Navarino in the presence of the President and British and French representatives.

GUJARATI SELF-TAUGHT

(In Gujarati and Roman Characters.)

By N. M. DHURVA.

(Grasia College, Gondal, Kathiwar-India.)

For learning the Language by the Natural Method, with Phonetic Pronunciation. Containing Classified Vocabularies, Conversational Phrases, Travelling by Railway, etc. Outline of Grammar, Exercises for Translation, Commercial, Legal, Trading, Shooting and Fishing Terms, Money and Weights.

THE WAHHABIS AND THE HIJAZ.

"The Administration of the Hijaz under the Wahhabis" was the title of a lecture which Mr. H. St. John Philby delivered before the Central Asian Society on October 19 at the Royal United Service Institution. Lord Allenby was in the Chair.

The lecturer began by stating that he had nothing very new to say. He devoted some attention to a recapitulation of events in Arabia from the end of the War to the present day. Owing to the misbehaviour of ex-King Husain in the deserts of Arabia war was in danger of becoming serious between the Wahhabis and the Hashimite King. The lecturer was sent out, in 1919, to stop Ibn Saoud from advancing on Mecca. At that time Lawrence imagined that (under the direction of Lawrence) the Hashimites would be more than a match for the Wahhabis. The lecturer took the opposite view. He mentioned, further, that all along he had fought against the policy of the Arab Bureau, and foresaw events as early as 1918. After the War, he said, "Arabia was left alone with great benefit to herself, for the whole of the fantastic structure designed by the Arab Bureau and the British Government to be reared on Sharifian foundations collapsed hopelessly in the course of construction, leaving only the two annexes of Iraq and Transjordan which are still buttressed and held up by British money and force."

Mr. Philby then dealt with the British pledges to the Arabs that they should be free and independent after the conclusion of hostilities. Yet the Arabs of Iraq and Syria (by far the most advanced and most intellectual of all the Arabs in the world) were accounted unfit to govern themselves. Whether they were so unfit might be judged by an examination of the administration of the Hijaz. Arabia proper, he said, had been left to govern itself, and had done so. "There was more than mere imagination behind the dreams of a great Arab empire fostered during the War by the Arab Bureau, Lord Kitchener, and other authorities," the lecturer said; and he went on:—"It was a real possibility—I make bold to say it is a real possibility still. But the British Government, persevering with the shattered remnants of its original policy, stands in the way of the realisation of such an ideal. Slowly and surely, however, faith in the possibility of Arab regeneration under the auspices of the Sharifian family is weakening and the real struggle of the future—a struggle of brains and sentiments not of arms—will be between British Imperialism and Arab nationalism drawing its inspiration from the Wahhabi King of the Dual Monarchy of Arabia. Ultimately Arab Nationalism will win the day because the common sense of Great Britain will sooner or later but inevitably realise that a strong and friendly Arabia is an asset of greater value to our Imperial communications than the multiplying of precarious routes across the desert."

Mr. Philby then briefly recounted the recent progress of the Wahhabis. The Sharifian régime, created by Great Britain in 1916, collapsed in 1925, when Ibn Saoud became ruler of the Hijaz. On January 8, 1926 he was proclaimed King in the great mosque at Mecca, and about a year later during a visit to Central Arabia was proclaimed King of Najd and its dependencies. His status has been formally recognised by all the great Powers interested in Arabia except Italy. Here the lecturer paid a very handsome tribute to Sir Gilbert Clayton who recently negotiated the Treaty of Jidda.

This Treaty, said Mr. Philby, was an event of the gravest import. Arabia after many centuries of neglect had suddenly woken up; and it was realising two things, first that it had a mission in the universe, and secondly that in the circumstances of the modern world it could not only not carry out that mission but would not continue to exist without substantial modification of its character. Arabia realised that it had to change its skin—not its heart. Hence Arabia, though cherishing independence as a natural right, was by no means going to kick against the pricks. King Ibn Saoud in fact in-

tended to adopt the industrial products of the West in so far as they were not harmful. As illustration of this, the lecturer mentioned that the Wahhabis welcomed the motor car but vetoed the kinema. He proceeded to deny the charge that the Wahhabi movement was dangerous and reactionary. What of the Sharifian reactionaryism which the Wahhabis supplanted? There were misconceptions upon the nature of the bigotry of the Wahhabis. Anything which the Quran forbade was forbidden; but outside that limit there was much freedom. In the Hijaz both liquor (for Europeans) and tobacco were obtainable.

Mr. Philby then compared the present administration of the Hijaz with that of the Husain régime. Ibn Saoud set himself from the first to rule for the benefit of pilgrims. He disposed of the opposition of the Harb Badawin by sending his Ikhwan out against them. The Harb came in to make submission, but said: "From time immemorial the pilgrims passing our country have paid us tribute and we have always been able to enforce this right whether against the Turks or the Sharifians. We bow to you as our lord and master, but this is our right and we would rather have our noses cut off than surrender it." "Take that man away," was Ibn Saoud's reply, "and cut off his nose." The Wahhabi leader's method was that of combining justice (as he conceived it) with effectiveness, rather than mercy with possible ineffectiveness. The result was that life and property in the Hijaz were now absolutely secure.

The lecturer then dealt with the pilgrimage, and with the extraordinary hardships endured by the pilgrims. One of his suggestions was that pilgrim ships coming up the Red Sea might be spared the extra examination on Kamaran Island, for there were adequate quarantine arrangements at Jidda. He concluded by claiming that, if King Ibn Saoud were granted another ten or fifteen years of life, the Wahhabi régime would prove to be a permanent one, because the Arabia of to-day was not the Arabia of the patriarchal age nor of yesterday. Nor was Arabia the Arabia of British popular imagination. This was instanced by the fact that neither in Lawrence's "Revolt in the Desert" nor in Gertrude Bell's "Letters," though purporting to be about Arabia, was there any but the briefest mention of the man and the country about whom he had been lecturing.

In the subsequent discussion Sir Percy Cox referred to the lecturer's version of Great Britain's War and post-War relations with Arabia. This was so high controversial he said, that he could hardly keep his seat when he heard it! For himself, he was glad to think that from very early days he had recognised the integrity and greatness of Ibn Saoud, but it was a mistake to think that, after Ibn Saoud's stalemate battle with Ibn Rashid early in the War, the Wahhabis could have been of as great service to Great Britain as were the Sharifians. Ibn Saoud was invited by the British to co-operate with them against the Turks in Mesopotamia, but after the battle of Jarrab he was unable to do so. Nevertheless, Sir Percy Cox paid a most striking testimony to the fine character of the present ruler of the Hijaz. This Arab King's statesmanship, he said, was quite remarkable; not once had he been guilty of a mistake.

Mr. H. E. Wortham asked whether it was not a fact that the Wahhabi movement was not a movement which ran counter to the whole tendency of Islam, from Cairo to Kabul. That tendency was towards secularization, and for his part he failed to see how a movement based upon a literal interpretation of the Quran could ever take the supreme place in the Islamic world. He also wondered whether the *Pax Britannica*, which was being maintained in Iraq and Transjordan, and which the lecturer had said inhibited the complete realisation of a Great Arab Empire, had not something to do with the success of King Ibn Saoud. The former Wahhabi ebullition was eventually quelled by another Muslim Power, Egypt; and he thought it quite possible, especially in view of present Egyptian sentiments towards the Wahhabis, that the same thing might, were it not for the presence of Great Britain in the Middle East, recur.

THE CENTENARY OF NAVARINO.

In commemoration of the centenary of the Battle of Navarino a dinner was given on Thursday, October 20, at the Savoy Hotel, in London, under the auspices of the Greek Legation and of the Anglo-Hellenic League. Among the 370 guests present were a number whose ancestors had taken part in the Battle of Navarino. Earl Beauchamp, Chairman of the League, presided, and was supported by Monsieur D. Caclamanos, the Greek Minister in London. The long dining tables were decorated with flowers, alternately depicting the colours of the two countries, and linked with streamers of the two sets of colours.

In proposing the toast of "Navarino Day," the Chairman said that they were met to celebrate the decisive event which established the independence of Greece.

It was a great landmark in the sequence of events recognising the importance of nationalism against oppressive suzerains. Such victories as that of Navarino—victories for freedom and nationality—reminded them of the futility of international leagues based on old illiberal lines; they renewed for them to-day hopes of the League of Nations, of which freedom and democracy, the equality of nations and the protection of minorities were the ideals and the basis of the brotherhood of nations.

The policy of Great Britain was nothing to be proud of after the Battle of Navarino: it was weak and vacillating. But in spite of all that Greece had, at that time all the elements for a successful rising. The idealism which took Byron to Greece lit the torch of romanticism in Europe and gave to all the peoples in Europe the idea that there was something better than the old system of oppression which was then in existence. Greece once more pointed the way to nations struggling to be free. It was not only of the actual Battle of Navarino that they were thinking that night. They were thinking of the debt to Greece for the instinct which she had given us for beauty and knowledge. They all owed Greece a debt which could never be repaid, because it increased as every year went by. There had not been any great upheaval of thought in the world in which the ideal of Greece had not had a leading part. They felt that, great as Greece has been in the past, she can be equally great in the future. The ideals she had given to the world were pregnant to-day; they will be pregnant in the future as well. The ideals such as Greece had given them never die, and may be prolific to-day. They might be useful in the modern problems which confront this country and, indeed, the whole of Europe.

The Greek Minister proposed the toast of "The Memory of Admiral Sir Edward Codrington, and his fellow-combatants at Navarino." He said that

he was proud and honoured to be the interpreter of the Greek people on the occasion of the commemoration of a battle which had the widest influence on the destinies not only of Greece but of all the peoples of South-Eastern Europe, and had led to their definite emancipation. The response that had been received to the invitations to that function proved sufficiently that the Battle of Navarino was no longer remembered in this country as an "untoward event," but as an eventful occurrence in the history of England and in the annals of liberty and civilisation in general. In laying that afternoon, on behalf of the Greek Government and the Greek people, a wreath of laurels on the tomb of George Canning in Westminster Abbey, he thought that, in spite of the hatred and jealousy of Metternich, it was that statesman who composed the best epitaph for Canning in saying, "The Ministry of Canning has marked an era in the history of England and Europe."

He was convinced that had Byron deserted the Hellenic cause in February, 1824, there would have been no Navarino, and the whole history of South-Eastern Europe would have been different. It was no exaggeration to say that the light which flashed from Navarino had illuminated the horizon of the whole world and had stirred up the love of freedom and justice inherent in all hearts. It would not be just to say that the British Admiral pushed his love of independence on that day, in October, 1827, so far as to violate his instructions, but he took it upon himself to interpret his instructions according to his own conscience, and the lofty ideal of the British Navy was repeated in his famous signal when warned by the Egyptian admiral not to enter the port, "I am entering ports to give, not to receive, orders." To such a man he wished to pay his homage on behalf of his compatriots not only in this country, but in all parts of the world.

Vice-Admiral Sir Ernle Chatfield, responding for the British Navy, said that the battle of Navarino was famous and interesting from the fact that it was fought to enforce peace. They might almost say that it represented a League of Nations battle. He gave an interesting account of the Battle, which he had been able to visualise during a visit three years ago to the Bay of Pylos (Navarino).

Colonel G. R. Codrington, a great-grandson of Admiral Codrington, who also replied, said that his father, Lieutenant-General Sir Alfred Codrington, who was representing the British Government at the Navarino celebrations in Greece, had sailed into Navarino Bay in one of His Majesty's ships just as his grandfather had sailed into the bay 100 years ago, and thus had fulfilled the ambition of his life.

Dean Inge, in giving the toast of "Poetry and Freedom," recalled

the fact that when the Spartans applied for a leader they were given Tyrtaeus, a lame poet. A hundred years ago Greeks were again fighting for their existence, and the West sent them a lame poet. It was the fashion to depreciate Lord Byron's poetry in these days, but whatever he sang about Greece rang true. He gave his heart to Greece, he gave his life for Greece, and the Greeks ever since had honoured his memory and, he was glad to say, had extended their good will to the nation which either sent him or, perhaps he ought to say, chucked him out. But it was not Byron who saved Greece, it was not even the valour of her sons which saved Greece, it was the ancient literature of Greece, which so moved the hearts of the civilised nations of the world that they could not, — would not, suffer the inheritors of these traditions and the speakers of that language to be crushed by barbarians. As they all knew, ancient Greece was not all in Europe; a great part of it was in Asia. It was to them, as it was to him, a matter of shame and grief that in our time those lands, which for 3,000 years had, through all vicissitudes, remained Greek, had been handed over to ruin and devastation, and it was his earnest hope that the great literature of Greece, the literature of liberation, might in our time achieve once more a signal triumph in urging and shaming the civilised world to restore the remnant of Asiatic Greeks to their ancestral homes, so that in the seven cities to which St. John wrote his letter the Cross of Christ might again glitter over their churches, and St. Paul's words might once more be heard in their streets.

Lady Crosfield proposed the toast of "The Guests and Descendants of Combatants at Navarino" and Judge C. E. Dyer, whose grandfather had been Secretary to Admiral Codrington on the flagship Asia, responded.

Among the guests present were:—

Lord and Lady Aberconway, Lady Beauchamp, Mme. Al. Benachi, Lieut.-Col. Hon. Clive and Mrs. Bigham, Mr. and Mrs. Tatton Bower, the Dowager Lady Boyle, Sir Edward and Lady Boyle, Sir Harry and Lady Brittain, Lady Brooks, Admiral Sir Henry Harvey Bruce, Lord and Lady Burnham, Vice-Admiral Sir Ernle and Lady Chatfield, Sir Arthur and Lady Crosfield, Sir Edward and Lady Crowe, Sir S. Dannreuther, Sir F. Dicksee, P.R.A., Rear-Admiral Barry E. Domville, Judge E. C. Dyer, K.C., Mr. N. Eumorfopoulos, Sir Gregory and Lady Foster, Sir James and Lady Frazer, Professor Ernest A. Gardner, Mr. and Mrs. Stephen Gaselee, Sir George and Lady Higgins, the Archbishop of Thyatira, the Bishop of Guildford, Dean Inge, Sir Roderick and Lady Jones, Vice-Admiral W. A. H. Kelly, Commander J. M. and Mrs. Kenworthy, M.P., Sir Frederic and Lady Kenyon, Commander O. Locker-Lampson, Professor F. H. Marshall, Countess Martinengo-Cesaresco, Sir Frederic and Lady Maurice, Lady Meiklejohn, Sir John Murray, Lieut.-Col. John Murray, Lady Helen Murray, Mr. Lancelot Oliphant, the Dean of Westminster, Mr. T. P. O'Connor, M.P., Mr. P. J. Pybus, Major-General Sir Frederick and Lady Robb, Sir Herbert and Lady Samuel, Sir John and Lady Shelley Rolls, Prof. and Mrs. R. W. Seton-Watson, Sir John Stavridi, Rear-Admiral and Mrs. Aubrey Smith, the Dowager Lady Swaythling, Major-General Sir Frederick and Lady Sykes, Major H. V. Temperley, Professor G. M. Trevelyan, Admiral Sir Reginald and Lady Tupper, Professor and Mrs. P. N. Ure, Mr. and Mrs. A. J. B. Wace, and Vice-Admiral Sir Richard and Lady Webb.

During a "musical interval" between the toasts, Miss Margaret Baird recited "The Isles of Greece" and "Admirals All"; and a number of choruses from Shelley's "Hellas," set to music by W. C. Selle, were sung by a Ladies' Choir. The conductor was M. P. J. Petridis, who had come from Paris for the purpose. The proceedings terminated with the singing of the Greek National Anthem (Mr. Rudyard Kipling's English version) and "God Save the King."

The Navarino Exhibition.

The exhibition in commemoration of the Battle of Navarino and the Greek War of Independence, to which reference was made in our last issue, was formally opened at the Greek Legation at 51, Upper Brook Street, on October 20 by Lord Burnham in the presence of the Greek Minister, the Staff of the Legation, Mrs. E. Lambrinudi (daughter of Admiral Koundouriotis, President of the Greek Republic), the Archbishop of Thyateira, the Archimandrite of the Greek Church, many descendants of those who fought in the Greek War of Independence, and representatives of the Anglo-Hellenic League. After Lord Burnham's speech the Greek Minister decorated the flag flown by Admiral Codrington at the Battle of Navarino in H.M.S. Asia with the Greek War Cross (First Class) by order of the President of the Greek Republic. The flag had been lent by Lt.-General Sir Alfred Codrington.

The exhibition was arranged by Mrs. E. Lambrinudi, Madame J. Romanos, wife of the Secretary of the Greek Legation, and the Misses Stavridi. Mr. C. Hourmouzios was responsible for the catalogue, and the following helped by lending exhibits and in other ways:—

Sir Alfred Codrington, Earl Spencer, the Earl of Lichfield, Sir John Murray, Mme. Alexandre E. Benachi, Lieut.-Col. Charles P. Gordon, Mr. Richard Edgumbe, Mrs. Demain Saunders, Lady Brooks, Dr. L. W. Bathurst, Mr. Richard King, Mrs. Leonard Wyburd, Mrs. R. Houghton, Mr. H. Talbot, Lord Ernle, Mr. P. F. Higgins, Miss E. Miller, the Rev. E. Austin Ommaney, Mr. Leonard Bower, Mrs. Urban H. Broughton, Mr. A. M. Gray, Mrs. Ethel Boteler, Commander F. B. Fellowes, M. Renè Puaux (Paris), Mr. O. Butler Fellowes, Captain H. Parker, Judge C. E. Dyer, Mr. Evans, Mme. Jean Romanos, Mrs. P. Dracoulis, Mr. A. G. H. Macpherson, Dr. Cawadias, Mrs. W. P. La Touche, Lady Fellowes, Major-General Sir Frederick Robb, Mrs. Swinton Holland, Mr. Frank Burton, Mr. Francis W. Gray, Mr. Charles Henderson, Lady Meiklejohn, Lady Crosfield, Mrs. Stella Fetherston-Dilke, the Greek Minister, M. C. Papalukas (Athens), Mr. Ph. Argenti, and Miss M. M. Sudell.

During the afternoon of October 20, Monsieur Caclamanos, the Greek Minister, placed a large laurel wreath, tied with blue and white ribbon, at the foot of the memorial tablet to Admiral Sir Edward Codrington in the crypt of St. Paul's Cathedral. On the wreath was the inscription, "From the Greek Nation to the Immortal Memory of Admiral Sir Edward Codrington, October 20, 1827-October 20, 1927." The Greek Minister also placed a wreath on the grave of George Canning in Westminster Abbey, "in memory of his generous help and sympathy in their struggle for freedom."

Book Review

WARREN HASTINGS.

"WARREN HASTINGS' LETTERS TO SIR JOHN MACPHERSON."
Edited by H. Dodwell. (London: Faber and Gwyer. 15s.)

Mr. Dodwell was fortunate in securing this correspondence for publication, and we may well count ourselves fortunate that the editing of it has fallen into the hands of one who has made the study of this period his own. We must, in fairness, add that the publishers have contributed largely to the pleasure we have had in reading

this book.

There is something touching in the affectionate trust which the great man had and retained for one so much his inferior in every way. Macpherson was in Madras with Hastings and it was there that the friendship began. Later he was appointed to the Bengal Council, where the two friends were colleagues. On Hastings' departure Macpherson succeeded him, and we know how soon and emphatically the change made itself manifest. With that, however, we are not here concerned. Macpherson clearly was, as shown explicitly in his own few letters and implicitly in Hastings' replies, a shrewd pawky Scot with an intense interest in the welfare of "Number One." He obviously had considerable gifts and charm, but opportunism is a bad vice and it was this quality that led to the old affection dying out. To do him justice, he appears to have been continually anxious that his friend should take the same interest in obtaining advantages for himself, and Hastings' persistent neglect of worldly advantages for himself and concentration on doing what was right and wise in public matters seem to have caused him much uneasiness and distress. "I want no Honour," Hastings writes. "Let me leave These Provinces uncumbered, and be allowed a peaceful Retirement at Home. I aim at no more."

Against the background of Macpherson, the splendid qualities of Hastings shine all the more brightly. And the fact that these are familiar letters and not the official documents with which we have hitherto had to be so largely content makes the picture of the writer's true greatness all the more clear. Letter XXI, written to Macpherson on getting the news of his officious and silly interference from Madras, with Lord Macartney and Sir Edward Hughes, in the negotiations for peace with the Peishwa, is likely to be quoted in every future book on the great man. Its sustained high tone of dignity, wisdom and true statesmanship and the entire absence from it of all personal reproach are very remarkable. It is, unfortunately, far too long to allow of its being quoted here. But we may quote one little piece of self-revelation which deals with his friend's opportunism:—

On every point of this Kind I have but One Answer, and I recommend it to you not only for my own Sake as the present Rule of your Conduct, but as a fixed principle to form into a Habit for your own, against the Time when you may fill the place which I now hold, and with Advantages which I want. Deliberate well; resolve with Decision, and completely, not by Halves; But when your Resolution is once formed, and in Execution, never admit a Thought of withdrawing it; but persist in it, even though in itself it should be wrong, if not ruinously wrong.

Here is another glimpse of his thoughts:—

The Evidence against Rumbold is strong enough to convict twelve Felons, such as are Felons of vulgar size, but he will surmount it all. There is not Virtue in England for the punishment of wealthy Villainy.

The book contains a beautiful collotype reproduction of Reynolds' portrait of Hastings and also of a portrait of Macpherson by an unknown artist which goes far to explain the personal charm which so closely attached his great Chief to him.

C. S-W.

BAGHDAD: THE CITY OF PEACE

By

Richard Coke

Author of

"The Heart of the Middle East."

Mr. Coke relates the long story of Baghdad with considerable fullness and no little grasp of significance. Detailed and dependable in its facts, lucid and lively in its telling, this is the book that might have been expected of the author of *The Heart of the Middle East*. It is also the book for all who wish to inform themselves concerning the past and present of the capital of Iraq—that immemorial region for which we have assumed such heavy responsibilities.

PERSONAL AND GENERAL

TO-DAY

October 27, 1927 (New Style).

October 14, 1927 (Old Style).

Jumada I, 1, 1346 A.H., of the Muslim Calendar.

Marcheshvan 1, 5688, of the Jewish Calendar.

Sir Basil Zaharoff left the Carlton Hotel last week for Paris.

The Hon. Anne Tufton will leave England on October 29 for India.

Mr. and Mrs. Rudyard Kipling last week arrived at the Hôtel Meurice, Paris, from Vichy.

The Maharaja of Kapurthala left London on October 20 to join the s.s. Ranchi at Marseilles for Bombay.

Mr. F. C. La Fontaine has arrived in Cairo to take up his position as representative of the Federation of British Industries in the Near East.

The Maharaja of Rajpipla, accompanied by his suite and staff, left the Savoy Hotel on October 20 on his return to India.

Sir John Risley, Legal Adviser to the Colonial Office, and Lady Risley arrived in London on October 19 from Rio de Janeiro, in the Arandora.

M. Achard, President of the French Consular Court in Alexandria, has been appointed French Consul in Jerusalem. He has been succeeded by M. Tomasini.

M. A. Papadaki, Greek Consul-General in Cairo, has been transferred to the Ministry of Foreign Affairs in Athens. The Vice-Consul, M. B. Lappas, is acting as Consul-General in his place.

Rev. A. Field arrived in Egypt on October 15 to take up the post of Assistant Chaplain at St. Mary's Pro-Cathedral, Kasr-el-Djubara, in the place of the Rev. R. A. Down, who has returned to England.

Major-General Sir James and Lady Stewart, who are on their way to Aden, left London on October 20 for Marseilles to join the s.s. Ranchi. Sir Gordon and Lady Fraser, Sir Philip and Lady Buckland, and Sir Joseph Kay sailed in the same vessel for India.

Lt.-Colonel A. C. Parker will lecture to the Central Asian Society on November 2, at 5 p.m., on "Sinai." The lecture, at which Lord Allenby will preside, and which will be illustrated with lantern slides, is to be given in the Royal Society's Rooms, Burlington House, Piccadilly W.

Mian Sir Fazl-i-Hussain gave a dinner in Westminster on October 21, when the guests included:—The Maharaja of Burdwan, Dame Edith Lytton, Sir Michael O'Dwyer, Sir William Vincent, Dr. R. P. Paranjpye, Sir John and Lady Maynard, Mr. Harold Cox, Mr. J. B. Hobman, Sir Thomas and Lady Arnold, Sir Israel and Lady Gollancz, Sir Louis Kershaw, Mr. and Mrs. S. N. Mallik, Captain Malhotra, Sir Reginald and Lady Mant, Count John de Salis, Captain E. N. Bennett, Dr. Shafaat Ahmad Khan,

NEWS IN BRIEF.

The Pact of Non-Aggression between Persia and the Soviet, which was signed in Moscow on October 1, was ratified unanimously on October 20 by the Majlis.

King Boris of Bulgaria, who has been undergoing treatment in a sanatorium at Breslau, is reported to have left there last week completely recovered in health.

The Navarino Centenary Exhibition is open to the public at the Greek Legation, 51, Upper Brook Street, daily, except Sundays, from 11 till 5 up till November 11.

It is stated from Angora that the King of Afghanistan has decided to pay a visit to the President of the Turkish Republic in the Turkish capital on the way back from his forthcoming visit to Europe.

The Turkish Court at Sultan Ahmed in Stamboul gave judgment on October 17 of *non lieu* in the case of the persons accused of having broken the law by gambling at Yildiz Kiosk, which has again been opened.

The Turkish authorities have closed the head quarters and five branches in Constantinople of the "Workers' Organisation." No reasons have been given for this action, but the police have visited the buildings belonging to this Organisation and seized all the papers there.

Colonel Sir John Lane Harrington, K.C.M.G., K.C.V.O., C.B., of the Turf Club, Piccadilly, W., and of Brunswick Terrace, Hove, for many years British Minister at the Court of Abyssinia, who died on September 8, aged 62, left estate of the gross value of £3,766, with net personalty £736.

A Bucharest message on October 19 stated that two bodies were washed up on the Black Sea coast, near Constantza. An inquiry established the fact that the bodies were those of two German tourists, Johann Martin and Heinrich Boesler, who were attempting to make a trip round the world in a small rubber canoe. It is supposed that they were caught by storms on the open sea.

WORKMEN'S COMPENSATION IN INDIA.

The development during recent years of the manufacturing, mining, and other industries of India has necessitated the introduction of legislation for the protection of the workers. Factories and Mines Regulation Acts have been in operation in India for a long time. But until quite lately there has been no need for anything much in the way of other protective enactments. Now, however, there are several such in force, and their working is being watched with interest by all concerned with Indian industries. One of the most important of them is the Workmen's Compensation Act, which came into force on July 1, 1924. Workmen's compensation is admittedly a difficult subject in all industrial countries, and India is no exception. Of necessity the Indian law had to be based largely on the principle laid down in the statutes in operation elsewhere. To frame it was consequently no easy matter, in view of the fact that Indian industrial conditions differ widely from those prevailing in most other parts of the world. Furthermore, Compensation Acts are numerous, for during the past fifty years or so they have been adopted by almost all European countries, as well as by most of the States of the American Union, the principal British Dominions, the leading South American republics and Japan. The Government of India attacked the problem by first making a thorough and comprehensive examination of its main features. They then consulted the Local Governments, and public opinion generally; and, after examining the numerous recommendations and criticisms thus obtained, they drafted a Bill, which they introduced in the Legislative Assembly in September, 1922. By order of the Assembly the Bill was circulated to the Local Governments and to the public and, after considerable criticism and discussion, it was passed in a somewhat amended form in the following March.

The Act has now been in operation for more than three years, and not long ago the Government of India expressed their belief that in its main features it is well adapted to meet the need that it was created to satisfy. This view was confirmed last month by a statement which was made in Calcutta by an official who is largely responsible for the working of the Act in Bengal, namely, the Workmen's Compensation Commissioner for that province. Before going further, it is useful to consider what the legal position of the Indian workman was before the Act was passed. In a large class of cases he could not recover damages by suit from his employer for injuries sustained in the course of his employment. He was in about the same position as the English workman was in before the Employers' Liability Act of 1880 and the Workmen's Compensation Act of 1906 were passed by Parliament. His claim for damages had to be brought under the English common law, according to which an employer is liable to his servant only for injuries caused by his—the employer's—negligence. Unless he could prove negligence on the part of his employer, the workman had no legal claim to compensation. And it was a good defence

for the employer to show that the workman had contributed to the accident by negligence on his own part. By the new Act these disabilities have been removed, just as they were removed in England by the two statutes mentioned above.

A few of the leading features of the Act may be briefly indicated here. One of them is that periodical payments of compensation are not provided for except in cases of temporary incapacity. For death, or for permanent disablement, a lump sum is paid. And this is calculated, not on the workman's actual monthly wages, but on round figures of assumed wages. The method of calculation is prescribed by the Act, and a table of assumed wages to be used in the calculation is given in a Schedule. Following the American practice, the Act gives also a schedule of injuries in respect of each of which a percentage of loss of earning capacity is stated. For instance, the percentage is 70 per cent. for the loss of the right arm above, or at, the elbow, and so on.

The Bengal Commissioner makes a point of the fact that the provisions of the Indian Act are not vague and indefinite, but are clear and exact. India legislated somewhat late in the day, and had an accumulation of foreign experience at her disposal. The way in which the difficult matter of misconduct is dealt with is a case in point. The Indian Act has no such vague expression as "serious and wilful misconduct," which appears in the English Act. On the contrary, it distinctly specifies three forms of misconduct which nullify a claim for compensation if the accident is directly attributable to any one of them. They are: (i) being under the influence of drink or drugs; (ii) wilful disobedience of a rule or order expressly made for the safety of the workmen; and (iii) wilful removal, or disregard of, any safety device. The settlement of disputes arising under the Indian Act is vested in a special officer styled a Commissioner, who is appointed by the Local Government for such local area as it may define. The jurisdiction of the Civil Courts is barred in so far as regards any question which, under the provisions of the Act, is to be dealt with by the Commissioner. But an appeal lies to the High Court against certain orders of the Commissioner, and these are prescribed in the Act.

It is not going too far to say that the distinguishing feature of the Indian Act is the precision of its language. It is less advanced in respect of many of its provisions than are the corresponding Acts of the more highly developed industrial nations. For India is in a backward stage of industrial development, and does not therefore need highly complicated industrial laws. But it is easier to administer than, for example, the English Act; and what is strange is that so far it has not created much litigation. For example, during the past year as many as three thousand accidents occurred in Bengal. But the number of applications for compensation did not exceed sixty, in addition to agreements to be registered and deposits for fatal accidents. This is satisfactory, and it is doubtless due in large measure to the Act being so framed as to reduce disputable points to a minimum. As has been

already stated, wages are calculated on assumed figures; and loss of earning capacity is likewise defined. Then again, disputes concerning dependency are avoided, as the right to compensation depends solely on proof of the necessary relationship. These features of the Act all make for smooth working and for the reduction of disputable points, which are obviously great advantages. On the whole there seems to be no doubt that the Government of India are justified in congratulating themselves on a successful and useful piece of legislation. When they framed it they did not blindly follow the provisions of the Acts in force in Great Britain. They took advantage of the knowledge and experience acquired by other countries also, and on this broader basis they drafted a measure which is proving itself to be suitable to Indian industrial conditions.

CURRENT TOPICS.

A Bold Step.

The Indian Central Legislature has passed, with important amendments, the Government Bill making it a criminal offence for writers or speakers to insult the religious beliefs of any class of the people. There has been a good deal of more or less acrimonious discussion in India on the subject; and this is not, perhaps, surprising, as such legislation is, to say the least of it, unusual. The Indian criminal law is, as is of course well-known, embodied in the Indian Penal Code and the Code of Criminal Procedure. The object of the new legislation will be clearly understood from the following section which, by the new Act, will be inserted in the Penal Code:

"Whoever with the deliberate and malicious intention of outraging the religious feelings of any class of His Majesty's subjects by words either spoken or written or by visible representations, insults or attempts to insult the religions or the religious beliefs of that class shall be punished with imprisonment of either description for a term which may extend to two years, or with fine, or with both."

It is not difficult to see the probability of strife in the future when this new section is put into operation. Religious beliefs are held with fanatic tenacity in India, and a very mild remark might easily be construed into an insult, or an attempt at insult by a religious zealot. The necessity to prove deliberate and malicious intention will be admittedly a safeguard to some extent. And these words were inserted with that object by the Select Committee of the Legislative Assembly which reported on the Bill. But even so there would still seem to be a risk of trouble. Indeed criticism in India has gone so far that one of the Anglo-Indian newspapers has suggested that the Local Governments, by whom prosecutions have to be set in motion, should forget the new section altogether and proceed under the existing provisions of the law. At the same time it cannot be denied that the object which the Government of India have in view in introducing the legislation is admirable. They are very rightly trying to exercise more control than they can exercise at present over those writers and speakers who are constantly doing their best to stir up strife between the various communities. With this object, everybody who cares for the welfare of India must be in sympathy. For obviously the present condition of the country is such that any person who, with deliberate and malicious intention, insults the religious beliefs of any class of the people deserves severe punishment. But the point is whether the remedy may not prove to be an irritant instead of a cure. All who are well acquainted with India know how promptly the Indian who thinks that he has a grievance against anybody will invoke the aid of the criminal courts against such person if it is in any way possible to do so. It is not, therefore, altogether unreasonable to fear that attempts will be made by religious fanatics to set the new law in motion against

perfectly honest expressions of opinion on religious questions.

Communications with Burma.

The question of connecting Burma and India by a railway was revived in the Council of State last month. A non-official Indian member moved a resolution that railway construction should be started during the Budget year 1928-29, and that the necessary steps should be taken forthwith. His resolution was negatived by the Council, after the Secretary in the Commerce Department had pointed out that the money required for the project was not available.

It is remarkable that transport between India and Burma should still be restricted to the sea. For, however efficient the steamer service may be, the advantage of a rail connection cannot be gainsaid. This was vividly brought home to everybody during the War, when the German cruiser Emden made the Bay of Bengal unsafe for some time for shipping, and thus cut off Burma from India. According to the figures quoted by the Government representative in the Council it would seem that a railway on what is known as the coast-line route would cost no less than Rs. 10 crores. On the other hand, the mover of the resolution claimed that, if the railway went along the Hukawng valley, the cost would not be in excess of Rs. 5 crores. This route was surveyed by the Government of India in 1919, and it is said to be the easier, although its difficulties are, no doubt, considerable. Whether either route would prove to be remunerative remains to be seen. But here again the mover of the resolution seems to have claimed that the probabilities were in favour of his route.

There is such great and pressing need for new railway construction in other parts of India that some time will, no doubt, elapse before the Burma project can be undertaken. But, according to what the Commerce Secretary told the Council, the Government of India intend to go on with it, when they can provide the necessary funds.

Another proposal for improving communications with India was made by Burma some little time ago. The telegraph lines are land lines, and they are liable to interruption during the heavy weather which prevails in the monsoon months of the year. These interruptions cause delays in the transmission of telegrams between Burma and India, and also, of course, between Burma and other parts of the world. As a remedial measure it was suggested that the land lines should be supplemented by a sea cable between Calcutta, or Madras and Rangoon. This project would also be costly, and its realisation is, therefore, likely to be delayed, although it would admittedly improve the telegraph service.

CALCUTTA LETTER.

(From Our Own Correspondent.)

Calcutta, October 6.

Durga and Lakshmi Pujas.

The Governor of Bengal arrived in Calcutta, on his return from his consultations with the Viceroy, on September 30, and after a busy day left for Darjeeling that night. The next day's newspapers had a word or two in them about the Bengal Ministry, but since then there has been nothing, as if it had been agreed that we should all put the subject out of our minds until after the holidays. The word or two in Saturday's newspapers were to no very great effect. Sir Stanley Jackson, it was said, was believed to have consulted the Viceroy, and in certain political circles it was confidently asserted that a Ministry of four had been definitely decided upon. We shall soon see. All that remained for decision, some even stated, was the final selection of the two additional Ministers. Some see an unreality in the whole business, and say that until a Kristodas Pal or an Asutosh Mookerjee has arisen to show what could be done by a

man of great capacity in charge of one of the transferred departments, there will be new Ministries to form at short intervals, the fight each time being very much a fight for broken egg-shells. That may be unduly pessimistic, but yet worth a thought. The late Sir Surendranath Banerjee told the writer only two or three months before he died, that is, some time after his laying down of his portfolio, that the then Governor of Bengal, Lord Lytton, being on a visit to him in his house by the river-side at Barrackpore, said that Sir Surendranath should consider himself fortunate to be out of the turmoil. It was no place, was Lord Lytton's view, for any man who wanted to work.

Except for a fracas at Kali Temple on Tuesday, and it was a small affair and soon over, the holy days have been celebrated peacefully, and everything points to a continuance of peaceful conditions. The affair at the Kali Temple was not communal, but arose among the worshippers themselves, and was over some question of the charge for admission.

Public Health in Bengal.

An acute student of the times might well be of the opinion that the most important news of the week under review was the report in Friday's newspapers of the words addressed to the students of Calcutta by Dr. C. A. Bentley at the Albert Hall on the subject of "Public Health and the Duties of Students." Those who have listened to Dr. Bentley in private, as the writer many a time has, know both how enthusiastic he is himself and how thorough and painstaking his researches have been into the hidden connexions between the diet of the Bengalis and the endemic diseases of the Province. Give Dr. Bentley the right backing from above, and as long as Sir Stanley Jackson is the Governor he is assured of that backing, and sufficient support from below, and a veritable transformation would be effected in Bengal, and that within a comparatively short time. A decade might show a new world in the Province.

"Bad health," said Dr. Bentley to the students, "is the cause rather than the result of lack of prosperity, and improved health precedes prosperity. Thus we are justified in assuming that the low standard of health of the people of Bengal is the prime cause or the poverty of the country, and that the first step towards promoting the general welfare of the people must be the improvement of the public health."

Dr. Bentley then gave statistics of infant and child mortality, and the expectation of life in Bengal. The last is only twenty-three years, which is about two and a half times less than in America. It sounds impossible, but so Dr. Bentley shows it to be. The average life-expectation of a child born in America is over fifty years. Theoretically, all the children born in Bengal in any one year would all be dead in twenty-four years, while the children born in America in the same year would all still be alive, and have more than half their lives to live. What a difference!

Dr. Bentley then passed to the subject of diet, saying, "A little inquiry will show that many of the people in Bengal to-day are attempting to exist on a dietary of a kind that is absolutely unable to sustain them in health.

Undoubtedly this is one of the main reasons why ten per cent. of the infants that are born are so weak that they cannot survive even a month. Everyone knows that the main food of the people of Bengal is rice. Now rice is a most valuable food when taken in conjunction with other materials. But rice by itself is not capable of sustaining a man in health. Moreover rice may be and very often is seriously damaged as a food by its mode of preparation and cooking. It is essential that a man's food should contain a due proportion of vitamins, otherwise the consequences to health are bound to be very serious indeed. Vitamins are concerned with life—life in the food and life in the person or animal that consumes it. If the food you take is dead, how can you expect to draw life from it? Yet at the present moment millions of people in Bengal are attempting to sustain life on dead food—dead rice, dead flour, and other dead products. Moreover they are doing this quite unnecessarily, because it is within the power of the vast majority to obtain the living food they need to supplement their present dietary at the cost of a little knowledge and a little exertion."

That is where the students have a part to play. They must acquire the knowledge, and spread it. One grain of rice or of wheat contains a husk and a germ, the germ that, if planted, will grow into a new shoot with an ear. But if you, when removing the husk, to get a white food, pleasing to the eye, remove the germ also, which you are almost certain to do, all you have left is "dead" matter. The secret is somewhere there.

Bengal-Nagpur Railway Strike Threat.

We closed the mail last week with the threat of a strike of the work-shop men of the Bengal-Nagpur Railway at Khargpur hanging over us; for Thursday's news was that at a meeting the day before, attended by over 12,000 workers, a resolution was passed deciding upon the declaration of a strike, if the Railway Administration did not immediately withdraw the discharge notices, or agree to set up a committee of inquiry, and the Loco Superintendent of the work-shops had issued the following circular:

"In all cases in which notices have been received from the staff, or notices issued to the staff, the notices must stand good. There cannot be any cancellation or withdrawal of the notices. I am prepared to consider any exceptional case put before me."

There was promise of an immediate conflict there. But the next day brought the news that there was little chance of a general strike at any rate before the *Pujas*. As for the employees of the other departments, who were being canvassed to support the workshop men, it was stated that the majority of them resented the idea of a strike, while none of them wanted one before they received their wages for September, which it was said were not to be paid until after the holidays. It was announced that the Company had made all possible arrangements to maintain normal passenger services, and one doubts whether any persons revised their holiday goings-away because of the fear of a strike.

Country Cousins.

There being many tens of thousands of people in the Bengal villages, chiefly of the poorer classes, who have never seen the sights of Calcutta, the Eastern Bengal

HAVE you been along the Nile to Luxor or Assuan? It is a wonderful voyage by one of the Anglo-American Nile Tourist steamers. The American Express are General Agents and can reserve cabins in advance for any of the weekly sailings from Cairo.

Services for Travellers to India

SERVICES that smooth the path and take the trouble out of travel. Your steamship passages booked at no extra cost.

A uniformed man to meet you at Bombay or Calcutta. An office nearby to take care of your baggage, issue tickets and arrange tours to any point inland. It pays to summon American Express service to your assistance before you leave Europe.

Railway, thinking also of popularising railway travelling and of their revenue, are going to run a *Kali puja* special. The *Kali puja* is celebrated on October 24 and 25. The train is to have accommodation for seven hundred passengers, and as two half-fares are to be counted as one passenger, and as the villagers will not leave their children at home, the train may be expected to carry well on to a thousand souls. The train is to leave Rajbari in the afternoon of October 23, and to stop at three other stations to pick up excursionists. The Presidents of the four Union Boards have been asked to pick out the right people, namely those who have never been to Calcutta. It is intended that as much of Calcutta should be seen by the village folk as time will permit, and the Calcutta Tramways Company is co-operating. It promises to be an enjoyable excursion for the men and women and children.

Here and There.

This week sees the end of another long career, Sir James Donald's, who is retiring after over thirty years in India, and most of them spent in Bengal. Sir James, an Aberdeen man, entered the Indian Civil Service as long ago as 1895. He has seen many changes. He now holds the post, or did yesterday, of Member of the Governor's Executive Council, higher than which, unless he is given the governorship of a Province, a man cannot rise. Good rest to him.

The building next to what was the Calcutta office, in its last years, of the Alliance Bank of Simla is in course of demolition, leaving only two of the old buildings in that street, Council House Street, still standing. They may be expected to follow before long.

People are still to be heard speaking of September 15 as the official date for the end of the monsoon. The writer remembers remarking to Mr. W. K. Dods, when both were members of the Council of the Asiatic Society of Bengal, that when they next met, the monsoon would be nearly over, for it would be getting on for the middle of September. Mr. Dods said, "It is to be hoped for the crops that it won't be. The monsoon should always continue into October." It is certainly doing so this year. On Sunday, which was the 2nd, in the centre of the city we had five inches of rain, with lightning to blind one and plenty of thunder, and there has been some rain every day since. So that is well. The cold weather cannot be now far off, and meanwhile the rain keeps things fairly cool. It has been as little nasty a September and beginning of October as I can remember.

BOMBAY LETTER.

(From Our Own Correspondent.)

Bombay, October 7.

October Rainfall.

During the past week we have been experiencing a monsoon in little, for the Observatory has registered something like five inches of rain in as many days. Although historical records indicate that Bombay seldom experiences a rainless October, the general impression is that the monsoon expends itself at the end of September, and that this indicates the preliminary warming up before the winter (if we can call it by that name) sets in. So far, however, the weather has, on the whole, been wonderfully bearable, and, if the rain should continue to keep it so until November sets in, we shall have little to grumble at.

The University Bill.

One of the principal items on the agenda of the Bombay Legislative Council at its present sitting has been disposed of, for the numerous amendments tabled to the University Bill have been cleared out of the way and the Bill has moved forward considerably. One particularly interesting feature was the defeat of Mr. Ginwala's effort to secure a seat for Labour interests in the Senate. Unfortunately

for him, the majority of the Council members refused to take Mr. Ginwala at his own valuation as a representative of Labour and threw out the proposal.

The Non-Brahmin Attitude.

The attitude of the Non-Brahmins in this connection hardly reflected any credit on them. Led by Mr. Jadhav, they voted against Government and for Mr. Ginwala's absurd scheme—certainly not because they really believed that it was sound, but merely to carry on a vendetta against the Education Minister. The latter has had a rather uncomfortable time, for the Non-Brahmins have taken advantage of every opportunity to make it very clear that they are no friends of his. Indeed, a motion of censure was tabled against him; but, just as there appeared to be a likelihood of a "breeze" of some intensity in the Council, the motion failed to find support and the Minister was given a slight respite. But we have not heard the end of the matter as yet.

India's Textile Mission.

A very welcome announcement is that recording the fact that a mission has been appointed to visit foreign countries with a view to investigate their potentialities as markets for Indian textile products. It indicates that neither Government nor the mill industry has lost much time in coming to an agreement on the non-contentious suggestions of the Tariff Board. The programme mapped out appears to be satisfactory, while the fact that Government has seen fit to choose the Director-General of Commercial Intelligence to represent it indicates what measure of co-operation it is prepared to offer. Mr. D. B. Meek's genius for the task that lies before the mission, and his experience as a statistician will contribute in no small measure to its success.

All Day and Night.

The recently arrived-at decision of the East India Cotton Association, to permit trading in cotton during any period in the twenty-four hours of the day, has led to considerable alarm in certain sections of the local cotton dealers. On one side it is contended that business will be thrown into chaos—and some support is forthcoming for this view in that the Association has essayed a similar step on two former occasions and finally had to revert to the restricted period. The Board of the Association, on the other hand, justifies itself by pointing to the failure of a recent test case against *Kutchha Khanda* dealers, whose activities, they contend, impose a great deal of injustice and hardship on members of the Association. Time alone can tell what the effects of this move are to be, but it looks like having a detrimental effect so far as foreign opinion of the local market goes.

Government Generosity.

That Gujarat has been treated with a generosity almost unparalleled is made clear in the supplementary demands to come up before the Legislative Council next week, which indicate that a sum in the region of one and a half crores is to be expended, or has been expended, in giving relief to the sufferers from the floods. But despite the fact that these figures are before them and that the distressed themselves express complete satisfaction with the measures already adopted, certain politicians still ask for more, and many resolutions are before the legislature for the complete remission of land revenue and other schemes which would, especially in view of the fact that crops in the affected areas have made a wonderful recovery, prove extremely unfair to the rest of the Presidency.

Turf Happenings.

Something in the nature of a surprise has been caused by an announcement that Mr. C. N. Wadi, one of our leading owners and a Steward of the Western India Turf Club intends to put up his string of horses for sale shortly after the start of the Bombay racing season in December, and that Major Malony, his trainer, is to proceed to England to look after his stable there.

Commercial Markets.

The Puja holidays in Calcutta have resulted in markets being generally dull across here. Money continues easy with the call rate at 2 per cent.; gilt-edged securities are steady with a rise in 4 per cent. New Loan as chief feature; Exchange has been dull; and both gold and silver are showing little activity with a slight decline in the latter owing to easiness in Shanghai.

DYARCHY—IN THEORY AND PRACTICE.

The discussion of the paper read by Mr. Sachchidananda Sinha on "Dyarchy in Indian Provinces: In Theory and Practice," at the opening session of the East India Association at the beginning of the month was resumed at the Caxton Hall on October 17. Sir Patrick Fagan, late Financial Commissioner in the Punjab, presided.

At the earlier session the Maharajah of Burdwan, who was until recently a member of the Executive Council of Bengal, and initiated the discussion, agreed generally with the lecturer's conclusions regarding the working of dyarchy which were, he said, practically the same as his own. At the same time he admitted that he had not, perhaps, sufficiently recognised the extent to which difficulties could be smoothed away by round-table conferences between the two halves of Government. But he pointed out that the benefit of joint consultation on reserved subjects could not be fully attained so long as Ministers were not allowed to record their votes and, therefore, felt in the position of strangers within the gate.

Personally, the speaker said, while he had always tried to uphold dyarchy as an experiment, he had never liked the system. In any revision it was particularly important that the financial arrangements should be placed on such a basis that there was no opportunity for the manifestation of commercial jealousy as between the halves of Government.

Sir Henry Wheeler, under whom Mr. Sinha served as Finance Member, pointed out at the adjourned debate that the paper in no way gave the survey of the working of the system which was promised in the introduction. To contend that dyarchy was unworkable, he said, was inconsistent with the facts, for it had worked in every province except that in Bengal and the Central Provinces it had been suspended for a time solely in consequence of non-co-operation.

Referring to his own experience, Sir Henry said that he had very seldom over-ruled his Ministers, with whom his relations had throughout been most cordial. Certainly, in Bihar and Orissa, the Governor was not the "ogre of the piece," nor were the Ministers as powerless as might be inferred from the paper. They had been able, on the contrary, both in Bengal and in Bihar and Orissa, to carry out very material changes in the important sphere of local self-government, which went far beyond what the more cautious official mind judged expedient. In many cases the result had been to confer a larger degree of responsibility and power upon the local bodies than was considered desirable in this country. Not a little part of the resentment which dyarchy had aroused in India could in his opinion be attributed to the politicians' habit of conjuring up the picture of a golden age which had existed in the past and the re-appearance of which was being prevented by the nefarious designs of the officials. The facts were that the Ministers had found in practice that it was desirable to carry on and develop the administration very much on existing lines.

Dr. R. P. Paranjpye, another member of the India Council, who was the first Minister for Education in Bombay under the reformed Constitution, said that dyarchy was certainly an improvement upon the previous form of administration. The departments had been as efficiently run by Indian Ministers as by their prede-

cessors, which went to prove that there was no need to fear the consequences of any further transfer of subjects from the reserved side. Ministers had worked under many difficulties, but it was noteworthy that when they had a majority of the Legislature behind them they could invariably carry their point on matters relating to transferred subjects, even though the Governor took a different view.

THE STATUTORY COMMISSION.—II.

BY THE HON. SIR PHIROZE SETHNA, O.B.E.

[In the second of a series of three articles on the above subject Sir Phiroze Sethna maintains that the early realisation of the ideal of responsible Government is essential to India's national progress and welfare.] The article concludes with an eloquent appeal for an agreed solution of the problem to be presented to the Statutory Commission.]

What is meant by those who assert that the system of Government in India should be suited to her genius? The underlying idea is that the national mentality of India—the product of her past national institutions, culture, traditions, thought and experiences—is such that the Indian people cannot work democratic representative institutions with efficiency and success, and that, therefore, some other form of government should be established to which they are accustomed, which is congenial to their ways of thought and habits and which, therefore, they can work efficiently and successfully. Another idea mixed up with, and influencing this, is that democratic, responsible government is a peculiarly Western institution which can never thrive and grow on any Eastern soil. The outcome of these two ideas is that the system of government supposed to be suited to the genius of India is some form of paternal, personal or autocratic government, not necessarily despotic, high-handed or arbitrary, but based on, and carrying out, not the will of the people, whatever it may be and such as it may be, but the will of the man, or the select body of men, in power. Before the changes wrought by the Great War in the ways of thinking, and the general mental outlook of the European peoples, the peculiar and distinctive Western character of democracy, of self-government, of representative and responsible institutions, was enthroned as a dogma and believed as an axiom. This claim no longer passes unchallenged; like every dogma, religious or political, it is losing its hold on all thinking men. There is now a growing opinion and feeling among the better minds of Europe that the Oriental peoples are not congenitally incapacitated for the working of parliamentary institutions, that they can acquire the art and methods of Parliamentary Government, that self-government is not a peculiarly Western, but human, institution.

But though there is now a better and wider realisation of responsible or Parliamentary Government as being a human ideal and institution, and not a peculiarly Western ideal and institution, conservatism and reaction are always there to rear their heads, and regain, if possible, their old empire. With the waning and weakening of idealism awakened and strengthened by the War, the old myth is again being trotted out that the qualities required for the working of self-government are peculiarly Western, and are not to be found among, or cannot be acquired by, the peoples of the East, that, in fact, the old notion is true that self-government or responsible government is a Western ideal and institution and not the War-bred new notion, that it is a human ideal and institution.

This, then, is the real idea of those who urge that the system of government in India should be one suited to her genius, viz., that responsible government is a peculiarly Western institution, that the people of India cannot adopt and work it without making a mess of her affairs, that some strong personal or autocratic form of government

such as prevailed in the country before the advent of the British and almost throughout her ancient history should be established. The possession of power by the people in their collectivity, which is the essence of self-government or responsible government, they view with horror; and the result of responsible government will, therefore, in their judgment, be utter chaos and confusion with consequent untold misery to all classes of people, and particularly to the masses. The reiteration of and insistence on the view that the system of government in India should be suited to her genius, is thus nothing but an attempt to make her retrace her steps, to deny her the priceless blessings and benefits of self-government and to make her revert to the old-world methods of autocratic or personal government. It is no other than the great issue between self-government and government by others.

The issue being thus clarified and set forth in its true nature, let us now examine, in the abstract, the dictum that the system of government in India should be suited to her genius. It assumes, first, that national genius is something immutable and unchangeable, like the laws of Medes and Persians (and even the laws of the Persians are now changing), and secondly, that it is either perfect or incapable of improvement and cannot assimilate anything new even if good. Now, both these assumptions are untrue. National character or genius is no doubt formed by physical environment, by the course of history, by traditions and by beliefs and institutions. (But it is capable of being modified by new experiences and fresh traditions. India has been gaining new experiences and building up fresh traditions ever since she came in contact with the West and its civilisation through Great Britain, and some of those experiences have gone so deep, and some of those traditions are so essentially modern, that they cannot but sensibly modify and improve her national genius and character. Again, the national genius and character of every people, and so of the people of this country, has its virtues and its defects. (The defects need not constitute a permanent, ineradicable element; it is the duty of the leaders of a country to attempt by means of education and new institutions to remove them and to make national character and genius as perfect as possible.) If self-government is the best instrument of promoting national progress and welfare, and if it be true that the national genius and character of India, as evolved in the past, is so far defective that it is not yet attuned to the efficient working of representative institutions and responsible government, the right logical course is not to rule out those institutions and responsible government for ever, but so to ~~improve and develop natural~~ improve and develop national genius and character as to make it ~~equal to the task~~ equal to the task of discharging those responsibilities which necessarily attach to responsible government and to the working of representative institutions. And the only way in which national genius and character can thus be improved and developed is by the working of representative institutions and the exercise of self-government. "It is liberty that fits men for liberty," Gladstone used to say, and the dictum is profoundly true. National genius and character is not something which remains outside the influence of political institutions; such institutions modify and may even radically change national genius and character. The vital consideration is whether responsible government is, as pointed out by Mr. Lionel Curtis, a human ideal, whether it is a form of government so desirable in itself and so rich in wholesome fruits that every civilised country ought to strive to realise it. There can be no two opinions on this point.

Moreover, in spite of all the too patent defects of Indian national character and genius, it is not so antagonistic or opposed to the satisfactory working of responsible government and representative institutions. We have our defects—what people have not?—some of them serious; but surely they are not such as to incapacitate us for the efficient working of popular government. We may not attain immediately or for many years to come the high level which the British have attained in working parlia-

mentary government; but are there not a few European countries with a parliamentary system of government which are yet far behind the British in the standards and methods of their free institutions? We may falter, we may commit mistakes—perhaps, at times, grave mistakes.—but we feel perfectly confident that our practice of responsible government will show steady and decided improvement with increasing experience until at last our parliamentary institutions may well compare favourably with similar institutions throughout the world. All that we have to do is to readjust our social institutions to the needs of responsible government and steadily to impress the national mind with the principle that success in responsible government cannot be achieved, except by intelligent, sustained, strenuous, honest and disinterested interest by the people in the affairs of the nation. These conditions are certainly not beyond our reach.

If the Commission arrive at the conclusion that the Indian political problem should be solved, once for all, by the establishment of full or almost full Swaraj, both provincial and national, there is nothing in the Act to prevent them from recommending such a solution. If that is so, then I ask why not have an agreed solution? I am not proposing the impossible. The Commission and the leaders of Indian public opinion representing all the important political parties and the different communities might put their heads together and formulate a scheme which will represent the united proposals of all. It is in this way alone that the problem can be satisfactorily and permanently solved. The Central Legislature has suggested this by the resolutions they have passed for having Round Table Conferences. To be sure, if some decisive practical consideration or considerations of Imperial policy make it imperative to place some limitations upon the establishment of full *Swaraj*, the Indian leaders will not be deaf to the call of reason, for justice, and even for expediency. What is wanted is an expression by Government of their readiness to solve the constitutional problem of India by consultation, negotiation and agreement. There is nothing novel about this suggestion. The Irish problem and the Egyptian problem have both been solved in this way; why should not the Indian problem also be solved in the same way? It is not necessary for this purpose to deny or contest the position so strenuously maintained by the Government that the final judgment must be that of Parliament. So long as an Indian constitution must be embodied in Parliamentary legislation, it is obvious that Parliament must have the final voice in determining what that constitution should be. But I feel no doubt whatever that the good sense of Parliament will heartily welcome any proposals which represent an agreed settlement.

(To be concluded.)

OBITUARY.

SIR ROBERT FULTON.

THE NEAR EAST AND INDIA regrets to record the death, at the advanced age of 83, of Sir Robert Fulton, late Chief Justice of Bengal and one of the most distinguished judges, lawyers and scholars that the Indian Civil Service has ever produced.

Appointed to the province of Bengal in 1864, after obtaining the first place in the open examination, he remained in the executive branches of the Civil Service until 1875, when he was appointed a District and Sessions Judge. Through his remarkable proficiency in Oriental languages, to the study of which his early days were assiduously devoted, he early attained distinction and in 1881 received the special thanks of the Government of Bengal for his successful settlement of the dispute respecting the estate of the Nawab of Dacca. Two years later he became Superintendent and Legal Remembrancer and in the following year he was called to the Bar by the Inner Temple. After officiating on four separate occasions as a Judge of the Calcutta High Court, he was confirmed in the appointment in 1893. He officiated as Chief Justice in 1907 and 1908 and retired from India in the latter year. Sir Robert, who married, in 1887, Miss Margaret Mathew, was a keen educationist, being a Fellow of the Calcutta University, a member of the Syndicate, President of the Faculty of Law, and President of the Board of Examiners in Oriental Languages. In 1903 he received from Edinburgh University the honorary degree of LL.D.

Commercial and Financial Section.

NOTES AND NEWS.

170, Strand, London, W.C.2,
Tuesday Morning.

Anglo-Persian Oil.

The report of the Anglo-Persian Oil Company for the year ended March 31 last, which has just been issued, gives as usual a most interesting survey of the progress of the company. The net profits of £4,635,444 represent a new record, and are about £250,000 in advance of the figures for the previous year. The proposed allocations as mentioned last week are £450,293 to extra depreciation, £200,000 to debenture stock redemption reserve, £100,000 to amortisation reserve, and £1,000,000 to general reserve, while the proposed final dividend of 7½ per cent. brings the distribution for the year to 12½ per cent. which will require £2,553,125 as compared with £1,566,250 for the previous year.

The Main Field.

While the company's activities have centred on a number of areas the main field at Masjid-i-Sulaiman has been, of course, the chief source of supply. It is stated that the field has again responded with ease to the calls for production made upon it, while its productive extent is continually being expanded by the bringing in of further large producing wells on its margins. Drilling operations in Persia in other areas have not so far yielded satisfactory results, but the policy of exploring all promising areas is being energetically pursued. At Naft Khana, in the transferred territories, drilling has proved exceptionally difficult, and progress consequently slow, but prospects continue to be good. As regards other regions it is stated that production in the Argentine has been maintained, but results from Albania have not been satisfactory so far, as further drilling has failed to add deeper sources of oil to those of poor quality oil previously found in upper horizons. Reference is made to the satisfactory results which have attended the refining operations, and it is pointed out that additions and improvements to the refineries are continually being made to maintain them in efficient condition and in accordance with most modern refinery practice. It is interesting to note further that a large number of additional tankers, mainly with internal combustion engines, have been ordered for the purpose of carrying the increasing production. The fleet of the British Tanker Co., Ltd., was kept fully employed during the year. Finally by the purchase of an interest in "Olex," an oil distributing concern in Germany, the company has obtained an entry for its products in that market.

Dead Sea Concession.

With the development on the Iraq oilfields, which is dealt with on another page, and the news that a British Syndicate has been successful in obtaining the concession for exploitation of the Dead Sea minerals the Near East has been in the picture of late to a quite unusual extent. The favourable advertisement that the region as a whole

will derive from these developments will, it may be hoped, go some way to counteract the adverse view taken of the Near Eastern regions by British traders as a whole. It is suggested that the British syndicate which has obtained the Palestine concession will work in conjunction with the Imperial Chemical Industries in the development of the minerals of the Dead Sea. The concession is one of great importance, a fact which is evident from the foreign competition to obtain it, and it is equally clear that only a large organisation could hope to cope successfully with the preliminary work which will be involved. It is not merely a question of recovering the minerals which is relatively easy, but also of transport, and developments must depend on the provision of the latter factor.

The Position.

It may be of interest to recapitulate the main points made in a report issued in 1925 by the Crown Agents for the Colonies giving the reports of various experiments and investigations which have been carried out in Palestine with a view to determining the practicability of producing minerals from the waters of the Dead Sea together with a summary of the conclusions of a Committee appointed by the Secretary of State for the Colonies to report on the matter. Rather more than half the publication consisted of extracts from reports by the Geological Adviser to the Government of Palestine in 1923. He points out that with increased evaporation and decreased rainfall the limits of the lake gradually retreated to its present shores and the soluble salts concentrated in its waters. At the north end of the Dead Sea there is a storm beach stretching along the whole length of the shore; and behind it is an area suitable for the formation of evaporation pans. The quantities of salts in the Dead Sea are estimated approximately as follows (in millions of metric tons):—potassium chloride 2,000, magnesium bromide 980, sodium chloride 11,900, magnesium chloride 22,000, and calcium chloride 6,000. For practical purposes, it is stated, the supply of potash may be considered inexhaustible.

Bankers :

BANK OF ENGLAND. Messrs. GLYN, MILLS & CO.
A general banking business with Roumania is conducted and correspondence from those having interests in that country is invited.

Difficulties of Transport.

The transport problem to which I have referred was the subject of emphasis in the report. The nearest points to the Dead Sea connected by rail are Beisan and Jerusalem, but while there is no road from Beisan to the Dead Sea, the Jerusalem-Jericho main road, which is mainly in first-class condition, is 8,000 yards from the Dead Sea beach at the point where the road issues from the limestone hills, and allowing for a further stretch of road along the beach it is estimated that it would be necessary to construct six miles of road. The interesting point was further made that it is estimated that for every ton of 80 per cent. potash five tons of salt will be produced, so that if 100,000 tons of production is reached for potash the disposal of 500,000 tons of salt will have to be considered. The two possible methods of disposal are marketing, which depends on cheap transport, and washing back into the Dead Sea. The summary of the conclusions of the Committee was on the whole not very encouraging. It was stated that from the technical standpoint, as distinguished from the commercial, no insuperable difficulties were likely to be met with in connexion with the extraction of potash from the Dead Sea in quantities of the order of 100,000 tons of potassium chloride per annum, and further that a product containing over 70 per cent. of potassium chloride could be obtained by natural evaporation, while practically unlimited quantities of common salt and magnesium chloride could be produced, that adequate land was available for the evaporating tanks, and that the area could be rendered habitable by suitable precautions. On the other hand, transport charges would absorb a considerable proportion of the market value of the potassium chloride, and would, to a large extent, render the common salt and magnesium chloride unsaleable, while in view of the uncertain conditions of the markets and the future production in Europe, the Committee was not in a position to forecast

the commercial prospects of potash recovery from the Dead Sea. Developments since then, however, have no doubt been such as to place a different aspect on the problem, and with the work conducted under such hopeful auspices it may be assumed that before long Palestine will have an important mineral industry to further the economic progress of the country.

Record Fair in Prospect.

The latest reports with regard to the British Industries Fair are of the most promising description. Applications for space at both sections are much in advance of the figures for previous years, and so far more than 360,000 sq. ft. of space has been taken by over 1,600 manufacturers. These totals speak for themselves as to the value which our traders place on the Fair as a medium of business and as to the view they take as to the commercial outlook in the near future. While the process is admittedly slow there is no gainsaying the fact that trade in certain directions is on the up grade, and provided there are no adverse international developments it may be taken for granted that this tendency will continue and will be accelerated as the months pass. It must be remembered that buyers at the Fair are not dealing with the immediate demand but are anticipating the future, and this demand for space at the Fair presupposes that in about a year's time the commercial outlook will be greatly improved. Among the sections in London, for which there has been a special demand for space, are those for toys and game; leather and leather goods; pottery and glassware; stationery, paper, printing and publishing; textiles and clothing; and wireless apparatus. For the Birmingham section manufacturers of machinery, engines, and hardware have been specially prominent in taking space. As special efforts are being made to attract foreign buyers it may be assumed that record business will be done at the Fair.

Rubber Improving.

A much better tone has ruled in the rubber market during the past week, and as yesterday there was a substantial reduction of stock as against the usual increase it is not surprising that quite an optimistic feeling began to prevail. A reduction for one week is, however, nothing to go by, and while it may be the forerunner of a constant weekly reduction, it is pertinent to point out that the reduction this week was due not to the deliveries but to the fact that the arrivals were below 1,000 tons. Still, with the tightening up of the regulations the position is certain gradually to improve, and it must be remembered that it has been pointed out that the existing stocks are not really too large for the market.

COMMENTATOR.

Exports and Imports

To assist its customers, the Westminster Bank has prepared a booklet explaining the many ways in which the commercial man may use the Bank for the furtherance of his business, how he should proceed in order to take the utmost advantage of interest, rebate, discount, rates of exchange, etc., and so combine security and caution with progress and enterprise.

Copies will be issued on application to the Secretary at Head Office

Recent floods in the valleys of the Drave and Morava in Yugoslavia have broken several bridges and interrupted communications.

M. Polychroniades, Greek Minister to Yugoslavia, left Athens on October 22 for Belgrade.

Mr. Frederick William Arthur Warman, aged 48, a cashier and accountant of the Armstrong Construction Company, who are carrying out the construction of an airship shed at the Karachi air port, died on October 22 at Karachi from cerebral malaria. He was a native of Newport (Mon.).

Signor Mario Lago, Italian Governor of Rhodes and the Dodecanese, accompanied by Douna Ottavia Lago, arrived in Cyprus at the end of last week to return the visit recently paid to Rhodes by Sir Ronald Storrs, Governor of Cyprus.

A cholera case from a new source was reported on October 20 at Basra when a seaman from the steamer City of Leicester was admitted to the hospital. The steamer was placed in quarantine. The total number of deaths in the summer outbreak, which has now been practically quelled, is about 350.

Mustapha Kemal Pasha concluded his great speech on October 20. It had occupied six days in delivery, the actual time the President spoke being 36 hours 20 minutes. His last words were addressed to the youth of future generations in Turkey and they produced the deepest impression on all present.

THE OILFIELDS OF IRAQ.

The Baba-Gurgur Gusher.

The event of the past fortnight in the commercial world has been the news that the Turkish Petroleum Company has struck oil in Iraq with the first of eight experimental wells which are being drilled on selected areas on the concession. The well in question is at Baba-Gurgur, some four miles north of Kirkuk (not south, as was stated in a telegram published in the Press). Features of special interest about this early success are that oil was reached at the comparatively small depth of about 1,500 ft., and that the flow has been at the rate of 7,000 tons per day. The gusher has now been brought under control, and the well will be closed down pending arrangements for the development of the field. The other wells being drilled are at Guaiyarah, about thirty-eight miles south of Mosul, at Targil, about eight miles south-east of Kirkuk, at Jambur, about four miles east of Tang, at Palkanah, six miles south of Tuz Khurmatu, where there are two wells, at Injanah, twenty miles west of Gakhar, and at Khasm-al-Ahmar, six miles south of the Injanah well. In three of these wells indications of oil have already been found, and it may therefore be hoped that before long news of strikes similar to that at Baba-Gurgur will be received.

Just as one swallow does not make a summer, it would be extremely premature to jump to the conclusion that the success at Baba-Gurgur proves the existence within the limits of the concession of the Turkish Petroleum Company of a vast oilfield. Quite probably it does, but before there is absolute assurance that oil is there in quantities which will permit of the great expenditure necessary for its development it will be necessary to await the results of the other drillings. It has to be borne in mind that the Iraq oilfields are not favourably situated from the point of view of getting the oil to the world's markets. The construction of a pipe line to the Mediterranean will be necessary, and as its length will be some six hundred miles, the cost will be several million pounds, and it is obvious that the oil deposits must be of very considerable extent to justify this expenditure.

The existence of oil in the Mosul district has been known since the earliest times, and the fact that it will be one of the last great oilfields (of those that are known already, that is) to enter the field is due no doubt to its situation. It will not be inapposite to recall the fact that the oilfields were the subject of a very detailed description in these columns in 1913, when a full page map was given showing the localities according to the most comprehensive report that had up to that time been made of the chief oil-bearing districts. Three of the most important of them were at Gayara, where one of the wells referred to above is being drilled, north of Kirkuk where the strike has just taken

place, and at Tuz Khurmatu where a well is being drilled. It would have been interesting to have reproduced the map, for the work now in progress on the field proves the value of the report on which it was based. The description in question contained brief summaries of the reports on the various fields. These included the following, which it will be noted, cover a number of the areas in which drilling is taking place.

Abjak.—Oil is found on the surface over an area 120 metres long. This field is not at present worked, and is not of a good quality.

Baba-Gurgur (north of Kirkuk).—An oil area of some fifty acres in extent, worked in a very primitive fashion by natives. Natural gas in large quantities appears here, and in 1901 was burning.

Gayara (on the Tigris).—This field is of immense extent, and can be classed with that at Mendali as being the best in Mesopotamia. There are "innumerable petroleum springs," which have formed "a layer of asphalt many metres in thickness," and also pools and lakes of petroleum, some of which are nearly 1,000 feet in length. The oil is of a very high quality, and from the greater part of the area the oil is completely free from either sulphur or salt water. At the southern end of this field naphtha trickles out of the cliffs at El Fatt'ha, through which the Tigris here breaks its way, and runs to waste in the river.

Guil (south of Chemchema).—An extensive field producing oil of the best quality and unusual purity. Although refined only by crude native methods, it is stated to burn better than the best Russian oil scientifically refined.

Numrud.—The petroleum from this field, which was not worked at the time of the report, is of poor quality and nearly black. It rises throughout a zone some 800 metres long, and runs to waste in the river.

Kifri.—The sources of Kifri appear to be best in an area which extends a long way beyond the points actually worked. A considerable deposit of black asphalt nearly six feet thick has been formed. This is of unusually good quality.

Tuz Khurmatu.—This is one of the richest fields in the country. The oil trickles from the soil for a distance of well over a mile along the right bank of a stream, and has formed many layers of asphalt from 12 to 15 feet thick. The conditions are very favourable for boring. The output of refined oil was limited by the exigencies of the season, the extent of the local demand, and the capacity of the sheepskin vessels in which it was transported at the time of the survey.

Zahrou (on an island in the Khabur).—The oilfield is very rich, and from eight miles along the river bank "the petroleum streams down from above in more than thirty little rills."

Hit and Ramadi.—There are numerous and important springs of bituminous pitch in this area, and in one place they have formed a pitch lake nearly two miles in diameter.

Naphata (near the Euphrates, below Hit).—The petroleum springs here, although both copious and of fair

quality, were not to be compared with the first-class fields at Bayara and Tuz Khurmatu.

As is well known, the Turkish Petroleum Company is an organisation of an international character. It was first registered in 1911, and acquired its present name in the following year when a concession granted by the Turkish Government to work the oil deposits in the Mosul and Baghdad vilayets was taken over from the Deutsche Bank. The War, of course, altered everything, and in March, 1925, the company, whose capital of £2,000,000 is held as to 47½ per cent. by the Anglo-Persian Oil Company, 22½ per cent. by the Royal Dutch, 20 per cent. by a French group, 5 per cent. by a Belgian group, and 5 per cent. by Mr. Gulbenkian, was granted a concession by the Iraq Government for a period of seventy-five years. An interest of 25 per cent., it should be added, has been offered by the Anglo-Persian Oil Company to the Standard Oil group, but so far there has been no statement as to its acceptance. Under the concession the company is allowed a term of three years for the survey and selection of 24 plots of eight square miles each. Drilling was only commenced in April last, so that it has not taken long to achieve what can be termed, without any show of optimism, extremely positive results.

It remains to add that it has all along been imagined that the occurrences of oil in the Mosul and Baghdad vilayets in all probability do not represent an isolated field, but constitute one section of the oil-bearing strata stretching north-east as far as Baku. If the places where the drillings are taking place are traced on a map it will be seen that they form the shape of a question mark, commencing at the drilling south of Mosul and then going via Kirkuk southwards to Baghdad. If, however, one turns to the pre-War reports, it will be found that the question mark must be continued almost to Mosul, changing its shape to that of an elongated S. The course of the field west or north of Mosul, if there is one, remains in doubt, though it has been suggested that the Iraq oilfields form part of a vast ridge which outcrops westwards as far off as Cyprus. But considerations such as this, while admittedly of considerable interest from the academic point of view, have little practical importance at the moment. It is sufficient to know that the confidence of the pre-War surveyors that oil exists in substantial quantities in Iraq is well on the way to being proved. If it is finally established it will go far to solving Iraq's financial problems, and will change the face of an agricultural country.

King Fuad of Egypt, accompanied by Fakry Pasha, Egyptian Minister in Paris, drove to the Arc de Triomphe in Paris on October 21. A squadron of the Garde Republicaine and a company of Infantry rendered military honours as His Majesty laid on the tomb of the Unknown Soldier a wreath of chrysanthemums tied with ribbons in the Egyptian colours and bearing an inscription: "From King Fuad to the Unknown Soldier." In the evening a gala banquet was given in King Fuad's honour at the Elysée Palace by President Doumergue. The King's official visit to Paris terminated on October 22. His Majesty left for Brussels yesterday.

ANCHOR LINE,

48, FENCHURCH STREET, LONDON, E.C.3.

THE ROUMANIAN MARKET FOR TOYS.

The market for toys in Roumania is largely restricted to cheap toys of simple design and workmanship (says the American Consul at Bucharest, Mr. J. Rives Child, in a recent report). In Bucharest and a few of the other larger urban centres, where the more well-to-do classes have their homes, there is a fair market for more expensive toys, including mechanical toys. The total value of toys consumed annually in Roumania amounts to approximately £96,000, and it is estimated that 20 to 25 per cent. of this amount is produced locally by several Roumanian toy factories, which specialise in the manufacture of mechanical toys composed of wood, paper, cloth, celluloid, etc. The toys produced by the domestic industry are not of the best quality, and are made to fill the particular want for a low grade, cheap merchandise.

Despite the existence of a Roumanian toy industry, which is afforded high tariff protection by the Government, most of the toys used in the country are imported from abroad, chiefly from Germany, Austria, and Hungary. It is estimated at present that Germany controls 60 per cent. of this trade and Austria 30 per cent., with the remainder distributed amongst Hungary, Czechoslovakia, France, and other countries. In 1923 imports of all classes of toys amounted to 284,000 kilos valued at £80,000, in 1924 to 306,000 kilos valued at £65,470, and in 1925 to 264,000 kilos valued at £51,900.

Roumania offers a fair but restricted market for cheap mechanical toys. Novelties are in great demand and their durability and quality are of secondary consideration. The same toys which appeal to American children are likely to interest Roumanian youngsters. Germany, on account of its proximity, will doubtless hold its position of supremacy in this trade, but the fact that the trade is to a considerable extent seasonal, centring around December, makes the handicap of remoteness from the market of less consequence than it would be in other products.

FORTHCOMING SAILINGS.

The following are the sailings for the Near East and India, the ports of departure and closing dates for cargo being given in parentheses:—

Anchor Line.—S.s. Elysia for Bombay (Birkenhead, November 4). (For passenger sailings and dates see advertisement.)

Anchor Brocklebank Line.—S.s. Maimyo for Calcutta (Birkenhead, October 31); s.s. Mahanada for Calcutta (Birkenhead, November 10).

Bibby Line.—S.s. Lancashire for Port Said, Colombo, and Rangoon (Birkenhead, November 2).

British India Line.—S.s. Manela for Bombay and Karachi (London, October 29); s.s. Margha for Colombo, Madras, and Calcutta (London, November 5).

Cunard Line.—S.s. Sea Victory for Genoa, Leghorn, Naples, Palermo, Messina, Catania, Bari, Venice, Trieste, and Fiume, also at Corfu, Gruz, and Ancona if inducement (Liverpool November 12, and Swansea November 15); s.s. Tyria for Patras, Piræus, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool November 12, also Glasgow and Swansea November 10).

Johnston Line.—S.s. Aviemore for Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, Constantza, Sulina, Galatz, and Braila (the last steamer of the season for Galatz and Braila (Liverpool, November 5).

P. and O. Line.—S.s. Rajputana for Bombay (London, October 28); s.s. Padua for Colombo, Madras, and Calcutta (London, October 29).

Prince Line.—S.s. Stuart Prince for Tunis, Malta, Alexandria, Haifa, Beyrout, and Cyprus (London, October 29).

Ellerman and Papayanni Lines.—S.s. Bavarian for Oran, Algiers, Malta, Piræus, Volo, Salonika, Smyrna, Constantinople, Bourgas, Varna, and Constantza (Liverpool, October 29). Cargo taken on through Bill of Lading to:—Algerian ports via Algiers; Moroccan ports via Gibraltar; Tripoli (Barbary) via Malta; Syria and Cyprus via Alexandria; Greek outports via Piræus or other convenient port; Fiume via Trieste.

Komitajis tried to blow up the Yugoslav magazines at Pozharevat on October 21, but were driven off by the fire of the sentries.

THE WEEK'S FINANCE.

(By Our Financial Expert.)

London, October 25.

The autumn season of overseas lending has come in with a vengeance, and in the last ten days loans for South Africa, Poland, Brazil, and Victoria have asked for no less than £18 millions of the British investors' money. The heavy volume of these loans has once more aroused much talk as to our real trade balance and the margin upon lending abroad without risk of monetary disturbance; while anxiety is not acute on this score, financial circles are inclined to think that the time has come for a full statistical survey of the position. In spite of the competition of new issues the gilt-edged market has shown no pronounced weakness, and the continued strength of the sterling-dollar exchange confirms confidence in the belief that the autumn and winter will be negotiated without recourse to higher money rates. But in the industrial markets the tone has been somewhat reactionary. British Celanese has for some weeks been the guiding star of the markets, and its phenomenal rise brought in its train better prices for selected lists of industrials. Now that the inevitable slump in Celanese—surprising only because it has been so long in coming—has set in in earnest, the effect is felt in many sections of the industrial share list. In many industrial favourites fairly large bull accounts exist and other differences to be paid at the close of this account look like being substantial.

Industrial Company Profits.

An analysis of the profit and loss account of a number of joint stock industrial undertakings made by the *Economist* shows that the profits disclosed during the past quarter are, in the aggregate, on the upgrade. The reports of 237 companies were examined, and these disclosed aggregate net profits, after payment of debenture interest, etc., of £19,528,300, representing an increase of £451,500 or 2.4 per cent. over the profits disclosed by the same companies in their previous financial year. In the two preceding quarters decreases of 4 and 5.7 per cent. were recorded. The shipping group showed an increase of £511,100, and the iron and steel section registered an improvement of £70,300, but there was a decline of £724,800 for 50 rubber plantation companies. Of the total profits 66.9 per cent. went to ordinary shareholders,

18.4 per cent. to preference shareholders, and 14.7 per cent. was reserved or added to balances carried forward. The ratio of net profits to total ordinary and preference capital worked out at 9.9 per cent. as compared with 10.2 per cent. at the same time last year, and an average of 10.8 per cent. for the four quarters ended June last. The average rate of interest paid on debenture capital was 4.98 per cent., while the average rate of preference dividend was 5.2 per cent. and of ordinary dividend 10.2 per cent. This last compares with 10.5 per cent. a year ago and is the lowest since the third quarter of 1925. The rubber group was prominent with a reduction in the average ordinary dividend rate from 23.4 to 17.1 per cent.

The Brighter Prospects for the Electrical Industry.

The ordinary shares of a number of the leading electric equipment manufacturing companies stand at levels at which they substantially discount the future. Whether the movement has been overdone may be open to question, but there can be no doubt that it does not entirely lack justification. The trade survey just issued by the British Electrical and Allied Manufacturers' Association is distinctly hopeful, both as regards trade in general and the electrical industry in particular. "We are justified," it reads, "in predicting much more active conditions in British industry" as a result of an international movement towards normal conditions. Turning to the electrical industry specifically, "on the export side the prospects are much more favourable than they have been for some considerable time and new records may be established." Moreover, the Association is not pessimistic regarding the home market, especially when the national reorganisation scheme has been entirely planned out. It is noteworthy that even under the conditions obtaining last year the average rate of dividend and interest paid by British electric equipment manufacturers was by no means unsatisfactory. According to the latest issue of "Garke's Manual," this figure was 7.73 per cent., on a capital of £73,000,000. The supply companies paid an average rate of dividend and interest of 6.21 per cent. on a capital of £125,000,000. Taking the electrical industry as a whole, the average rate of dividend and interest works out at 5.62 per cent. on an aggregate capital of £451,000,000. Among the moderately-priced ordinary shares, those of Metropolitan Vickers, returning £5 11s. per cent., and those of Mather and Platt, yielding £6 per cent. free of income-tax, deserve the investor's attention.

The South American Outlook.

The British investor has invested many millions of pounds in South America and is therefore vitally interested in the economic condition of that part of the world. There are few better guides in this connexion than the address of Mr. R. J. Hose at the annual meeting of the shareholders of the Anglo-South American Bank. Being chairman of a bank doing business with the principal countries of South America, he has an unrivalled opportunity to observe the trend of events. Dealing with Argentina, he says that "the outlook in Argentina may be regarded with optimism." His comments on Chile deserve special attention. "The nitrate year, July, 1926—June, 1927," he says, "was on the whole the most difficult period experienced by this industry since the 1921-22 season. However, since April last, the situation has undergone a complete change. . . . Prices have continued to rise, and buyers have come forward in quite a surprising manner, both in the United States and Europe." The goodwill and co-operation of all parties concerned is expected to "lead to the establishment in Chile of stable conditions upon which a great measure of future prosperity could be based." Prospects in Peru "at the moment appear considerably brighter, but severe business depression continues in Mexico." With regard to Columbia and certain other northern Latin American republics, conditions have mainly been normal, and steady progress may be anticipated in the development of their very considerable natural resources.

EMPIRE COTTON GROWING CORPORATION.

A meeting of the Administrative Council of the Corporation was held in London on October 19, the President, Lord Derby, being in the Chair.

The quarterly report of the Executive Committee was presented by Lord Derby, who referred in his remarks to the importance of the levy, and expressed the hope that, in the interests of the cotton trade, its renewal could be relied on. The Director gave an explanation of matters which had taken place since the report was drafted; he mentioned in particular that he, Sir William Himbury and Mr. Milligan had been attending, as representatives of the Corporation, with great interest the meetings of the Imperial Agricultural Conference. He understood that the Conference might make certain recommendations to the Corporation as to directions in which they could be of assistance in promoting agricultural research work in the Colonies, and he felt sure that any proposals that might reach them would receive sympathetic consideration from the Executive Committee.

The Vice-Chairman of the Executive Committee reported that the Committee had had under consideration the question of the renewal of the spinners' levy when the Cotton Industry Act should expire next year. The Committee were unanimously of opinion that it was advisable that the levy should be renewed in order that the work of the Corporation might be continued, and they had decided to approach the Federation of Master Cotton Spinners' Associations and the Cotton Spinners' and Manufacturers' Association in order to ascertain the views of the trade and to ask their advice as to the means whereby its whole-hearted support might be secured.

The period of three years for which President and Vice-Presidents of the Council hold office having expired, Lord Derby was unanimously re-elected President and the following were re-elected Vice-Presidents for a period of three years:—Lord Colwyn, Sir Frederick Lugard, the Rt. Hon. Walter Runciman, the Rt. Hon. Tom Shaw, Sir Henry Birchenough, Mr. A. K. Barnes, Mr. E. Holroyd, Mr. J. A. Hutton, Mr. E. B. Orme, and the Hon. Sidney Peel.

The following extracts are taken from the report of the Executive Committee:—

The Corporation have recently received a number of requests for small quantities of seed for experimental purposes. It has been arranged that some Sea Island seed shall be sent to the Indian Central Cotton Committee for trial in the Andaman Islands and seed of a number of different varieties have been sent to Fiji, Nigeria, and Sierra Leone at the request of the several Departments of Agriculture.

The Director of Agriculture, Nigeria, is sending some special seed to be grown experimentally at Barberton, while some Tanguis seed from Peru is to be sent to the Sudan for investigation as to the effect on this variety of so marked a change of environment.

Transport.

In the last report the recommendations of the sub-committee of the Colonial Conference regarding tropical

transport were reprinted in full, including the suggestion of the Conference that the Empire Marketing Board should be asked to consider the question of giving financial assistance towards the proposed Transport Council. The Board set up a special committee to report to them on the proposal, and the Corporation have offered that if the proposal is carried into effect, they would make a contribution of £3,000 as their final payment towards transport experiments provided that (a) the committee appointed agreed to take over the Corporation's experiments and vehicles and their liabilities in this connexion, (b) the Empire Marketing Board makes a contribution which will enable the committee adequately to discharge its duties, and (c) Colonel French be appointed a member of the committee. It is understood that the committee have recommended to the Empire Marketing Board that a Mechanical Transport Council should be established and that the Corporation's offer should be commended to the favourable consideration of that body, if formed.

THE AMERICAN FINANCIAL REPORT ON PERSIA.

We have just received a copy of the eighteenth quarterly "Report" of the Administrator-General of the Finances of Persia, for the three months Dey, Bahman, and Esfand, 1305 (December 23, 1926—March 22, 1927). Additional interest, of course, is lent to this "Report" by the fact that before it reached England, Dr. Millspaugh had resigned.

The three months under review were notable for the putting in hand of plans by the Persian Government for the reconstruction and development of Persia, and other measures were officially taken during this time which had their effect on the administration of finance. Among these were the reorganisation of the Ministries of Justice and of Foreign Affairs.

Generally speaking, the favourable financial situation continued.

An important section is devoted to the agricultural and peasant problems in Persia. The American Advisers wisely see that "it is the peasant class whose interest should be kept constantly in view, who should be, so far as possible, encouraged and assisted, and whose standard of living should be raised." The land tax, therefore, must, according to Dr. Millspaugh, be reduced, or a substitute found for it. In connexion with this point should be noted the advocacy by the Americans of the policy of settling the tribes of Persia on the land.

The situation of the National Treasury at the close of the fiscal year 1305 was "more gratifying than for any period in recent years. Heavy balances in some, and substantial balances in most, of the Treasury General accounts existed and the total of the public debt has been somewhat reduced."

One is led, on reading this Report, to wonder again whether all the good work narrated in it is to be lost or consolidated.

NOTES FROM ROUMANIA.

(From Our Own Correspondent.)

Bucharest, October 15.

Opening of Parliament.

The Parliament opened to-day for the autumn session, the first full session under the Regency. It is understood that one of its first duties will be the revision of the import tariff which came into force last April, and which has caused considerable dissatisfaction in many quarters on account of its inconsistencies and the heavy duties imposed on many imports. The question of the requirements of the railways will also, no doubt, have to be tackled seriously, as, according to the statements of those most qualified to judge—the present conditions cannot be allowed to continue much longer. The facts relating to the utter inadequacy of the present transport system and of the organisation for repairs, etc., have so often been set forth in print, that the subject begins to pall, and some useful action on the part of the Government is awaited with a certain impatience. Another burning question is that of the stabilisation of the leu. In this connexion it appears to be the policy of the Minister of Finance not to effect the legal stabilisation until the currency has in fact become sufficiently stable to preclude any reasonable fear of its falling after the legal stabilisation takes place. For many months now the rate of exchange for sterling has been about 780-790 lei, with very slight variations. It remains to be seen, however, whether this will last throughout the winter season, in view of the fact that this year's harvest has not been very satisfactory, owing to lack of seasonable rains, and the maize crop is the worst recorded for a number of years. The available surplus of maize for export from this year's crop is estimated at about half the quantity available last year, viz., about 64,000 waggons. Trade in the Danube ports is reported to be very slack, especially in grain. Should the leu still hold its own, in spite of these adverse conditions until the spring then perhaps the time will be considered ripe for stabilisation. Until the legal stabilisation is effected, on the other hand, it is proving difficult for the Roumanian Government to obtain a foreign loan for the reconstruction of the railways and so they find themselves moving in a vicious circle.

Topics of Discussion.

There are two main topics of discussion in the Press at the present time, i.e., the question of the Hungarian optants and the European Commission of the Danube. The International Chamber of Commerce has recently delegated Mr. John Sandeman Allen to visit Roumania, sailing down the Danube to Giurgiu for the purpose of examining the situation in regard to shipping on the Danube. As to the urgency claimed by other nationalities of ex-

tending the privilege of "petit cabotage" to vessels of other riverian countries, Mr. Sandeman Allen is reported to have stated that so far as he was able to judge the Roumanian shipping now available was sufficient in the meantime to deal with all the existing transport trade, but with the increase of Roumanian exports conditions might change in this respect in the not very distant future. Mr. Sandeman Allen also visited Galatz, Braila, Sulina and Constantza to study the burning question of the European Danube Commission. He was given every possible facility by the Roumanian authorities, who hope great things from his views.

THE BELGRADE LOAN.

(From Our Own Correspondent.)

Belgrade, October 21.

The Minister of Finance has refused his consent to the renewal under new conditions of the agreement for a loan of three million dollars from the American Chase Securities Corporation to the Belgrade Municipality on the grounds that the new conditions make it appear that the town of Belgrade cannot fulfil its engagements and that the period of six months instead of three years after which the loan must be repaid is too short. The Vice-Mayor of Belgrade has explained to the Press that he considers this decision a mistake, as the Chase Corporation has promised to renew the loan from time to time until a large long period loan can be raised. He fears that this refusal may retard the great work of repaving the streets of Belgrade already begun and planned to be continued on a still larger scale in the spring.

The Albanian Cabinet resigned on October 20 and is being reconstructed.

The production of Anglo-Egyptian Oilfields for the week ended October 21 was 3,509 tons.

Among the appointments in the Royal Air Force recently announced are those of 28 officers to Iraq.

According to an *Industrie und Handelszeitung* message from Belgrade, negotiations are in progress for a £30,000,000 British loan to Yugoslavia, mainly for the purpose of railway extension.

The death is announced at Sigmaringen of Prince William of Hohenzollern in his 64th year. The elder brother of the late King Ferdinand of Roumania, he renounced his succession to the throne of Roumania in 1886.

Hamilton's Oil Concessions (Roumania).—Cabled advice has been received from Bucharest as follows:—"Production for week ended October 21, 1,370 tons (9,590 barrels). New well No. 13 commenced drilling October 15; present depth, 313 metres. New well No. 14 finished water test and drilled to 869 metres."

Mr. Norman McLean, M.A., Fellow and Tutor of Christ's College, Cambridge, who has been elected Master of the college in succession to the late Sir Arthur Shipley, gained First Class Honours in the Classical Tripos at Cambridge in 1888, and Honours in the Semitic Languages Tripos in 1890. He was awarded a Tyrwhitt Hebrew scholarship in 1891; a Jeremie Septuagint Prize in 1890, and the Mason Hebrew Prize in 1891. He was elected a Fellow of Christ's in 1893, successively filling the offices of Hebrew Lecturer, librarian, steward and tutor. He edited the Ecclesiastical History of Eusebius in Syriac with the late Professor Wright; and the large Cambridge Septuagint with Dr. A. E. Brooke, now Provost of King's.

COMPANY NOTES AND REPORTS.

BENGAL DOOARS RAILWAY.

The report of the Bengal Dooars Railway Company for the year to March 31, 1927 shows coaching earnings amounting to Rs.73,753, compared with Rs.5,55,794 for 1925-26, an increase of Rs.17,959. The amount received on account of goods traffic was Rs.17,18,858, an increase of Rs.1,02,150. Other earnings amounted to Rs.51,096. The net earnings totalled Rs.11,10,017, as against Rs.11,26,941. The amount at credit of net revenue account is £107,196. The directors have placed £20,000 to reserve, bringing it up to £230,000, and recommend a final dividend of 4 per cent. and a bonus of 2 per cent. on the Ordinary stock (subject to tax), making 10 per cent., carrying forward £47,196.

NATIONAL BANK OF EGYPT.

Position at August 31, 1927, published in conformity with Article 8 of the Statutes. Banking Department.—Liabilities: Share Capital (300,000 fully paid Shares of £10 each), £E2,925,000. Reserve Fund: Statutory Reserve, £E1,462,500; Special Reserve, £E1,145,625; Current, Deposit and other Accounts, £E15,553,384; Egyptian Government, £E14,737,908; Sudan Government, £E255,986; Mixed Tribunals, £E1,632,959; Bankers' Accounts, £E322,693; Cheques and Bills Payable, £E260,615; Sundry other Accounts, £E1,772,335—£E40,069,005. CHESS.

By "CARO-KANN."

The solution to last week's problem is as follows:—
1, P—Q5, PxP; 2, P—Kt4, P—B4; 3, PxP (e.p.), PxP;
4, P—Kt5, P—Kt4; 5, P—Kt6, P—Kt5; 6, P—Kt7, P—Kt6; 7, P—Kt8 and wins.

Black to play. What result?

The Masters' Tournament at the British Empire Club, which ended on Monday, has been rather disappointing as far as the British competitors are concerned. I suppose a partial explanation is that abroad the game is taken much more seriously than it is here by the majority of players.

The Murton Cup tournament at the City of London Chess Club has been won by Mr. Morrison. The winter season commenced at the Club on Monday when the first class section of a lightning tournament was played.

NEWS FROM ALL SOURCES.

The Egyptian Markets announce an interim dividend of 5 per cent. (less tax) on the ordinary shares, payable on November 19.

The entries at the port of Salonika in September comprised 157 steamers of 142,166 tons and 102 sailing vessels of 5,441 tons.

Of the total number of cars shown at Olympia—British and foreign—64.42 per cent. were equipped with Dunlop tyres, compared with the 61.02 per cent. last year.

The total receipts of the Egyptian Delta Light Railways for the ten days ended September 30 amounted to £E9,597, making the total from April 1 £E136,138. For the corresponding periods of the previous year the totals were £E9,368 and £E151,463.

A mission from the United States Department of Commerce has arrived in Egypt with the object of investigating the Egyptian market for cotton piece-goods and similar products. Office have been taken in Banco di Roma Buildings, Cairo, where samples of standard American textile products will be on view.

Reduced duties have been put into force in Roumania till the end of this year for coke for the metallurgical industry, electrical apparatus, zinc plate such as is not manufactured in the country, flax yarns of not more than 3,000 metres per kilogram, nickel and amalgams thereof, felt, and some woollen fabrics.

The Yugoslav trade returns for the first six months of this year show an adverse balance of 370 million dinars, or 10.96 per cent. of the imports, as against 15.09 per cent. during the corresponding period in 1926:—January-June, 1927: Imports, 562 million tons, valued at 3,370 million dinars; exports, 2.43 million tons, valued at 3,000 million dinars.

The Commission for the Ottoman Debt last week reached an agreement on all the points in suspense at the meeting which had just take place. The Committee for drawing up the agreement will terminate this work very shortly, and it is expected that the final signatures can be exchanged at an early date.

Near East Markets

THE SMYRNA FRUIT MARKET.

Messrs. C. J. Giraud and Co., of Smyrna, report as follows for the week ended October 8:—

The arrivals of sultanias on the Smyrna market since the opening of the season are estimated at 27,820 tons and the sales to date are put at 23,700 tons. Closing prices, Smyrna, per cwt. c.i.f.: type 12, 41s.; type 13, 47s.; type 14, 51s.; type 15, 57s.; type 16, 61s.; type 17, 69s.; type 19 43s. 6d.; type 6, 40s. 6d.; type 20, 38s.

Prices in local currency have, throughout the week, been firmly maintained for all low and medium grades. Good qualities have advanced as supplies are not coming forward to the market to replenish stocks, and the scarcity is causing prices to move up. The exchange has further weakened causing an advance in foreign quotations of 1s. per cwt. (1 fl. per 100 ks.) over last week's closing parities. Good qualities corresponding to our types 16 upwards are becoming scarce, and their complete exhaustion may be expected before long.

The arrivals of figs on the Smyrna market since the opening of the season are estimated at 19,710 tons and the sales to date are put at 18,685 tons.

The market continues its upward trend. The advance in prices is particularly marked for figs suitable for packing purposes and for good sound quality Genuines. Supplies of both descriptions are short of demand. Low grade Naturals, suitable in the main for distilling purposes now constitute the bulk of supplies coming forward from the interior. The complete exhaustion of good sound quality figs is to be foreseen at an early date.

Messrs. C. J. Giraud and Co., report as follows for the week ended October 15:—

The estimated arrivals of sultanias on the Smyrna market since the opening of the season are estimated at 30,600 tons and the sales to date are put at 26,350 tons. Closing prices, Smyrna, per c.i.f.: type 12 41s.; type 13 46s.; type 14 50s.; type 15 55s.; type 16 60s.; type 17 68s.; type 19 42s.; type 6 38s.; type 20 38s.

Prices for sound fruit are slightly under last week's closing level, but there is very little change in the actual position of the market for rain-damaged and low grades which are firmly maintained. There appears to be a leveling up of prices for these latter grades owing as much to the strong demand which has developed during the week for export as to the important quantities being absorbed by the requirements of Local Distillery. The import of foreign alcohol being prohibited, resource is being had to the lowest grades of sultanias, irrespective of condition, provided the price does not exceed a maximum of 32s. per cwt. f.o.b.

The arrivals of figs on the Smyrna Market since the opening of the season are estimated at 20,104 tons and the sales to date are put at 19,754 tons.

There is practically no change in the position. The majority of packing houses have now closed down and business is getting into very narrow lines owing to the gradual exhaustion of supplies.

IVORY IN GOOD DEMAND.

Messrs. Hale and Son report that the quarterly ivory sales, held on October 18 and 19, comprised 42½ tons (against 43½ tons same time last year, and 33½ tons in July last), viz., 18½ tons Zanzibar, Bombay, Mozambique, East African, and Siam, 2½ tons, Abyssinian, 10½ tons Egyptian (Alexandrian description), 7½ tons Congo and West Coast African, and 4 tons Land Carriage; also ½ ton sea horse tusks, 3½ tons mammoth tusks, and ½ ton rhinoceros horns and boars' tusks; total 47 tons.

The following was the assortment of the East Indian description: 10½ tons soft tusks, ½ ton hard and Siam, 1½ tons billiard ball pieces, ½ ton bagatelle pieces, ½ ton billiard ball and bagatelle scrivellos, ½ ton cut points for balls, 1½ tons cut points off large tusks, ½ ton under-size and defective points, etc., 1 ton scrivellos and mixed defective pieces, and 2½ tons cut hollows. Of the above quantities 8½ tons consisted of lots previously offered or indirect import, viz.,

1½ tons East Indian, ½ ton Abyssinian, 1½ tons Egyptian, ½ ton West Coast African, and 4 tons land carriage.

There was a good demand and the competition was well maintained throughout the sales. The quantity catalogued was again moderate, although rather larger than that offered at the preceding auctions. The Continent and America bought freely and the home trade took their usual quantity. There was a good assortment of soft, large, and medium tusks, and some fine lot of billiard ball pieces. Cut hollows were in good supply. Large and medium soft tusks were a little irregular, in some instances selling rather in favour of buyers, but hard was firm to £2 per cwt. advance. There was rather more of the Siam description offered.

TENDERS INVITED.

Tenders are invited for the following contracts, and must be made by the dates mentioned.

(Particulars of tenders marked D.O.T. are to be obtained from the Department of Overseas Trade, 55, Old Queen Street, S.W.1.)

EGYPT.

Sewers.—Tenders are invited by the Ministry of Public Works for the supply, construction, and delivery to the Ministry in perfect working order of main branch sewers in Sharia El Azhar, Cairo, and subsidiary works. November 14. (D.O.T.)

Safes.—The Egyptian Ministry of Finance invites tenders for the supply of 100 small iron money safes, 18 in. by 12 in. by 11 in. December 1. (D.O.T.)

Signal Materials.—The General Management, Egyptian State Railways, Telegraphs and Telephones, Cairo Station, invites tenders for the supply of mechanical signal materials. November 29.

Surgical and Medical Instruments.—The Director-General of Prisons, 43, Sharia El Bustan, Cairo, invites tenders for the supply of surgical and medical instruments. December 20.

Light Railways Material.—The Director-General, Main Drainage Department, 2, Sharia El Maleka Nazli, Cairo, invites tenders for the supply of light railways materials. December 1.

Safes.—The Controller-General, Administration and Central Stores, Ministry of Finance, Cairo, invites tenders for the supply of iron safes required by the Direct Taxes Department. December 1.

TURKEY.

Cast Iron Pipes.—The Anatolian Railway Administration invites tenders for the supply of 120 tons of cast iron pipes. November 6. (D.O.T.)

THE SUDAN.

Steamers' Stores.—The Inspector-General of Irrigation Service in the Sudan, Khartoum, invites tenders for the supply of steamers' stores to the Egyptian Irrigation Service in the Sudan, of the following general description: oils, greases, cleaning materials, packing and jointing, hemp and wire rope and yarn, lamps, small tools, wrought iron, steel, copper, paints, and enamels brushes and brooms, bolts nuts and pins, life-buoys, oars, piping, minor electric light spares. November 3. (D.O.T.)

Electric Generating Set, Etc.—The Inspector-General, Egyptian Irrigation Service in the Sudan, Khartoum, invites tenders for the supply of: (1) One electric generating set and searchlight; (2) one petrol paraffin engine with reversing gear, stern tube, propeller and propeller shaft. November 27.

THE NEW PALESTINE CURRENCY.

Palestine's new currency, consisting of coins and currency notes, will be introduced on November 1. The standard of the new currency will be the Palestine pound, equivalent to the English pound, and divided into 1,000 mils. The inscription on the coins will be in English, Arabic, and Hebrew, and all coins will be beaded and the silver coins milled. It is not intended to introduce any gold coins at present. The Egyptian currency, which has been used in Palestine since the British occupation, will be withdrawn during the next few months, and will then cease to be legal tender in Palestine.

It is proposed to reduce the Customs duty on currants imported into Cyprus from 10 per cent. *ad valorem* to 15 paras per oke.

An announcement in the Sudan Government Gazette notifies that duty-free importation of dura or dukhn will be permitted until January 1 next subject to the conditions already prescribed—i.e., that consignments are ordered and intended for sale in the Sudan and that the importer complies with the requirements as to prior notification of the arrival of the consignments, etc.

THE IMPERIAL BANK OF PERSIA.

(Incorporated by Royal Charter, 1889.)

CAPITAL (fully paid) - £650,000 | RESERVE - - - £520,000
Reserve Liability of Shareholders, £1,000,000.

Branches in Persia:—
 Abadan Bushire Kermanshah Pehlevi
 Ahwaz Duzdab Masjed-Saleiman Resht

INDIA & BURMAH.—BOMBAY, CALCUTTA (2 Offices), KARACHI, RANGOON, DELHI, SIMLA, RAWAL PINDI, MURREE, SRINAGAR (Kashmir), GULMARG.

Cotton and Cotton Goods.

THE LIVERPOOL COTTON MARKET.

Messrs. Reynolds and Gibson report as follows for the week ended October 19:—

Egyptian Futures.—Sakel Contract.—Only normal fluctuations have been experienced in this market during the past week, but on the whole the undertone has shown more resistance, and mainly under the influence of somewhat improved trade support values show an advance of 31 to 34 points for near and 33 to 35 points for distant positions on the week. The recent action of the market is quite in accord with that usually experienced during the heavier part of the marketing season, hence it is to be recorded that any decided advance has immediately met opposition in the shape of hedging operations; on the other hand, declines down to the neighbourhood of 18d. attract a greater volume of trade support, and it is encouraging to note that latterly spinners have shown more disposition to take advantage of price recessions than they have done for several weeks. This, in our opinion, indicates an increasing confidence on the part of spinners in the position, and further to consolidate this feeling they have been favoured with an increasing offtake for the finer counts during the past few days. It is interesting to note that the Liverpool stock stands at the small figure—for this period of the season—of 49,000 bales. The relative cheapness of Liverpool hedged cotton has been more widely recognised during the week, and some 1,000 to 1,500 bales have been purchased here for shipment abroad. A continuation of these activities, and this is extremely probable, will soon cause a readjustment of the present Liverpool/Alexandria difference, especially so with offerings of tenderable Sudan cotton now exhausted. At certain times during the week it has been possible to purchase January here at 15 to 20 points below the same position in Alexandria, a state of affairs hardly attractive to importers nor likely to increase the small amount of cotton heading for this port.

The overseas market has developed more firmness during recent sessions, but we believe that this is due to a large extent to speculative activities in anticipation of the Government shortly issuing a crop estimate showing a reduction from their earlier figures. Also part of the improvement can probably be attributed to purchases for shipment to Russia; from some sources we hear rather detrimental reports regarding the second picking. For the immediate future, we do not anticipate any material change in the present level, but should values decline again to the neighbourhood of 18d. 18½d. for the January position we think the opportunity should be taken to enter into conservative commitments.

Upper Contract.—In contrast to recent weeks this contract has latterly developed a somewhat heavy undertone. Local spinners have again only shown a moderate amount of interest, but Continental and U.S. consumers, from all accounts, are still operating fairly freely in the Alexandria market. Whilst we still maintain a favourable opinion of the outlook for cotton covered by this contract, we are quite prepared to witness some easing of a temporary character; should our ideas prove correct, we think the opportunity might be utilised to purchase more distant positions, as we consider that the statistical position will begin to show decided strength during the earlier spring months.

Egyptian Spot.—The week opened in an uneventful manner with business in Egyptian spot cotton at a low ebb. Prices remained steady, however, and it was noticeable that the offtake for Sudan Sakel Cotton was maintained on a healthy scale. Fluctuations throughout the week have taken place on an unusually restricted scale, and during the last few days confidence amongst

buyers has been steadily growing. Helped by some purchases of Upper (at about 15.00d. and Sakel (18½d. to 19.00d.) for American account, the daily sales of Egyptian have shown a marked improvement, seven hundred bales having been returned on two successive days. As we write, the market appears remarkably steady, and we see no reason why the improved trade should not continue for a while.

More interest has been displayed in Sakel than we have seen for some time past and prices show faint signs of hardening. Uppers, which for the past three weeks or more have been very steady, have latterly shown a tendency to ease slightly, but we are of the opinion that this will prove to be of only temporary duration. Some surprise was recently occasioned by the decision of the Egyptian Government to defer the publication of the next crop estimate (due last Monday) until the end of the month. Further unconfirmed rumours have come to hand of large Soviet purchases in Egypt.

The local inquiry for Sakel cotton has broadened out and practically all grades have received attention. The demand for Uppers has again centred on the Strictly Good Fair quality (14.75d. to 15.00d.), but more interest has undoubtedly been shown this week in the better grades also. A persistent inquiry for inferior cotton (principally Sakel) 11½d. to 13½d. still continues. Pilon 16.00d. to 16½d. has been in moderate request. C.i.f. business has again shown some improvement.

Forwardings to spinners for the week ending 14th inst. were returned as 7,637 bales Egyptian and 2,378 bales Sudan. Estimated sales for the week 2,500 bales Egyptian and 7,000 bales Sudan. Quotations of Sakel show a net advance of 15 points, those of Upper and Pilon 25 points. F.G.F. Sakel to-day 19.00d. F.G.F. Upper to-day 15.00d. F.G.F. Pilon to-day 15.30d.

THE EGYPTIAN MARKET.

The Alexandria Commercial Company in their report for the week ended October 13 state:—

Since our last report the future market has been quiet with an undecided tendency—indeed, for Sakel the tone has been on the heavy side. The week's summary of price movements is as follows:—Sakellaridis: November, 36.86 dollars, 0.41 dollars down; January, 37.13 dollars, 0.43 dollars down; March 37.33 dollars, 0.42 dollars down. Ashmouni: October, 28.48 dollars, 0.39 dollars up; December, 28.50 dollars, 0.11 dollars up; February, 28.81 dollars, 0.06 dollars down; April, 28.95 dollars, 0.14 dollars down.

Sakel.—The third American Bureau Report, so anxiously awaited, was published on the 8th inst., and showed a condition of 54.2 against 56.1 a month ago, and 61.3 a year ago, whilst the production is put at 12,678,000 bales against an estimate last month of 12,692,000 bales and last year of 16,627,000 bales. The figures given as production proved to be slightly lower than expected, but the effect on the market was small, and the slight advance in prices which followed the publication of the report has since been lost; November, after touching 38.35, gradually fell back to the neighbourhood of 36 dollars, although the closing price to-day is 36.86 dollars.

As has been the case for several weeks past, the tone is somewhat heavy; hedging sales by interior merchants continue, and the demand from spinners is not by any means as good as one would like to see it. November has been sold this week by local operators straddling against October and December Ashmouni and this has contributed to the depression of the Sakel market. There is nothing fresh concerning the negotiations of the Soviet Delegation for the purchase of part of the stock held by the Government.

Uppers.—The tone of this market has been better than

that of Sakel, the chief reason being the straddle purchasing mentioned above. Another factor which helped the market is the smallness of the second October tender, 5,500 kantars; a much larger figure was generally expected. There is nothing fresh to report on the demand from abroad; this continues to be on moderate lines. The total of the October dockets issued to date is 56,750 kantars.

The week's receipts amount to 390,710 krs. against 218,816 krs; the stock in Alexandria stands at 2,584,758 krs. The official figures of arrivals and exports for the period September 1, to October 5 are as follows:—Arrivals: Sakellaridis 271,527 krs., Ashmouni and Zagora 671,877 krs., Pilion 44,569 krs., Various 23,961 krs., Scarto 12,005 krs., total 1,023,939 krs. Exports: Sakel 184,967 krs., Ashmouni 215,349 krs. Pilion 19185 krs., Various 13,334 krs., total 432,835 krs.

Spot.—During the past week Minet el Bassal has been active and considerably more business has been done than for some time; it is to be doubted however if this is due to improved trade buying or rather to merchants buying for stock, chiefly Upper Egyptian, taking advantage of the carrying premium into December which has hitherto existed. Sales amount to about 25,000 bales, of which we estimate 8,500 bales Sakellaridis (including 300 bales Sekina and Scarto) 15,500 bales Ashmouni and Zagora,

1,050 bales Pilion and 150 bales other varieties. The spot situation is easier for Sakel and premiums are inclined to ease as cotton becomes more plentiful and trade demands remains only moderate. For Uppers there is a tendency for the top grades to harden, and for the lower styles to ease as these qualities are beginning to show in increasing quantities.

Sakellaridis.—A fair business has been done covering all styles. Extra cottons continue in request at high premiums. Spot differences, apart from specialities, are without much change.

Ashmouni and Zagora have been in favour with buyers, and a good business has resulted, covering all grades. Spot differences are generally without change, but the lower grades are inclined to ease.

Pilion.—A good business has been done at about last week's differences.

Other Varieties.—A small business has been done in White at last week's differences. In Nahda, several small lots have changed hands.

Crop 1927.—Weather conditions have been favourable during the past week and the plants are still making cotton. As a result of the heavy accumulation of cotton in Alexandria and the relatively moderate demand on the spot market at Minet el Bassal, the crop movement in the interior has recently slowed down to some extent.

Notes of the Week.

The Situation in Roumania.

With regard to the situation in Roumania it should not be necessary to point out that the highly-coloured versions emanating from Vienna and Budapest, which may be good enough for the purposes of the Yellow Press of all countries, cannot be accepted as reflecting in the least degree the actual state of affairs. It may be inferred that M. Manoilescu, Prince Carol's messenger, had indulged in other activities than merely carrying letters to political leaders, and the arrest of a former prefect of Jassy on the charge of having circulated a subversive manifesto suggests that some kind of movement was on foot to push the Prince's candidature for the Throne. These circumstances will explain the trial of the arrested men by court-martial. The Roumanian Constitution "guarantees to all liberty to communicate and to publish their ideas and opinions by the spoken word, by the written word and by the press"; "no censorship, nor any preventive measure regarding the appearance, sale or distribution of any publication can be created"; but it may be presumed that special laws are in existence to cover the present case and the operation of a court-martial. The censorship of news from any Balkan country is always a proceeding of doubtful utility, as it merely gives free rein to the lucubrations of neighbouring capitals. In the present instance it has served to distort the issue in Roumania into a struggle between a Prince supposed to be devoted to the cause of liberty and a Prime Minister who is represented as a dictator.

"Crooked Counsels."

While Prince Carol of Roumania was assuring journalists of the type that regards him as good "copy" that he was no pretender to the Roumanian Throne, because he would not lend himself to intrigue on his own behalf, his intermediary in his attempt to inform the Roumanian people that he was waiting only for a summons to mount the Throne was being arrested at the Roumanian frontier on his return from a visit to the Prince. A young man of the Prince's particular record will have his own interpretation of what does or does not constitute intrigue; but to all people whose moral sense has not become atrophied it will seem that in his renunciation Prince

Carol definitely and for all time resigned his rights to the Roumanian Throne, and that to pose now as waiting to respond to a call from his country is to add yet another disqualification to an aspirant to a throne. It would have been better for the country, if public opinion in Roumania could have shown itself so alienated by the Prince's record that there could be no question of his imagining that he was still wanted by any section of the people. Unfortunately, to a rather lax outlook on such escapades as those for which Prince Carol is notorious has to be added the bitterness of party strife, which makes hardly any weapon too base for use in political controversies. The personal friendship of one party leader, who helped or connived at the Prince's earlier lapses, would seem now to be used as basis for the equivocal attitude of his political following on the dynastic question. Dr. Maniu, the head of the National-Peasant Party, stands in a different category, and there is no need to doubt the sincerity of his contention that democratic usage called for an *ad hoc* expression of the people's opinion on the subject of the succession to the Throne rather than a vote in Parliament. The subtlety of this claim lies in the tacit assumption that elections do not reflect the opinion of the people, but merely confirm in power the Government that conducts them. That, however, is Roumania's own adaptation of constitutionalism, whereas the referendum is not known to the Constitution. Dr. Maniu, no doubt, felt obliged to register his *caveat*; but he is not for this reason to be regarded as an opponent of Prince Michael's succession. In all the circumstances, it may be fortunate for Roumania that the fishers in troubled waters meet their match at this stage in the Bratianu Ministry, while longer time is being given to M. Titulescu, the Minister for Foreign Affairs, to exercise a pacifying influence on Roumanian domestic politics.

An Attack on the Greek President.

The attempt made on the life of Admiral Koundouriotis, President of the Greek Republic, who was shot at on leaving the Athens Municipal Offices on Sunday, would seem to be altogether devoid of political significance. Admiral Koundouriotis has played a difficult part in

Greek history with personal distinction and has won the respect of his fellow-countrymen, of whatever shade of political opinion. He reached the Presidency of the Republic through no self-seeking of his own, and has consented to remain in it much against his own wishes. It will in all probability be a difficult task for Greece to find a successor, unless M. Zaimis, who is also seventy-two years of age, would consent to be a candidate. The attack on him, therefore, is likely to be proved to have been the act of a crazy individual, labouring under a personal grievance. If he had represented any organization, it would have been more reasonable to expect his attempt to have been directed against a prominent politician rather than against the titular head of the Republic. Sympathy will be widely felt with the President, and it is satisfactory to know that the attack, fortunately, so miscarried as to make the wound on the head only a slight one.

Arms and the Men.

A report emanates from Bulgaria to the effect that a number of stores of arms and munitions have been discovered near the Serbo-Bulgarian frontier to the north and south of Kustendil. These arms are supposed to be connected with a Communist plot which failed to materialise owing to the wholesale arrests effected in 1924 and 1925; they are said to have formed part of the consignments handed over to the Serbs by the Bulgarian army after the Armistice. The inference, therefore, is that they found their way back into Bulgaria by clandestine methods for a definite purpose, but owing to disciplinary measures could not be utilised. If the facts are as represented the best use to which the discovery can be put is to give the two countries occasion to congratulate themselves that the relations between them are now so much better than they were in 1924-5. The Bulgarian Government is, no doubt, prepared to meet the allegation that the discovery is a fake for the furtherance of anti-Yugoslav designs, and, perhaps, its best course will be to hand the rifles back to the Yugoslav Government, to whom it would seem they rightly belong. The ceremony might be made the occasion of a picturesque *rapprochement*.

The Macedonian Question.

An interesting commentary on the situation in Serbian Macedonia is given by a correspondent on another page. Mrs. Hasluck's letter, written, no doubt, in disbelief of the reports of a state of affairs in South Serbia that is held responsible for the recrudescence of *komitaji* outrages, bears testimony to those "good intentions" which, it has long been recognised, have actuated successive Governments in Belgrade. A genuine attempt is being made to raise the agricultural, hygienic and cultural level in South Serbia, and for this full credit is due to the new order in Yugoslavia. On the other hand, distinctions made in favour of some minorities can serve only to emphasise the disabilities experienced by others. It is evident that the Yugoslav authorities have feared to experiment with a policy of unreserved trust towards those who *prima facie* might be regarded as hostile to the régime, and have relied on drastic measures to secure acquiescence. In so doing, they have acted as any other Balkan State would do in similar circumstances, and, perhaps, it is by that standard that they have to be judged. To-day, however, there is an abundance of accumulated evidence to show that this policy has not been an unqualified success. The Serbs may defend themselves by saying that they had good reason for knowing those with whom they had to deal far better than the people of any other country could hope to know them. That may be perfectly true; but by resorting to measures of suppression they have placed themselves on a level with their victims and have made no attempt to win their respect. The history of the Balkans shows that its people are not easily dragooned by repressive measures, and it was improbable that the Serbs would succeed in a few years where the Turks availed nothing in five centuries. If the picture drawn

by our correspondent is correct, it suggests that it would be a comparatively easy matter now to extend a liberal policy to those who have hitherto been regarded with suspicion or treated as open enemies. A change of local officials, which the Democrat element in the Government is insisting upon, might be necessary, and it could be an injunction to the new men to give a genuine trial to more liberal spirit towards those who have hitherto been given no chance of appreciating the advantages of Yugoslav citizenship.

Yugoslav Politics.

The various soundings initiated by the Yugoslav Democrats in the political open sea have been concluded, and the Party vessel is back once more in the Government dock. With over eighty seats the Democratic Union, in which the Bosnian Muslims are content to play second fiddle more or less harmoniously to their Democrat allies, is in a position to give either the Radicals or the remaining political groups the support required to obtain a majority in the Skupshtina, and for the first few weeks after the General Election, while the Union was formally part of the Government, the ground was explored with a view to seeing whether the Opposition groups could be welded together with Democratic cement with some likelihood of permanence. The fact that M. Raditch was necessary to the success of this scheme constituted a conspicuous weakness and the project has been abandoned. The Democrats have proclaimed their unity as a party under Dr. Davidovitch and their determination to remain in the Government with the Radicals under M. Voukitchevitch. The *quid pro quo* provided by the latter takes the form of a general overhauling of the Civil Service under the guidance of Democrats who will be appointed to various departmental and provincial posts. Officials are to receive better pay and will be required to provide better qualifications for the exercise of their functions. If this scheme is carried out wholeheartedly to its logical conclusion, and is not merely a device for distributing loaves and fishes to political supporters, a new era will have been inaugurated for Yugoslavia. It has long been recognised that one of the chief difficulties of the Administration was to give effect to good intentions by means of the too often indifferent material at its disposal in the provinces. Official posts had come to be regarded as merely payment for services rendered to a special Party, and not as entailing obligations yet to be discharged towards the country as a whole.

The Turkish Census.

It was an Irishman who, set to count pigs in a sty, confessed his inability to complete his task, because there was one pig that ran about so much that he could not count it. Fear lest the same difficulty should beset their canvassers constrained the Turkish authorities for the purposes of a census to order the whole population of Turkey to remain indoors last Friday until the last person had been counted. The precaution, though drastic, was a practical one, as it was too much to expect of the people as a whole that they would accept responsibility for the numbering of themselves, as is done in other countries where the proportion of illiterates is not so high. If the returns of the great army of canvassers prove to be complete, the census will supply both the Turkish Government and the world at large useful and interesting information, for steps have been taken to compile a wealth of data regarding the people of Turkey—nationality, religion, domestic state, literacy, etc.—which have hitherto been entirely lacking. Indeed, all statements regarding the actual population of Turkey have been more or less guess-work. Less than a year ago the Turkish press considered it a sure indication of hostility to Turkey that certain foreigners had hazarded the opinion that the number of inhabitants in the Republic did not exceed seven million, whereas the Ministry of Interior, with a praiseworthy zeal for accuracy which the methods employed could not justify, had published a document giving the number as

12,426,597. The Government will be relieved of a serious embarrassment if the census substantiates this latter figure. It has certainly been at pains to ensure accuracy this time. The organisation of the census has been entrusted to a Belgian expert, and, provided that the name of each man, woman and child, and supplementary information are duly entered on separate forms, the risk of excess of zeal on the part of individual canvassers who may be tempted to magnify the scope of their task should be avoided. In itself the census is a striking illustration of the thoroughness with which the Turkish Government is approaching its task of westernising the Republic. From the enumeration of the people it is to be hoped that it will proceed to a survey of the country—estimates of the area of which may be found in English publications to vary from 279,020 square miles to 391,129 (*Report of the Department of Overseas Trade* and 494,538 square miles (*Statesman's Year Book*))—and to the compilation of accurate agricultural statistics, without which no permanent improvement of agriculture as a whole will be possible.

Iraq and Geneva.

A most hopeful account of Iraq was given to the Permanent Mandates Commission at Geneva on October 25 and 26 by Mr. B. H. Bourdillon, Counsellor to the High Commissioner at Baghdad. He explained that Iraqis had developed an administrative capacity which few British officials had credited them with at the time of the formation of the National Government. The co-operation of Sunni with Shiah was admittedly still a problem; and there is no need to emphasise the importance of this problem when it is being expressly considered during the present negotiations between King Faisal and the British Government. Mr. Bourdillon stated that the relations between Iraqi, Syrian, and Transjordanian tribes were now much improved. On the question of the future of the railways of Iraq he had nothing new to report. But the most prominent event of the past year in Iraq was, of course, the settlement with Turkey. As far as can be seen, this settlement is perfectly sincere. Turkey has shown, since the signing of the Treaty of Angora, no disposition to swerve in the slightest way from the loyal observance of its terms, and this cordial attitude has certainly been reciprocated in Iraq. Iraqis as a whole wish to see a stronger and successful Turkey; many of them, in fact, go so far as to say that their essential interests are bound up with the success of the Kemalist experiment. It is true that there still exist a few observers who are by no means convinced of the uprightness of Turkish intentions towards the new Arab Kingdom, but they are conspicuous by their absence in Iraq itself. The report which was presented to the Mandates Commission was, in short, one of the most encouraging of its kind.

The Progress of Iraq.

The manifest and acknowledged progress which Iraq has made should not blind one, however, to the fact that there are some questions not yet solved. For instance, the problem of the minorities, which, according to the telegraphic summaries from Geneva, was touched upon by Mr. Bourdillon, still causes a certain perplexity. It may be true, as the Counsellor said, that no special measures of protection have been taken for Nestorians and Chaldeans, "because they were satisfied with their lot"; but it is, according to recent information, to be doubted whether the Kurds of the North are as yet so completely reconciled to the Arab administration as has been claimed by Baghdad. It cannot be emphasised too often that the Turkish solution of the Kurdish problem cannot be the Iraqi solution, however much certain Arabs might wish it so, and it would be comforting to have more reassurance from the British advisers in Iraq that reconciliation as between Iraqi Kurd and Arab is really becoming a solid thing. Another thing which was mentioned at Geneva concerned the Iraq Railways. Surely it is high time that the unsatisfactory arrangement which governs them were substituted by something better and more in keeping with

the future of the country? Many months ago General Hammond was sent out to report upon them, but, so far as we know, his recommendations have not yet been published.

The Iraqi Cabinet.
